The debts which have priority are expenses of caring for the property, filing fees, costs, wages due workmen, clerks, or servants which have been earned within three months, not exceeding $300 to each one, and debts entitled to priority by State or national laws.

Compromises, involving more time in which to pay or a reduction of the amount to be paid, may be readily and cheaply effected between honest debtors and their creditors, under very careful restrictions, after a voluntary or involuntary petition has been filed, and either before or after the defendant has been adjudged a bankrupt.

Compromises which have been fraudulently obtained may be set aside upon application made within six months after they were granted.

A petition for a discharge may be filed by a bankrupt, not a corporation, after two and within the next four months after the adjudication or conditionally within the next six months, but not afterwards; it must be filed in the court where the proceedings are pending. The discharge will be granted unless the bankrupt has been convicted of having committed some one of the acts forbidden by the bill—giving a preference which has not been surrendered, knowingly made a materially false statement in writing for the purpose of obtaining credit, made a fraudulent transfer of his property, or fraudulently destroyed or neglected to keep books or records showing his financial condition.

Discharges which have been fraudulently obtained may be set aside upon application made within two years after they were granted.

Fraudulent bankrupts, embezzling officers, and creditors who have proven false claims may be punished by imprisonment.

Notices will be sent, at trifling cost, by the referee to all creditors of each step in the proceedings, including the hearing on the application of the bankrupt for a discharge.

Creditors may be heard at all times in support of or in opposition to any proposed step in the administration of the estate.

Claims may be proven by the simple oath of the creditor, and will be allowed upon being filed in person or sent by mail, without the payment of any filing fee; if it is thought that an allowed claim is fraudulent, it may be suspended and investigated.

Preferences are forbidden, and those which have been given may be set aside if proceedings intervene within four months after they have been given.

Valid liens will be upheld; fraudulent ones will be set aside.

Present legitimate business methods will not be interfered with by the bill. It is not a measure relating to transactions between honest solvent persons, firms, or corporations, but for the relief of honest insolvent debtors, the prevention of dishonesty, and the administration of the estates of insolvent and dishonest debtors more economically and equitably than it is possible to do under present laws.

The bill contains the provisions, in addition to the foregoing, necessary to make it a complete, equitable bankruptcy code.

Bankruptcy.

SPEECH

OF

HON. JAMES J. WALSH,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 1, 1896,

On the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcies throughout the United States.

Mr. WALSH said:

Mr. SPEAKER: There is no question pending before Congress that should be approached with more care and deliberation than that which proposes a national bankruptcy law. One who does not appreciate the demand for such a law must indeed be ignorant of the conditions under which we have been living for the past few years and must be indifferent to one of the strongest prerequisites to a restoration of commercial confidence, which, in my opinion, is the greatest necessity of the hour.

Many have complained of present financial conditions, and all concede that a change would be beneficial—yes, necessary. They have differed only on the question as to the direction which that change should take.

Some have complained of present and past tariff laws and, according to their predilections, have attributed all the evils which we have suffered to the high or low tariff.

It is unnecessary to discuss these questions now or to engender that political excitement with which their discussion is usually attended, because I believe that is hardly the spirit in which to consider an important question like the one before us. Yet I may be pardoned while I say in passing that I believe the business people of this country want nothing so much as a certain basis on which to do business, and that every attempt to change the tariff laws, with the accompanying uncertainties, creates a

condition of suspense, the creation of which can only be justified by great public necessity.

Certainty is the desideratum of the business community to-day. Certainty in the basis of operation begets confidence and boldness in the operation itself and definiteness in results.

Now, while it is generally admitted on the floor that a national bankruptcy law is desirable, we are divided upon the question as to whether the bill should contain involuntary as well as voluntary features. The bill presented by the Committee on the Judiciary presents both features. Voluntary bankruptcy need not be discussed. There is a general agreement that this feature of the bill is a good one. Opposition here seems to be confined to the involuntary features. Now, before discussing the measure let me say that I would more cheerfully support this bill if the acts of bankruptcy mentioned in its second section were confined to acts of actual fraud, but I am moved to vote for and support this bill as it is with the amendment of the gentleman from Pennsylvania [Mr. MAHON] because the acts mentioned in that section, which are not acts of actual frauds per se, very often amount to the same thing, and the method of treating them under the laws of the States, which I have examined, is more drastic than anything in this bill.

Now let us see what are the acts of bankruptcy. The second section reads as follows:

(a) Acts of bankruptcy by a person shall consist of his having (1) concealed himself, departed or remained away from his place of business, residence, or domicile, with intent to avoid the service of civil process and to defeat his creditors, and shall not have returned at least forty-eight hours before the filing of a petition in bankruptcy and before the rights of creditors shall have been impaired, altered, or interfered with; (2) failed for thirty days and until a petition is filed, while insolvent, to secure the release of any property levied upon under process of law for $500 or over, or if such property is to be sold within such time under process, then until three days before the time fixed for such sale; (3) made a transfer of any of his property with intent to defeat his creditors and has not regained the ownership and possession of such property before the rights of creditors have been altered, impaired, or changed by reason of such transfer and at least ten days before the commencement of a proceeding in bankruptcy; (4) made an assignment for the benefit of his creditors or filed in court a written statement admitting his inability to pay his debts; (5) made, while insolvent, a transfer of any of his property or suffered any of it to be taken or levied upon by process of law or otherwise for the purpose of giving a preference, and has not regained the ownership of such property or released same from such levy before the rights of creditors shall have been altered, changed, or impaired by reason of such transfer, taking, or levy, and at least ten days before the commencement of a proceeding in bankruptcy; (6) procured or suffered a judgment to be entered against himself with intent to defeat his creditors and suffered same to remain unpaid until ten days before the filing of a petition in bankruptcy, provided that a payment or satisfaction of a judgment by a sale of any of the debtor's property or from the proceeds of such a sale shall not be deemed a payment of such judgment under the provisions of this section; (7) secreted any of his property to avoid its being levied upon under legal process against himself and to defeat his creditors, and has not surrendered such property to such legal process at least ten days before the filing of a petition in bankruptcy; (8) suffered while insolvent an execution for $500 or over, or a number of executions aggregating such amount, against himself to be returned no property found, unless the amount shown to be due by such executions shall be paid before a petition is filed; or (9) suspended and not resumed for thirty days and until a petition is filed, while insolvent, the payment of his commercial paper for or aggregating $500 or over.

It will be seen at a glance that some of these acts are acts of actual fraud, and that under the State laws the punishment is very severe for such acts, and for some others an attachment will issue, which, in the first instance, embarrasses if not ruins a man long before he has been heard on the merits of his case.

Under section 19 of this act any persons against whom any of the acts mentioned in section 2 is alleged is entitled to a trial by jury on that issue. The language of that section is as follows:

SEC. 19.—JURY TRIALS.—(a) A person against whom an involuntary petition has been filed shall be entitled to have a jury trial, in respect to any act of bankruptcy alleged in such petition to have been committed, upon filing written application therefor before the expiration of the time within which an answer may be filed. If such application is not filed within such time a trial by jury shall be deemed to have been waived.

(b) If a jury is not in attendance upon the court one may be specially summoned for the trial, or the case may be postponed, or, if the case is pending in one of the district courts within the jurisdiction of a circuit court of the United States, it may be certified for trial to the circuit court sitting at the same place, or by consent of parties when sitting at any other place in the same district, if such circuit court has or is to have a jury first in attendance.

(c) The right to submit matters in controversy, or an alleged offense under this act, to a jury shall be determined and enjoyed, except as provided by this act, according to the United States laws now in force or such as may be hereafter enacted in relation to trials by jury.

In attachment proceedings, as well as in cases where order of arrest will issue, we usually hang the man and try him afterwards; but in this proceeding we give him a chance to prove his innocence before a jury of his peers before subjecting him to any of the rigors of the law.

But the mightiest objection to the involuntary feature is that it is taken against the will of the debtor. Carefully examined, this objection loses much of its force. Consider what unbusinesslike, if not reckless and immoral, methods lead to. Can we truthfully say that he who plays with fire and burns himself wills it not, when we consider the old maxim? If he did not he would be an exception. Can we say that the way to fraud is an easy one, or is it the result of careless methods, which are occasional at first and afterwards become habitual and willful?

The time to stay the hand of the petitioner in the involuntary proceeding is at the time you are making the contract which binds you to him.

Make no contract you can not carry out. But the answer is, misfortunes will come, and sometimes come unforeseen. This is sadly true; but these are exceptions to the general rule, and the cases are rare and more exceptional where the true merchant will take advantage of the honest unfortunate. Experience is the other way. Find me the merchant who is the oppressor and I will find you the man who, sooner or later, will feel most keenly the rigors of this law, because he is unjust and his injustice will be as plain to his creditors as it is oppressive to his debtors. I will not consider this as a bill affecting classes, because all debtors are creditors to some extent and all creditors are debtors. But it has been a matter of some surprise to find the opposition to this bill attributed to the South and West, where the sentiment for the increase in the volume of our circulating medium seems so strong.

This bill will make buyers careful. The use of paper will not be so great. If it has a tendency it is to increase the demand for a greater volume of money. It is not necessary to develop this idea. If this condition of things follows, how the influence of our financial institutions will diminish! How much more closely will they be confined to a legitimate business at reasonable profit. And where credit is demanded with how much more confidence can these institutions distribute money where it is most needed now, instead of hoarding it as they are now doing, or if not hoarding it, lending it to their next-door neighbor and watching him suspiciously while he uses it.

Of course trade has got beyond our friend's idea, who said:

In all wise commerce payments large or small should be over the counter. If you can not pay for a thing do not buy it. If you can not get paid for it do not sell it. So you will have calm days, drowsy nights, all the good business you have now and none of the bad.

That is and would be a happy condition of trade for the buyer and the merchant, but in the United States we are a good ways away from the millennium. But there is a great deal in the thought that the less complex the conditions of trade are the better is the state of trade.

We have thus far considered the involuntary features of this bill from the standpoint, first, that a uniform bankruptcy law is conceded to be a necessity; second, that the involuntary feature is not a hardship on the honest man; third, that such a bill as we have before us will be of benefit to the whole country by restoring confidence and certainty as a basis of operations in trade; fourth, that it is not intended to affect any class or any section and that all are subject to its provisions.

Let us assume for a moment that there is a creditor class and a debtor class, distinct in themselves, constituting different individuals, and examine the possible harshness of this law on the debtor class, and let us dwell for a moment on the theory of the true merchant as developed by the author of Unto the Last. He says:

The merchant's function (or manufacturer's, for in the broad sense in which it is here used the word must be understood to include both) is to provide for the nation. It is no more his function to get profit for himself out of that provision than it is a clergyman's function to get his stipend. The stipend is a due and necessary adjunct, but not the object, of his life, if he be a true clergyman, any more than his fee (or honorarium) is the object of life to a true physician. Neither is his fee the object of his life to a true merchant. All three, if true men, have a work to be done irrespective of fee, to be done even at any cost, or for quite the contrary of fee; the pastor's function being to teach, the physician's to heal, and the merchant's, as I have said, to provide. That is to say, he has to understand to their very root the qualities of the thing he deals in, and the means of obtaining or producing it; and he has to apply all his sagacity and energy to producing or obtaining it in perfect state, and distributing it at the cheapest possible price where it is most needed.

And because the production or obtaining of any commodity involves necessarily the agency of many lives and hands, the merchant becomes in the course of his business the master and governor of large masses of men in a more direct though less confessed way than a military officer or pastor; so that on him falls, in great part, the responsibility for the kind of life they lead, and it becomes his duty not only to be always considering how to produce what he sells in the purest and cheapest forms but how to make the various employments involved in the production or transference of it most beneficial to the men employed.

Supposing the captain of a frigate saw it right or were by any chance obliged to place his own son in the position of a common sailor; as he would then treat his son, he is bound always to treat every one of the men under him. So, also, supposing the master of a manufactory saw it right or were by any chance obliged to place his own son in the position of an ordinary workman; as he would then treat his son he is bound always to treat every one of his men. This is the only effective, true, or practical rule which can be given on this point of political economy.

And as the captain of a ship is bound to be the last man to leave his ship in case of wreck and to share his last crust with the sailors in case of famine, so the manufacturer, in any commercial crisis or distress, is bound to take the suffering of it with his men, and even to take more of it for himself than he allows his men to feel, as a father would in a famine, shipwreck, or battle sacrifice himself for his son.

All which sounds very strange, the only real strangeness in the matter being, nevertheless, that it should so sound. For all this is true, and that not partially or theoretically, but everlastingly and practically.

The merchant is like every other class, influenced to some degree by his environments. Integrity is his strongest trait, and a reputation for this is invaluable in business. Even the best of them, however, striving toward the ideal, must take into consid-

eration the market in which they buy and sell. And it is to the interest of every merchant to rid his community of the selfish competitor. If he does not he suffers injury to his community as a market for buyers.

On this principle the oppressor and the shylock can not endure in a community of reputable merchants, and this is the debtor's safeguard against oppression.

Merchants as a rule are practical men, men of integrity and experience, with a large knowledge of the world. While they know and pursue as a rule, as far as they are able, ideal practices in trade they must protect themselves, and it is our duty to protect them from that foe of trade, the fraud. Hence assuming him to be the creditor always and himself never the debtor, fair treatment of his debtors is, first, his principle, his instinctive act; secondly, his interest as an individual and as a member of a community that invites trade.

The honest debtor who does his best has little to fear from such creditors, even if misfortunes do come. They may be depended on for consideration, generosity, and equity. The only warning I would utter to the debtor is, Choose your merchant. Do not be afraid to pay a price for your goods. If you deal with an honest man you will get value. If you do not, sooner or later you will be robbed. We read in the Art of England that—

There is no such thing as just or real cheapness. When you obtain anything yourself for half price somebody else must always have paid the other half.

Here again, then, the bankrupt is thrown on the generosity of the honorable man rather than subjected to the swift rapacity of the ever-vigilant shyster or the bitter vengeance of the first oppressive mercantile shylock, who may, under present State laws, force him into court and strip him of his property to the exclusion of honorable and considerate creditors who desire to give the debtor a chance for his business life.

This law, it seems to me, is a good one and will be of benefit to the business of this country. Let me say the business men of my own city, the great city of New York, have suffered much in the last few years. Their losses have been enormous. I do not allude only to the losses of those who have failed but rather to those who have been able to weather the storm. They have, as a rule, been uncomplaining. They have borne their losses like men, and at the same time, while their distress has been constant and continuing, they have kept a fair front to the world. They deserve consideration from us. They ask for this measure. Their request should not be hastily denied or carelessly considered. They do not, as a rule, take the interest in politics I would like to see them take, I suppose because their business duties are exacting. Instead of spasmodic reform movements, they should ally themselves with the great parties and take active part in their counsels. It is my opinion that by that means they might prevent some of the evils that they attempt every few years to reform. They can accomplish as little by these spasmodic efforts as I might by going into a dry goods district and holding a five-days' auction of dry goods.

One of the reasons why business men's administrations are failures is because there is no business men's party behind them. It would be doubtful if they could be successful, even backed by such a force.

Administrations are for the people as a whole, and must have the moral force of a great party behind them in order to approach success—a party which was here yesterday, is here to-day, and will be here to-morrow; a party that can be held responsible for failure in the administration of public offices by its representatives, and is ever present to stand by them in every effort at good administration.

Will merchants and business men ever see the necessity of lending their personality, their intelligence, their energy, to such a party, instead of degrading their communities by attempts to degrade its public officers, and spending their efforts at futile attempts at so-called reforms, which are but the horns on which designing politicians are tossed into power?

Let me say in conclusion that sooner or later the clouds of depression which overhang us must break. The business atmosphere will clear and after the mist has risen the merchant will see old familiar faces and new ones come to meet him on new conditions. The reunion will be a happy one, I trust. The buyer will buy and the seller will sell in mutual confidence. They will part with an identity of interest and sympathy which becomes their relation. The buyer goes to his home; he becomes the seller; he meets the consumer on new conditions; trade is revived; the honest man has survived his trials, his difficulties; he now reaps the reward. And in years to come he will, if this bill becomes a law, look back upon our work as at least contributing to the confidence so essential to the revival of business.

This revival is my sincere desire, and in my judgment we can make no mistake if, under present conditions, we pass this bill, and trust to the future to bring about conditions where any kind of bankruptcy bill will be unnecessary.

Proposed Investigation of Bond Sales.

SPEECH
OF
HON. WILKINSON CALL,
OF FLORIDA,
IN THE SENATE OF THE UNITED STATES,

Wednesday, May 6, 1896.

The Senate having under consideration the resolution submitted by Mr. PEFFER, proposing an investigation of all the material facts and circumstances connected with the sale of United States bonds by the Secretary of the Treasury in the years 1894, 1895, and 1896—

Mr. CALL said:

Mr. PRESIDENT: I desire to leave the city for some days, and I wish to put upon record a few observations upon this subject and others connected with it.

Mr. President, it is not necessary to support this resolution that there should be any kind of criticism upon the President of the United States or the Secretary of the Treasury. I think that it is their duty as well as their interest to demand that this inquiry should be had and this resolution passed, because there is a widely feeling of discontent in the country. There is an opinion extensively prevalent that there has been an unwise policy pursued in the administration of the Treasury Department in this respect, and whatever may be the fact in regard to it, it is certainly only right that the people of this country should have a full statement on the part of that department of the Government which is specially charged with inquiry into all subjects which are connected with the public good and within the jurisdiction of the Federal Government. So, admitting all that may be said by the Senator from New York to be true, it is unquestionably the duty of this body, representing the public opinion of the people of the United States, to ask that whatever facts exist in the Treasury Department in relation to this subject shall be placed before Congress; and in doing this there is no implication of reflection, there is no judgment in reference to the wisdom or unwisdom of the policy of the Department, but there is simply an answer to a widely prevalent feeling on the part of the people of the United States.

There is another reason for this investigation entirely disconnected with the two political parties in this country. And I wish to say that whatever may be said in regard to the two great political parties which have existed in this country, and which have changed from time to time their names and to some extent their principles and policies, political parties are formed upon ideas, upon public policies; and although the ingredient of tradition and prejudice exists in one and the other among the great masses of the people, still there is a profound sentiment of opinion, of judgment, of consideration of public policy, that prevails with the people of this country, even the humblest and most ignorant of them, and it can not be denied that now, with the belief that there is almost universal want, with a feeling that can not be argued away, but exists in the personal wants and sympathies of the people, that in every household there is want, that the means of supplying the comforts and the necessities even of life are scant and hard to be obtained—in the midst of universal dissatisfaction and the belief on the part of a great portion of the people that we are following the public policies of Europe, which have created vast pauper populations—in the presence of a feeling of that kind, how wise is it that in the interests of conservatism, in the interests of truth, there should be light shed upon all public transactions, and that this department of the Government should show itself anxious to respond to the public sentiment and provide remedies, if remedies are needed, to arrest this condition of pauperism and want, this stagnation and paralysis of business, which exists throughout the country. In the opinion of many persons, it is largely founded in the financial policy of the Government, and that opinion is strengthened by the declarations of the distinguished Secretary of the Treasury during twenty years of public life. If it be an error unquestionably all the light which can be furnished should be thrown upon that subject for the satisfaction of the public mind.

I am one of those, Mr. President, who believe that there is great danger to republican institutions to-day. I am one of those who believe that the existing financial policies of this country are upon the verge of producing revolution, that they are building up a great privileged class of aristocrats in sentiment, in feeling, alien and foreign in interest and in patriotic sympathies to the institutions of this Government. I believe that there is a secret conspiracy to overthrow this Government and establish in its place a government formed upon the systems and bases of old Europe. Why not? Why shall 65,000 people hold in a power of taxation the greater part of the wealth of 70,000,000? If this be false let us have an inquiry and prove that it is so. Do not let us fly from the charge; do not let us cover it up. If the landed estate of the

great public domain of this country has by one policy and another been conveyed to a few individuals and is now the property of the great European bondholders and brokers in national credits, let the fact be exposed. I do not share in the criticism of the Senator from New York of the speech of the Senator from South Dakota [Mr. PETTIGREW]. I think his propositions, apart from the implied reflections on the public officials, were correct and could be sustained, and that they were forcibly and clearly stated.

Mr. President, in my own State of Florida homesteads are denied to the people of that State and the public land has been given over to the control of a few men. If that be not true, come forward and disprove it. Let light be thrown upon these transactions. Examine your Interior Department, your Treasury Department, and all your Departments, and see if by some methods the public property, the power of taxation, burdens impossible to be sustained, have not been created by public functions the property of a few individuals. I state that to be so. I am a Senator of the United States; I have been elected four times by the people of my State in defiance of this policy and these corrupt methods, which policies have disfranchised the whole population of my State. I charge it upon them, and I should prove it if the opportunity were allowed to me.

Shall there be no inquiry? Are we ready to destroy this republican government of ours and smile when these things are said, and when we propose to offer proof, bury these statements in your committees, under the pretense that you are going to have investigation? The people of all parties are true to republican government. They are loyal and true, and they will see that their right to govern is respected.

Mr. President, this resolution derives its significance from the fact that there is a widespread feeling throughout this country that this condition of fraud and corrupt methods results from public policies. We know that there is a Federal party and always has been in this country; and the richer men grow the more disposed they and their families are to reestablish the aristocracies and despotisms of Europe, with its class privileges and with contempt for the people and their rights. Why was Debs, the chief officer of the workingmen, treated as he was? Why did we march troops, against the protest of the governor of Illinois, into the State of Illinois, against the plain precept of the Constitution, with the governor protesting his ability and his readiness to preserve property and protect the interests of the country? And no word of condemnation of it from that body, the Senate, charged with the duty of protecting the Constitution and the rights and liberties of the people.

Mr. President, it is time that we should respond to the opinion of the people. It is time that we should answer their inquiries, Why is it that pauperism and poverty increase? Why is it business is stagnant and paralyzed? Why is it that money is not to be had except upon the most extortionate and ruinous rates, and in many portions of the country not to be had at all? What is capital? We hear it spoken of as if it were a sentient being? Capital has its rights. What is capital? It is simply the means of exchange. Labor and invention applied to nature's materials create capital. Wherever there are labor and industry and land and material there is capital.

My learned and honorable friend the Senator from New York [Mr. HILL] speaks of New York as a State of great wealth. Unquestionably it is. The city of New York, like all cities, has drawn from commerce its princely merchants and it appropriates in the ways of trade and exchange the greater part of man's production. It is legitimate, but it is the labor of the people throughout this vast country which pays its toll at its gates, its tribute and custom. So we go on to this proposition. You speak of greenbacks and of the contrary and opposing policy of gold or specie or silver redemption. Who can tell the failures, the disasters, the ruined homes brought about, who can tell the vast fortunes which have been accumulated under that system? I shall not discuss its wisdom or its unwisdom, but it will not do to declare that the public credit, resting upon the right of confiscation of the labor of 70,000,000 people, is less powerful than the ingenuity in trade and traffic and brokerage in public credit of a few individuals. It will not do to assume that the power of Government to take everything possessed by laboring, industrious, inventive people is not so great a power—and immensely greater—than the ideas of a few men banded together in commerce and trade. It is public credit alone that makes gold valuable or silver valuable or paper valuable. It is the public credit of the country.

Mr. President, what better evidence do we want than that? And we hesitate to accept this as a controlling fact. Why did the syndicate want the bonds? Why did they jump from the price they proposed to 17 and 20 cents and more premium on the dollar and offer to pay $1.17 and $1.20 for the promise of the people of the United States to pay a dollar at a later period, with annual interest? Why? The proposition is plain in itself. It is because of the high standard of the public credit of the 70,000,000 people of the United States under this free Government, as yet not overturned by monopoly, not overturned by syndicates and trusts, not overturned by a great aristocracy alien in sympathy and in faith to republican institutions. The faith of the nations, of the aristocrats of Europe themselves, in this Government and in our public policies is such that it makes our public securities the most valuable possession in the world.

That is the plain proposition. There is no denying it, no questioning it; and there are reasons why it should be so. No war, no serious possibility of war, a country increasing with vast rapidity in numbers, a country in which even unwise policies can not discourage the enterprise and invention of the people, separated by oceans from Europe, with a comparatively limited public debt. Why is it not worth more than all the nations of old Europe, with their millions of armed men, with every farmer and laborer carrying one or two or three soldiers upon his back to maintain? Why is it not true, and who does not know in the presence of these facts, that he who can obtain the pledge of the people of the United States can afford to give 10, 15, 20, 25, and 30 cents premium for Government bonds, because of all accumulations they are sustained by the greatest possible security that can be given?

Therefore, leaving all party views out of consideration, leaving all questions relating to past policies out of view, it is right that this body should ask to be informed, without implied reflection upon the President or anyone else, what are the facts in regard to these transactions, that it may be spread abroad and wide throughout the country that the people may see that there is no rightful foundation for criticism or implied censure, or even the censure which prejudice sometimes imparts to men—political malice, personal malice. Those high offices should rest unsullied in the minds of the people by even a suspicion of wrongdoing.

But I wish to go a little further in these brief observations; and I will ask leave to publish some statements which I have here without troubling the Senate to read them.

Mr. HILL. Will the Senator please tell us what they are? Will he describe them?

Mr. CALL. One of them is an extract from a speech which I believe was delivered by Wendell Phillips; another relates to the Smithsonian bequest; another one is a statement of the foreign public debt of the United States and its gradual increase. There are other papers, extracts from some of my own speeches relating to public lands and papers from the Interior Department, all of which, however, are matters which it would take some little time to read. If there be no objection, I will insert them without detaining the Senate to read them.

The political condition of our country demands the consideration not only of persons intrusted with the conduct of public affairs, but also of the public and of all persons interested in the general welfare and the permanence of our institutions. Causes are at work in themselves powerful enough to overthrow long-established governments, unsettle traditional customs, and rearrange the social order. It should be our wise care and foresight that these elements of force, which can not and ought not to be suppressed, shall be led along the paths of peaceful and orderly improvement of the conditions of life for the great body of the people. In this way, and this alone, can we avoid that commingling of these irresistible social and economic forces which overcome all other forces and lead the people into a revolution which will have its way until spent by its own violence.

If we could look beneath the surface and accurately note the condition of life of the mass of the people, if the statistics of modern economics had been or could be obtained, we should find the great evils which create and precede violent civil and social commotions widely prevalent and increasing in activity and force.

The poor in the extreme of poverty increase day by day in our own country, the most favored and prosperous of all lands. The great army of unemployed recruit their numbers constantly from the ranks of wretchedness and despair. Year by year the procession grows of those who descend from the ranks of comfort and comparative independence into poverty and crime and suicide and is swollen by great numbers who ask for labor as a boon; to whom abundance, comfort, shelter, and protection is a stranger from their birth to their death; to whom suicide is the only refuge from horrors far worse than death; whose misery drives them to seek that "undiscovered country from which no traveler has ever returned"; whose conscience does not make cowards of them; whose misery dulls the fear of something after death, which makes "cowards of us all and gives us pause." The columns of the newspapers continually note the suicide of persons because they can not obtain work to furnish them bread and shelter; who are driven by despair to end the lives of themselves, their wives, and children.

In the Westminster Review for September, 1895, Mr. Joseph Burgess, candidate for Parliament, is thus quoted:

It was the question of the unemployed upon which the Independent party would ride into power. * * * The central idea that the grossest scandal of our civilization was, and is, that we had in our midst millions of men, women, and children who were always on the verge of starvation. He believed that the estimate of 1,000,000 unemployed and 3,000,000 people in want

was rather under than above the mark, the constitution would not last if they only had all the poor unemployed people herded together in one place where they would strike the imagination of those who were in better circumstances. He looked forward to a promised land where honor was given to merit, not to wealth; where the gauge of honor was not what a man won for himself but what he had done for others. He invited them to go up and possess this land.

Again Miss Martyn speaks in the same article as follows:

Equality of opportunity—

She meant not only in sharing the work which created wealth, but equality of opportunity to—

breathe free air; to drink in the sights and sounds of nature; to revel in the creations of art; to participate in the triumphs of science; to become true lords of creation; to develop every faculty—physical, mental, and moral—to the utmost possible extent.

In the Nineteenth Century for December, 1892, Mr. John Burns makes the following statement:

Outside the official pauper class, as Mr. Charles Booth proves, there are hundreds of thousands of people whose standard of life and comfort, from the point of view of food, clothing, and home accommodations, is lower than the pauper or criminal; yet these people will not accept relief, but struggle on in the vain hope of work that never comes. * * * Having experienced the lot of the workless worker, I believe with Carlyle that a man willing to work and unable to find work is perhaps the saddest sight that Fortune's inequality exhibits under the sun.

Pathetic it is to see the laborer, strong in limb, healthy in mind and morale, willing to work, but compelled reluctantly to be numbered with the ever-increasing legions that machinery, invention, competition, and monopoly recruit for idleness. But the first step necessary to a change is his own awakening, and that at last has come. His eyes are now open, and the Samson of labor has pulled from them the bandage that class rule, apathy, and his own ignorance and drunkenness has placed upon him. He sees that the soil after its crops lies fallow and is fed. The trees, after their fruitful loads have gone, rest and recuperate.

The rich go to other climes to rest or hibernate in slothfulness at home. But he, the worker and producer for them all, is linked to an idleness that worries and fatigues. His limbs are rusted with a vile repose. The opportunity of using them is denied him. The city his hands have helped to make rich and beautiful has nothing to offer him—not even the chance of further work—the little all he modestly craves—and in refusing the community robs itself and leaves him poorer still.

But even more pathetic than the unemployed male worker and industrial nomad is the workless woman or girl in search of work in a city of great distances. Trudging from shop to factory with thin boots, with little food, without the support trades unionism gives to men, lacking the stimulant of association, isolated by her sex, with no organization, often the victim of bogus registry offices, friendless and alone, she searches for work that slowly comes. Before her the workhouse or the street, she bravely suffers in silence and has no alternative to starvation but the eating of the crumbs of charity or the loaf of lust.

The industrial Andromeda, chained to a life she loathes, incarnates all the poignant sorrow and desperation of the merciless struggle for existence among the poor, against which virtue, honor, and labor often fight in vain.

The inspiring motive of all is the disposing of the unemployed, the slaying of the Frankenstein that the fruitlessness of their own labor has created. Disguise it how we will, hide though we may, looming up is the great, all-absorbing question for all countries and governments to face, How can the honest worker be provided with work uncontaminated with pauperism's degrading taint and charity's demoralizing aid? The official statutes reveal the nature of the problem—the fact that a cruel administration of the poor laws which mixes honest and criminal together has reduced official pauperism from 46 to 20 per cent per 1,000.

The fact is, the unemployed have to be kept in one of three conditions—living on the rates as a pauper; or as a criminal, kept in prison; third, or as a wanderer in the streets, preying upon his fellows or the charitable rich; forced to live like a vagrant camel upon the hump of his own melancholic poverty, slowly getting physically exhausted, morally and mentally degraded, till the manhood is crushed out of him, and he becomes one of those fearful wrecks to whom death itself would be the greatest relief.

—

Commander Booth-Tucker, of the Salvation Army, fresh from his first plunge into the east-side slums of this city, sent the following statement to The World yesterday:

To the Editor of The World:

Reckoning the submerged at only one-tenth of the entire population of the world—and the calculation is admitted to be a moderate one—we have the enormous total of 150,000,000 of human beings in a state of chronic want and semistarvation.

If Mr. Booth-Tucker's estimate approaches correctness—150,000,000 people in want, unemployed, and without the possibility of obtaining work, the victims of starvation, despair and suicide—we stand appalled at the ghastly spectacle and demand a remedy immediately. One hundred and fifty million human beings in the extreme of sorrow, misery, degradation, and death! We demand of ourselves, Are we sharers in this responsibility? Are we responsible for this great holocaust, this hell of despair with which the world is overwhelmed?

Is this mighty sacrifice of humanity, constantly occurring, while the churches lift their steeples to the heavens and the sacrifice of praise and thanksgiving, of music and song, ascends to the Prince of Peace, who brought the glad tidings of peace and good will among men, is it true that mingled with it are the cries of anguish of 150,000,000 human beings, of Christ's brothers, of God's children, suffering all the tortures of the damned and perishing in want and misery, disease and starvation? Is this the result of our religion and our civilization? If so, there must be something wrong in our systems or our policies or our parties, for surely this is not a necessary condition, although it has accompanied, more or less, the development of our modern systems, and is, in part, the result of density of population. What remedy have we? What can we do or try to do?

Mr. Chamberlain, a distinguished English statesman, has given this subject intelligent and able consideration. In 1885, in a succession of brilliant speeches, he pointed out, to the great satisfaction of the laboring people of England, that "the common rights of ownership of the land had disappeared. Some of them had been sold; some of them had been given away by people who had no right to dispose of them; some had been obtained by fraud and some acquired by violence." This is a picture of the land tenures and the means by which all the land, all the soil, of the country has passed into the hands of a few men.

Again, Mr. Chamberlain says: "How are we to increase the material resources of the poor? For my part," he answered, "I see no hope whatever except in a radical revision of the laws which affect the tenure of the land."

Again, to the same purport: "How to restore the laborer to the land is the great question with which the great mass of the English people are chiefly concerned. We have no accurate statistics on these important subjects, and must therefore rely on those of foreign Governments. It seems as if our public system is to conceal and suppress information on these subjects."

In 1892, in England, 22 unions, with 268,658 members, had in October 19,684 out of work. The figures for 7 years were:

	Per cent.		Per cent.
For 1886	10.1	For 1890	2
For 1887	8.6	For 1891	4.45
For 1888	4.4	For 1892	7.83
For 1889	1.8		

The following table taken from the Nineteenth Century Review, Lord Scott's Publication Company, casts light on this subject.

The census of London unemployed in 5 districts in 1886–87 compares as follows with 1892:

	1886–87.	1892.
Dock laborers	55	25–40
Laborers (general)	37	12
Shipwrights	44	44
Masons	37	3
Painters	33	12
Carpenters	27	4

The condition, then, is a chronic one. The causes are want of work, want of employment—not enough work for all. The causes of this are found to be overwork of some, monopoly of the sources or means of employment, and chiefly by the exclusion of men from the soil, except on terms of exaction too great for him to bear. A profound thinker on these subjects, although an enthusiast, says the economical subjection of the mass of labor to the monopoly of the means of labor that is the source of life has at the bottom servitude in all its forms, of all social misery, mental degradation, and political dependence, and the economical emancipation of the working classes is therefore the great end to which every political movement ought to be subservient.

Mr. Garrison, in a late speech in Boston on immigration, says landlordism, militarism, and militantism are the great causes of evil in modern life. But there are causes which will produce this result if landlordism and militarism do not exist.

Let us look a little further into this question. We are on the eve of a great political struggle. We are talking about protection. We have a tariff which is highly protective. We are speaking of the election of a President upon the policy of a financial change or the preservation of the present financial status of the country. These are questions which are coming before the people for consideration. Is it not well that the facts should be carefully investigated, that we should know why it is that in this country there is widespread suffering and want? Is it not well that we should know to what extent the power of taxation has been conferred upon private individuals, to what extent is it true that the Rothschilds and their associates hold the power to put their hands into every laboring man's pocket and deprive his family of the necessaries, the comforts, and the luxuries of life?

Is it true or not? Why should not this body have devoted their time to deliberations upon these questions? How many men there are who have grown enormously rich, possessing hundreds and five hundred millions of dollars! How were such fortunes obtained, by the pursuits of merchandising and trade and commerce, or by the power of taxation conferred by us? If it be not true, let us demonstrate the fact to the people. Let us silence these cavilers and objectors. Let us see what are the figures. If it be so, we are to have a Government built upon the overthrow of the people's power by a privileged class, resting upon grants of taxation similar to those which were destroyed by the people of England one hundred years ago and which their Parliament to-day will not sanction. If it be so, and that is a better condition of things, let us adopt and declare to the people that we have made a mistake in the idea of government by the people and for the people, a government in which there shall be no entail, in which there shall be equality of distribution, in which there shall be, so far

as the law is concerned, equality of right, of opportunity, of access to the soil.

Why disguise it to ourselves? These are questions which we must meet. These are questions which republican government must solve. Is the tribute exacted from the people too great? Is it more than can justly be required? Is it more than is consistent with widespread prosperity? Is the privilege denied to every poor man to travel hither and thither with his wife and child and enjoy the elevation which comfort gives? Is it more than is consistent with saving them from the gutters and slums, from that vast army of ever-increasing paupers which swells the procession from the ranks of comfort, their homes and children threatened with it, into the ranks of misery and degradation and vice and crime? Are these questions unworthy of the American Senate?

When many persons believe that the gold policy, which the honorable Senator from New York extols as sound and beneficent, means the monopoly of money by a few men, means the prescription of extortionate rates of usury, means the ownership of all houses, of all stores, of all lots, of all places where commerce exacts toll and tribute of the toiling multitude, is it not wise that we should throw open the doors of inquiry and say, as a wise monarch would say, if this even were a monarchical government, "The happiness of the people, the prosperity of the great masses, the freedom of the laborer, are objects of government and of all sound and beneficent policies, and if there be these evils let us correct them?" This is the opinion undoubtedly of a vast mass of the people of this country. I will not say whether they be a majority or not, but if I were to rest my hopes of political future upon taking one or the other side of this alternative, I should be upon the people's side. I should say that the American people have the power, the wisdom, the intelligence to adopt public policies which should at least be equal to those of New Zealand, whose people are descended from the same ancestry, with the same civilization, with the same ideas of political and religious liberty. I should say that I would have no fear that the monopoly of money, whether it be gold or silver or paper, the monopoly of that which is legal tender for every man's debt, will be rebuked and prohibited by the great unanimous verdict of the people of the United States.

I doubt whether any President, of whatever party, be he Populist (I do not think it impossible in this country that there may be a new party; I do not think it impossible in a country where people reflect and where principle and distinction of principle exist, that new ideas may come) or of any other party—I say I do not believe any wise man of any party elected to be President would sustain gold money if it be a monopoly. In my opinion it is an unquestionable monopoly; it is nothing but a monopoly. A few men in Europe, brokers in the public credit of the United States and other nations, control the gold as they would control diamonds or pearls or anything else that it is possible to control.

I saw in a New York paper the other day that the Rothschilds had loaned twenty thousand million dollars. Forty men have loaned within the last few years twenty thousand million dollars. How can forty men acquire twenty thousand million dollars? The institutions are faulty, the policies are faulty. What are these twenty thousand million dollars in? In land, in labor? No; in the power of taxation created by law, in government bonds imposing this burden upon the people.

My able and distinguished friend the Senator from New York can well devote his abilities and his acute reasoning to considering the remedy for that condition of things. Take our own country. Our national debt increases, over and above the vast exports which we send abroad, all of our agricultural products chiefly, and somewhat of manufactures, as I see by the statement which I have here, from twenty-seven to forty million dollars a year, notwithstanding we send abroad nearly the entire surplus of our production. Yet the public debt, the gold debt, of our country to Europe, to the Rothschilds, richer by far than all the countries of Europe, protected against possible revolution, war, and its disasters, better than any country, increases yearly. Yet with this vast superiority we are going into debt every year from twenty-seven to forty million dollars to the poor people of Europe, who do not possess within $2,000,000,000 the wealth which we possess. They are burdened with debt twenty times more than ourselves.

How is that? Do you go to your poor neighbor, inferior in credit, in resources, to yourself to borrow money, with your production far, far above his? It is a trick of the trade; that is all. It can not be that we can be richer; it can not be that we can be more inventive, more productive; it can not be that we can feed our own people and also the people of Europe, and yet be their slaves and tributary to them for the necessary means of carrying on our own Government.

I am very far from objecting to the proper accumulation of wealth. I do not even object to these public franchises, with the power of taxation inherent in them, being vested in private hands if we are strong enough to control them against the corrupt use of the people's money which they take from them. If they are to come here and buy seats in the Senate of the United States, if they are to come here and buy the seats of members of the other House, when a respectable person comes here and says, "I want an opportunity to prove it," I do not think it is quite the thing to say that State rights prohibit it.

If State rights mean the corruption of the power of the State by foreign influences, then we had better not have it. We can not have any worse condition of things than that. We can not have any more destructive condition of things for the progress of mankind, the higher civilization, the better condition of the people of the world and of our own country, particularly the elevation of the American laborer, and contentment, comfort, education, and happiness in every home. We have the best people in the world. We have them because we have had our lands unoccupied and free scope was given to poverty and want and disaster to go upon the public lands and save themselves from the gutter, to save themselves and their families from absolute want and beggary. This country has been the pathway of relief for the poor and suffering. I have seen it. I have lived in a frontier country the greater part of my life. I know how beneficent free homes are to the poor people, and I know the selfishness and wickedness of the public policy have robbed the people of their homes and sentenced them to lives of poverty and humiliation.

It has not been my purpose to occupy the attention of the Senate for any great length of time.

Booth-Tucker, the leader of the Salvation Army, in regard to the extent of the misery inflicted upon the people of his country by the existing conditions, states that there are 150,000,000 people upon the verge of starvation in the world, and that in our country they are increasing and increasing rapidly. He alludes to the Salvation Army, which has been doing a grand work. I recognize in this great and powerful organization, extending from India and throughout the states of Europe to every city of the United States, the unselfish and beautiful benevolence of men and women who rescue from the vast army of paupers and criminals the humanity which once lived in comfort and enjoyed the purity of homes within the circle and folds of society and religion.

I recognize that grand work. I have it upon the authority of these people, not only the book In Darkest England, but of the new salvation leader that what was pronounced not quite a century ago in the celebration of the Smithsonian bequest to be the great object and purpose of government is still its great purpose. John Burns, Chamberlain, and the other great statesmen of England state that to find work for the unemployed, to fill the homes of the workless who can not obtain work, is the great problem of modern statesmanship. It underlies the political ideas of all political parties. The old traditions have been lost in the centralization of power which comes by the corruption of all sources of public authority and public power.

Who can justify the imprisonment of the three California men for conspiracy?

Mr. HILL. What California men does the Senator from Florida refer to?

Mr. CALL. I am referring to the three at Los Angeles who were sentenced to imprisonment for eighteen months. I do not remember the names. The Senator from California, if he were here, could give them. But for eighteen months they were sentenced to imprisonment, and a pardon has been refused them. Sentenced for what? They were laborers employed upon the railroads. They were the men who, with sleepless energy, toiled day and night; they were men of the class upon whose vigilance and skill and fidelity the lives and transportation of all the productions of this great country depend. They were sentenced to eighteen months' imprisonment. Why? Because they combined the same as syndicates combine to endeavor to better their condition.

Mr. HILL. Will the Senator please explain what was the alleged ground of their imprisonment? What was the charge against them?

Mr. CALL. Conspiracy to stop the mails.

Mr. HILL. Were they tried before a jury?

Mr. CALL. Oh, yes, and a judge. That only serves, sir, to show, if the fact be that a judge and jury, in face of the law and facts, sentenced these men, that, while the institution of judge and jury are right, that judge and that jury deserve and should receive condemnation. Legislation should be had to prevent such a judge and such a jury from again inflicting upon a free-born citizen of the United States and a deserving laborer such a criminal and oppressive punishment. That is the remedy for that. But I say no one can justify it. I have read the briefs in the case. It is simply an evidence of how, even as to an innocent person, without an intention to do wrong, the progress of opinion goes in favor of dynastic privileged classes, privileged aristocracy, federalism, and against the institutions of freedom and the rights of the people.

There was an old Federal party. There is a Federal party now. We have Federalist Democrats and Republicans, and I doubt

very much whether we would not have some Federalist Populists. Party names are not everything. It is ideas. You can not give the wealth of the country to me and to others without building us up. It is exclusive. It is in favor of privileged classes. I know something of it. I have seen it. I have seen it in conditions and forms in which it will never be repeated, but which were more favorable than can ever exist in any other community. It will grow. We know the fact that Thomas Jefferson and the people of the South who held large possessions, grew up with the refinements and tastes and elegances which belong to hereditary fortune. And while, in the free air of the new America, with its unoccupied soil, with its vast feeling of enterprise and activity, there grew up a splendid manhood and womanhood—elegant, refined, brave, courteous, and patriotic—it was not the result, wholly or in large part, of the accumulated fortunes in their hands, but rather of the circumstances which surrounded them. It will behoove us to prevent its recurrence, because that is the sentiment of the people.

They sympathize, in my judgment, with those who sympathize with them. They do not want an aristocracy. They do not want a privileged class. They do not want men of too great fortunes, of hundreds and hundreds of millions of dollars derived from the power of taxation. They realize the fact that that is the condition of things to which our economies and our institutions are tending.

I have nothing to say about bonds or who was responsible for their issue or whether it was necessary in the growth of the conditions which have occurred. But I do mean to say when a resolution is offered here of inquiry upon any subject which the public opinion demands, that inquiry should be accorded, and while I am willing to make liberal grants of public money, and even franchises for public purposes, and to do full justice to those already granted, and to the citizens to whom they have been granted, I do desire such public policies as will make them minister to the convenience, comfort, and welfare of all the people, and to the perpetuity of the Republic.

Bankruptcy.

SPEECH

OF

HON. RICHARD W. BLUE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 1, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcies throughout the United States—

Mr. BLUE said:

Mr. CHAIRMAN: Bankruptcy laws have not been favored in this nation. Three have been enacted since the organization of the Government—one in 1800, which was repealed in 1803; one in 1841, which was eliminated from the statute books in 1843; the third and last one in 1867, which remained upon the statute books until 1878, when it was, after several efforts, repealed. All these acts contained insolvency clauses, chiefly for the benefit of the creditor. Each one also contained provisions for involuntary bankruptcy.

A serious objection to any bankruptcy law in this Republic is the inability of the lawmaking power to make it uniform in its application. With a nationality composed of forty-five separate States, each with a constitution and code of laws of its own, varying as the necessities of the people may demand, the task seems hopeless and impossible.

The framers of our Constitution were students of the laws of the mother country. The spirit and genius of our institutions have been molded and fashioned after the teachings of our Anglo-Saxon ancestors. The common law, as it existed at a certain period in the history of the mother country, modified to suit the conditions and necessities of the people, has been adopted and is yet in force in many States of the Union. In other sections of the country the civil law, modified to meet the necessities of the surroundings and advancing civilization of the race, has been adopted and approved. An aggressive, industrious, and highly civilized people, united in a common destiny and solicitous for a common prosperity, happiness, and development, is working out the problem of self-government. One of the chief factors in the solution of this problem is the absolute independence in local affairs of each State in the Union. Each State in its home rule and management of the affairs of its people among themselves has a separate and distinct entity. But each is also a member of that greater and superior entity—the United States of America. As a consequence of this system, each State has its exemption, insolvency, and attachment laws, differing as the peculiar genius and necessities of its people demand. To harmonize this with any general bankrupt law so as to make its operation uniform throughout the nation is an impossibility. An approximation is the most that can be expected. It may be stated as an axiom that bankruptcy laws here have ever and always been unpopular; that public sentiment has favored them only as matters of extreme necessity, and sought to have them repealed as soon as that inexorable necessity has passed.

The difficulties surrounding the enactment and enforcement of an acceptable bankrupt law in this nation seems to have been clearly understood by Senator Conkling, who, in speaking of the act of 1867, said as follows:

> I do not know, Mr. President, perhaps I should not feel warranted in saying—but for a consideration which I will refer to in a moment, and which alone would restrain me—that the present bankrupt law, with changes which we might hope for, would be clearly a wise measure of legislation to remain: yet I am inclined to think that the most serious complaints grow out of conditions wholly unavoidable. For illustration, at least, I may say that our geographical difficulties are very great and that they can not be overcome. Men look at the administration of the bankruptcy system in Great Britain, and they compare it with ours, and they wonder with discontent that the comparison is against us. They forget that the bankruptcy system in Great Britain operates upon a limited area, amid a very dense population, with a very numerous and effectual judicial staff. England without the 12 counties of Wales has a little less than the area of the State of New York. Twenty-four million people inhabit it. Look to the taking of the census for illustration of what I am saying. The British census is taken in one night. It is taken between sun and sun and after sundown.
>
> We take an enumeration here to count all the people scattered throughout all our borders, and weeks and months are exhausted and expenses are involved which would seem apocryphal, comparing them with the expenses of taking the British census and making no allowance for the disparity of conditions. So when you come to execute a bankrupt law in the thirty-eight States of the Union, sparsely populated and illy conditioned for transit from place to place, as many localities are, without a judicial staff so numerous as to carry justice to every man's door, you find great impediments, prolixity, postponement, expenses; and accordingly you find, as was stated, I think, in a petition presented by my colleague, perhaps to-day, a percentage of the outcome of assets, and a percentage of that which is swallowed by the proceedings, and of that which accrues at last to the creditor, and very naturally say that this is a failure. But if you look into the causes, I fear you will find that most of them are such that no art in drafting a bill, no reformation in administration, nothing which falls within the province of legislation can encompass and avoid them, and so it may very well be said the best considered argument would acquit the present bankrupt act of much of the guilt laid at its door, and attribute its evil consequences, as I have endeavored to show, to conditions beyond the purview of legislation.

It may be said in this connection that there is at this time no popular sentiment in favor of a permanent bankrupt law in this nation. Whatever action Congress may take upon this subject, whatever measure it may enact into a law, it should strictly limit the time of its operation. In my opinion it should not extend beyond a period of five years. Each of the laws heretofore enacted by Congress have contained involuntary bankruptcy features. These provisions are chiefly in the interest of the creditor class and are in the main remedies for the collection of debts. The exacting creditor has ever and always sought to incorporate in the laws intended for the relief of debtors meaasures for the most speedy and thorough collection of debts. This has always been the vice of these measures. The spirit and intention of the bankrupt law should ever and always be the relief of the unfortunate but honest debtor:

> If a man has given up all his estate to his creditors, he is entitled to his release; if he has contracted his debts fraudulently or inconsistent with fair dealings, punish him; but if he has surrendered all he has give him at least an opportunity of retrieving his position and send him back into the world again with a chance of getting a living in the future and of becoming a wiser and better man; but do not pass upon him the sentence of perpetual mercantile excommunication.
>
> The principle on which all bankrupt laws ought to be framed is to leave everybody to manage their own affairs, taking every precaution against abuse.

The demand for a bankruptcy law at this time is based chiefly upon the desire of the people to have the unfortunate but honest creditor relieved from the load of indebtedness upon him and which he is wholly unable to pay; to give him a new lease of life and offer him another opportunity to use his talent, experience, and industry in the development of the business of the country. There is no general demand among the people for national legislation for further and additional remedies in the collection of debts. The present measure, which is now before this House, is radically wrong in principle. It is conceded that it is fashioned after the Torrey bill, which was prepared by the attorney of the tradesmen and wholesale dealers in their interest and for the avowed purpose of facilitating collections. This bill is wrongly named. It should be entitled "An act giving additional remedies and powers to creditors in the collection of their claims against unfortunate debtors." By the terms of this measure the debtor can be made the subject of bankruptcy and suffer all the obloquy of that term before the question of his solvency can be heard or determined. He is, in fact, by the terms of this bill, executed first and tried afterwards. However honest may have been his intentions, if he should be indebted to the extent of $500 or upward, and is unable to pay, he may, by his conscienceless and unsympathetic creditors, be thrown into bankruptcy at any time if, by the

unfavorable condition of business, he should become unable to pay for thirty days.

The nine different acts of bankruptcy named in the bill are not only in several instances inconsistent with each other, but are of such character that almost any debtor can be forced into involuntary bankruptcy. That this feature is wholly unnecessary there can be no question. Every State in the Union has its solvency and attachment laws which furnish ample relief to the creditor. He needs no other remedy than that which is already given him by the States themselves. It is the unfortunate debtor who should receive the wholesome and generous relief of a discharge. Under these State laws, in almost every instance when a debtor is found to be in a failing condition, his creditors can get together and compromise and settle with him and give release to much better advantage than to adjust their claims in the bankrupt court with all its expenditures and delays. The utmost latitude should be given to the creditors and debtors in the management and settlement of their affairs without the intervention of the public.

John Stuart Mill says:

> The tendency of public authority to stretch their interference ought to be watched with unremitting jealousy.

Sir George Jessel has said:

> Where there has been no criminality, it has been established by what might be called universal legislation that an arrangement between the debtor and his creditors is the first thing to be secured, and it should be limited to the will of the contracting parties.

Lord Chancellor Westbury has also said:

> If the creditors choose to grant the debtor his discharge, let that be their concern; if they wish to be indulgent and merciful, let them be so; it is no business of the court, but of the creditors.

Should this bill become a law nearly 75 per cent of the business men of the West would be harassed, intimidated, and oftentimes destroyed by it. In my opinion the entire section providing for involuntary bankruptcy should be stricken from this measure. If that can not be done, then I am willing to accept a provision for involuntary bankruptcy for actual fraud only. If this bill is not modified as suggested, in deference to the sentiment of the constituency which I have the honor to represent I shall feel constrained to vote against it.

It is proper at this time to refer to some of the vices of this proposed bankruptcy law. In the first section it seeks to give unusual definitions of words and phrases contained in the bill. Many of these definitions enlarge the scope and intent of the law to an unreasonable extent. It may be observed that a petition may be filed within four months after the commission of the act of bankruptcy as defined by this bill, and this provision of the bill further says:

> Such time shall not expire until four months after (1) the date of the recording or registering of the transfer or assignment when the act consists in having made a transfer of any of his property with intent to defeat his creditors or for the purpose of giving a preference as hereinbefore provided, or an assignment for the benefit of his creditors, if by law such recording or registering is required or permitted, or, if it is not, from the date when the beneficiary takes notorious, exclusive, or continuous possession of the property unless the petitioning creditors have received actual notice of such transfer or assignment; or (2) the date of the return of legal process when the act consists in having secreted any of his property to avoid its being levied upon under legal process against himself and to defeat his creditors, as hereinbefore provided.
>
> "Insolvent," as applied to a person, shall mean that his property is not sufficient in amount, at a fair valuation, to pay his debts, and when insolvency is to be inquired into with reference to an act of bankruptcy it shall be determined as of the date of the filing of the petition.

How would such a measure have operated during the unfortunate year of 1893? Thousands of honest business men all over the nation were for months hovering on the border of insolvency; lack of business confidence prevailed everywhere. Bankrupt stocks sold under the hammer throughout the land impaired and destroyed values and prices and demoralized business. Many of those who regarded themselves as entirely solvent, and who were in fact solvent, were wholly unable to realize on investments or meet their paper when it became due. Had one of these transferred, assigned, or mortgaged property for the purpose of paying or securing a portion of his debts, at any time within four months thereafter, he might have been thrown into bankruptcy by an exacting or remorseless creditor, although the act of transfer might have been made in absolute good faith, the debtor believing as he did that his property at a fair valuation at the time of the transfer would meet all of his outstanding indebtedness and discharge all his liabilities. This bill defines "transfer" as follows:

> "Transfer" shall include the sale and every other and different mode of disposing of or parting with property, or the possession of property, absolutely or conditionally, as a payment, pledge, mortgage, gift, or security and the creation of a lien on property by any means other than by compulsory process prosecuted in good faith.

Let us for a moment consider the second and fifth acts of bankruptcy in connection with the time of filing petition and the time of determining the value of the property of the debtor and the definition of "transfer." Said act of bankruptcy is as follows:

> Failed for thirty days and until a petition is filed while insolvent to secure the release of any property levied upon under process of law for $500 or over, or if such property is to be sold within such time under such process then until three days before the time fixed for such sale.

The following is the fifth act of bankruptcy as described in said bill:

> (5) Made, while insolvent, a transfer of any of his property or suffered any of it to be taken or levied upon by process of law or otherwise for the purpose of giving a preference, and has not regained the ownership of such property or released same from such levy before the rights of creditors shall have been altered, changed, or impaired by reason of such transfer, taking, or levy and at least ten days before the commencement of a proceeding in bankruptcy.

If the poor but unfortunate debtor seeks to avoid the second act of bankruptcy by the transfer of property he finds himself in the toils of the fifth. How, in disastrous financial periods like that of 1893, would an unfortunate tradesman protect himself against the second act of bankruptcy unless he did so by a transfer of property to pay his obligations or to secure the money with which to discharge them? If he did so, and in four months afterwards a petition should be filed by his conscienceless creditor, how would he escape the provisions of the fifth act? Again, "preferences" are not always unmixed evils. Should a debtor, struggling to avoid insolvency and bankruptcy, seek the aid of a friend who makes him a loan, hoping to tide him over his difficulties and save him from financial destruction, ought not that friend furnishing the money under such circumstances to have a preference over the creditor who has sold the debtor goods and commodities in the regular course of trade? Many instances readily suggest themselves in which an honest and equitable preference should be allowed, and yet the sixth act of bankruptcy in this bill reads as follows:

> Procured or suffered a judgment to be entered against himself with intent to defeat his creditors, and suffered same to remain unpaid until ten days before the filing of a petition in bankruptcy: *Provided*, That a payment or satisfaction of such a judgment by a sale of any of the debtor's property or from the proceeds of such a sale shall not be deemed a payment of such judgment under the provisions of this section.

This measure seems to treat the question of preference with invidious distinction. It not only makes it the subject of bankruptcy, but provides by the terms of this sixth act that a payment or satisfaction of a judgment by sale of any of the debtor's property or from the proceeds of such a sale shall not be deemed a payment. In other words, if the debtor has procured or suffered a judgment to be entered against himself in favor of a preferred creditor he has committed an act of bankruptcy which the payment of the debt will not remove.

The eighth and ninth acts are as follows:

> (8) Suffered while insolvent an execution for $500 or over, or a number of executions aggregating such amount, against himself to be returned no property found, unless the amount shown to be due by such executions shall be paid before a petition is filed; or (9) suspended and not resumed for thirty days and until a petition is filed, while insolvent, the payment of his commercial paper for or aggregating $500 or over.

Under the laws of most of the States of this Union it is the duty of any officer with process in his hand to first levy upon the personal property of the debtor. If he, after diligently searching, fails to find any personal property on which to levy, it is his duty to indorse on the process "no goods" or "no goods found." After which he may proceed against the real estate of the debtor.

This eighth act of insolvency would seem to include a debtor who had not sufficient personal property to discharge his obligations. This eighth act of bankruptcy also comes in conflict with act 5. If the unfortunate debtor seeks to escape from one, he is impaled on the other horn of the dilemma.

If the ninth act of bankruptcy is not stricken from this bill, it will be found that almost any tradesman can, at some time in a financial crisis, be thrown into bankruptcy. If a business man is not permitted to transfer any property to secure a loan of money or otherwise get the means of discharging his indebtedness in a financial stringency and is to be declared a bankrupt if his commercial paper goes unpaid for thirty days or more, who of them is safe?

Again, the State of Kansas has a provision in its laws by which an attachment lien can be preserved and the order of the court or judge dissolving the same carried to the supreme court for review. If an unscrupulous creditor procures an attachment upon the property of an honest but unfortunate debtor, and the debtor appears before the court or judge and satisfies the court or judge that the attachment has been wrongfully obtained, and the court or judge makes an order dissolving it, this lien can still be preserved until a final adjudication of the matter in the court of last resort.

Under the second act of bankruptcy, as defined in this bill, no business man in the State of Kansas can escape being thrown into the bankruptcy court if he owes $500 or more to unscrupulous and exacting creditors.

Another feature of this bill, which to my mind is exceedingly objectionable, is its provision in regard to corporations. While a

corporation may be thrown into bankruptcy and its property all taken from it and its business destroyed, yet it is not allowed the privilege of a release. It is unquestionably true that a prejudice exists in the minds of the people against corporations, but it must not be forgotten that a large volume of the business of this nation is transacted through corporations. The development of our civilization seems to render this necessary. The use of an artificial person with limited capital and fixed liabilities seems to be favored in all avenues of commerce and trade. Why should the corporation be thus invidiously singled out and made an exception? If good reasons should be found why a corporation should not be discharged in bankruptcy, why should the authority be given to throw it into a bankruptcy court and deprive it of its property, impair its credit, and ruin its business? No provision is made by this law for the winding up of the affairs of the corporation and dissolving it. This measure simply provides a way to destroy its usefulness and wreck its business without any corresponding benefit. Why should not the corporations be left to the insolvency laws of the several States? Should this bill become a law, would it not be in the power of creditors to force the great railroad corporations of the nation now in the hands of receivers into the bankruptcy courts and thus interfere with the commerce, trade, and travel of the public? The provisions of existing laws are found to be in the main beneficial in the management and control of the great corporations which handle the transportation and communication of the public. These are serious questions which challenge the attention of the people of the country and demand a thorough and patriotic consideration.

It is admitted by the committee which reported this bill to the House that the business failures in the nation average about 1 per cent of the business of the country. If that be true, would it not be a wiser and more patriotic thing not to enact a bankrupt law than to pass one so objectionable and threatening as the measure now pending before the House? The people should be given the greatest latitude consistent with the welfare of the body politic in the management of their own affairs and the settling of all business relations between themselves. The interference of the Government of the United States by means of a bankrupt act with the business of the people should never be undertaken except in case of imperative necessity. The disposition of the officers of the courts to encourage bankruptcy proceedings for the sake of fees, and the abuse of the law, have always been objectionable features of bankrupt legislation in this nation.

It is also found in practice that the involuntary features of a bankrupt act become potent factors in the oppression of debtors in the hands of obdurate and conscienceless creditors.

President Grant, in the message in which he recommended a repeal of the law of 1867, used the following language:

> Careful and prudent men very often become involved in debt in the transaction of their business, and though they may possess ample property, if it could be made available, for the purpose to meet all their liabilities, yet on account of the extraordinary scarcity of money they may be unable to meet their pecuniary obligations as they become due, in consequence of which they are liable to be frustrated in their business by proceedings in bankruptcy at the instance of unrelenting creditors.
>
> People now are so easily alarmed as to monetary matters that the mere filing of a petition in bankruptcy by an unfriendly creditor will necessarily embarrass and oftentimes accomplish the financial ruin of a responsible business man. Those who otherwise might make lawful and just arrangements to relieve themselves from difficulties produced by the present stringency in money are prevented by their constant exposures to attack and disappointment by proceedings against them in bankruptcy, and beside the law is made use of in many cases by obdurate creditors to frighten or force debtors into a compliance with their wishes and into acts of injustice to other creditors and to themselves.

That expression is fully as applicable to the proposed law at the present time as the then existing law which was sought to be repealed.

With the experiences of the past still vivid in the minds of many men now living, and the financial condition of the present before us, it seems strange that many men who claim to be seeking a strengthening of credit and a restoration of business confidence should insist that this measure for the relief of the honest but unfortunate debtor shall be made an engine of oppression in the hands of an exacting and conscienceless creditor. Shylock insisting upon his pound of flesh is apparent from beginning to end in the section which provides for involuntary bankruptcy. Under the guise and pretense of benefiting the debtor this extortionate and unworthy measure is sought to be made a law. It should fail.

It is the purpose of my colleague, Mr. BRODERICK, to offer at the proper time, as a substitute for this bill pending here, the Senate bill upon the same subject, with a few proper amendments. This substitute should prevail. It is a just and equitable measure. If enacted into a law it will bring relief to those unfortunate but honest debtors who are unable, by reason of financial embarrassment, to resume business. It is without the oppressive features of the House bill. I trust that the House will give to this measure the consideration which its merits deserve and eventually enact it into a law.

Labor Commission.

SPEECH
OF
HON. EDWARD D. COOKE,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collect information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital—

Mr. COOKE of Illinois said:

Mr. CHAIRMAN: The bill recites that many of those engaged in the various fields of labor and many of those engaged in commerce are presenting grievances to Congress and to the various State governments, seeking and demanding legislation in their behalf. The commission to be appointed is to be called the industrial commission and consist of three men representing labor, three men representing agriculture, three men representing manufacture, and three men representing business, to be appointed by the President, neither political party to have a majority of such commission. The commission is to convene in Washington within sixty days after appointment and to proceed with the performance of its duties. The selection of secretaries and a presiding officer is provided for, and authority is given to make rules to carry out the purposes of the act.

It is made the duty of the commission to investigate questions pertaining to immigration, to labor, to agriculture, and to business, and to recommend to Congress such legislation as it may deem best upon these subjects. The commission is further required to furnish such information and to suggest such laws as may be made the basis for uniform legislation by the various States of the Union in order to harmonize conflicting interests and to be equitable to the laborer, the employer, the producer, and the consumer.

The commission is to receive petitions and papers, give time for hearings, and may appoint subcommittees of its members to make investigations in any part of the United States, and is authorized to send for persons and papers; and, aside from salaries, the expenses shall not exceed $50,000 per year. Each member of the commission is allowed a salary of $5,000 a year (men of the highest ability, character, and experience being intended to be selected); three secretaries are provided for at $200 per month, and four legal advisers (one for each section) may be appointed with a yearly salary of $5,000 each.

The commission may report from time to time to the President of the United States, and shall, at the conclusion of its labors, at the end of its term of office in two years, submit a final report.

Such, Mr. Chairman, are substantially the provisions of the proposed bill.

I am most heartily in favor of the passage of this bill. It comes at an opportune time in the development of the laws of the English-speaking people upon the subjects which it embraces. If the bill passes and the commission appointed shall consist of able and experienced men (as it undoubtedly will), its work and report, and the discussion and information resulting therefrom, may well be expected to mark an epoch in the development of our civilization.

The only objection to the passage of this bill that occurs to my mind is the expense incident to the creation and work of the commission. But that objection seems to be overcome by two considerations, namely, the importance of the interests involved in the subjects to be inquired into by the commission, and the fact that the commission can perform the work assigned to it far better and cheaper than could any special or continued session of Congress held for the same purpose.

The report of the Committee on Labor upon this bill discusses briefly the subject of strikes in the United States and the losses to the country that are directly traceable thereto. The report says:

> Upon this subject of strikes we desire to state that the Hon. Carroll D. Wright, Commissioner of Labor, in his third annual report submitted the results of an extensive investigation as to strikes and lockouts in the United States from 1880 to 1886. It will be seen by an examination of this summary that during the years named (1881 to 1886, both inclusive) there were 3,902 strikes in the United States.
>
> There were 22,394 establishments and more than 1,323,203 employees involved.
>
> It will be seen also by this report that—

The loss to the strikers for the period of six years was	$51,814,723
Loss to the employees by reason of lockouts	8,157,717
Loss to employers of labor	34,163,814
Amount of assistance to strikers by contribution	4,430,595
Total loss in six years	98,566,859

These figures represent the actual loss to the parties engaged and do not represent the enormous loss which incidentally came to the community by reason of such disturbances.

The facts and figures of the last few years in regard to strikes and lockouts are not fully accessible. They are recent history and are still more appalling than those given. One writer has estimated the loss caused by strikes in 1894 at $80,000,000. Others estimate it as high as $100,000,000.

As a citizen of Chicago I vividly recollect the great and disastrous strike of 1894 in that city, which began at Pullman and extended to almost the entire railroad interests centering in Chicago. At one period in the progress of that strike the people of Chicago were in grave fear of such a spread of lawlessness and rioting as would lead to a repetition of the great conflagration of 1871. The immediate fears and passions engendered or aroused during that labor disturbance have so far subsided as to bring all persons concerned in it to a sober sense of the evils and dangers lurking somewhere in the body politic, which render it the part of wisdom to pause, investigate, and consider.

The present time would seem to be the proper one at which to discuss remedies for the existing and periodical labor riots and costly strikes. The reckless and ignorant teachings of anarchists as to property rights and as to what are feasible remedies for any injustice that exists should be offset by at least tentative suggestions of practicable and sound remedies. Many very able and thoughtful editorials and papers upon this subject have appeared in the press of the country and various remedies have been proposed, but I venture to suggest that the views so expressed do not as a rule go far enough. Explicit remedies are needed.

No laws can or should endure which do not adhere to and proceed along the line of justice—that is, justice between man and man. Mr. Lincoln's statement in the time of Southern slavery is still true: "The nation can not endure half slave and half free." Unless the line of honor and justice is closely followed in the division of profits and in the fixing of fair wages, the nation will cease to exist in its present form; there will ultimately come a revolt in which the really or supposedly favored few will be overcome by the many who are really or supposedly oppressed.

During the times of human slavery labor was regarded as too degrading to be performed by the free; and it is difficult to trace the slightest semblance of protection or regulation pertaining to free labor in the laws of those times.

Montesquieu in his work on the Spirit of Laws, speaking of the manners of the ancients (Book IV, chapter 8), says:

It is observable that in the cities of Greece, especially those whose principal object was war, all lucrative arts and professions were considered as unworthy of a freeman. Most arts, says Xenophon, corrupt and enervate the bodies of those that exercise them; they oblige them to sit under a shade, or near the fire. They can find no leisure, either for their friends or for the Republic. It was only by the corruption of some democracies that artisans became freemen. This we learn from Aristotle, who maintains that a well-regulated republic will never give them the right and freedom of the city. Agriculture was likewise a servile profession, and generally practiced by the inhabitants of conquered countries, such as the Helots among the Lacedaemonians, the Periecians among the Cretans, the Penestes among the Thessalians, and other conquered people in other republics.

In fine, every kind of low commerce was infamous among the Greeks, as it obliged a citizen to serve and wait on a slave, on a lodger, or a stranger. This was a notion that clashed with the spirit of Greek liberty; hence Plato, in his laws, orders a citizen to be punished if he attempted to concern himself with trade.

And the same author, discussing the subject of cruel laws (Book XV, chapter 15), says:

Lenity and humane treatment may prevent the dangers to be apprehended from the multitude of slaves in a moderate government. Men grow reconciled to everything, and even to servitude, if not aggravated by the severity of the master. The Athenians treated their slaves with great lenity; and this secured that state from the commotions raised by the slaves among the austere Lacedæmonians.

It does not appear that the primitive Romans met with any trouble from their slaves. Those civil broils which have been compared to the Punic wars were the consequence of their having divested themselves of all humanity toward their slaves.

A frugal and laborious people generally treat their slaves more kindly than those who are above labor. The primitive Romans used to live and eat with their slaves; in short, they behaved toward them with justice and humanity. The greatest punishment they made them suffer was to make them pass before their neighbors with a forked piece of wood on their backs. Their manners were sufficient to secure the fidelity of their slaves, so that there was no necessity for laws.

But when the Romans aggrandized themselves, when their slaves were no longer the companions of their labor, but the instruments of their luxury and pride, as they then wanted morals, they had need of laws. It was even necessary for these laws to be of the most terrible kind in order to establish the safety of those cruel masters who lived with their slaves as in the midst of enemies.

They made the Sillanian Senatus-Consultum and other laws, which decreed that when a master was murdered all the slaves under the same roof or in any place so near the house as to be within the hearing of a man's voice should, without distinction, be condemned to die. Those who in this case sheltered a slave in order to save him were punished as murderers; he whom his master ordered to kill him and who obeyed was reputed guilty; even he who did not hinder him from killing himself was liable to be punished. If a master was murdered on a journey, they put to death those who were with him and those who fled. All these laws took place even against persons whose innocence was proved; the intent of them was to inspire the slaves with a prodigious respect for their master. They were not dependent on the civil government, but on a fault or imperfection of the civil government. They were not derived from the equity of civil laws, since they were contrary to the principle of those laws. They were properly founded on the principles of war, with this difference, that the enemies were in the bosom of the State.

The crude and oppressive enactments regulating labor which were passed about the time human slavery expired show clearly the cruel barbarism out of which the race was then emerging. Under the English law in the time of the Saxons, as far back as it can be traced, the nation consisted of freemen (nobles and coerls) and slaves, the latter a numerous body and incapable of holding property. The villeins, who held lands on servile tenure and were a species of serfs, and the slaves, incapable of holding property, can hardly be distinguished in the crude laws of the Saxons before the Norman conquest. But even under those laws the power of the lords over their slaves was not absolute. If the owner beat out a slave's eye or teeth the slave recovered his liberty. (Laws of Alfred, section 20; 1 Reeve's Hist. of English Law, pages 13, 14.)

Under the feudal system, as practiced in England after the Conquest, the villeins were tillers of the soil, and for a long time occupied the position generally of slaves annexed to the lands on which they were born, though they were gradually emancipated. The oldest English statute pertaining to laborers, enacted after the Conquest, was adopted A. D. 1349 (23 Edw. III) and followed the great plague which thinned the lower class of people, servants and laborers, who took occasion to demand very extravagant wages, and rather than submit to work upon reasonable terms became vagabonds and idle beggars, as recited in the preamble of the act. This statute compelled able-bodied persons, not having lands or employment, to serve in stations suited to their conditions, on wages and terms usual in the five or six years preceding the twentieth year of the then king. Those refusing or departing from such service were to be imprisoned. All persons paying or receiving or demanding more than the above wages were to forfeit double the sum, and artificers or workmen refusing to work for the prices usual at the above-mentioned periods were to be committed to jail.

A further regulation was made on the same subject in the year 1351 (25 Edw. III), and also in the reigns of Richard II and Henry IV. And these statutes were followed by an attempt which was made by statute (1 Edw. VI, c. 3) to introduce a system of captivity or slavery, by ordaining that all idle vagabonds should be made slaves and fed upon bread and water or small drink and refuse meat; should wear a ring of iron round their necks, arms or legs; and should be compelled, by beating or otherwise, to perform the work assigned them, were it never so vile. But, as Blackstone says (1 Bl., 424), "The spirit of the nation could not brook this condition, even in the most abandoned rogues; and therefore this statute was repealed in two years afterwards." (3 and 4 Edw. VI, c. 16.)

The provisions of the later statute of Elizabeth (5 Eliz., c. 4) as to laborers (aside from menial servants and apprentices) made regulations, in substance: (1) Directing that all persons who have no visible effects may be compelled to work; (2) defining how long they must continue at work in summer and in winter; (3) punishing such as leave or desert their work; (4) empowering the justices at sessions or the sheriffs of the county to settle their wages; (5) inflicting penalties on such as either give or exact more wages than so settled; and (6) giving to persons serving seven years as apprentices to any trade the exclusive right to exercise that trade in any part of England. And this statute has been followed by others in England upon the same subject (notably 6 George III, c. 26, and numerous others from 22 George II to the present time, regulating the relations of master and servant).

In the United States the subject of laborers and their wages or service (aside from African slavery) has never been seriously attempted to be regulated by law. Mr. Parsons in his work on Contracts, referring to the English statutes as to the relations of masters and servants, says:

In this country we have nothing of this kind. With us a contract for service is construed and governed only by the general principles of the law of contracts. (1 Parsons on Contracts, 101.)

This result came doubtless from several leading causes, the chief ones being that aristocracy and feudal conditions found no place under the Constitution; universal suffrage was adopted, and the toilers of all kinds were placed upon an equality as rulers; the conditions of a scarce population rendered it unnecessary to restrict and regulate parish settlements, the care of the dependent poor, and the hiring of apprentices; and the ownership of lands by the people became quite general. Within the last thirty to fifty years the vast increase which has taken place in our population, and the still more wonderful growth of manufactures, springing from the inventive genius of the age of steam, telegraphs, and electricity and labor-saving machinery, with the help of protection as an American system, and from the later comparative scarcity of lands, makes it necessary to consider seriously in its new form and changed aspects the old problem, viz, What is the recompense justly due to labor?

The principal acts of Congress pertaining to labor, passed prior to the present Congress, may be briefly summarized as follows:

(1) The law constituting eight hours a day's work for laborers,

workmen, and mechanics in the service of the United States. Revised Statutes, section 3738.

(2) The acts forbidding the immigration of contract labor, of 1885, 1887, and 1891.

(3) The act allowing the incorporation of national trade unions, organized for the purpose of aiding their members to become more skillful and efficient workers, the promotion of their general intelligence, the elevation of their character, the regulation of their wages and their hours and condition of labor, the protection of their individual rights in the prosecution of their trade or trades, and for their mutual protection or benefit, through benefit funds or otherwise; which act was adopted June 29, 1886.

(4) The act forbidding the hiring out of convicts of the United States, adopted in 1887.

(5) The acts enforcing the eight-hour law in the Government Printing Office and in the carriers' service, adopted in 1888.

(6) The act of October, 1888, to create boards of arbitration for settling controversies and differences between railroad corporations and other common carriers in interstate commerce, which controversies and differences may hinder, impede, obstruct, interrupt, or affect such transportation, if, upon the written proposition of either party to the controversy to submit their differences to arbitration, the other party shall accept the proposition, each party to select one arbitrator and the two so selected to select the third arbitrator.

(7) The acts of 1890 and 1891 forbidding the importation of the products of convict labor, and for the inspection of mines in the Territories.

(8) The act of June 27, 1884, created the Bureau of Labor, which Bureau was merged in the Department of Labor, created under the act of June 13, 1888. The latter act in substance provided a Department of Labor at Washington, the general design and duties of which shall be to acquire and diffuse among the people of the United States useful information on subjects connected with labor, in the most general and comprehensive sense of that word, and especially upon its relation to capital, the earnings of laboring men and women, and the means of promoting their material, social, intellectual, and moral prosperity. The Commissioner of Labor is specially charged to ascertain, at as early a date as possible, and whenever industrial changes shall make it essential, the cost, including wages, of producing articles at the time dutiable in the United States, in leading countries where such articles are produced, and the profits of the manufacturers and producers of such articles, and the comparative cost of living and the kind of living. The Commissioner is further to report upon the effect of customs laws, the effect of currency on agriculture and mortgage indebtedness, and what articles are controlled by trusts, and the effect thereof on production and prices.

The Commissioner is required to establish a system of reports at intervals of not less than every two years, by which he can report the general condition, so far as production is concerned, of the leading industries of the country, and further required to investigate the causes of and facts relating to all controversies and disputes between employers and employees as they may occur, and which may tend to interfere with the welfare of the people of the different States, and report thereon to Congress. The Commissioner shall also obtain information upon the various subjects committed to him as he may deem desirable from foreign countries, and as to what, if any, convict-made goods are imported into this country, and annually report to the President and Congress the information collected and collated by him, with such recommendations as he may deem calculated to promote the efficiency of the Department.

(9) In 1892 a penalty for infraction of the eight-hour law as to employees of the Government was enacted; and an appropriation was made to investigate the occupations, earnings, sanitary surroundings, and other essential facts, to show the condition of the residents of what is known as the slums of cities of 200,000 inhabitants and over, compared with the residents of cities of similar size in other countries.

(10) In 1894, by act of Congress, the first Monday of September in each year, known as Labor's Holiday, was made a legal public holiday; the Commissioner of Labor was authorized and directed to investigate and make report upon the conditions attending the employment of women and children; their wages, earnings, sanitary surroundings, and cost of living; the effect of various employments upon their health and longevity; what measures are taken to protect their physical condition and to protect them from accidents; the rates of wages paid them in comparison with the rates paid men; and the effects of their employment upon the wages and employment of men; and as to the effects of machinery on labor; and the economic aspects of the liquor problem.

With the exception of Pennsylvania, I believe no State has attempted to adopt compulsory arbitration for the settlement of disputes between the employed and the employer. Generally speaking, State legislation has followed the lines of Federal legislation on this subject, by aiming to facilitate the organization of labor, educating the workingmen in their crafts and callings, furnishing them with statistics, facts, and information bearing upon their pursuits, taking away as far as practicable the competition of convict and Chinese labor, improving the surroundings of the work and homes of laborers, making voluntary arbitration easy to be resorted to, and, in short, dignifying and exalting the position and status of the laborer as much as can be done with the present knowledge upon the subject. Doubtless these Federal and State enactments have done much to benefit and soothe the condition of the working world, of those at least who are wage-earners as distinguished from the class of workers who work for themselves, as the phrase is, and as distinguished from the class of workers who toil in literary, scientific, medical, legal, or educational professions.

But the fact remains that the task of the lawmaker is not finished. Nor indeed is it reasonable to expect that the necessity for changes in and improvements of the laws will ever end, at least so long as man remains a selfish being. Notwithstanding all the enactments to which I have briefly referred, from the times of human slavery until the present, humanity has struggled and complained against injustice and inequality in the laws. No remedy has ever been so direct and efficacious as to put a stop to the overreaching of the weak by the strong, the ignorant by the educated and cunning, the foolish and confiding by the knavish and cruel.

What better proof could be had or desired of the continuing bitter and cruel struggle of man against man than the simple but true and appalling statement I have quoted from the committee's report, showing that the strikes and lockouts in the United States from 1880 to 1886 reached 3,902 in number, involved 22,304 establishments, affected 1,323,203 employees, and entailed a loss of $98,566,859, without counting at all the general loss and disturbance of the communities in which the strikes and lockouts occurred?

It would be a work of the greatest arrogance and presumption for any person who has not devoted a lifetime to the study of social economics, labor problems, history, and laws, to urge a plan of legislation or to lay down positively a line of action to be pursued in regulating the rights of labor. It seems easier to point out or suggest in general terms some few things that should be avoided in the legislation of the future upon this question than it is to suggest a definite or positive line of enactments. I confess that the problem utterly appalls me, though I appreciate to some degree the importance of solving it.

Unless our laws are formed to do as nearly as possible substantial justice to all, the discontents will continue and increase. It is equally necessary that the people for whose benefit laws are passed shall be shown, in a way which they shall themselves understand, that the laws do work out exact or nearly exact justice. It is not sufficient that justice shall be very nearly always done under the law, if such be the case, but it is also equally necessary that the discontents which so often overtake the people shall be cured by and through a plain, clear, and satisfactory demonstration to them that justice prevails. For instance, it is believed by many working people—artisans, laborers, and followers of the more humble callings in life, including farmers and agricultural laborers—that their just share of the profits and wages of toil, manufacture, and commerce is not paid and accorded to them.

The mystery as to what becomes of profits, and as to what is the exact aggregate of profits and the source thereof, needs to be cleared up far more fully than at present is done. The laws must be framed so as to effectively point out the evil practices that exist, and to remedy the same by clearly traceable and apparent steps. A new statute of laborers seems necessary in order to meet the more modern conditions of society, and in order to regulate the absorption of the present vast output of human toil. Not to take one man's property or capital from him to give it to another, but to prevent any man or corporation from obtaining by false pretense, mystery, and deception the labor or goods of another.

In the new statute, yet to be written, more equal and ideally just relations between the employer and the employed must be aimed at. All the old ideas of serfdom and villeinage, and all aristocratic notions of the dominion or lordship of one man or set of men over another man or set of men must be palpably put aside and satisfactorily set at naught. An equal division of property and earnings among all men would be as unjust as it is impracticable. The exact division of good character and mental capacity, not to speak of industry, frugality, and economy among all men, will never be known. But it is not too much to hope that fully as great strides will hereafter be made in bringing justice to bear upon human relations (in the just division of real and personal property, goods, profits, and creature comforts) as have ever yet been made in the past history of the race.

This progress can not be reasonably looked for along the line of any form of socialism which takes away the private ownership

and control of property; nor from a spirit of anarchy and lawbreaking, from which the weak and ignorant suffer most. There are better lines which may be pursued. From the barbarous times, in which brutal, cruel, and inhuman slavery existed and was practiced by the strong upon the weak and defenseless, until the present time, when all men are by law declared to be free, is a long period; and between the two conditions a great contrast is presented. Every step in that long march was one in which the individual was given a fairer chance to work, save, earn, and contrive for himself; whereby the individual was left the right and chance to compete on equal grounds with others.

It seems not too much to say that the confiscation of all property to the state, or anarchy, would simply place all property in the hands of the brutal and the strong, and that those who fondly dream of happiness and plenty in such times would become the suffering and starving portions of society. And further, it seems not too much to hope that another and wholly blessed step can and will be taken by our race when it shall have progressed to such a point beyond its present semibarbarous and semioppressive system, or rather lack of system and order, that a law may be made that shall result in an equitable and just division of the products of labor upon a basis which shall be generally accepted as equitable. It seems idle, however, to dream of fixing any exact standard for such division. The law of supply and demand must forever be the controlling basis upon which to fix the price of every commodity, including the labor of the artisan and the labor of every other person who puts forth effort for gain. Between these two necessities, then—first, of freedom to the individual to contract, work, and acquire and hold property for himself, and second, the necessity for just and equal conditions upon which to judge of and make contracts—the lawmakers must find themselves placed.

It seems clear also that all the light possible should be thrown upon economic conditions; that in so far as employers keep their employees in the dark concerning the details, exigencies, and results of their business the employees can not judge as to the fairness of the wages paid to them, and are very apt to make foolish demands at times or to be overreached and robbed at others. As wages must rise and fall under varying economic conditions, it would seem only fair and just that such varying conditions should be made known systematically by law to those concerned therein, and that if employers refuse to allow the facts and figures concerning the operations of their business to be inquired into on proper occasions and under proper and reasonable restrictions the law should strive to find a way to enforce such inquiries, if it can be done without injustice to the employer.

Only by such a system, under which the wage workers would be furnished reliable and exact figures, from balance sheets and inventories, passed upon by expert accountants, can the wage worker learn or judge for himself when, all things considered, he is selling his labor for a fair price. Railroads, banks, insurance companies, boards of trade and other semipublic institutions are compelled to furnish such details of their business as to enable the public dealing with them to judge of their solvency and earnings. Why should not the employers of labor do substantially the same thing, in the interest of justice and humanity, not to speak of the public tranquillity? I ask this question with the utmost diffidence, feeling altogether uncertain as to the wisdom of the suggestion.

What a shameful spectacle is presented by great corporations, on the one hand, claiming positively that they have been doing business at a loss, that to continue to do business and pay their workmen their former wages would entail a great loss, and, on the other hand, the spectacle of the employees and great labor unions claiming that the corporations are uttering monstrous and willful lies; that the wage workers are in fact oppressed, while the corporations are making large profits and declaring dividends from the labor of the workers.

A law to compel the employers of labor to submit differences with their employees to arbitration and to abide by the result can not be enacted without invading and destroying the private ownership of property, but it ought not to be too difficult to frame a law (based upon the police power or upon the principle of the banking, railroad, insurance, or building association laws) which would compel all employers of labor having in their employ, say, 100 or more persons to keep full and accurate books of account of all their business operations, and to submit the same to a thorough and rigid examination by the auditor of public accounts, or a national examiner, so that it could be reliably and accurately ascertained whether the wage workers and their unions or the employers are acting the part of wolves in the community.

Public opinion and the law should together demand that the proper steps be taken to place the responsibility for starting ruinous and bloody riots, such as have often disturbed the nation (and have been quelled by armed force), upon the shoulders of the really guilty parties. How can this be done without clear and reliable information from the books and accounts of labor employers, from which those deeply concerned, including the public as well as the labor unions, may freely judge as to the intrinsic value of labor, in comparison with the other elements of value which enter into economic conditions?

When corporations and employers of labor are about to be subjected to adverse legislation they are only too glad to open up their books and to show the operations of their business; and the showings made often help to defeat the obnoxious measures. When the rights of others are heavily involved, should the same showing be denied? It is not meant by this that any compulsory hiring of men should take place, nor that any fixed rate of wages can or should be compelled by law, but simply that the facts may be elicited, upon which candid minds may judge intelligently and not in the dark as to the justice of all demands and counter demands out of which lawbreaking and bloodshed arise.

Mr. Chairman, in closing I would say that the views I have expressed lead me naturally to the conclusion that the bill under discussion should be passed. The bill is directly in line with the opinions I have held for a number of years past on the subject of practicable legislation in the interest of labor in all its forms. It is far easier to indiscriminately condemn existing laws on any subject than it is to frame better laws. And I may venture to add that a careful study and patient investigation of all the branches of any subject demanding legislation is the first great essential to its successful treatment by the lawmaker. The bill now in hand provides for such a study and investigation by those best fitted to do the work, and, in my judgment, should be supported by every friend of American labor, as well as by all who desire the prosperity of the farming interests and the tranquillity and prosperity of the manufacturers and business men of our common country. I hope the bill will pass.

The History of Money and Financial Legislation in the United States.

SPEECH

OF

HON. JOSEPH W. BABCOCK,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collect information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

Mr. BABCOCK said:

Mr. SPEAKER: Thirty-five years ago the Republican party, confronted by the gravest exigency in our national life, originated and adopted a system of currency and credit.

This system was subjected to the severest of all tests—civil war in its most tremendous form—but achieved a success and earned a place among the monetary systems of the world far greater than any ever instituted by any government on the face of the earth.

The Republican party has steadfastly maintained the high standing of this system through all the years of its ascendency; has held firmly to an interchangeable currency based upon coin, every dollar of which has been maintained and redeemed according to the original pledge.

The same party is to-day, as ever, in favor of the same sound money, and will continue to maintain, by prudent legislation, the same wide use of gold, silver, and paper with profit and security to all the people.

OUR METALLIC MONEY.

Under the Confederation of 1778 Congress was given the sole and exclusive right and power to regulate the alloy and value of the coin struck by their own authority, or by that of the respective States, but, having no power to enforce its laws in the States, and no revenues with which to carry out its own right of coinage, nothing was done.

Under the Constitution Congress was given the exclusive power to coin money, to regulate the value thereof, and of foreign coins. It was expressly provided that no State shall coin money, and Congress exercised this power by the passage of the act of April 2, 1792, establishing a mint and regulating the coins of the United States.

In this act the "dollar," of gold or silver, was adopted as the unit money of account, with the dollar coin of 371.25 grains of pure silver as the base.

FROM SILVER TO GOLD BASIS.

Between 1792 and 1834 we were under a bimetallic system, with the silver dollar as the actual unit on a basis of 15 to 1. Spanish dollars until 1816, and other foreign coins of both metals until a later date, were also a legal tender; but, as our lighter weight silver dollars were exported to the West Indies, where they passed

at par, we were without a sufficient national currency of either or both metals.

Legislation was therefore necessary, and by the laws of 1834 and 1837 the weight and fineness of the gold coin—and by the latter act the weight and fineness of both coins—were changed so as to make the ratio 16 (15.98) to 1, and to establish the double unit, viz: The eagle of gold and the dollar of silver.

COINAGE AND EXPORT OF SILVER TO 1853.

This change undervalued silver, as the act of 1792 had undervalued gold; and, as a result, silver went out of the United States to countries where it was worth more than with us.

In 1847 our coinage of gold was $20,202,325, which fell to $3,775,513 in 1848; while silver, in 1847, was $2,374,450, and $2,040,050 in 1848.

The effects of the California gold output were felt in 1850 and its coinage increased, while that of silver decreased.

In 1850 the gold coinage was $31,981,739; in 1851, $62,614,493; in 1852, $56,846,188; while silver, in 1850, was $1,866,100; in 1851, $774,397; and in 1852, $999,410.

CONDITIONS IN 1853.

By 1853 (in spite of an annual coinage of over a million dollars in halves, quarters, etc.) there was not enough subsidiary silver for small change, and we were on practically a gold basis. By the act of this year the values of the minor silver coins were reduced so as to stop their exportation, and what was a still more important act, these were made a limited legal tender for all amounts not exceeding $5. This was the first step in the impairment of the double standard, established by the gold act of 1834.

CAUSES.

There were good reasons for this action. Silver was scarce, gold was plentiful, and it had been found necessary to coin silver in small denominations and with smaller proportionate values than the standard dollars to keep them at home for domestic use.

INCREASED GOLD OUTPUT.

The world's supply of gold had suddenly increased because of the California and Australian output. From an annual product of about $13,482,000 in the period from 1831 to 1840, it reached $132,500,000 after 1850. The natural result was to raise the value of silver and to lower that of gold.

NO SILVER IN CIRCULATION.

Then, too, we had no silver dollars in the country, or at least not in sufficient quantities to figure largely as a circulating medium. We had coined none from 1806 to 1836, and from 1836 to 1853 we had only coined of dollars 1,067,373, all the other silver coinage in this period being of minor money.

GOLD THE ACTUAL STANDARD.

While, therefore, after 1853, except for the minor coins, the double standard was the law, yet the actual condition was that of a single gold standard.

RÉSUMÉ.

Let us briefly review—

The act of 1792 made the silver dollar the unit, at 15 to 1; those of 1834 and 1837 changed the ratio to 16 to 1; that of 1853 reduced the values of the minor silver coins and limited their legal tender to $5.

While the acts of 1834 and 1837 made the eagle of gold a co-unit with silver, they did not repeal the act of 1792, which based the unit of a bimetallic money on the silver dollar.

But from the causes already named 1853 found us with a practically single gold standard, with gold as the cheaper and more plentiful metal. While silver dollars were a full legal tender, they were not greatly used, because they were usually worth more abroad than at home and were exported. Gold was the chief and sole base for coin currency.

SILVER DOLLARS COINED UP TO 1853.

We could not, indeed, have had many silver dollars then, because the total coinage of these up to 1853 had been only $2,506,890. This condition obtained until the exigencies of the civil war drove all coin money out and gave place to bonds, greenbacks, and national-bank notes.

GOLD STANDARD INTENDED.

There is no doubt as to the intention of the lawmakers at that time on this point. They were legislating for a single gold standard, although they left the silver dollar as a co-unit. That this was the end sought is shown by the remarks made by the chairman of the Committee on Ways and Means:

We mean to make gold the standard coin, and make these new coins—

The subsidiary silver of proportionately less value—

applicable and convenient, not for large, but for small transactions.

Another member of the same committee said:

We have had but a single standard for the last three or four years; that has been and now is gold. We propose to let it remain so, to adapt silver to it, to regulate it by it.

In 1861 came the civil war, the tremendous expense account of the Government, the exhaustion of our current money, and later the issues of paper money in Treasury notes and bonds and national-bank notes.

HISTORY OF THE ACT OF 1873.

This act, concerning which so much has been said, was introduced in the Senate April 25, 1870; was considered through five sessions of Congress, and became a law February 12, 1873.

It has been charged that this bill demonetized silver, not openly, but by means of an amendment not fully known or understood except by a few. Let us follow the course of this bill.

THE ORIGINAL BILL.

As originally presented, April 25, 1870, section 14 made the gold dollar of 25.8 grains the standard of value, the unit of computation.

Section 15 provided that the weight of the silver coins should be for the half dollar 192 grains (the dollar was not mentioned), with proportionate values for the quarter, 25-cent piece, and dime; and that these should be legal tender for $1.

Section 18 enacted that no coins other than those mentioned that is, gold and minor silver) should be thereafter coined.

SILVER DOLLAR PIECE DISCONTINUED.

On page 11 of the report which accompanied this original bill are the following words:

The coinage of the silver dollar piece is discontinued.

The discontinuance of the silver dollar piece is pointed out by the committee three times in other places in this report. In all the discussions and in every form of the bill these two features, making the gold dollar the standard unit of value and the omission of the silver dollar (of 412½ grains), remain unchanged. Indeed sections 14 and 18 were never changed, but passed absolutely as first presented in the original bill.

SILVER SECTION.

Section 15 passed through enough changes to warrant the idea that its every provision was understood by all fully. In the Senate it first went through unmodified—36 to 14—(January 10, 1871), Senator SHERMAN voting against and Senator STEWART of Nevada voting for it.

LEGAL TENDER FIVE DOLLARS.

In the House committee this section was amended to make the legal tender $5; but, owing to lack of time, the bill went over.

On March 9, 1871, Mr. Kelly, in the House, reported the same bill as amended by the previous House committee; that is, with the legal tender raised to $5; and, except for the 5-cent piece, it was an exact reproduction of the law of 1853. No silver dollars were to be coined, and this minor coinage was to be a legal tender for $5 only.

A 384-GRAIN DOLLAR.

In the discussion it was shown that some desired to have a silver dollar included, although all agreed that its legal tender should be limited, and that its contents should be not 412½ grains, but twice that of the proposed half dollars, or 384 grains.

On February 13, 1872, Mr. Hooper reported it back as H. R. 1427, with these provisions:

SEC. 16. That the silver coins of the United States shall be a dollar, a half dollar, a quarter dollar, and a 10-cent piece, and that the weight of the dollar shall be 384 grains, the half and other coins in proportion, and that these shall be legal tender for $5.

This passed the House May 27, 1872. It will be noted that this is not the old standard dollar of 412½ grains, but a subsidiary coin for change and of limited legal tender.

TRADE DOLLAR.

There were some who desired to attempt a competition in the East Indies with the Mexican dollar, and through these the bill was still further modified. As it was finally passed, in the Senate January 17, 1873, and House February 7, 1873, the silver clauses were as follows:

A trade dollar of 420 grains for this export trade, although it was made a legal tender and so remained until July 22, 1876, for $5 at home; a half dollar of 12½ grams (on the basis of a silver dollar of 396 grains); and minor coins of proportionate value.

All these were made legal tender for $5 only. A 5-cent piece of silver was included in the copper and nickel coins.

412½-GRAIN DOLLAR NEVER IN THE BILL.

From the foregoing it is plain that the silver dollar of 412½ grains, "the dollar of the fathers," was not dropped out surreptitiously, because it was never in the bill to be dropped out. No one wanted it there. First they had a half dollar (no dollar), then a dollar of 384 grains, then a trade dollar for the Pacific Coast trade to the East Indies, and a half dollar of 12½ grams or 198 grains (at the rate of 396 grains for a dollar), and all this silver was, from first to last, a limited legal tender for from one to at the end five dollars.

WHY WAS SILVER DROPPED OUT?

In his speech (House, April 9, 1872, Congressional Globe, pages 2306–2308, volume 102), one of ten columns, by the way, Mr. Hooper, for the committee, said:

SILVER DOLLARS NOT A CIRCULATING COIN.

Section 16 reenacts the provisions of the existing laws defining the silver coins and their weights, respectively, except in relation to the silver dollar, which is reduced in weight from 412½ to 384 grains, thus making it a subsidiary

coin in harmony with the silver coins of less denomination to secure its concurrent circulation with them. The silver dollar of 412½ grains, by reason of its bullion or intrinsic value being greater than its nominal value, long since ceased to be a coin of circulation, and is melted by manufacturers of silverware. It does not circulate now in commercial transactions with any country, and the convenience of these manufacturers in this respect can better be met by supplying small stamped bars of the same standard, avoiding the useless expense of coining the dollar for that purpose.

MR. STOUGHTON SAYS SILVER DOLLAR IS TOO VALUABLE.

On the same day Mr. Stoughton made a speech of seven columns, in which he said (same volume, page 2308):

The silver coins provided for are the dollar (384 grains troy), the half dollar, quarter dollar, and dime, of the value and weight of one-half, one-quarter, and one-tenth of the dollar, respectively; and they are made a legal tender for all sums not exceeding $5 at any one payment. The silver dollar as now issued is worth for bullion 3½ cents more than the gold dollar, and 7½ cents more than two half dollars; having a greater intrinsic and nominal value, it is certain to be withdrawn from circulation whenever we return to specie payment, and to be used for only manufacture and exportation as bullion.

MR. POTTER DECLARES LEGAL TENDER SHOULD BE GOLD.

Mr. Potter, in discussing this part of the bill, said:

Mr. Speaker, this is a bill of importance. When it was before the House in the early part of this session I took some objections to it which I am inclined now to think, in view of all the circumstances, were not entirely well founded; but after further reflection I am still convinced that it is a measure which it is hardly worth while for us to adopt at this time. * * * This bill provides for the making of changes in the legal-tender coin of the country and for substituting as legal-tender coin of only one metal, instead as heretofore, of two. I think myself this would be a wise provision, and that legal-tender coins, except subsidiary coin, should be of gold alone. But why should we legislate on this now, when we are not using either of those metals as a circulating medium?

The bill provides also for a change in respect of the weight and value of the silver dollar, which I think is a subject which, when we come to require legislation about it at all, will demand at our hands very serious consideration, and which, as we are not using such coins for circulation now, seems at this time to be an unnecessary subject about which to legislate. (Page 2310, volume 102.)

MR. KELLEY FAVORS GOLD AS STANDARD AND SILVER AS SUBSIDIARY MONEY.

And Mr. Kelley (who is reported as having said afterwards that he "did not know that the bill omitted the standard silver dollar") said on this same day (Globe, volume 102, page 2316):

I wish to ask the gentleman who has just spoken [Mr. Potter] if he knows of any government in the world which makes its subsidiary coinage of full value? The silver coin of England is 10 per cent below the value of gold coin, and, acting under the advice of the experts of this country and of England and France, Japan has made her silver coinage within the last year 12 per cent below the value of her gold coin, and for this reason it is impossible to retain the double standard. The values of gold and silver continually fluctuate. You can not determine this year what will be the relative values of gold and silver next year. They were 15 to 1 a short time ago; they are 16 to 1 now.

Hence all experience has shown that you must have one standard coin which shall be a legal tender for all others, and then you may promote your domestic convenience by having a subsidiary coinage of silver, which shall circulate in all parts of your country as legal tender for a limited amount and be redeemable at its face value by your Government. But, sir, I again call the attention of the House to the fact that the gentlemen who oppose this bill insist upon maintaining a silver dollar worth 3½ cents more than the gold dollar and worth 7 cents more than two half dollars, and that so long as those provisions remain you can not keep silver coin in the country.

In another place in the same speech Mr. Kelley said:

Every coin that is not gold is subsidiary. I repeat it, sir. Every coin that is not gold is subsidiary.

SENATOR STEWART DECLARES FOR GOLD.

Speaking on another subject a few months afterwards, Mr. STEWART, then as now a Senator from Nevada, said (page 1392, volume 2, part 2, CONGRESSIONAL RECORD):

I want the standard gold, and no paper money not redeemable in gold.

And about two weeks later, on February 20, 1874, the same gentleman said (same volume, page 1677):

By this process we shall come to a specie basis, and when the laboring man receives a dollar it will have the purchasing power of a dollar, and he will not be called upon to do what is impossible for him or the producing classes to do, figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York; but he will know what his money is worth. Gold is the universal standard of the world. Everybody knows what a dollar in gold is worth.

These are the words of Senator STEWART before he became simply the representative of a special interest.

PUBLIC DISCUSSION OF ACT OF 1873.

It has been charged that very little was said in the public press about this legislation. To this the answer is that in 1873 neither metal was in circulation; and it was also simply a reiteration of what had been a commercial condition for more than twenty years. The bill itself had been before Congress three years; its every provision had been fully discussed; it was finally passed with only the addition of the trade dollar, and there was not much worthy of extended comment.

THE PRODUCTION OF GOLD AND SILVER.

The legislation of 1853 and 1873 was based on commercial conditions which in turn were largely caused by the variation in the output of these two metals, both in the United States and in the world. Let us briefly study these and see why, from 1853 to 1873, and even for a few years afterwards, gold was the more plentiful and cheaper; why, later, the price of silver fell so that the two were on a parity; why it kept on falling to far below this limit; and finally, why in recent years the change in the ratio of production has tended and still tends strongly to induce the belief that a few years more will see them near the former parity.

GOLD IN THE UNITED STATES.

Up to the year 1848 our annual output of gold had never exceeded a million, except a trifle in two years. In that year it suddenly rose to ten millions (an amount equal to the total annual world product up to 1840); in 1849 to forty millions; in 1850 to fifty millions, and ranged from that figure to sixty-five millions up to 1860. Then for five years it ranged from forty to forty-six, and from 1865 to 1870 averaged over fifty millions. For the next five years it averaged under forty, to go to fifty-one millions in 1878, and ranged from thirty in 1883 to $39,500,000 in 1894. It did not touch the forty-million mark after 1871, except $51,200,000 in 1878. The recent increase dates from 1892, when it was at the low-water mark of $33,000,000. In 1893 it went to $35,900,000. In 1894 it reached $39,500,000. The product of 1895 has not yet been stated by the Director of the Mint, from whose report all the foregoing figures have been taken, but Mineral Industry, an authority on such subjects, under date of April 10, 1896, gives the United States gold product as $46,830,000, or an increase of over seven millions. The Director of the Mint, under date of April 14, 1895, estimates the 1895 product as about $47,000,000, a substantial agreement with the figures of Mineral Industry.

GOLD IN THE WORLD.

The gold product of the world had averaged for many years before 1840 a little over ten millions per year. In the ten years from 1841 to 1850 this suddenly rose to the then unprecedented figure of $36,393,000. Not content with this enormous gain, the next five years, 1851 to 1855, showed a product of more than three and a half times as great, $132,513,000, or the immense sum of $662,566,000 for the five years. From 1856 to 1860 it averaged $134,083,000; fell off eleven millions in the next five years; rose to $129,614,000, 1866 to 1870; fell to $115,577,000, 1871 to 1875; to $114,585,000, 1876 to 1880, and to $99,116,000, 1881 to 1885. This was the gold low-water mark for the world for the past forty years. Since that time it has steadily increased, until for the year 1892 it reached a sum higher than ever before known—to the enormous total of $146,815,100. For 1893 there was a further increase of nearly eleven millions to $157,287,600, while the amount for 1894 is twenty-three millions more—to the vast quantity of $180,626,100. The estimated output for 1895 is over $203,000,000; that of 1896 nearly if not quite $250,000,000, while conservative estimates put the world's gold product within five years at $300,000,000 per annum.

COUNTRIES OF INCREASE.

It may be well to see whence this great increase has come. It will also enable us to estimate as to the future. The principal gold producing countries for the year 1894 were, in order and amounts, as follows:

Australasia	$41,760,800
Africa	40,271,000
United States	39,500,000
Russia	24,133,400
China	8,556,800
Mexico	4,500,000
Total from six countries	158,722,000

Of the above, China shows no increase; it and all other nations remain about the same year by year. The recent and future increases are to be found and expected in Africa, Australasia, United States, Russia, and Mexico. These increases have been as follows:

	1893 over 1892.	1894 over 1893.	1895 over 1894.*
United States	$2,900,000	$3,545,000	$7,330,200
Australasia	1,529,600	6,072,200	7,000,000
Africa	4,711,500	11,328,500	15,000,000
Mexico	176,100	3,194,700	5,000,000
Russia			3,000,000
Increase	9,317,200	24,140,400	37,330,200

*Estimated.

The increase for 1896 over 1895 is estimated by experts to be: United States, $10,000,000; Australasia, $10,000,000; Africa, $20,000,000; Mexico, $5,000,000; a total of $45,000,000.

SILVER IN THE UNITED STATES.

From 1792 to 1834 the product of silver was insignificant; from 1834 to 1844 it is estimated at a total of $250,000; from 1845 to 1857, both inclusive, it is given as $50,000 per year. In 1858 it went to $500,000; 1859, fell to $100,000; 1860, $150,000; in 1861 it rose suddenly to $2,000,000; went to $4,500,000 for 1862; $8,500,000 in 1863; and ranged from eleven millions to sixteen millions up to 1871. In that year it reached twenty-three, and varied from twenty-eight to forty-eight millions up to 1885. The demonetization took place in 1873; resumption and the use of coin money

took place in 1876. From 1874 to 1884 there was only a slight increase, the highest figure, in 1884, being $48,800,000. In 1885 it reached $51,600,000; rose to fifty-three in 1887; to fifty-nine in 1888; to sixty-four in 1889, and touched seventy millions in 1890. In 1891 it went to $75,417,000; in 1892 it reached the high-water mark—the highest ever known, and from which it is now steadily receding—$82,101,000, only to fall off in 1893 to $77,576,000, and to $64,000,000 in 1894.

COMPARATIVE INCREASE.

From 1874 to 1894 silver increased $26,700,000; in the same time gold increased a little more than six millions, but there was no appreciable increase in silver until 1885.

SILVER IN THE WORLD.

The annual average coinage value of the silver produced in the world has been, from 1545 to 1761, $12,450,000 to $22,162,000. From 1761 to 1860 it ranged from $19,144,000 to $37,618,000; 1861 to 1865 it was $45,772,000; 1866 to 1870, $55,663,000; 1871 to 1875, $81,864,000; while from 1876 to 1880 it rose to an annual average of $101,851,000, and 1881 to 1885 to $118,955,000. The values for 1886 and 1887 were, respectively, $120,213,611 and $126,095,062. It continued to rise steadily some twelve millions per year to 1893, when it was $214,745,300. The year 1894 only showed a slight advance—a trifle over two millions for that period. As the output in the United States has fallen off thirteen and a half millions from 1893 to 1894, and as the same conditions prevail throughout all the precious metal producing countries, it is certain that the returns for 1895 will show a falling off of some $15,000,000, and that of 1896 of some $25,000,000.

COINAGE VS. COMMERCIAL VALUE.

The foregoing figures as to silver, being based on the United States coinage value, are not a true guide as to the actual market value. From 1833 to 1850 the average price of a fine ounce of silver was about $1.31, or 60 pence. In 1850 and up to 1872 it ranged at about $1.33, or 61 pence, only touching $1.36, or 62 pence, in 1859.

AVERAGE BULLION VALUE.

In 1873 the average bullion value of the silver dollar was $1.004, making it more valuable than a gold dollar. For 1874 it was 0.988; 1875, 0.964; 1876, 0.894; 1877, 0.929, and has not reached the 0.90 mark since. In 1886 it got into the seventies, rose to 0.81 in 1890, to fall to 0.764 in 1891, to 0.674 in 1892, to 0.603 in 1893, and to 0.491 in 1894.

1873 AND 1894.

In 1873 a silver dollar containing 371.25 grains of pure silver would purchase only 369.77 grains of the same silver. The coined value was 1½ grains less than its commercial value.

In 1894 this same dollar would purchase 756.04 grains, or twice itself and 5½ grains over.

THE TURN IN THE TIDE.

For the ten months (to October 30) of 1895 this average bullion value had risen from 0.491 to 0.505. This considerable rise is due to the decrease in the output of white and the increase in that of yellow metal during the last two years an increase that is sure to be continued for the next year and to assist in absorbing the surplus of white metal in the world.

WHY WHITE METAL FELL IN VALUE.

Did silver fall, or did gold get scarcer and grow dearer? We have shown that in the United States the gold product held steadily at over thirty and (except in 1877–78) under forty millions from 1874 to 1894; that in the world for this same period it had steadily increased from $115,577,000 to $180,626,100. Evidently during this period gold did its full duty and earned the repute of a metal of stable and sufficient increase in output.

Silver first came to be a factor in the United States in 1861, when $2,000,000 were produced; in 1864 it was $11,000,000; in 1874, $37,300,000; in 1884, $48,800,000, with from fifty-one to eighty-one millions per year thereafter.

The world product had gone from an annual average coinage value of $81,864,000 in 1874 to $118,955,000 in 1884 and $216,892,000 in 1894.

From 1874 to 1894 silver did not make nearly so great a proportional gain as did gold from 1841–1850 to 1851–1855.

THE PROPORTION OF METALS.

For three hundred years, 1545–1840, during which time Spain had poured the wealth of her American silver mines into the markets of the world, the general average proportion of the values of the two metals produced had been about 33 per cent for gold and 67 per cent for silver. From the period 1841–1850, up to that of 1876–1880, this proportion was about 66 per cent for gold and 34 per cent for silver—much greater than the three-century average; from 1881 to 1894 gold was still 44 per cent, while for 1894 it was 45.6 per cent. It is well to note this average carefully, for, by a strange coincidence, this per cent is exactly the relative proportion of the metallic money of the world which gold has furnished in the four hundred years since 1493. This gold per cent will be even higher than this average for 1895 and 1896.

SILVER COINAGE.

KELLEY-BLAND BILLS.

In 1876 Mr. Kelley (Pennsylvania) introduced a bill for the coinage of standard (412½ grains) dollars and to make them an unlimited legal tender. The same year Mr. Bland (Missouri) introduced a bill for the unlimited issue of Treasury notes in exchange for gold and silver bullion.

Both these measures were considered, and in March, 1877, a commission of Senators and Representatives made a report on the relations of gold and silver.

The Kelley bill, as modified and championed by Mr. Bland, passed the House November 5, 1877. It provided, with the Bland amendment, for the free and unlimited coinage of 412½-grain dollars, and made these an unlimited legal tender except where otherwise specified by contract.

BLAND-ALLISON ACT.

The Kelley-Bland bill was modified in the Senate and became known as the Bland-Allison bill. As modified in the Senate and as finally passed it restricted the coinage to the four millions per month which the Secretary of the Treasury was to purchase, and it gave to the public Treasury the seigniorage or profit on these purchases and coinages. The silver thus to be coined was made an unlimited legal tender except for certificates of deposit of gold and silver bullion under the act of 1863 and in cases where other money had been stipulated by contract. Section 3 authorized the deposit of these dollars and the issuance of (silver) certificates therefor. It became a law over the President's veto February 28, 1878.

BLAND AND CONGER BILLS.

In 1886 Mr. Bland again introduced a bill for the free and unlimited coinage of silver—that is, giving to the mine owner and bullion producer the whole profit of the seigniorage or difference between the actual cost and the legal-tender value of the dollar when coined.

Mr. Conger introduced another bill, embodying the views of Secretary Windom, allowing owners of silver to deposit it and receive Treasury notes to the amount of its then market value, these to be redeemed when presented at its then value.

THE SHERMAN LAW OF 1890.

The Conger bill, as modified, was finally passed and became a law July 14, 1890, and is known as the Sherman law.

It directed the purchase of 4,500,000 fine ounces of silver each month at not to exceed $1 for 371.25 grains of pure silver, and to issue Treasury notes therefor. These notes were to be redeemable on demand, in coin, and could be reissued. They were made legal tender for all debts, public or private, except where otherwise expressly stipulated, and for customs, taxes, etc., and when so received could be reissued. They could also be counted as part of the lawful money reserve of national banks. The act further provided that upon demand of holder the Secretary of the Treasury should redeem such notes in gold or silver, at his discretion, it being (says the act) the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law.

Section 3 provided for the coinage until July 1, 1891, of $2,000,000 per month; after that date as much as needed to redeem Treasury notes issued under this act.

Any gain or seigniorage arising from such coinage was to be accounted for and paid into the Treasury.

WHAT IS GAIN OR SEIGNIORAGE?

The Bland bill as it passed the House November 5, 1877 (it did not become a law), allowed any owner of silver bullion to deposit it and receive for every 371.25 grains of pure silver (412½ grains of standard silver) a coined dollar which should be an unlimited legal tender. He was only to pay the half per cent mint charge for this great privilege. All the profit in this transaction was to go, not to the Government, not to the people through the Government, but to the mine owner, the bullion producer. In 1886 Mr. Bland introduced another bill with the same provisions. Mr. Plumb's amendment to the Conger bill, adopted by the Senate June 10, but which also failed to become a law, had the same provisions.

All three of these were in the direct interest and to the sole advantage of the mine owners. All profits or gains in the business went not to the Government to help lighten the burden of the people, but for the profit and gain of a particular class.

PROFITS OF SEIGNIORAGE.

Let us see what these profits were. Under free coinage, on an average in 1878 bullion worth 89.1 cents when deposited by the mine owner would have entitled him to have received from the mint a legal-tender dollar worth 100 cents in silver or in gold. He would have made a net profit, not counting the small charge for coinage, of 10 cents, a profit gained at the expense of the whole people.

In 1886 this same bullion was worth only 76.9 cents, giving to this same class a net profit of 23 cents and making a net cost to

all the people of 23 cents for the inestimable privilege of allowing the mine owners the chance of using the Government and people of these United States as a stalking horse. It would make their dollars cheaper to the mine owners, of course. How would it help those who had to buy these same silver dollars by the sweat of their brows and at the full price of 100 cents on the dollar?

Had this provision, so beneficent to the mine owner, been in operation in 1894, the dear people would have been giving the mining men a 100-cent dollar coined for silver bullion which had cost the same mining people just 49.1 cents. The people of these United States may be lying awake of nights sighing for more silver, which, by the way, they will not accept when given them if they can help it, preferring the paper equivalent, but they should not be compelled to subsidize any class of our citizens, however meritorious they may be, to the extent of taking 49 cents worth of silver and stamping it a dollar and handing it back to them. This may, indeed, make more money, but it makes it into the wrong pockets, into the pockets of the mine owners, from which the people will have to get them out by a well-known system of purchase at full price.

WHAT FREE COINAGE WOULD HAVE COST.

Let us calculate the result of such financial legislation; let us see what it would have cost the people of these United States to have given the free coinage at the dates stated.

In 1878 the average cost of silver bullion, enough to make a standard silver dollar, was 89 cents. In that year we coined 22,495,550 of these dollars. At 11 cents on the dollar it would have cost the country just $2,474,510.50 to have thus accommodated the silver-mining interests of the country.

In 1886 we coined 31,423,886 of these dollars out of bullion which cost only 77 cents for each coined dollar, and which, had this been done under the free-coinage provisions, would have cost the people the considerable sum of $7,227,493.78, and which would have been a direct contribution on the part of Congress of the public funds to the profits of the silver-producing interests of the country. A more monstrous instance of attempted diversion of public money was never attempted.

THE SHERMAN LAW.

Under the operation of the Sherman law of 1890 it was found that the Government was purchasing 54,000,000 ounces of silver per year, or nearly all that was produced in the United States. This silver was stored in the Treasury vaults, and Treasury notes issued for the same, which were redeemable in gold on demand. It can be readily seen that it would be only a question of time when the Government would be obliged to suspend gold payments and reach a silver basis if this was continued.

REPEAL OF THE SHERMAN LAW.

At a special session of the Fifty-third Congress, called in August, 1893, after a long and spirited debate, the so-called Sherman law, on November 1, was repealed.

AMOUNT OF SILVER IN USE AS MONEY.

There is a widespread misunderstanding as to the actual amount of silver in use as money by the Government. At the present time there is coined in the shape of silver dollars, either in the vaults or in circulation, silver bullion deposited to secure Treasury notes, and subsidiary silver, the enormous amount of $627,925,632, all of which is in actual use as money. The total amount of gold in use in the United States is $618,875,157; of greenbacks, $346,681,016. So it will be seen that there is more silver in use than any other kind of money, and I believe it would be greatly to the interest of the Government and of the people if all paper money under $5 could be retired and the silver dollar put in its place to do its work, instead of being stored in the Government vaults. This is the case in France, Germany, and England, where but very little, if any, paper or gold can be found of a less denomination than £1 in England, 20 marks in Germany, and 20 francs in France, practically approximating $5 of American money.

THE GOVERNMENT DEBT.

Now, Mr. Speaker, before closing, I wish to call the attention of the House to a few hard facts. Under Republican tariff laws, during the period from the 1st of September, 1865, up to the time President Cleveland was inaugurated in 1893—twenty-seven and one-half years—the Government debt and obligations were reduced $1,881,367,873, or an average of $68,632,000 per year. The per capita debt in 1865 was $78; in 1893 it had been reduced to $12.55. This is certainly a fair showing, for it covers the whole period from the close of the war until the Democrats secured full control of all branches of the Government. Notice the great difference between the financial policies of the two parties. Since the 1st of March, 1893, until the 1st of March, 1896—a period of three years—the interest-bearing debt has increased $260,000,000, or an average of nearly $87,000,000 per year, against a decrease of nearly $69,000,000 per year under a Republican Administration for the previous twenty-seven years.

DEMOCRATIC ADMISSION OF DEFICIENCY.

Mr. DOCKERY, an eminent light of Democracy, member of the Committee on Appropriations, in the House, April 29, 1896 (RECORD, page 4971), makes the following statement:

Mr. Speaker, I desire to make a simple statement to the House. For the fiscal year ended June 30, 1894, the revenues of the Government failed to meet current expenses by $69,803,260.58. During the last fiscal year the current income was inadequate to meet current liabilities by $42,805,223.18, and it is now estimated that the deficiency in current revenues for the present fiscal year will be not less than $25,000,000.

These are facts and official figures, and it would seem to me that comment is unnecessary.

FREE COINAGE OF SILVER.

The time has come, I think, Mr. Speaker, when the Republican party should set its face firmly against the free coinage of silver, except by international agreement. I have been willing to do all in my power to maintain as large an amount of silver as possible in circulation, and the figures I have given are proof conclusive that the Republican party has done its full duty, and reached the limit so far as the free coinage of silver is concerned, and in the coming campaign it should be true to its past record for honest money, and give the great financial enterprises and financial institutions the stability that can only be reached by a firm declaration against a debased currency. Under present conditions the opening of our mints to free coinage is an impossibility. It means ruin and bankruptcy to many millions of people.

LET THE WHEELS OF PROGRESS MOVE.

Now, Mr. Speaker, we have but lately witnessed the spectacle of certain advocates of free silver in the upper House of this Congress allying with Democrats and Populists, and taking the great industrial interests of this country by the throat, and saying to 70,000,000 people that there shall be no financial legislation, no tariff legislation, until silver is recognized, or, in other words, until the mints are opened to the free coinage of silver. There can be but one answer, Mr. Speaker, to such a proposition as this, and I believe at the polls in the coming election the people will rise in their might and demand that the advocates of this interest shall no longer bar the wheels of progress or prevent the Fifty-fifth Congress from enacting such wise protective tariff laws as will not only furnish ample revenue for the needs of the Government, but protection to all the great agricultural, laboring, and industrial interests.

SUMMARY.

I have endeavored, Mr. Speaker, in these few remarks to give a history of the finances of this Government since the war, also showing the production of silver and gold for the past three hundred and fifty years, believing that the enormous production of silver during the past ten years has had much to do with its present bullion value, and also believing, Mr. Speaker, that the great increase in the production of gold and decrease in the production of silver since 1892, if continued for a few years, will do much to bring these metals more nearly together in bullion value.

Bankruptcy, Its Cause and Remedy—The Silver Party, Causes of its Creation and Growth—Plan of Organization.

SPEECH

OF

HON. FRANCIS G. NEWLANDS,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 29, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 8110) to establish a uniform law on the subject of bankruptcies throughout the United States—

Mr. NEWLANDS said:

Mr. CHAIRMAN: I am in favor of the provisions of this bill which relate to voluntary bankruptcy and I am opposed to those which relate to involuntary bankruptcy. I am in favor of the provisions relating to voluntary bankruptcy because they are in favor of the debtor. I am opposed to the provisions relating to involuntary bankruptcy because they are in favor of the creditor, and in my judgment, the legislation of the past twenty years having been in favor of the creditor and against the debtor, in favor of increasing the value of that which the debtor has to pay and of diminishing the value of that which he sells for the purpose of payment, it is now time that there should be some legislation directed to the relief of the debtors of the country and of them alone.

We have all observed the difference between the treatment of corporate and individual debtors within the past three years of distress. We have observed corporations going into the hands of

receivers, their property protected, their income diverted into betterments instead of being absorbed in interest payments, and we have seen plans of reorganization inaugurated and carried out, debts scaled, both in principal and interest, and extended as to time, thus relieving the ultimate owners of the property.

Have there been any such methods of relief for individual debtors? No. The stockholders in a corporation are protected by reorganization, by scaling of debts, by scaling of interest, by extension of time; but no such relief is offered to the individual debtors. On the contrary, their difficulties multiply as distress increases. Every expedient of obtaining money is resorted to, interest increases, heavy commissions for loans are paid, extensions of time are denied, income diminishes, until finally, overwhelmed by attachments, and foreclosures, they are driven to the wall and compelled to surrender all. It seems to me it is our duty to insist that they shall at all events be free from a mortgage on the future, on the courage, the enterprise, and the energy which may enable them to rebuild their shattered fortunes.

CAUSES OF BANKRUPTCY.

Now, Mr. Chairman, we are to devote three or four days to the consideration of a bill intended for the relief of the bankrupts of the country. How is it that so much time is devoted to the relief of these people thus compelled to surrender everything, while so little time has been given by this House to the consideration of the causes which have led the country into bankruptcy, of the causes which have involved loss and destruction to so many of the enterprising, the industrious, and the energetic of our country? How is it that industrial and financial measures have had so little time allotted for consideration, while this measure, merely palliative in its character, merely intended for the relief of the unfortunate after all is gone, is to have four or five days devoted to its discussion and consideration? With the indulgence of the House, I propose to devote the few minutes allotted to me not so much to the details of this bill as to the consideration of the causes which have brought about the distress prevailing in this country and increasing in severity every day and every hour; causes which thus far have received but little consideration in debate because of the limited time thus far given to the financial and tariff legislation of this House.

DISTRESS IN SOUTH AND WEST.

Where is this distress located? We find it mainly in the West and the South. Take a railroad map of the country—mark the railroad lines in the hands of receivers, comprising about one-third of the railroad mileage of the country, railroads whose conditions sympathize with those of their patrons, and you will find the area of distress not in the New England or the Middle States, the seat of the protected industries of the country, but you will find it in the mining States, in the wheat-growing region, and in the cotton-growing region. And no better test of the prosperity or distress of a section can be found than the condition of its railroads which transport the things produced and consumed by the communities through which they pass.

And what is the cause of the distress in this vast area? It is found in the destruction of the mining industry of the far West and the decline of the wheat-growing industry of the West and the cotton-growing industry of the South.

In six States and three Territories the silver-mining industry is the basic industry on which commerce, agriculture, banking, and transportation depend, just as coal mining and iron mining are the basic industries of Pennsylvania. That industry has been destroyed by brutal legislation, and consequently all the dependent and correlated occupations and industries in that region suffer and almost its entire railroad system is in the hands of receivers.

And so it is with the vast wheat-growing region. The price of their product has steadily declined from $1.25 a bushel to 65 cents a bushel. The price of that product has steadily fallen in the scale with the price of the ounce of silver, and so every dependent and correlated industry in that region suffers and its railroads are in the hands of receivers. And so it is with the cotton-growing region, the price of whose product, on which all other values in that region depend, has also declined *pari passu* with the fall in the price of the ounce of silver.

CAUSED BY ORIENTAL COMPETITION.

And to what is this due? To competition with the oriental countries, to competition with the silver-standard countries, a competition from which the favored regions of this country, the New England and the Middle States, have thus far been protected by a tariff wall of from 50 to 60 per cent. Where domestic products are exported the price of the exportable surplus fixes the price of the whole, and hence our wheat growers and cotton producers are compelled to accept for the domestic product the price of the exportable surplus. The price of wheat and cotton in the Liverpool market is the price here, differences in transportation being adjusted. What competitors have these wheat and cotton growing regions in the Liverpool market? The silver-standard countries, whose wages, always phenomenally low, are made doubly low in terms of gold by the constant depreciation of silver, or, rather, appreciation of gold. Silver there is worth as much as it ever was. In the silver-standard countries the ounce of silver will buy as much of human labor or of the products of human labor as it ever would. So that you find this condition of things: That as the ounce of silver buys as much of wheat or of cotton in those silver-standard countries as it ever would, the price of the ounce of silver in terms of gold fixes the gold price of our wheat and cotton; and hence the gold prices of our wheat and cotton have steadily declined as the gold price of the ounce of silver has declined. And so it is that the wheat and cottton producing regions traversed by these railroads which have been driven into the hands of receivers have been struggling with adversity for twenty years, until entire communities are bankrupt and attachments, sales, and foreclosures take the place of enterprise.

MENACE TO MANUFACTURING STATES.

And, gentlemen of the Eastern States, what danger threatens your region? Are you prepared to invite the competition of these silver-standard countries with the manufacturing industries of the New England and Middle States? Thus far the generosity of the country has given you a tariff law which has protected you against the cheap labor of Europe; but recollect you are about to contend with oriental labor, always exceptionally low, and now made doubly low by the decline in the gold price of silver. Do you not think that you are also interested in raising the price of silver, so as to increase the labor cost of silver-standard countries, whose manufactured products are now threatening to invade the country and to displace your own? And can you devise any way of increasing the price of silver except by increasing its use? So that you have not simply present conditions to meet—conditions brought about by the gradual paralysis of the wheat-growing, the cotton-growing, and the silver-mining industries of this country, covering a vast area, but you are about to meet a paralysis caused by the competition of those very countries in the production of manufactured goods. Your very financial policy, which refuses to use silver, which refuses to extend its use or to give it the value in relation to gold that it ought to have, is building up for the protected industries of New England and the Middle States a competitor whose products will slip in over any tariff wall which you may erect.

SILVER PARTY OF NEVADA.

My friend from Iowa asked us to avoid the discussion of party politics in the consideration of this bill. That is always my disposition. I stand here the single representative on this floor of the party to which I belong—the Silver party. I have no party organization associated with me; there is no one with whom I can consult except through that sympathetic interest which all friends of silver of whatever party feel in this burning question. But so far as I may devote myself to the economic consideration of this question, I do not propose to shrink from its just treatment, though it may involve the arraignment of both the old parties of the country, for they have stood together as twin brothers in all financial legislation, and are jointly responsible for the prevailing distress.

I wish to say, Mr. Chairman, that when Mr. Cleveland was first elected President I voted for him. He stood upon a platform which recognized silver as standard money, before that question had reached the prominence which it has since reached in this country. When renominated, on a platform which, for the first time in the history of the Democratic party since the demonetization act of 1873, was absolutely silent upon the silver question, I refused to vote for him and cast my vote for Benjamin Harrison, who stood on a platform which declared for the use of both gold and silver as standard money and condemned the course of the Cleveland Administration in opposing the rehabilitation of silver.

Harrison was elected President of the United States, receiving the support of the silver men who were in the Republican party and of many silver men who were Democrats, because he was supposed to favor the restoration of bimetallism; but the gold combination triumphed, for he early manifested hostility to free coinage, and fear of a veto was used to deter silver Republicans from passing a free-coinage bill and induced them to accept a compromise measure known as the Sherman law in its stead, a law whose beneficial operation was defeated by every effort of a hostile Administration acting in conjunction with England to depress instead of advance the price of silver.

INDEPENDENT ELECTORS.

Four years after that, when Benjamin Harrison and Grover Cleveland were both candidates on platforms opposed on the tariff question but almost identical on the money question, insincere declarations for bimetallism, coupled with "ifs" and "provisos" which made the mintage of silver in this country impossible, hypocritical professions intended to deceive the voters as to the great question which was then confronting the country, a mining congress, over which I had the honor to preside, met at Helena, Mont., a mining congress in which six States and three Territories were represented, composed of leading Republicans and

Democrats in that section, the peers of the citizens of any State in this Union in business capacity, courage, ability, and patriotism, and after long debate and deliberation that congress almost unanimously, by a vote of 264 to 27, declared that it was the duty of every man in that section who was devoted to the cause of bimetallism to repudiate both the candidates and the platforms of both the old parties and to unite in support of independent candidates for the electoral college who would be in a position to represent the principles approved by the conscience and judgment of the people of that section of the country. This was not the action of Populists, bent upon numerous reforms of our governmental and social organization, but the calm, deliberate, united judgment of conservative men who had differed on the lines of the old parties for years, and who, being hopeless of relief within their respective parties, declared for united action in the solution of what they regarded as the paramount issue of the day.

Their hope was that the independent electors of the mining States, united with Populist electors of the agricultural States, would hold the balance of power in the electoral college, and either force concessions there or throw the election into the House of Representatives. At that election every mining State, if my memory serves me right, declared against the Republican party, to which, previously, all had been attached, and the independent and Populist electors together numbered nearly 30, sufficient under ordinary circumstances to hold the balance of power, but the overwhelming and unexpected victory which Cleveland gained in Western States hitherto Republican made our effort for independent electors futile. So far as the State of Nevada was concerned, it remained true to the instructions of the Helena mining congress. Independent electors, nominated by the silver leagues, were ratified by both the Democratic and Republican State conventions, and were elected by a vote aggregating three-fourths of the voters of the State. From this action grew the silver party of Nevada, which elected me to Congress in 1892 over Democratic and Republican competitors, and again in 1894 over Democratic, Republican, and Populist competitors, who substantially pooled their vote against me. We there realized the advantage of uniting the silver vote on a platform devoted to the issue of silver, and in an organization whose name indicated its basic principle.

I trust and believe that the silver men of the United States will take lesson from that small State and learn the importance of effecting an organization that will not be embarrassed by the memory of old-party dissensions or weighted down by party mistakes or divided in its purpose by attempt at governmental and social reforms whose advocacy will repel as many as it attracts.

You will observe that the year 1892—often referred to by the members from the manufacturing States of the Union as the flood tide of a prosperity attributed to the McKinley Act—was a year of restlessness in the agricultural and mining States of the West, which resulted in a revolt against and the defeat of the Republican party. Why was this? Simply because the McKinley Act, while it protected the manufacturing States against the cheap labor of Europe, afforded no protection to the agricultural States against the competition of the cheap labor of oriental and silver-standard countries, whose efficiency in the production of food products was doubled by the low price of silver. The only protective act which could affect the agricultural States was a free-coinage bill, increasing the use and thus raising the price of silver; and so the Western and mining States swung away from the Republican party, as they will do again at the coming election. Part swung into the Democratic camp, part into the Populist camp, and Nevada swung into the Silver party camp.

The latter party alone shows signs of increasing strength. It has grown until now it promises to unite all the friends of silver in the Republican, Democratic, and Populist parties.

The people who desire the restoration of the money of the Constitution, regardless of past differences, will be united at the coming election. Four years of bankruptcy and suffering have been instructive, and there is abundant evidence that the lesson taught by Nevada four years ago will become epidemic this year, and that States enough to give a majority in the electoral college will follow the example we set for them.

ORGANIZATION OF THE NATIONAL SILVER PARTY.

On the 22d and 23d of last January there assembled in the city of Washington a representative body of men, representing the productive forces and business interests of nearly every State and Territory in this Union. The result of the deliberations of that great conference was the inauguration of a new political movement, having for its object the unification of the silver forces of the country regardless of former political affiliations. It put forth an address to the people of the United States reciting the causes that were bankrupting enterprise, starving labor, threatening the homes of our people, and planting the seeds of social discord and revolution, and proclaimed a platform upon which all patriotic men could unite to bring back conditions of social order and progress and restore the rule of the people.

They called a national convention to meet in the city of St. Louis on the 22d of July, at the same time and place that the Populist party had already named for the holding of their convention, the dates of both of which conventions were fixed at a later day than those set for the conventions of the two old parties in order that the earnest bimetallists of all parties might have an opportunity to unite and make effective their votes in the selection of a President of the United States who would represent the producing forces of the land and not the gold combination, as the candidates of the Democratic and Republican parties were likely to do.

A provisional national committee was appointed, and the work of organization has been started and is under good headway at the present time in four-fifths of the States of the Union.

As the sole representative in this body of the platform and principles enunciated by that great conference, having been twice elected upon that issue alone, I call your attention to the proceedings of that conference, as reported by its officers, and lay before this House and the country the principles of the American Silver organization, the address of the chairman of its national committee, and its plan of organization:

A CALL TO ACTION—THE SILVER CONFERENCE HELD AT WASHINGTON, D. C. JANUARY 22 AND 23, 1896, DECLARES FOR INDEPENDENT POLITICAL ACTION AND CALLS A NATIONAL CONVENTION AT ST. LOUIS, MO., JULY 22, 1896—PROCEEDINGS OF THE CONFERENCE AND ADDRESS OF THE CHAIRMAN OF THE NATIONAL COMMITTEE.

[Issued by the Provisional National Committee, room 83, Corcoran Building, Washington, D. C.]

A conference of bimetallists was held at Washington, D. C., on January 22 and 23, in response to the following call:

"AMERICAN BIMETALLIC LEAGUE,
"*Washington, D. C., January 4, 1896.*

"DEAR SIR: In pursuance of a resolution of the executive committee of the American Bimetallic League, adopted November 20, 1895, a copy of which is herewith inclosed, a conference of well-known and active advocates of the cause of independent bimetallism in the United States, who are prepared now to place the cause above party and to join in an independent movement to secure the restoration of the constitutional standard of gold and silver by the free coinage of both metals at the existing ratio, will be held at the Sun Building, Washington, D. C., January 22, 1896. The object of the conference is to deliberate on the situation at that time and to arrange for holding a national convention to nominate candidates for President and Vice-President, and for conducting a national campaign on the above issue. Recent events, it is believed, make such a conference more important than when the inclosed resolution was passed. You are respectfully invited to attend this conference and participate in its deliberations.

"Very truly, yours,

"A. J. WARNER,
"*President American Bimetallic League.*
"H. G. MILLER,
"*Chairman National Silver Committee.*
"R. C. CHAMBERS,
"*President National Bimetallic Union.*
"J. M. DEVINE,
"*Secretary American Bimetallic League.*"

Every State in the Union was represented, and the proceedings were harmonious throughout.

The speeches with which the proceedings were interspersed were of a high order of ability and dignified in tone, as befitted the momentous character of the question under consideration.

The committee on resolutions and address consisted of the following-named gentlemen:

Senator JOHN P. JONES, chairman.
Joseph Sheldon, of Connecticut.
J. H. Lorimer, of Pennsylvania.
Hon. J. L. MCLAURIN, of South Carolina.
H. F. Bartine, of Chicago, Ill.
Gen. A. J. Warner was subsequently added to the committee.

The committee reported the following:

RESOLUTIONS AND ADDRESS TO THE PEOPLE OF THE UNITED STATES.

The paramount issue at this time in the United States is indisputably the money question. It is between the gold standard, gold bonds, and bank currency on the one side and the bimetallic standard, no bonds, and Government currency on the other.

On this issue we declare ourselves to be in favor of a distinctively American financial system. We are unalterably opposed to the single gold standard and demand the immediate return to the constitutional standard of gold and silver by the restoration by this Government, independently of any foreign power, of the unrestricted coinage of both gold and silver into standard money at the ratio of 16 to 1, and upon terms of exact equality as they existed prior to 1873, the silver coin to be a full legal tender equally with gold for all debts and dues, public and private.

We hold that the power to control and regulate a paper currency is inseparable from the power to coin money; and hence that all currency intended to circulate as money should be issued and its volume controlled by the General Government only, and should be legal tender.

We are unalterably opposed to the issue by the United States of interest-bearing bonds in time of peace, and we denounce as a blunder worse than a crime the present Treasury policy, concurred in by a Republican House, of plunging the country in debt by hundreds of millions in the vain attempt to maintain the gold standard by borrowing gold; and we demand the payment of all coin obligations of the United States, as provided by existing laws, in either gold or silver coin, at the option of the Government, and not at the option of the creditor.

And whereas the demonetization of silver in 1873 enormously increased the demand for gold, enhancing its purchasing power and lowering all prices measured by that standard; and

Whereas since that unjust and indefensible act the prices of American products have fallen upon an average nearly 50 per cent, carrying down with them proportionately the money value of all other forms of property, except in peculiarly favored localities; and

Whereas such fall of prices has destroyed the profits of legitimate industry, injuring the producer for the benefit of the nonproducer, increasing the burden of the debtor and swelling the gains of the creditor, paralyzing the productive energies of the American people, relegating to idleness vast numbers of willing workers, sending the shadows of despair into the home of the honest toiler, filling the land with tramps and paupers, and building up colossal fortunes at the money centers; and

Whereas in the effort to maintain the gold standard the country has within the last eighteen months, in a time of profound peace and plenty, been loaded down with $162,000,000 of additional interest-bearing debt under such circumstances as to allow a syndicate of native and foreign bankers to realize a net profit of $10,000,000 on a single deal; and

Whereas another call is now pending for a further gold loan of $100,000,000, which, but for an outburst of popular indignation, would also have been negotiated in the same secret manner and through the same syndicate; and

Whereas it stands confessed that the gold standard can only be upheld by so depleting our paper currency as to force the prices of our products below the European and even below the Asiatic level, in order that we may sell in foreign markets, thus aggravating the very evils of which our people so bitterly complain, degrading American labor, and striking at the foundations of our civilization itself; and

Whereas the advocates of the gold standard persistently claim that the real cause of our distress is overproduction—that we have produced so much that it made us poor—which implies that the true remedy is to close the factory, abandon the farm, and throw a multitude of people out of employment, a doctrine that leaves us absolutely without hope for the future; and

Whereas the difference of exchange between silver-standard countries and gold-standard countries is equivalent to a bounty equal to the difference between the value of gold and silver in favor of the products of silver-standard countries exported to gold-standard countries, and a corresponding tariff against the products of gold-standard countries exported to silver-using countries; and

Whereas the cost of production otherwise in the Old World, and particularly in China and Japan, is far less than the cost at which similar products can be produced or manufactured in this country by American labor without reducing our farmers, miners, mechanics, manufacturers, and other industrial workers to the level of Chinese coolies: Therefore

Be it resolved, That over and above all other questions of policy we are in favor of restoring to the people of the United States the time-honored money of the Constitution—gold and silver, not one, but both—the money of Washington, and Hamilton, and Jefferson, and Monroe, and Jackson, and Lincoln, to the end that the American people may receive honest pay for an honest product; the American debtor pays his just obligations in an honest standard and not in a standard that is appreciated 100 per cent above all the great staples of our country; and to the end, further, that silver-standard countries may be deprived of the unjust advantage they now enjoy in the difference in exchange between gold and silver—an advantage which tariff legislation alone can not overcome.

We therefore confidently appeal to the people of the United States to leave in abeyance for the moment all other questions, however important and even momentous they may appeer, to sunder, if need be, all former party ties and affiliations and unite in one supreme effort to free themselves and their children from the domination of the money power—a power more destructive than any which has ever been fastened upon the civilized men of any race or in any age. And upon the consummation of our desires and efforts we invoke the gracious favor of Divine Providence.

—

The address was read by Senator JONES, and never did he appear to better advantage. He seemed inspired by the occasion, and the clear-cut, epigrammatic sentences fell from his lips with splendid effect. Every clause was applanded, and at the close of the reading the whole conference rose as one man and cheered with the wildest enthusiasm.

Among other things, he said: "You will either be redeemed and disenthralled and the twentieth century will either be opened with a wave of prosperity or we will gradually go down to slavery. It is a question whether the poorhouses shall be turned into factories or the factories shall be turned into poorhouses."

Without the change of a word the address was adopted, and upon motion of ex-Congressman Hatch, of Missouri, the thanks of the conference were extended to the chairman and members of the committee for the "magnificent address."

ORGANIZATION.

Immediately after the reading of the address came the report of the committee on organization, which committee consisted of the following: Senator WILLIAM M. STEWART, of Nevada; I. L. Johnson, of Virginia; Richard McIntosh, of Utah; I. N. Stevens, of Colorado, and C. J. Hillyer, of Washington, D. C.

The report was as follows:

"That a convention of the qualified voters of the United States who believe in the principles this day enunciated by this conference, and who are willing to subordinate party allegiance and fealty to those principles, and to support the nominees of the national convention provided for by this conference, shall be held at the city of St. Louis, Mo., on the 22d day of July, A. D. 1896, at the hour of 12 o'clock noon.

"That the apportionment to such convention shall be one delegate for each Senator and Representative in the United States Congress from the several States and one delegate for each Delegate in Congress from the several Territories, and additional delegates for the several States and Territories based upon the silver strength as ascertained from the American Bimetallic Union.

APPORTIONMENT OF DELEGATES.

"The number of delegates apportioned to each State and Territory shall be as follows:

Alabama	40	New Hampshire	6
Arizona	6	New Jersey	12
Arkansas	30	New York	44
California	45	North Carolina	70
Colorado	70	North Dakota	12
Connecticut	15	Ohio	40
Delaware	3	Oregon	17
Florida	8	Oklahoma	10
Georgia	50	Pennsylvania	45
Idaho	10	Rhode Island	8
Illinois	50	South Dakota	15
Indiana	40	South Carolina	35
Iowa	35	Tennessee	24
Kansas	60	Texas	70
Kentucky	25	Vermont	8
Louisiana	20	Virginia	40
Maine	9	Washington	17
Maryland	9	West Virginia	12
Massachusetts	21	Wisconsin	15
Michigan	34	Wyoming	15
Minnesota	30	New Mexico	8
Mississippi	25	Utah	20
Missouri	45	District of Columbia	4
Montana	18	Indian Territory	5
Nebraska	51	Alaska	2
Nevada	15		

"That this conference appoint a provisional national committee, consisting of one member from each State and Territory, said committee to possess all powers usually possessed by national committees of political parties; said committee to serve until the holding of said national convention; said committee, or the portion thereof appointed by this conference, shall have full power to fill all vacancies, whether from the failure of this conference to appoint a full committee or from death, resignation, or otherwise; said committee shall select its own officers and adopt rules for its own government; said committee shall have its headquarters in the city of Washington, D. C.

"The mode of selecting delegates to said national convention shall be as prescribed by the national committee, subject to the following regulations:

"All delegates shall be elected at public conventions, or at public meetings, to be held either in the several States at large or in the several counties or districts of such States as the national committee may prescribe.

"No person shall be eligible as a delegate to any such convention or meeting, or shall sit as a delegate in said national convention, who is not in favor of the declaration of principles this day enunciated by this conference and who is not willing to subordinate party allegiance to the advancement of such principles and to support the nominees of said convention.

"The national committee shall proceed at once to organize the several States and Territories for the success of this movement."

A provisional national committee was selected and empowered to fill vacancies and make all necessary changes.

Dr. J. J. Mott, of North Carolina, was selected by the conference as chairman of the provisional national committee.

A finance committee was also appointed. The executive committee elected I. L. Johnson, of Virginia, as its treasurer.

Headquarters have been opened in the Corcoran Building, Washington, D. C., and the work of organization preparatory for the national convention actively begun.

All correspondence relative to the work of organization for the great political battle this year, to redeem our country from the rule of an alien gold power, should be addressed to

J. J. MOTT,
Chairman National Committee, 83 Corcoran Building, Washington, D. C.

—

AN ADDRESS BY THE CHAIRMAN OF THE NATIONAL COMMITTEE.

To the people:

As chairman of the national committee appointed by the silver conference lately assembled in Washington City to organize the silver forces in these United States in the battle which is to take place for the possession of the Government this year, it is thought proper that I should make some statement to the people in reference to it.

As the necessity of money as a medium of exchange became revealed to the minds of men, the two metals finally accepted as the most suitable for money were silver and gold. This was natural, because they were the two most precious metals adapted to the purpose, and were sufficiently limited in quantity.

As mining has developed the fact that these two metals existed in the earth in almost certain proportions, a natural ratio of value was assumed. This ratio has continued as arranged by man under the natural order as he found it. It was accepted by mankind as a part of the grand plan upon which the world was to move, and approved by the philosophy and common sense of all ages.

From this condition of regular order and contentment, contributing to the gradual elevation of all classes of society, the extension of civilization, and the general betterment of the human race, this country and the world has been ruthlessly torn.

It has been done by the rejection of one of the precious metals in the interest of greed, and by this act the money changers have been enthroned and the narrowing of the scope of monetization begun. As monetization has been narrowed money has become scarcer in proportion, and as money became scarcer prices fell in proportion, and falling prices have been the bane of this world.

It was predicted after the demonetization of silver that great suffering would follow. This suffering is already here. From a contraction of the currency we are now in the throes of one of these desperate stages of human experience—a period of heartache, canker, and sleepless nights as the foundations of prices have crumbled. Obligations resting upon the supposed firm foundation of a price in ready money have crumbled into dirt as the foundation of the price has crumbled. The country is confronted by a grave emergency. Further theorizing is futile. The agitation of the money question must be settled by peaceful methods that will give practical results.

Long, patient, and dispassionate reflection has convinced me that an independent American financial system is absolutely necessary to the restoration of national prosperity and the establishment of commercial conditions in this country that will give the common people, the agricultural and laboring classes, an equal show with capital and concentrated wealth. How can it be effected? Can it be done through either the Republican or Democratic party as now constituted? No. Both organizations are under the blighting influence of the Eastern money power. The record of every national convention of both parties for years is plain proof of the assertion. The legislation of both parties in Congress is proof that it is impossible as a party question.

What, then, is to be done? As patriots, as Americans who are for America against the world, what is our first and controlling duty in this crisis? Shall we longer heed the false promises of party platform declaration? Sha we longer submit to the academic discussion or what bimetallism means? Shall it be another campaign of straddling and equivocation? Or shall the issue be squarely on the free coinage of silver and gold, and a President elected who represents the people on that great question?

The first step, the essential preliminary to the correction of present abuses, the reestablishment of national prosperity and the maintenance of our national credit, is the election of a President whose Andrew Jackson courage and inflexible integrity will defy the influences that prostitute Presidents and Cabinets and make the administration of the Government a subject of humiliation and reproach.

Strong in character and intention as may be the standard bearer of the Republican or Democratic party in the coming campaign, it will hardly be possible for him to rise above influences that secured his nomination or the environments that must surround him in the event of his election. The one hope of the people, I am convinced, is in the election of a President pledged, unconditionally and unreservedly, to the free and unlimited coinage of silver and gold, the same as from the foundation of our Government until 1873, and also unconditionally pledged in favor of a national currency without the intervention of banks of issue and against the issuance of interest-bearing bonds in time of peace for any purpose whatever.

I appeal not only to Republicans in my own State, who can appreciate the sacrifice I make in renouncing party obligations on this question in advance of party action in the premises, but to the people throughout the country, without regard to party, to cooperate in this great, nonpartisan, patriotic, American movement to sustain the industrial and financial independence of the United States in the pending irrepressible conflict.

This sentiment influences me to accept the chairmanship of the National Silver Party. I shall give to this movement my best services and thought, and, successful or otherwise, I shall realize the satisfaction of having done my duty to the people and the country as I see and understand it.

In my own State I confidently appeal to the rank and file of both parties to support my efforts. North Carolina is an agricultural State and nine-tenths of its people are directly and disastrously affected by the operation of the single gold standard. I appeal to them to lay aside party feelings, ignore

party obligations on this social question, disregard party appeals, forget the exasperations of past party contention, and spurn the offer of place and emolument.

We have the example and experience of the last campaign in North Carolina to show the practicability and safety of men of different parties cooperating to carry out a great measure essential to the welfare of the people, where neither of the parties favoring it could effect it alone. That was a cooperation on one issue—the issue of fair elections. It is now arranged to extend such a plan through all the States on another vital issue of even greater importance to this country. No one party can do this, but a majority of the people in all the parties want it done, and they can do it if they will cooperate.

The peril that menaces the people in the election of a President whose administration of the Government means a perpetuation of the present financial system can only be averted by the people themselves. It may be too late four years hence. Present abnormal conditions do not warrant belief in the peaceful submission of the people to further oppression and impoverishment. The gold gamblers may deride the popular ebullition as a system of harmless "socialism," but if they are wise they will heed the admonition, and not persist in their greed of accumulation at the expense of the toiling and suffering people. The plain, patriotic duty of every American who loves and honors his country, who would jealously guard its institutions, who would die for the principles that have made it the greatest, the richest, the proudest, the most independent nation on the face of the globe, is to assert his manhood and subordinate party success to the country's welfare in the impending conflict.

Let us have this metal money restored and in the proportions found in nature's storehouse and as it existed in Washington's time, when the flag and the Constitution were fresh and God seemed to speak to the people through an open book.

The men who are for gold stand together, no matter what party they belong to. They have control of both the Republican and the Democratic parties. The people in their distress, striking at intrenched power, knock out first one and then the other party, but no matter which turn is taken gold comes uppermost. The gold leaders are keen, determined, and loyal to the gold standard. Are the silver leaders less determined, less intelligent, and less loyal? If they are equal to the others in these qualities, what is the matter with them that they allow victory after victory to be scored against them, and that, too, when the silver people in the country are in the vast majority?

The people are enraged, and justly so. Must they say at last to these leaders, "Lo, these many years have we sent you for silver, and you have returned to us without it; you are unprofitable servants, and have led us through the bog and quagmire of disappointment. We like to honor you, but you must take us by some other road and reach our idol."

The men who blazed the way to the silver conference did well. The people see the citadel of their liberties and are ready for the battle. The Philistines are at our doors. "To your tents, O Israel!"

J. J. MOTT,
Chairman National Committee, Silver Party,
Corcoran Building, Washington, D. C.

AMERICAN SILVER ORGANIZATION,
OFFICE CHAIRMAN NATIONAL COMMITTEE, *Washington, D. C.*

PLAN OF ORGANIZATION.

That the voters of the country may have an opportunity to so organize that they can cooperate and redeem our country from the blight of a gold standard which has made the 100-cent dollar of 1873 a 200-cent dollar in 1896 and is paralyzing the energies of our people, undermining our liberties, and bids fair to fill the land with poorhouses, the national committee appointed by the silver conference in Washington, D. C., January 22 and 23, suggests the following plan of organization:

1. That the organization proceed from the people up by all silver men signing the club roll.

2. That the organization should extend into every school district, so that clubs may be formed convenient to the homes of the people.

In order to effect such organization, the representative of the national committee in each State and Territory should proceed at once to appoint an organizer for each Congressional district, whose duty it will be to organize the district by the appointment of an active and efficient worker in each county to act as committeeman for such county, whose duty it will be to organize said county.

The county committeeman should proceed without delay to secure the cooperation of one active man in each city, township, or precinct to undertake the organization of said city, township, or precinct. It is further recommended that the city, township, or precinct committeemen subdivide their work by the appointment of a committeeman in each school district, whose duty it will be to canvass the school district and secure the signatures of voters to the club roll.

This would make a State organization right down with the people, each county having a member of the State executive committee. The school district committeemen would constitute a township or precinct committee. The county committee would consist of the chairmen of the township or precinct committees. It will be the duty of the representative of the provisional national committee to act as chairman of the State committee until after State conventions have been held and a new State committee created.

The organizers appointed for Congressional districts will perform the duties usually performed by the chairman of district committees until district conventions have been held and new committees created. The chairmen of the county committees will represent their respective counties on both district and State committees.

It is recommended that the delegates to the national convention be selected by Congressional district conventions, each district being entitled to its pro rata of the total number of delegates apportioned to each State.

The importance of an immediate thorough canvass of the voters and the securing of their signatures to the club roll can not be too strongly urged. After the signatures are secured the work of perfecting the organization becomes easy. If this plan be adopted and vigorously executed, it is believed that a majority of the voters can be enlisted in our cause long before the date set for holding our national convention. When the people understand that this plan has been adopted throughout the entire country, they will at once realize that the only effective way of overcoming the money power and its servile politicians and press has been adopted, and hope will take the place of despair.

The club roll should be left in charge of the school district committeeman, but a copy should be furnished to the national committee, so that newspapers and documents could be sent to all signers of the club roll if desired; and further, so that the number of true friends of silver in the United States could be ascertained.

ORGANIZATION ROLL.

Whereas, the demonetization of silver in 1873 enormously increased the demand for gold, enhancing its purchasing power and forcing down prices until the 100-cent dollar of 1873 has become a 200-cent dollar in 1896, measured by the average of American products; this fall of prices has deprived legitimate industry of profit and injured producers for the benefit of nonproducers, increased the burden of debts, swelled the gains of creditors, and paralyzed the productive energies of the American people; condemning willing workers to idleness and filling our land with tramps and paupers, while building up colossal fortunes at the money centers: Therefore,

Be it resolved, That we, the undersigned legal voters of ——, county ——, State ——, will not support any political party or vote for any candidate for any office whatever that does not favor the restoration of the money of the Constitution by the free and unlimited coinage of silver and gold on terms of exact equality, regardless of the action of other nations, and that we will not support any candidate for the office of President or Vice-President whose past record on this question does not constitute a guarantee of his action in the future:

Name.	Residence.

ISSUES OF SILVER PARTY.

You will observe that this party, now in its infancy, proposes to make the issues of the day the industrial question and the financial question, protection and silver, twin issues, not contradictory to each other, as would be the alliance of the gold standard with protection or of the silver standard with free trade. They are both protective measures. We believe in a reasonable tariff which will protect the labor of this country against an invasion of the products of the cheap labor of Europe, for we realize that the unit of value of this country is the day's labor, that upon that every other value is built up and related to it. You can not diminish the value of a day's labor in this country without diminishing the value of every unit of property throughout its vast area, whether it be the acre of the farm, the square foot of city real estate, or the measure of products.

Realizing, then, that we have a high standard of value in this country, a high standard of value for labor and a high standard of value for property produced or utilized by that labor; realizing that the intelligence and the courage and the energy of the people of this country are the products of our institutions and not the cause, are the products of the industrial policies we have been pursuing and not the cause, we are for a reasonable protection against the cheap labor of Europe; the protection of the New England States, the protection of the Middle States, the protection of the States that are about to become manufacturing States. But we also demand a measure of protection for the wheat-growing and silver-producing and cotton-growing regions of the country, for we know that to-day these regions are producing their products in competition with silver-standard countries; that they must export, and that the value of the domestic product is determined by the value of the exported product, and that just so surely as we can increase the labor cost in silver-standard countries, in terms of gold, by raising the gold value of the ounce of silver, just so surely will we raise the value of our wheat and the cotton, with which we mainly pay the principal and interest of our foreign debts, and so far as the mining regions are concerned, restore the basic industry of six States and three Territories upon which our transcontinental railroads with their branches have relied for the profitable part of their business—railroads which, as the result of the legislation of 1893, have defaulted their interest, and are now in the hands of receivers, making a desperate struggle for existences by processes of reorganization and scaling of debt and interest.

Mr. HALL. Will the gentleman yield for a question?

Mr. NEWLANDS. My time is very limited. I should be glad to do so, but I believe I have only three minutes remaining.

Mr. HALL. I was just going to state that I was a little puzzled to understand why the gentleman was making a 16-to-1 speech on a bankruptcy bill, but I now see the twin relationship existing between the two, and suppose that one is germane to the other.

Mr. NEWLANDS. Well, if the gentleman can not appreciate the relation of my remarks to the subject, I have to say that it is impossible for me to endow him with the necessary intelligence.

I can only say that I am addressing myself to the causes of insolvency, and I so declared at the opening of my remarks. I claim that the legislation of this country should be applied to the removal of the causes, and not to these wretched palliative measures which leave a man stripped of his fortune, relieved only of the mortgage which debt imposes on his courage, enterprise, and energy.

PROBABLE ACTION OF OLD PARTIES.

Now, I can not tell, no man can tell, what the action of the old parties will be in the next three months. We all know, however, that the action of the Republican party is a foregone conclusion. I regret it. I was in hopes that the Republican party, the party of protection, would so far expand its policy as to embrace the use of silver, and thus protect the mining region, the wheat region, and the cotton region. I was in hope that the doctrine declared in an interview in the Fortnightly Review about two years ago, and purporting to give the views of our honored Speaker—namely, that silver and protection were twin issues—would become the policy of the Republican party; that it would be a party that would protect not a section, but the entire country; not simply

the New England and Middle States, which, through their manufacturing interests, have accumulated wealth and become the creditor States of the country, but also the Western and Southern States, which have been thus far compelled to submit to a competition infinitely more dangerous than the competition against which your tariff wall is now raised; but that seems to be hopeless. The State conventions of the Republican party have declared, one after another, either in favor of a straddle platform, which has now no power to deceive, or in favor of the gold standard, with an occasional expression of the hope of an international adjustment.

There is no time for me to consider the international phase of the question. International adjustment, so long as you seek an alliance with the three great creditor nations of the world, having a plethora of money which they loan out to the people of other nations, is, in my judgment, hopeless.

Had we sought alliance with the debtor countries of the world, whose scarcity of metallic money is demonstrated by the existence in them of about $2,500,000,000 of uncovered paper money, much of it depreciated paper; had we directed our efforts in the line of a monetary alliance with debtor countries such as Russia, Austria, Italy, Spain, and the countries of South America, all of which have to-day a vast amount of depreciated paper money, simply because there is not enough gold to go around, our efforts might have been successful in increasing the use and value of silver; but there never has been a conscientious effort by the Executive of our Government for a practical international adjustment of this question; and the only thing we can do is to force a domestic adjustment.

So far as the Republican party is concerned, it will take no action in support of silver. It relies for its strength upon the creditor and manufacturing States of the Union, and does not seek the support of the South and the wheat-growing and mining States of the West. How about the Democratic party? What action will it take? Two months ago it seemed to be universally conceded that the power of the Administration would be effective in securing delegates to the Democratic convention, so as to control them for the gold standard, and we all know how effective the power of organization is in producing results contradictory of the wishes of the people. The gold men were foolish enough to allow the question to be tested at the primaries, and from almost every Western and Southern community comes the demand for the restoration of the constitutional coinage of silver at the old ratio. I assume, then, that the Democratic convention may be a free-coinage convention, and if so it is apparent that the success of the silver issue will largely depend upon the wisdom that controls its deliberations.

The CHAIRMAN. The time of the gentleman has expired.

Mr. KEM. I ask unanimous consent that the gentleman from Nevada may be permitted to finish his remarks.

Mr. NEWLANDS. Five minutes will do me.

Mr. WATSON of Ohio. I ask that the gentleman may have ten minutes.

There was no objection.

Mr. BRODERICK. I would like to know how much time there is to be taken, as there are a great many to speak, and there will not be opportunity for them all.

Mr. BAILEY. To save any trouble, I yield the gentleman ten minutes.

Mr. NEWLANDS. I do not like to deprive you of your time.

Mr. BAILEY. Go on.

Mr. NEWLANDS. I will be as brief as possible.

DUTY OF THE DEMOCRATIC PARTY.

With reference to the Democratic party, I repeat that much depends upon the wisdom of the deliberations of that convention. I have always thought that the success of bimetallism would be best promoted if both the old parties declared for a gold standard at their coming conventions. I have been satisfied that there would then be an overwhelming combination of all the friends of silver, which would result in the organization of a new party with bimetallism as the distinctive issue, and led by a man of large experience in public life, whose whole career had exemplified his devotion to the best interests of the people and particularly to the course of bimetallism. But the Democratic party may take such action on this question as to make a successful union of the silver forces improbable, and the question is now whether the Democratic party will maintain its tendency toward free trade, or whether it will recognize the signs of the times, that the sentiment of this country is more steadily every day advancing toward the protective idea. That school of humanitarianism which seeks to regard the whole world as one people with universal free trade and universal brotherhood no longer has many disciples. We begin to realize that intelligent self-interest should control every nation as it does every individual or family. That man best discharges his duty to humanity who first considers the interest of his family, next the interest of his community, next the interest of his State, and next the interest of his nation, and then gives the balance of his love to the rest of the world. [Loud applause.]

Mr. WATSON of Ohio. That is good Republican doctrine.

Mr. NEWLANDS. The gentleman says that is good Republican doctrine. [Renewed applause.] Whether it be good Republican doctrine or good Democratic doctrine it is good common sense; but let me say to my Republican friend that the policy which gives protection to a section and denies it to the nation at large, which passes laws in favor of protecting the labor of the manufacturers of the East and refuses to pass the only laws which can protect the wheat growers and cotton planters against destructive Oriental competition is not the enlightened self-interest which should control a nation. And let me say to my Democratic friends that if the Democratic party remains hidebound on the tariff, if it fails to accept the general sentiment of this country with regard to the necessity of maintaining protective tariff laws, it will, in my judgment, seriously imperil the success of the silver cause; and I appeal to those gentlemen on the other side who constitute the leading members of that party to take this matter into serious consideration in the interest of the people of the West and South, and I would add the interest of the manufacturing industries of the country.

AN ORIENTAL MENACE.

This question has not been fought out in Pennsylvania and Massachusetts as it has been in the wheat fields, the cotton fields, and the silver mining camps. The people of those States do not realize, protected as they have been by this high-tariff wall against the cheap labor of Europe, that there is a productive power in the Orient which threatens their destruction; and when they do realize that fact, as they will during the coming campaign, they will learn that the interests of the manufacturers of New England and of the Middle States stand with the interests of the manufacturers of Manchester, of Birmingham, and of the German cities, who have lost their Oriental trade through the promotion of domestic industries in those countries owing to the premium on gold, and who find that the products which they have been accustomed to throw upon those countries are forced back upon them, producing a glut in their domestic markets, the effects of which we find here in these low-priced products that have slipped over our tariff wall.

A UNION OF INTERESTS.

I hope to see the wheat interest, the cotton interest, the mining interest, and the manufacturing interest organize against the banking interest, the railroad interest, and those great commercial bodies whose action beats responsive to their will. For recollect, gentlemen, that it is the changers of money, the changers of goods, and the transporters of goods that have made a union of forces against the productive energies of the country, whether those productive energies are manifested in cotton and wool manufactures in the New England and Middle States, in the iron and coal industries of Pennsylvania, in the production of wheat in the West and cotton in the South, or in the mining of silver in the great West; and you may rest assured that this country will in time pursue the policy of enlightened self-interest. It will realize that it is to its interest, as the producer of over one-third of the entire silver of the world, as the greatest debtor nation in the world, as the greatest producing nation in the world—it will realize that it is the policy of enlightened self-interest for such a nation to stop the appreciation of gold, to stop the building up in value of every unit of those four thousand millions of gold whose present home is in three countries—England, France, and Germany.

Think of it! One-half of the gold of the world in the banks in those three countries, occupying so small a space on the map and having only one-fifteenth of the population of the world—one-half of the gold of the world in their possession and the other half tied to strings by which they can easily draw it to themselves at any time. Shall we continue to place our interests, our industries, our property, our existence at the mercy of those people who have accumulated that gold, which can be put into a cube of 22 feet, a space less than that of the Speaker's chamber, and who by their financial policy have compelled the debtor and producing nations to recognize it as the only money metal, to build up its value and to increase its control over the value of the products of labor, and thus to reduce the world to industrial and financial servitude. [Applause.]

I must beg pardon of the House for diverting its attention from the discussion of the particular subject before it. My only excuse is that I rarely have an opportunity to speak upon this floor; that the financial and the industrial policy of this country have not been made the subjects of long, protracted, and careful consideration here; that this is the only opportunity I have had and possibly the only opportunity I shall have to speak in favor of a true and robust Americanism to be exhibited by either a new party or a union or fusion of parties with the party declaring for free coinage, which will, I trust, in November next carry the flag of bimetallism to victory. [Loud applause.]

The Democratic Party the Only Friend of Farmers, Laborers, and Bread Earners.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 29, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collect information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

Mr. WHEELER said:

Mr. SPEAKER: The people of all governments, from the beginning of time, have been divided into two distinct parties advocating antagonistic principles, the one party including and controlled in the interests of a fortunate and favored few, always struggling to increase their power; and the other, composed of the great producing classes, always struggling to enlarge their liberty. Our forefathers fled from the intolerant oppression of the titled few in the Old World and cast their lot in an unknown continent to establish a government in which all men should be free and equal and where all men should enjoy the blessings of perfect liberty. To attain this God-given right, our forefathers planted the foundation of this great democratic Republic. The word "democracy"—taken from the Greek words Demos, the people; cratia, to posses, to govern—is symbolical of the character of government which the founders of this Republic endured dangers, hardships, trials, battles, and bloodshed to establish.

The essence of democracy is to seek in its utmost purity the voice of the people; to have laws which express the wishes of the people; a government which is but a reflection of the people themselves, and governors from among the people, chosen by the people, and governing for the good of the entire people. Such a government is but the voice of the people, and the voice of the people is the voice of God.

Such a government attains the most prosperity, the purest virtue, the highest culture, the noblest manhood.

Such a government alone can protect the life, liberty, and property of its citizens.

The Declaration of Independence, the Articles of Confederation, and the Constitution of the United States all bear the impress of the virtue and spirit of liberty which animated the forerunners of American civilization.

A government which enacts laws that benefit the few and oppress the many is not a democratic government. Tariff laws which give bounties to the few and place burdens on the many are not democratic. Laws by which millions upon millions are collected from the laboring masses and appropriated so as to benefit the few are not democratic. Laws by which the banking facilities are practically confined to a few men are not democratic. Laws by which substantially all the gold of the country is centered in one locality and in the hands of a few men, and then sought to be made the only money of ultimate redemption, are not democratic. Laws which build up and maintain monopolies and trusts or any other oppressive combinations of capital are not democratic. Obnoxious laws of this character which have been enacted since the Republican party came into control of the Government have divided the people into two great classes, on the one side the owners of three-fourths of the property of the country, so few that they could all be sheltered within this Capitol, and on the other millions of laboring, struggling, toiling people, which include 30,000,000 who derive their support from the cultivation of the soil.

It is these people who fight the battles of the country in war whose interests should have the first consideration of the lawmakers of our land. The farmer has never asked for legislation for his especial benefit; he only asks that the laws of our country be equal and just, and that the burdens and the bounties incident thereto, like the dews of heaven, fall equally upon all people and all vocations. The farmer is the creator of nearly all the wealth of our land, and the welfare of all other vocations is largely dependent upon his prosperity. When the farmer is prosperous the manufacturer has the best market for his wares, the merchant collects his debts, the educator, the minister, the lawyer, the physician, and the followers of all other vocations are well paid.

The farmers only ask a repeal of Republican laws which have reduced the price of farm products to less than the cost of production. They ask a repeal of the bank legislation, which for thirty years has denied to farmers the right to use their lands as a basis of credit, and which, together with other adverse laws, has reduced farm lands to one-tenth their value when the laws were equal, just, and Democratic.

They denounce this prohibitory 10 per cent tax upon issues of banks other than national banks as the main prop, pillar, and foundation of the exclusive and most obnoxious features of the national-bank system.

The history of our country shows that the Democratic party has always been the farmer's friend, and is the only party which has not done the farmer the grossest wrong and injustice.

Jackson's great mind saw that a national bank, which virtually makes a favored few the financial partners of the Government Treasury, would become a nursery of evil. He said that such a bank would concentrate the moneyed power of the Union, make the rich richer and the potent more powerful, while the humbler members of society, the farmers, mechanics, and laborers, would be the victims of the injustice.

The Democratic platforms of 1840, 1844, 1848, 1852, 1856, and 1860 denounced such an institution as—

of deadly hostility to the best interest of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power and above the laws and will of the people.

The Republican party came into power in 1861 the avowed champion of a strong centralized government.

The laws enacted by this party have favored banks and bondholders. They have given privileges to the rich and powerful at the expense of the humbler people of our land. Financial laws, tariff laws, and tax laws have all tended in the same way and have all attained the same purpose. But it is gratifying to see the evidence that the Democratic party had always opposed every encroachment upon the rights and liberties of the great mass of the people.

REPUBLICANS CREATE NATIONAL BANKS.

On February 13, 1863 (Globe, page 897), the Senate voted upon the bill to charter national banks, called the national currency bill. Twenty-one Republicans voted for the bill and 16 Democrats voted against it. This bill was voted upon in the House on February 20, 1863 (Globe, pages 1147 and 1148). On the vote for the previous question 73 Republicans voted for it and 51 Democrats voted against it. On the vote to lay the bill on the table 49 Democrats voted for the resolution and 79 Republicans against it.

On the vote ordering the bill to a third reading 79 Republicans voted for it and 53 Democrats against it. On the final passage of the bill 76 Republicans voted for it and 47 Democrats against it. This law has already cost the people more than $400,000,000. All these votes were practically upon strict party lines. Of the 78 affirmative votes by which the national-bank bill was finally passed, 76 were Republicans and 2 were Democrats.

The law was approved February 25, 1863, and is found in Statutes at Large, volume 12, pages 665 to 682.

In April, 1864, the law which sought to perpetuate national banks was before Congress. Every Democrat in both Houses voted against the bill, while the Radicals and Independents, with the exception of 1 in the lower House and 2 in the Senate, voted for it.

On April 6, 1864 (Globe, page 1451), upon an amendment favorable to national banks, 75 Republicans voted for the amendment and 54 Democrats against it.

On April 16, 1864 (Globe, page 1682), on Mr. Felton's amendment to greatly relieve national banks from taxation, 70 Republicans voted for and 59 Democrats against it.

On April 18, 1864 (Globe, page 1695), a vote was had upon this:

That the expansion of the bank circulation of the country, producing general and ruinous speculation, should be repressed by taxing the issues of the State banks.

A solid phalanx of Democrats, including such men as Francis Kernan, George H. Pendleton, J. L. V. Pruyn, Samuel J. Randall, and Fernando Wood, voted against the resolution, and it was passed by a solid vote of Republicans.

Upon the final passage of the bill, April 18, 1864 (Globe, page 1697), there were three yea-and-nay votes, namely: On Mr. Rollins's motion to lay Mr. Brooks's motion on the table to reconsider the vote by which the national-currency or national-bank bill was ordered to be engrossed and read a third time, 75 Republicans voted for the motion and 57 Democrats against it; on Mr. Holman's motion to lay the national-bank bill on the table, 56 Democrats voted for the motion and 75 Republicans against it; on passage of the national-bank or currency bill, 77 Republicans voted for the bill and 63 Democrats against it.

On May 24, 1864 (Globe, page 2448), on Mr. Holman's motion to table objectionable amendments to the bank bill, 56 Democrats voted for the motion and 78 Republicans against it. The various amendments to the bill were voted on in the Senate April 28, 1864 (Globe, pages 1957 and 1959), May 5 (page 2123), May 6 (pages 2142, 2143, and 2145), May 9 (pages 2174, 2180, and 2183), and May 10 (pages 2200, 2202, 2203, 2204, 2205, and 2206), and the bill was passed on May 10 (page 2207). In nearly all the numerous votes the Democrats voted almost solidly against the establishment of the system, and the Republicans almost solidly in favor of the system.

The bill was approved June 3, 1864. (See Statutes at Large, volume 13, pages 99 to 118.) It will therefore be seen that the objectionable national-bank law was solidly and untiringly opposed from first to last by the Democrats in Congress, and was passed by the votes, speeches, and efforts of the Republicans.

REPUBLICANS LEGISLATE FOR THE BONDHOLDER AND AGAINST THE PEOPLE.

On February 28, 1865, the House passed the bill to provide ways and means for the support of the Government. The bill provided that all bonds or other obligations issued under this act should be exempt from taxation by or under State or municipal authority. The vote was taken viva voce, and Mr. Hooper moved to reconsider and to lay the motion on the table; 85 Republicans voting affirmatively and 43 Democrats in the negative.

The original contract was to pay the principal of the United States bonds in currency, and the obligation to so pay them was recited upon the face of every bond.

In March, 1869, a Congress largely composed and under the entire control of bank officers and bondholders enacted a law that these bonds should be paid in coin, and thus embezzled $1,000,000,000 of the hard earnings of an honest people. Every Democrat but 1 voted against this iniquity, and all the Republicans but 12 voted for it. In the Senate 42 Republicans voted for it and nearly every Democratic Senator against it.

The bill declaring that currency bonds should be paid in coin was voted on in the Senate March 11 (see pages 46, 53, and 56 of the Globe), and on March 15, 1869 (page 70).

In the House it was voted upon on March 12, 1869 (pages 60–61).

In March, 1869, a resolution was offered to lighten the burdens of the people by placing a tax on bonds, and exempting such necessaries as salt, tea, coffee, sugar, matches, and tobacco. The Democrats voted solid for and the Radicals solid against it.

In 1870 a funding law was passed by which $500,000,000 was taken from the people and given to the bondholders. The Democrats in both the House and Senate voted solid against it, and all but 2 Republicans for it.

The funding bill of July, 1870, was voted for, pages 5026, 5059, 5064, and 5070.

The Senate bill was voted upon, page 5467, and was finally passed on July 13, 1870 (page 5523).

In July, 1870, Congress passed the Sherman bill to increase the national-bank circulation $54,000,000. All but 4 Democrats voted against the bill, and it was passed by the almost solid vote of the Republicans.

REPUBLICANS ADVOCATE CURRENCY CONTRACTION AND OPPOSE SILVER COINAGE.

On June 14, 1870 (Globe, page 4434), Mr. Randall's bill to substitute $300,000,000 United States currency for national-bank notes was defeated; all the Republicans but 10 voted against it, and every Democrat but 6 for it. The failure of this measure has already cost us $360,000,000.

Soon after, Mr. Morgan's bill (Globe, page 4435), which sought the same relief but extended the substitution to $400,000,000, was defeated by 116 Radicals, while it was supported by the almost solid vote of the Democracy.

On June 15, 1870 (Globe, page 4471), Mr. Ingersoll moved to authorize additional legal-tender notes; 35 Democrats voted for it and 88 Republicans against it.

In 1872 a resolution was introduced indorsing and approving the ruinous Radical financial policy. Every Democrat voted against and every Republican for the resolution.

The bondholders and bankers, not satisfied with making $1,000,000,000 by the law of March, 1869, which made the bonds payable in coin, now finding an increase in the production of silver, in 1873 demonetized that metal, and thus required the taxed people to pay them gold for their untaxed bonds.

This law of necessity increased the purchasing power of gold, which still further added to the wealth of the rich and to the distress of the mass of the people. This bill was rushed through under a suspension of the rules by a strict party vote.

In 1875, by the same rule, the resumption act, "that great king of destroyers," was passed by Republican dishonesty. In the House every Democrat voted against it, and nine-tenths of the Republicans sustained and voted for this law, which has already caused so much bankruptcy, ruin, and distress.

STRUGGLES OF DEMOCRATS FOR THE PEOPLE.

The beginning of the year 1876 found the Forty-fourth Congress in working order and determined to do something for our oppressed people.

This was the first Democratic House of Representatives which had been elected since 1860. The resumption act was bankrupting and destroying the people. This Democratic House passed a law repealing the "resumption act," although resisted in every possible way by the Republicans.

On August 5, 1876 (CONGRESSIONAL RECORD, page 5232), Mr. Cox's bill to repeal this act was voted upon; 96 Democrats voted for it and 59 Republicans against it.

On December 13, 1876 (RECORD, page 172), the House voted upon a bill for the free coinage of silver; 124 Democrats voted for it and 36 Republicans against it.

On November 5, 1877 (RECORD, page 241), another bill for the free coinage of silver was brought before the House; 97 Democrats voted for the bill and 24 Republicans against it.

On November 23, 1877 (RECORD, page 632), another bill was considered and voted upon to repeal the resumption act; 109 Democrats voted for the measure and 92 Republicans against it.

On February 28, 1878 (RECORD, page 1420), the House passed the silver bill over the President's veto; 122 Democrats voted for it and 52 Republicans against it.

On May 31, 1878, the bill was considered and passed to forbid any further retirement of legal-tender notes; 106 Democrats voted for it and 28 Republicans against it.

June 6, 1878 (RECORD, page 4204), upon Mr. Tucker's amendment to reduce taxes, in the interest of the people. 133 Democrats voted for the amendment and 101 Republicans against it.

On January 15, 1879 (RECORD, page 473) Mr. Fernando Wood reported a bill to make United States notes receivable for duties on imports. This was a measure in the interest of the people and against banks and monopolies. The bill passed the House, 108 Democrats voting for it and 31 Republicans against it.

Pending its passage, Mr. Garfield sought to amend so that the bill should only hold good "so long as said notes shall be exchangeable at par with coin." Garfield's amendment was voted for by 67 Republicans, and was voted against by 94 Democrats, and was defeated. On April 5, 1880 (RECORD, pages 27, 42), a resolution was voted upon:

That the maturing interest-bearing debt shall not be refunded beyond the power of payment at any time, and that the mints be operated at their full capacity in the coinage of silver.

Seventy-three Democrats voted for the resolution and 90 Republicans against it.

On February 17, 1882 (RECORD, page 1246), upon a vote favorable to Republicans and against Democrats and Democratic principles, 5 Greenbackers voted with 120 Republicans against 95 Democrats.

REPUBLICANS AND GREENBACKERS EXTEND CHARTERS OF NATIONAL BANKS.

On April 3, 1882 (RECORD, page 2536), the bill was voted upon to extend the charter of national banks; 103 Republicans voted for it, and not a single Republican voted against it. The bill was opposed by 69 Democrats. On May 18 (RECORD, page 4076), Mr. Bland moved to amend the bill to extend charters of national banks by providing for the retirement of national-bank currency and substituting United States Treasury notes. This would have saved the people $20,000,000 a year. Sixty-five Democrats voted for this just and proper bill, while it was opposed by 114 Republicans and 5 Greenbackers, and every one of these 5 Greenbackers was elected by pledging extreme and unrelenting hostility to national banks.

It is astounding to the last degree that these Greenbackers elected to the Forty-sixth and Forty-seventh Congresses so utterly violated their pledges to their people and voted with the Republican enemies of the people and against such beneficent Democratic measures. It tends to show that these Greenbackers were controlled by Republican leaders and voted with the Republicans when required to do so by the leaders of that party.

On the same day Mr. Randall and Mr. CULBERSON moved to amend the bill by provisions which restricted the contraction of the currency; 76 Democrats voted for the amendment, while 105 Republicans voted solid against it.

On May 19, 1882 (RECORD, page 4121), Mr. JONES of Arkansas made another motion to prevent the contraction of the currency; 76 Democrats voted for the measure and 94 Republicans voted solid against it.

The same day a bill was voted upon in the Senate to extend national-bank charters; 26 Republicans voted for it and 12 Democrats against it.

On June 21, 1882 (RECORD, page 5177), Senator Beck's measure against national banks was voted on in the Senate; 20 Democrats voted for it and 29 Republicans against it. In the House, upon the final passage of the bill which extended national-bank charters, 103 Republicans voted for the bill, while 57 Democrats voted against it.

While the bill was before the Senate, Senator Beck offered an amendment which was in the line of free coinage of silver and expansion of the currency; 20 Democrats voted for Senator Beck's amendment, while 26 Republicans voted against the amendment and not a single one for it.

On June 22 (RECORD, page 5224) the bill to extend the charters of the national banks passed the Senate; 26 Republicans voted for the bill and 12 Democrats and 1 Republican against it.

On July 10, 1882 (RECORD, page 5852) the conference report extending the charters of national banks was voted upon in the House; 99 Republicans voted for it and 69 Democrats against it.

On June 27, 1882, upon passage of the internal-revenue bill, the

Republicans and 1 Greenbacker voted for it, the Democrats voted against it, and 7 Greenbackers refrained from voting. (RECORD, page 5422.)

On April 15, 1884, the Morrison tariff bill was voted on in the House; 151 Democrats voted for it and 124 Republicans against it.

On June 17, 1886 (RECORD, page 5830), the Morrison tariff bill was voted upon in the House; 135 Democrats voted for it and 121 Republicans against it.

On July 21, 1888 (RECORD, page 6660), a vote was had in the House on the Mills tariff bill; 161 Democrats voted for it and 146 Republicans against it.

On January 22, 1889, a vote was had in the Senate on the Republican substitute for the Mills tariff bill; 32 Republicans voted for it and 30 Democrats against it.

DEMOCRATS VOTE FOR FREE COINAGE OF SILVER.

On April 8, 1886 (RECORD, page 3300), a bill was voted upon in the House for the free coinage of silver; 96 Democrats voted for the bill in the interests of the people and 93 Republicans voted against the bill and against the interests of the people.

On the same day (RECORD, page 3300) an amendment was offered to suspend the coinage of silver; 51 Republicans voted for this and 130 Democrats against it.

On June 7, 1890 (RECORD, page 5813) a motion was made to recommit the bullion bill and report back a bill for the free coinage of silver; 101 Democrats voted for the motion and 27 Republicans against it.

On the same day (RECORD, page 5814) the bullion bill passed the House; 134 Republicans voted for it and 112 Democrats against it. Mr. Featherstone, a Farmers' Alliance man from Arkansas, voted with the 134 Republicans in favor of this bill, in favor of banks and monopolies and against the people.

On June 25, 1890 (RECORD, page 6510), Mr. Bland offered an amendment in favor of free coinage of silver; 112 Democrats voted for it and 130 Republicans against it.

On July 12, 1890 (RECORD, page 7218), the conference report on the bullion bill was voted upon in the House; 121 Republicans voted for it and 90 Democrats against it. Mr. Featherstone, a Farmers' Alliance man, voted with the 121 Republicans against the 90 Democrats.

It will be seen that this Farmers' Alliance man was so anxious to aid the Republicans in their vicious legislation, that he even voted with them for the pernicious Sherman bullion law which stopped the coinage of silver.

On July 12, 1890 (RECORD, page 7188), the conference report on the bullion bill was voted upon in the Senate; 39 Republicans voted for the bill and 26 Democrats against it.

On May 21, 1890 (RECORD, page 5112), a vote was had on the passage of the McKinley tariff bill in the House; 164 Republicans voted for it and 142 Democrats against it. On September 10, 1890 (RECORD, page 9943), the McKinley tariff bill passed the Senate; 40 Republicans voted for it and 29 Democrats against it. On September 27, 1890 (RECORD, page 10641), the vote was had in the House on the conference report on the McKinley tariff bill; 151 Republicans voted for it and 80 Democrats against it.

On September 30, 1890 (RECORD, page 10740) a vote was had in the Senate on the conference report on the McKinley tariff bill; 33 Republicans voted for it and 27 Democrats against it. On July 1, 1892 (RECORD, page 5719), a bill for the free coinage of silver passed the Senate; 19 Democrats voted for it and 18 Republicans against it.

On October 28, 1893 (RECORD, page 2920), the Senate voted upon the amendment to require the coinage of not less than 2,000,000 ounces of silver per month. Twenty-three Democrats, including Mr. ALLEN of Nebraska and Mr. KYLE of South Dakota, voted for it and 20 Republicans against it.

On October 30, 1893 (RECORD, page 2958), the Senate voted upon the House bill for unconditional repeal of the purchasing clause in the Sherman Act; 24 Republicans voted for the bill and in favor of money contraction and 21 Democrats voted against the bill and in favor of an increase of circulation.

On February 1, 1894 (RECORD, page 2041), on the passage of the Wilson tariff bill in the House, which greatly reduced the tariff on clothing and other articles used by the laboring people and taxed the incomes of people of wealth, 196 Democrats voted for the bill and 122 Republicans against it.

April 12 and 13, 1894 (RECORD, pages 4597, 4603), Senator PEFFER, Populist, argued in behalf of taxing the people to pay a bounty of some $14,000,000 a year to sugar raisers. June 18, page 7648, he said:

> Let the National Legislature take charge of this subject; let it take possession of all the coal beds and all the coal mines in the country, and let the coal be given to the people freely.

As most all farmers burn wood, this plan would tax them some $300,000,000 a year to donate coal to persons who are not farmers.

June 18, pages 7667, 7668, and again June 20, page 7752, he advocated a tax on salt equal to 50 per cent.

In order to show at a glance that Democrats have voted upon all financial measures in the interests of the people, I have prepared four tables showing how Democrats and Republicans have voted on these questions during the last thirty years.

I think, Mr. Speaker, that all Democrats who examine these tables will hesitate a long time before deserting a party which has always been true to the best interests of the people and which through years of oppression voted in a solid phalanx against the enactment of the oppressive laws which have created the great moneyed monopolies and gone so far toward dividing our country into two great classes, a few millionaires on one side and the struggling mass of the people on the other.

TABLE 1.—*Votes in the House of Representatives upon Republican measures in the interest of banks and monopolies and against the people.*

Date.	Character of measure.	Republican votes for monopoly and against the people.	Democratic votes for the people and against monopoly.
Feb. 20, 1863	Vote on previous question to charter national banks.	73	51
Do	Vote ordering national-bank bill to third reading.	79	53
Do	On final passage of bill chartering national banks.	76	47
Apr. 6, 1864	On amendment favorable to national banks	75	54
Apr. 16, 1864	On Felton's amendment to greatly relieve national banks from taxation.	70	59
Apr. 18, 1864	On resolution to prevent issues of bills by State banks.	62	46
Do	On Rollins's motion favorable to national banks.	75	57
Do	On passage of national bank or currency bill	77	63
June 3, 1864	Bill to perpetuate national bank	80	65
Feb. 28, 1865	Hooper's motion to reconsider and to lay motion on the table.	85	43
Mar. 3, 1865	Authorizing the issuance of nontaxable bonds	85	43
Mar. 18, 1869	Bill to pay off greenback bonds in gold (act of March 18, 1869).	96	35
July 13, 1870	Bill for exchanging greenback bonds for gold bonds and in favor of national banks.	*139	52
July 7, 1870	Sherman's bill to increase national-bank circulation by $54,000,000.	96	44
July, 1872	Bill indorsing Republican financial legislation	110	86
Jan. 14, 1875	Bill for the resumption of specie payment	136	71
Jan. 15, 1879	Garfield's amendment restricting the use of greenbacks to pay import dues.	67	94
May 15, 1879	Vote to table Warner's silver bill	95	107
Apr. 3, 1882	Bill to extend national-bank charters	103	69
May 19, 1882	The national-bank bill was passed	103	57
July 10, 1882	Adoption of conference report	99	69
Apr. 8, 1886	Motion to suspend the coinage of silver	51	130
May 21, 1890	Vote on passage of McKinley tariff bill in the House.	164	142
June 7, 1890	Bullion bill as it passed the House	†134	112
July 12, 1890	On conference report on bullion bill	†121	90
Sept. 27, 1890	Vote on the conference report on the McKinley tariff bill in the House.	151	80
Mar. 24, 1892	On Mr. Burrows's motion to lay the bill for free coinage on the table.	66	129
Do	On Mr. Johnson's motion to reconsider the above vote.	66	129
Mar. 1, 1894	Vote to recommit bill for coining the silver in the Treasury.	85	137
Feb. 7, 1895	Vote on Mr. Reed's substitute to issue bonds	99	177
Do	Vote on bill to issue bonds	44	102
Feb. 14, 1895	Vote on bill to issue gold bonds	33	98

*Solid. †Featherstone, Farmers' Alliance, voted with Republicans.

TABLE 2.—*Votes in the Senate upon Republican financial measures in the interest of banks and monopoly and against the people.*

Date.	Character of measure.	Republican votes for monopoly and against the people.	Democratic votes against monopoly and for the people.
Feb. 13, 1863	To establish national banks	21	1
June 3, 1864	Act to perpetuate national banks	30	6
Mar. 16, 1869	Bill providing that greenback bonds shall be paid in gold.	42	79
Jan. 14, 1875	Bill for the resumption of specie payment	32	11
June 27, 1879	Mr. Allison's motion to refer and defeat Vest's motion for free silver coinage.	19	32
Mar. 17, 1882	Vote to table Senator Brown's resolution favoring increase of money.	23	23
June 22, 1882	Bill extending national-bank charters	26	12
Jan. 22, 1889	Vote in the Senate on Republican substitute for Mills tariff bill.	32	30
July 12, 1890	On conference report on bullion bill	39	26
Sept. 1, 1890	Mr. Aldrich's motion to increase duty on wools, yarns, etc.	26	18
Do	Mr. Aldrich moved to increase duty on woolen cloths, etc.	28	17

Votes in the Senate upon Republican financial measures, etc.—Continued.

Date.	Character of measure.	Republican votes for monopoly and against the people.	Democratic votes against monopoly and for the people.
Sept. 5, 1890	Mr. Aldrich's motion to tax farmers on their leaf tobacco.	24	21
Sept. 8, 1890	Mr. Aldrich, to increase tariff tax on sugar in interest of sugar trust.	25	16
Do	Mr. Aldrich, to give bounty of 2 cents to producers of maple sugar.	30	25
Sept. 9, 1890	On ordering the McKinley bill to be read the third time.	38	28
Sept. 10, 1890	Vote in the Senate on the McKinley tariff bill.	40	29
Sept. 30, 1890	Vote on passage of McKinley tariff bill	33	27

TABLE 3.—*Votes in the House of Representatives upon Democratic measures against banks and monopolies and in the interest of the people.*

Date.	Character of measure.	Democratic votes against monopoly and for the people.	Republican votes for monopoly and against the people.
Feb. 20, 1863	On motion to lay national-bank bill on table	49	79
Apr. 18, 1864	On Holman's motion to lay national-bank or currency bill on the table.	56	75
May 24, 1864	On Holman's motion to table objectionable amendments to bank bill.	56	78
June 28, 1864	Mr. Holman's amendment permitting taxation of bonds.	63	77
Mar. 29, 1869	Mr. Morgan's bill taxing bonds, and exempting from tax salt, tea, coffee, sugar, matches, and tobacco.	39	104
Jan. 17, 1870	Mr. McNeely proposed to substitute greenbacks for national-bank currency.	53	112
Jan. 31, 1870	Mr. McNeely proposed that the national debt should be paid in strict compliance with the contract, and that bonds payable in greenbacks should not be paid in gold.	40	120
June 1, 1870	To place tax of 10 per cent on incomes from bonds.	46	130
Do	To place tax of 5 per cent on incomes from bonds.	58	109
June 14, 1870	Mr. Randall proposed to substitute $300,000,000 for national-bank notes.	41	105
	On the same day Mr. Morgan extended the same relief to the extent of $400,000,000.	34	116
June 15, 1870	Mr. Ingersoll moved to authorize the additional legal-tender notes.	35	88
Mar. 13, 1871	Vote to repeal tax on tea and coffee	89	39
Mar. 27, 1871	Vote to refer and defeat resolution that the tariff should be so reformed as to be a tax for revenue only, and not for the protection of class interests at the general expense.	75	91
Aug. 5, 1876	Mr. Cox's bill to repeal the resumption act	96	59
Dec. 13, 1876	Bill for free coinage of silver	124	36
Nov. 5, 1877	do	97	24
Nov. 23, 1877	Bill to repeal the resumption act	109	92
Jan. 21, 1878	Vote on bill to allow payment of customs duties in legal-tender notes.	127	76
Jan. 29, 1878	Vote to pay bonds in silver	116	56
Feb. 28, 1878	Silver bill over the President's veto	118	52
Mar. 5, 1878	Vote for free coinage of silver	102	77
Mar. 25, 1878	Vote on motion to suspend for five years payments for sinking fund.	105	91
May 31, 1878	To forbid further retirement of legal-tender notes.	106	28
June 6, 1878	Tucker's amendment to reduce taxes in the interest of the people.	133	101
June 19, 1878	Vote to substitute United States currency for national-bank notes.	98	98
Dec. 9, 1878	Vote to recoin trade dollars	104	71
Do	Vote for silver and against national banks	106	75
Jan. 15, 1879	To make Treasury notes receivable for duties and imports.	108	31
Apr. 19, 1879	Vote increasing legal-tender power of silver	97	88
May 24, 1879	RECORD, page 1600—On vote for free coinage of silver.	100	89
Apr. 5, 1880	That the $782,000,000 in bonds which were redeemable should not be funded beyond the power of the Government to call in such obligations, and that the mints should coin standard silver dollars to their full capacity.	73	90
Jan. 17, 1881	On a refunding bill which sought to destroy national-bank system.*	125	†109
May 18, 1882	On motion of Randall, Holman, and Bland to restrict national banks.	65	‡114
May 18, 1882	On Randall's and Culberson's motion in interest of people, against national banks.	76	105
May 19, 1882	Mr. Jones's motion to restrict national banks	76	94
June 27, 1882	Springer's amendment to abolish excessive taxes.	56	119
Apr. 15, 1884	Vote on Morrison tariff bill in the House	151	124
Apr. 8, 1886	Bill for free coinage of silver	98	93
June 17, 1886	Vote on Morrison tariff bill in the House	135	121
July 21, 1888	Vote on Mills's tariff bill in the House	161	146

Votes in the House of Representatives upon Democratic measures, etc.—Cont'd.

Date.	Character of measure.	Democratic votes against monopoly and for the people.	Republican votes for monopoly and against the people.
June 7, 1890	Motion to recommit bullion bill and report back free-coinage bill.	101	127
June 25, 1890	Mr. Bland's amendment in favor of free coinage of silver.	112	130
Mar. 24, 1892	Vote for free coinage of silver	129	66
Do	Mr. Bland's motion to table Johnson's motion against silver.	128	66
Apr. 9, 1892	On vote to make bagging, machinery, and cotton ties and cotton gins free.	159	44
May 2, 1892	On vote to make binding twine for farmers free.	176	44
July 8, 1892	On vote to reduce tax on tin-plate, in the interest of farmers.	199	61
July 13, 1892	On resolution to consider Senate bill for free coinage of silver.	118	61
Aug. 28, 1893	Vote for free coinage of silver at 16 to 1	100	112
Do	Vote to coin 2,000,000 ounces of silver per month at 16 to 1.	111	110
Do	Vote to repeal purchasing clause of Sherman act.§	74	100
Feb. 1, 1894	Vote on Wilson bill to reduce tariff taxes on wool clothing, etc., and impose a tax on large incomes.	196	122
Mar. 1, 1894	Vote to coin the silver in the Treasury	143	64
Do	Vote upon passage of the bill	135	82
Apr. 4, 1894	Vote to pass silver bill over veto	119	61

* This bill was vetoed by President Hayes, March 3, 1881.
† Eight Greenbackers voted with the Republicans.
‡ Five Greenbackers voted with the Republicans.
§ This vote not regarded as partisan or political.

TABLE 4.—*Votes in the Senate upon Democratic financial measures against banks and monopolies and in the interest of the people.*

Date.	Character of measure.	Democratic votes against monopoly and for the people.	Republican votes for monopoly and against the people.
May 10, 1864	Powell's measure to repeal national-bank law	5	31
Mar. 11, 1870	Senator Bayard's measure to tax bonds	7	38
Feb. 15, 1878	Bland act for coinage of silver	24	14
Feb. 28, 1878	Bland act over President's veto	25	10
June 21, 1882	Beck's measure against national banks	20	26
Aug. 19, 1890	Vote to reduce tariff on many descriptions of steel and iron to 35 per cent.	19	26
Do	Vote to reduce tax on wire for fences	21	25
Do	Mr. Vest's motion to reduce tariff on wire for fences.	21	27
Do	McPherson's motion to reduce tariff on wire not less than 10 wire gauge.	17	27
Do	McPherson's motion to reduce tariff on iron or steel wire of certain classes 25 per cent.	19	27
Do	Vance's motion to reduce tax on trace chains and other chains.	18	26
Aug. 20, 1890	McPherson's motion to reduce tax on cheap knives, razors, etc.	24	32
Aug. 22, 1890	Vest's motion to reduce tax on files and other tools.	19	27
Do	To reduce tax on iron or steel sheets, plates, wares, etc.	19	24
Do	To reduce tax on cut nails, spikes, etc	18	27
Do	To reduce tax on horseshoe nails and all iron and steel nails.	20	29
Do	To reduce tax on saws	19	25
Do	To reduce tax on wood screws	15	29
Aug. 26, 1890	To reduce tax on lead ore	17	28
Aug. 27, 1890	To reduce tax on tobacco	20	29
Aug. 28, 1890	To make sugar of milk free	21	24
Aug. 29, 1890	To make salt free of tax	15	29
Aug. 30, 1890	To make wool free	17	27
Sept. 1, 1890	To reduce tax on woolens, worsted, yarns, etc.	16	27
Do	To reduce tax on knit fabrics, etc	18	25
Do	To reduce tax on blankets, flannels, wool hats, etc.	16	57
Do	To reduce tax on women's and children's dress goods, etc.	19	36
Sept. 4, 1890	To reduce tax on stockings, hose, etc	19	27
Do	To reduce tax on burlaps and bagging for cotton	24	31
Do	To make bagging of cotton free	24	31
Do	To reduce tax on collars and cuffs	17	29
Sept. 5, 1890	To reduce tax upon men's gloves	21	30
Do	To reduce tax on fashion plates engraved on steel.	17	26
Do	To reduce tax on bagging of jute, manila, sisal, or other fiber, except hemp or flax.	19	26
Do	To reduce tax on burlaps and bags for grain	23	28
Do	To make lumber, sawed boards, etc., free	17	31
Sept. 6, 1890	Vest's motion to put salt on the free list	25	34
Do	To reduce tariff on all imports exchanged for farm products grown in United States.	23	30
Do	To make all articles necessary for the construction of vessels free.	22	29

Votes in the Senate upon Democratic financial measures, etc.—Continued.

Date.	Character of measure.	Democratic votes against monopoly and for the people.	Republican votes for monopoly and against the people.
Sept. 9, 1890	To strike out bounty on sugar	23	34
Do.	That McKinley tariff tax shall not affect bonded goods for one year.	28	34
Do.	To admit goods free from nations which admit our farm and other products free.	26	38
Do.	To levy a tax of 3 per cent upon dividends, including interest on bonds of corporations.	24	30
Do.	Mr. Butler moved to make bagging, etc., free	24	29
Do.	To prohibit any tax duty exceeding 100 per cent.	25	33
July 1, 1892	On passage of bill for free coinage of silver	19	18
Oct. 28, 1893	On vote to require the coinage of not less than 2,000,000 ounces of silver per month.	23	20
Oct. 30, 1893	On vote for unconditional repeal of purchasing clause in Sherman act.*	21	24

* This vote was not regarded as partisan or political.

I will now make some reference to the political organizations called the Greenback party, Populist party, or Third Party.

The elections of 1874 and 1876 were very favorable to the Democrats, and the Republican party clearly saw that unless the Democracy could be divided the Republicans would be overwhelmingly defeated. The Greenback party sprang into existence, and elected some dozen Greenback members to the Forty-sixth and Forty-seventh Congresses. In some cases it was contended that these Greenback members were aided in their elections by money furnished by the Republican executive committee. By artful and deceptive promises many men who had been good Democrats were deceived and enticed into casting their votes for Greenback candidates, thus detracting from the power and strength of the Democratic party.

Many of the Greenback candidates in part won their elections by denouncing Democrats whom they were trying to defeat as not sufficiently Democratic, but after securing their elections they voted in Congress with the Republicans and against the Democrats upon many matters of vital importance to the interests of the people.

GREENBACKERS VOTE AGAINST THE PEOPLE.

Most of these votes against the people and in favor of monopoly were viva voce, or upon division, or upon votes by tellers, of which, of course, there is no record; and sometimes, when the yeas and nays were demanded, they voted with the Republicans, but frequently, when votes were taken by yeas and nays, they refrained from voting. But notwithstanding this, a glance at the Journal and the CONGRESSIONAL RECORD shows that the Greenbackers were often recorded as opposed to Democratic measures and to measures which they had promised their constituents to support. To illustrate:

On April 5, 1879 (RECORD, page 257), a Greenbacker, who was elected protesting that he was a better Democrat than his opponent, moved to strike out the sixth section of the Army bill, viz, that part of the bill which prohibited the use of soldiers and marshals at the polls. The same Greenbacker on June 26, 1879 (RECORD, page 2365), sought by amendment to defeat the bill which required nonpartisan jurors in Federal courts. He also made a speech for the amendment, which is on page 2365, Forty-sixth Congress.

On June 10, 1879 (RECORD, page 1908), on the vote in the House to prevent marshals and soldiers from controlling elections in the South, when the yeas and nays were called 102 Democrats voted for the bill, 84 Republicans against it, and 13 Greenbackers refrained from voting.

The Greenbackers therefore showed they were clearly in favor of having elections controlled by soldiers and marshals.

On another vote on the same bill 13 Greenbackers refrained from voting upon the call of the yeas and nays.

On June 27, 1879 (RECORD, page 2397), the House voted upon a bill which prohibited the use of marshals and soldiers at the polls; 13 Greenbackers refrained from voting.

June 30, 1879 (RECORD, page 2443), the bill was vetoed, and the same day it was voted upon in the House; 14 Greenbackers refrained from voting.

In December a bill was voted upon to prevent officers of the Government from intermeddling in elections by threats or menaces, or contributions of money, or the use of official patronage. The Republicans voted against this, and when the yeas and nays were ordered 13 Greenbackers refrained from voting.

On January 12, 1880 (RECORD, page 289), 4 Greenbackers voted with 99 Republicans against free trade on salt, and 6 Greenbackers refused to vote, and thus aided the Republicans in defeating this effort of the Democrats to give the people free salt; and on March 8, 1880, upon the same subject, 7 Greenbackers voted with 97 Republicans.

March 8, 1880 (RECORD, page 1385), on Mr. Samford's bill to reduce the tariff on articles used by the poor 50 per cent, 8 Greenbackers voted with 102 Republicans against the measure.

March 23, 1880, on Mr. Townshend's bill to put salt and many other articles on the free list, 5 Greenbackers voted with 100 Republicans. On a second vote regarding the subject, 8 Greenbackers voted with 108 Republicans, and on a third vote on this subject 7 Greenbackers voted with 105 Republicans.

In the Forty-sixth and Forty-seventh Congresses there was a great struggle on the part of the Republicans to obtain an unfair apportionment of representation in Congress, which was unduly favorable to Republicans and did great injustice to Democrats.

March 3, 1881 (RECORD, page 2434), on this question 6 Greenbackers voted with the 110 Republicans on the bill favorable to Republicans.

On the same day, on another vote favorable to Republicans, 11 Greenbackers voted with 116 Republicans, and on the passage of the bill, which was favorable to Republicans, 12 Greenbackers voted with 114 Republicans, and on the passage of the bill in the Forty-seventh Congress 6 Greenbackers voted with 136 Republicans. On Mr. Beltzhoover's amendment, which was favorable to Democrats, 3 Greenbackers voted against it with 129 Republicans.

June 27, 1882 (RECORD, page 5415), on Mr. Springer's amendment to repeal all internal-revenue taxes except taxes on whisky, Democrats all voted for it, Republicans all against it, and the Greenbackers refrained from voting.

March, 1882, upon the vote to increase the powers and privileges of national banks, which was favorable to monopoly, 2 Greenbackers voted with 99 Republicans, and against the people.

On motion to reconsider the vote, 4 Greenbackers voted with 105 Republicans.

On Bayne's amendment in favor of monopoly, 7 Greenbackers voted with 95 Republicans.

On Buckner's amendment favorable to the people, 8 Greenbackers joined 105 Republicans in voting against the people.

February 17, 1882 (RECORD, page 1251), on Mr. Colerick's amendment favorable to Democrats, 6 Greenbackers voted against it with 128 Republicans. On Mr. Colerick's motion to reconsider, 4 Greenbackers voted with 124 Republicans.

GREENBACKERS VOTE IN FAVOR OF NATIONAL BANKS.

In 1881 Mr. Wood reported a bill to refund the debt in 3 per cent bonds, payable at the pleasure of the United States after five years and payable in ten years. The bill also authorized the issuance of $300,000,000 of small certificates to be used as currency, which issues could be redeemed after one year. The bill also provided that these bonds and certificates should be used for the redemption of bonds bearing a higher rate of interest, and that after May 1, 1881, these bonds alone should be received from national banks as security for circulation. This would have made 3 per cent bonds sell for at least 115. On this measure, which was very favorable to the people and against the banks, the Greenbackers arrayed themselves side by side with the Republicans in favor of banks and against the people.

On January 19, 1881 (RECORD, page 783), the vote was taken upon the passage the bill; 8 Greenbackers together with 109 Republicans voted against the bill and 125 Democrats for it. Upon another vote 10 Greenbackers voted against it together with 104 Republicans. Upon the return of the bill from the Senate 7 Greenbackers voted against it together with 86 Republicans.

The Greenbackers who voted against this bill were De La Matyr, Ford, Forsythe, Gillette, Jones, Lowe, Murch, Weaver, Wright, Yocum.

To show that this bill was favorable to the people and against national banks, and that the Greenbackers voted against the bill with the full knowledge of this, I will read from a speech delivered by General Weaver January 19, 1881 (RECORD, page 776). In speaking of this bill he says:

> First. By the law as it now stands national banks may use any and all kinds of Government bonds to secure their circulation.
> Second. They may deposit in pledge bonds upon which all interest has ceased.
> Third. These banks may, whenever and as often as they see proper, retire and in turn increase their circulation by depositing lawful money with the Secretary of the Treasury. Now, all three of these privileges are taken away by the provisions of this bill.

It showed that President Hayes fully understood the bill was against national banks when he vetoed it on March 3, 1881. (RECORD, page 2433.) The veto message says:

> I should not deem it my duty to interpose my constitutional objection to the passage of the present bill if it did not contain, in its fifth section, provisions, which in my judgment, seriously impair the value and tend to the destruction of the present national banking system of the country. This system has now been in operation almost twenty years. No safer or more beneficial banking system was ever established.

Now, the bill passed the House by only 10 majority, and the Democrats saw clearly they could not pass the bill over the President's veto by a two-thirds vote. Therefore, Mr. Tucker (RECORD, page 2434) moved that the veto message lie on the table, to be called up hereafter, and on this 5 Greenbackers voted with the Republicans and against about 125 Democrats, including such men as Carlisle, BLACKBURN, Blount, CULBERSON, Forney, Hatch, Hooker, Kenna, MCMILLIN, MILLS, Morrison, Reagan, Springer, and Stevenson. It seemed very strange to see Greenbackers, who were elected on a pledge to oppose national banks, vote against this measure.

GREENBACKERS AID REPUBLICANS TO VIOLATE THE CONSTITUTION.

March 29, 1882, on the vote to violate the Constitution and destroy time-honored rules of the House of Representatives and give unbridled authority to the Republicans, all the Greenbackers present voted with 144 Republicans.

This vote is recorded in the RECORD, page 4329. Had these Greenbackers refrained from voting, the Republicans would not have been able to commit this outrage upon the Constitution.

In their efforts to prevent this outrage the Democrats exhausted every effort possible, and they would have succeeded had not the Greenbackers joined hands with the Republicans.

On the morning of May 29, 1882, before the Republicans were able to reach the vote to which I have referred, the Democrats succeeded in forcing four yea-and-nay votes. The first is recorded on page 4305 of the CONGRESSIONAL RECORD, and every Greenbacker present and voting is recorded as voting with the Republicans.

The second is on page 4325, the third is on page 4327, and the fourth is on page 4328, and in each case the RECORD shows that every Greenbacker present and voting cast his vote with the Republicans.

On a vote in the House to seat a negro—Lynch—in place of a white Democrat, 5 Greenbackers voted with 120 Republicans.

On vote to unseat a Democrat—Dibble—and seat Mackey, a Republican, 7 Greenbackers voted with 140 Republicans.

On vote to unseat Tillman, a Democrat, and seat a negro—Smalls—4 Greenbackers voted with 140 Republicans.

On vote on the previous question of unseating General Shelly, a Democrat, 5 Greenbackers voted with 138 Republicans.

On vote to unseat General Shelly, 5 Greenbackers voted with 140 Republicans.

The Greenbackers commenced their career of joining their votes to the votes of Republicans and against Democrats at the beginning of the Forty-sixth Congress. On March 19, 1879, page 27 of the RECORD, and before that Congress had been in session two hours, Mr. FRYE, a Republican from Maine, made a motion to prevent Mr. Hull, a Democrat, from being sworn in as a member, the purpose being, if possible, to seat Mr. Hull's opponent, who was an extreme radical Republican. This was an insult to a sovereign State, the governor and secretary of state of said Commonwealth having certified to the member's election. Eleven Greenbackers voted with 126 Republicans for this outrage, and 140 Democrats voted against it. Mr. Harris, a Democrat from Virginia, then moved that Mr. Hull be sworn in as a member. Mr. Garfield called for the yeas and nays, and 12 Greenbackers and 124 Republicans voted against it, and 140 Democrats voted for the motion.

The 12 Greenbackers who voted against seating Mr. Hull were: Barlow, De La Martyr, Ford, Forsythe, Gillette, Jones, Kelley, Lowe, Murch, Daniel L. Russell, Weaver, and Yocum. This vote is recorded in the RECORD, March 19, 1879, page 28.

The Greenbackers continued their support of the Republican party during their entire career of four years in the House of Representatives, and including the last night of the session, March 3, 1882, when they repeatedly voted with Republicans to unseat Governor Richardson, of South Carolina, and seat a negro named Samuel Lee, said negro Lee having no claim to the seat whatever, even a Republican election committee having made a report that he was not elected. On this vote 4 Greenbackers voted with 119 Republicans to seat the negro and 114 Democrats against it. (RECORD, page 3752.) The Republicans, assisted more or less by the Greenbackers, continued their efforts to unseat Governor Richardson and seat the negro Samuel Lee. Several yea-and-nay votes were had. They are recorded in the RECORD, pages 3753, 3754, 3755, 3759, 3760, 3764, 3772, second session Forty-seventh Congress. The Democrats broke a quorum twice during the contest, and on both occasions the Republicans demanded a call of the House.

March 2, 1883, in the case of Sessinghaus *vs.* Frost, 7 Greenbackers voted with 119 Republicans and against 110 Democrats to unseat a Democrat, R. Graham Frost, and seat a Republican, Sessinghaus. (See RECORD, page 3631.)

GREENBACKERS VOTE WITH REPUBLICANS FOR HIGH-TARIFF TAX.

But worse than all that, in the great struggle made by Democrats to defeat the iniquitous tariff act of March 3, 1883, many of the Greenbackers voted with the Republicans and against the people. On the vote to establish the Tariff Commission, 6 Greenbackers voted with the 117 Republicans and against 58 Democrats, and on the vote on the bill 4 Greenbackers voted with 136 Republicans against 112 Democrats.

On vote to reduce the tariff tax the Greenbackers very generally voted with the Republicans against the Democrats, and on vote to increase the tariff tax the Greenbackers again voted with the Republicans and against the Democrats.

June 6, 1882, on bill to more than double tariff tax upon woolen goods all the Greenbackers who voted cast their vote with the Republicans for this iniquity.

March 30, 1882, on Tariff Commission, 4 Greenbackers voted with 113 Republicans. On second vote, 6 Greenbackers voted with 124 Republicans. When the bill passed, 7 Greenbackers voted with 116 Republicans.

On June 6, 1882, 5 Greenbackers voted with 99 Republicans against abolishing the tariff tax on trace chains.

On December 16, 1881, on the election of officers of the House of Representatives, upon the vote whether the officers of the House should be Democratic or Republican, 8 Greenbackers voted with 147 Republicans for the Republican officers and against Democratic officers.

DEMOCRATS SOLIDLY FOR—REPUBLICANS SOLIDLY AGAINST FARMERS.

On April 7, 1882 (RECORD, page 3057), on a vote "to place wool on the free list and to reduce the duties on woolen goods," such as are worn by farmers and laboring people, 187 Democrats voted for it, and 57 Republicans and 1 Populist [Mr. Otis of Kansas] against it.

On April 9, 1892 (RECORD, page 3141), upon a vote to admit free of duty bagging for cotton, machinery for manufacturing bagging, cotton ties, cotton gins, and parts thereof, 159 Democrats voted for it, and 44 Republicans against it.

On May 2, 1892 (RECORD, page 3842), on a vote to put binding twine for farmers on the free list, 176 Democrats voted for it, and 44 Republicans against it.

On July 8, 1892 (RECORD, page 5906), on vote to reduce duty on tin plate and make it free after October 1, 1894, all for the benefit of farmers and laboring men, 199 Democrats voted for it, and 61 Republicans against it.

All these measures were specially in favor of farmers. With one or two exceptions the Democrats voted solidly for these bills, and the Republicans voted solidly against them.

POPULISTS AID REPUBLICANS TO DEFEAT FREE COINAGE OF SILVER IN 1892

On March 24, 1892, the House voted upon a bill for free silver coinage. Upon Mr. BURROWS'S motion to lay the bill on the table the vote (RECORD, page 2544) was 148 yeas and 148 nays. The Speaker then added his name to the negative vote. Every Democrat south of the Ohio River except two voted in favor of silver.

A gold-standard man moved to reconsider the above vote, which motion Mr. Bland moved to lay on the table. The motion was lost by one vote, page 2545. The motion was then voted on and was carried by two votes, page 2546.

Hon. Hosea H. Rockwell was the only man from New York or New England who voted with the Democrats for free silver.

He had been a brave soldier in a white regiment during the war and had been fairly elected to Congress, but notwithstanding this, the Republicans and Populists combined to drive him from Congress and put in his place Henry F. Noyes, who was not elected and who was a colonel of a negro regiment during the war, but was an extreme gold-standard Republican. After a long struggle, they succeeded in getting a vote on this contest on April 22, 1892.

This was the supreme struggle for silver and for the people, and every member of Congress fully realized that a vote against Mr. Rockwell was a vote for the gold standard and against the people, and yet, with that knowledge, every People's Party man in this supreme moment deserted their pretended principles and the people and voted with the Republicans against silver and in favor of a gold-standard Republican.

The Populists or third-party men who thus voted against the coinage of silver were Messrs. BAKER of Kansas, Clover, Davis, Halvorson, KEM, Otis, Simpson, Watson, and Winn. They all voted with the gold-standard Republicans in the numerous votes, by viva voce, by division, and by tellers, and also in three separate yea-and-nay votes. The first of these yea-and-nay votes is recorded on page 3539; the second on page 3540, and the third on page 3541 of the RECORD, all on April 22, 1892. Mr. McKeighan withheld his vote twice, but otherwise voted with the gold-standard men.

POPULISTS VOTED AGAINST AND OPPOSED SILVER COINAGE IN 1893.

On a vote for free and unlimited coinage of silver at the ratio of 17 to 1 (RECORD, August 28, 1893, page 1004), Mr. Harris and Mr. McKeighan, Populists, voted against 88 Democrats and with 111 Republicans against silver coinage at 17 to 1, and Mr. BAKER of

Kansas, Mr. Boen, Mr. Cannon of California, Mr. Davis, Mr. Hudson, Mr. KEM, Mr. Pence, and Mr. Simpson sat in their seats and declined to vote.

On the vote for free and unlimited coinage of silver at the ratio of 18 to 1 (RECORD, August 28, 1893, pages 1005 and 1006), Messrs. Harris, KEM, and McKeighan voted against 88 Democrats and with 110 Republicans against silver coinage, and Messrs. BAKER of Kansas, Boen, Davis, Hudson, Pence, and Simpson sat in their seats and declined to vote.

On the vote for the free coinage of silver at the ratio of 19 to 1 (RECORD, August 28, 1893, pages 1005 and 1006), the vote and action of the Populists, with the exception of Mr. Cannon of California, was the same as it was upon the vote for free coinage at the ratio of 17 to 1.

On the vote for free and unlimited coinage of silver at 20 to 1 (RECORD, August 28, 1893, page 1006) the vote and action of the Populists was the same as the vote for free and unlimited coinage of siver at 18 to 1.

On a vote for the coinage of silver at 16 to 1, under the Bland-Allison Act, Mr. NEWLANDS declined to vote. (RECORD, August 28, 1893, page 1007.)

POPULISTS AIDED REPUBLICANS UNDER MR. REED IN OPPOSING REDUCTION OF TARIFF TAXATION.

On a vote January 5, 1894 (RECORD, page 537), for taking up a bill for reducing tariff taxation and lightening the burdens upon the people, Messrs. BAKER of Kansas, Boen, Davis, Harris, Hudson, KEM, NEWLANDS, Pence, and Simpson, Populists, or Third Party men, joined the solid Republican party under the leadership of the arch protectionists, Mr. REED and Mr. BOUTELLE, and refused to vote upon the bill, and in this manner made 7 less than a quorum, and thus aided the Republican party in continuing oppressions upon the people.

On another vote, January 5, 1894 (RECORD, page 538), the Populists again, in the same way, joined and aided the Republicans in efforts to oppress the people.

Again, on January 5, 1894 (RECORD, page 538), on another vote, the Populists for the third time, in the same way, joined and aided the Republicans in efforts to oppress the people.

On another vote, the same day (RECORD, page 539), the Populists, for a fourth time, in the same way, joined and aided the Republicans in efforts to oppress the people.

Again, on January 6, 1894 (RECORD, page 544), on another vote, the Populists, for a fifth time, in the same way, joined and aided the Republicans in efforts to oppress the people.

The same day (RECORD, page 545), on another vote, the Populists, for a sixth time, in the same way, joined and aided the Republicans in efforts to oppress the people.

Again, on the same day (RECORD, page 546), on another vote, the Populists, for the seventh time, in the same way, joined and aided the Republicans in efforts to oppress the people.

On January 8, 1894 (RECORD, page 565), on another vote, the Populists, for an eighth time, in the same way, joined and aided the Republicans in efforts to oppress the people. The same day (RECORD, page 570) on Mr. REED'S motion to recommit, the Populists, except Mr. Hudson, for a ninth time, in the say way, joined and aided the Republicans in efforts to oppress the people. The same day (RECORD, page 571), on the order for the consideration of the bill to reduce tariff taxation and lighten the burdens upon the people, Messrs. BAKER of Kansas, Boen, Davis, Harris, KEM, NEWLANDS, Pence, and Simpson refused to vote, and thus joined the solid Republican party under the leadership of Mr. REED and Mr. BOUTELLE, and thus sought to prevent legislation for reducing tariff taxation and lessening the burdens upon the people.

The RECORD shows that none of these gentlemen were paired upon any of these votes; and the RECORD shows that Mr. BAKER of Kansas, Mr. Boen, Mr. Davis, Mr. Hudson, Mr. KEM, Mr. Pence, and Mr. Simpson were present at other roll calls during days that these votes were had.

SOUTHERN DEMOCRATS VOTED SOLIDLY FOR SILVER COINAGE.

On March 1, 1894, the House voted on the bill to coin the silver bullion in the Treasury. Upon the vote to strike out the second section of the bill, so as only to permit the coinage of $55,156,681, 120 Democrats voted against the amendment and 59 Republicans for it.

Upon Mr. Bland's substitute, 172, nearly all Democrats, voted for it, and only 94, mostly Republicans, against it, and only two members of Congress south of the banks of the Ohio voted against it.

On the vote to recommit, nearly all the Republicans and the Northeastern Democrats, in all 132 in number, voted to recommit the bill. The vote against the recommittal was 168, including every Democrat but one from the South.

Upon the passage of the bill 168 votes were cast in its favor, including every Democrat but one from the South. There were 129 votes cast against it, including nearly every Republican.

Upon the vote to pass the bill over the President's veto on April 4, 1894, 119 Democrats voted in favor of its passage. The vote against its passage was 114, including almost the solid Republican party aided by gold-standard Democrats, mostly from the North and East. Only two members of Congress from south of the banks of the Ohio River voted against the bill.

June 5, 1894, page 6841, Senator ALLEN said:

If the $100,000,000 that were found in the Treasury when Mr. Harrison came into the Presidential office had been judiciously used there would be no necessity to-day for the levying of a tax upon sugar.

POPULISTS VOTED WITH THE REPUBLICANS TO PREVENT AN INCREASE OF CURRENCY.

On June 6, 1894, the Populists in a body joined the Republicans and voted against the Democrats on the measure to repeal the 10 per cent tax on State bank issues. There were 102 votes for the bill, all of them by Democrats and including every Democrat south of the Ohio River. The votes against the bill included every Republican and every Populist.

I will now present a table showing the recorded vote on thirty-six measures introduced by Republicans, in which Greenbackers, Populists, or Third Party men voted with Republicans in favor of these measures, all of which were to benefit banks and monopoly, and against the interests of the people. I also present a table which shows the recorded vote upon thirty-seven measures introduced by Democrats, in which Greenbackers, Populists, or Third Party men voted with Republicans and against these measures, in favor of banks and monopoly and against the people.

In these tables I have included some votes which are purely political, in which Greenbackers, Populists, or Third Party men voted with Republicans to give increased strength to the Republican party.

Votes in the House of Representatives upon Republican measures in the interests of banks and monopolies and against the interest of the people.

Date.	Character of measure.	Democratic votes against banks and monopolies and in the interests of the people.	Republicans and Greenbackers or Populists in favor of banks and monopolies and against interests of the people.	
			Republicans.	Greenbackers or Populists.
Mar. 8, 1880	On referring a bill to reduce taxes to a committee to prevent its passage.	84	97	7
Mar. 23, 1880	Vote to delay and defeat Mr. Townshend's bill to place salt, printing type, printing paper, chemicals, and materials used in making paper upon the free list.	94	108	8
Do	On Garfield's motion to defeat Townshend's bill by referring it to committee.	84	105	7
Mar. 3, 1881	On apportionment of representation at 322, which was favorable to Republicans.	127	110	6
Do	On motion to fix representation at 319, which was also favorable to Republicans.	120	116	11
Do	On passage of the bill favorable to Republicans.	113	114	13
Feb. 17, 1882	Mr. Anderson moved to fix the House of Representatives at 325 members.	100	136	6
Do	On vote favorable to Republicans and against Democratic principles.	95	120	5
Mar. 17, 1882	On Mr. Cameron's amendment favorable to national banks and to Republicans.	86	99	2
Do	On reconsidering the above vote	87	105	4
Mar. 20, 1882	Mr. Kelley's motion to consider the Tariff Commission.	55	113	4
Mar. 23, 1882	Mr. Kasson's amendment favorable to Chinese.	96	94	3
May 6, 1882	Tariff Commission bill passed	75	116	7
May 29, 1882	Page 4325 of the RECORD, Mr. Reed's motion to lay Mr. Randall's motion on the table.	.....	142	8
Do	Page 4328 of RECORD, Mr. Reed's demand for previous question on unconstitutional rule.	.....	142	9
Do	On vote to give Republicans unlimited and unbridled authority.	.....	141	9
May 29, 1882	To seat a negro (Lynch) in place of a white Democrat.	93	120	5
Do	In unseating Dibble and seating Mackey.	.....	140	7
Do	In unseating Tillman and seating a negro (Smalls).	.....	140	4
Do	On the previous question of unseating Shelly.	.....	138	5
May 29, 1882	On the vote to unseat Shelly	.....	140	5
Mar. 19, 1879	On Frye's motion against Hull and in favor of a Republican.	140	126	11
Mar. 20, 1882	On Tariff Commission	58	117	6

Votes in the House of Representatives upon Republican measures in the interests of banks and monopolies, etc.—Continued.

Date.	Character of measure.	Democratic votes against banks and monopolies and in the interests of the people.	Republicans and Greenbackers or Populists in favor of banks and monopolies and against interests of the people.	
			Republicans.	Greenbackers or Populists.
June 27, 1882	On passage of internal-revenue bill	77	119	*7
July 3, 1882	Mr. Kelley's motion to increase tariff on knit goods from 35 per cent to 100 per cent.	46	108	4
July 26, 1882	Motion to recommit Mr. Tucker's bill in favor of free American ships.	71	96	3
Mar. 2, 1883	To unseat a Democrat (Frost) and seat a Republican.	110	119	7
Mar. 3, 1883	Vote on tariff bill	112	136	4
Do	On vote to seat a negro and unseat a Democrat.	114	119	4
Apr. 22, 1892	To unseat a silver Democrat and seat a gold-standard Republican colonel of a negro regiment.	140	72	9
Do	do	128	74	9
Do	Motion having the same ultimate purpose.	124	78	10
Jan. 8, 1894	On Mr. Reed's motion to recommit order for consideration of tariff bill.	181	114	8
June 5, 1894	Vote in Senate to continue the bounty on sugar for 11 years.	38	31	1
Do	Vote in Senate to retain graduated bounty on sugar for 11 years.	37	31	3
June 20, 1894	Vote in Senate on Peffer's amendment to tax salt.	31	23	1

Votes in the House of Representatives upon Democratic measures against banks and monopolies and in the interest of the people.

Mar. 19, 1879	On Mr. Harris's motion to seat a Democrat.	140	124	12
June 10, 1879	On vote to prohibit marshals and soldiers at the polls.	102	84	13
June 27, 1879	On another vote to prohibit marshals and soldiers at the polls.	89	69	13
June 30, 1879	Vote on same bill after President's veto.	85	63	13
Jan. 12, 1880	Bill to make salt free of duty	99	99	*9
Mar. 8, 1880	On motion on Mr. Samford's bill to reduce tariff 50 per cent on many articles used by laboring people, and to make printing paper, type, and material free.	81	102	8
Mar. 23, 1880	Mr. Nicholls's motion favorable to bill to place salt, printing type, printing paper, chemicals, and materials used in making paper upon the free list.	110	100	5
1881	Mr. Wood's bill to refund in 3 per cent bonds, redeemable at the pleasure of the United States after one year.	124	104	10
	When the same bill came back to the House.	113	86	7
Jan. 19, 1881	Funding debt and destruction of national-bank system.	125	109	8
Dec. 6, 1881	On motion to elect Democratic officers of the House.	121	147	8
May 18, 1882	Mr. Bland's bill for substituting United States currency for national-bank notes.	66	114	5
May 6, 1882	Mr. Mills in favor of resolution that no more money shall be collected than is necessary for the wants of the Government economically administered, and that the maximum revenue duty should be imposed on all luxuries.	74	124	6
May 18, 1882	Mr. Buckner's amendment restricting national banks and favoring the people.	56	150	8
Do	Mr. Beltzhoover's amendment to prevent gerrymandering.	109	129	3
Do	Mr. Colerick moved to fix the House of Representatives at 316, favorable to the Democrats.	94	128	6
Do	Mr. Colerick moved to reconsider	99	124	4
May 29, 1882	On Mr. Blackburn's motion to delay		138	8
	vote on rule, page 4305.			
Do	On Mr. Kenna's motion, page 4327		143	9
June 6, 1882	On bill to abolish duty on trace chains.	67	99	5
June 27, 1882	On Springer's amendment to abolish excessive internal taxes.	56	119	*10
Apr. 7, 1892	On vote to reduce tariff tax on woolen clothing used by laboring people.	187	57	1
Aug. 28, 1893	On vote for free and unlimited coinage of silver at 17 to 1.	88	111	*8
Do	On vote for free and unlimited coinage of silver at 18 to 1.	88	110	*10
Aug. 28, 1893	On vote for free and unlimited coinage of silver at 19 to 1.	87	109	*10

Votes in the House of Representatives upon Democratic measures against banks and monopolies, etc.—Continued.

Date.	Character of measure.	Democratic votes against banks and monopolies and in the interests of the people.	Republicans and Greenbackers or Populists in favor of banks and monopolies and against interests of the people.	
			Republicans.	Greenbackers or Populists.
Do	On vote for free and unlimited coinage of silver at 20 to 1.	73	105	*10
Jan. 5, 1894	On vote to take up bill to reduce taxation.	169	*119	*9
Do	do	167	*118	*9
Do	do	168	*116	*9

Do	do	168	*115	*9
Jan. 8, 1894	do	190	*112	*9
Do	do	184	*114	*9
June 6, 1894	On vote to repeal 10 per cent tax on State bank issues.	102	88	9
June 5, 1894	Vote in Senate to abolish bounty on sugar.	38	30	1

*In votes thus marked a portion and sometimes all of the Populists and Republicans refused to vote; I therefore classify the Populists as joining the Republicans against the measures.

DEMOCRATS THE ONLY TRUE FRIENDS OF THE PEOPLE.

This record gives abundant proof that Populists, Greenbackers, or Third Party men, under whatever name they may appear, have repeatedly aided the Republicans in thwarting the efforts of Democrats to legislate in the interests of the people. It shows clearly they have aided the Republicans in perpetuating the national-bank system, in perpetuating the gold standard, in maintaining high tariffs, in force bills, and in controlling elections by soldiers and marshals, and other obnoxious and pernicious legislation by which the Republicans have added wealth to the rich and increased the poverty and suffering of the great mass of the people; and the evidence is clear beyond question that the leaders of the Greenback, Populist, and other Third Party movements in the South seek and receive financial aid from the Republican party, and the proof is also abundant that their leaders promise in return to support tariff and other legislation which they must know is destructive to the farmers and other laboring people of the Southern States.

We all remember how Mr. HENDERSON, a Republican member of Congress from Iowa, showed that in 1880 General Weaver ran for President to aid General Garfield, or, as Mr. HENDERSON expressed it, as the tail of the Republican kite.

The proof is abundant that Chris Magee, of the Republican committee, came to Alabama in 1892, and that the Weaver electors were pledged to vote for Harrison, provided by so doing they could defeat the Democratic party and reelect Harrison President of the United States; and in 1894 the opponents of the Democratic party in Alabama secretly arranged with those high-tariff, force-bill Republicans, Senators HOAR and LODGE and other Republicans of the Senate and House by which, in return for money, the Populists or Jeffersonians of Alabama were in future to give their support to the Republican party.

Senator HOAR, in speaking of Captain Kolb, says:

We all believe that this movement is of the utmost importance; that it is the most promising fact that has taken place in the history of the South for many years.

Senator HOAR also says:

That if he succeeds the solid South is broken and that the success of the cause of protection is assured.

Senator HOAR also says to his Republican associates:

I have no doubt that the forces that he leads will be found acting with us in all great essentials in the future.

The New York Sun says:

The Home Market Club has sent out circulars marked "In confidence," seeking to raise this money.

The circular closes in these words:

Prudence requires that strict privacy should be observed in raising the money. There is so much prejudice in the South that it might be fatal to the cause to have it become known the Kolb party receives any aid from New England. We pray you, therefore, to avoid seeing any but discreet men, and to impress upon them the importance of secrecy.

This exposure is only corroborative of the evidence furnished by the records of Congress which I have given in this speech. Here we have positive proof that the leaders of the opposition to

the Democratic party in Alabama have convinced the authors of the force bill and the arch protectionists, Senators HOAR and LODGE, that they and their followers will be found acting with these Republican leaders in the future.

The evolution has been rapid. Two years ago the opponents of the Democratic party in Alabama publicly proclaimed themselves as the purest Democrats, as better Democrats than the body of the Democratic party. At the same time they were secretly pledging themselves to support the most obnoxious Republican measures and principles; and now they have joined themselves with the solid Republican party of that State, and if a gold-standard Republican is elected President they will be the foremost in demanding Republican patronage.

This record should admonish every true lover of his country that there is but one way on earth to restore our country to peace and prosperity; that there is but one way to reestablish the South and the rural sections upon the principles which governed when we were happy and prosperous, and that one way is to place every Department of the Government under the control of true and unquestioned Democrats.

POPULIST BILLS INJURIOUS TO THE SOUTH.

I have before me four bills, introduced in the last Congress by Populists, which I submit would, if enacted into law, do more harm to the people of the South than any measures ever proposed in Congress, unless we except the force bill and confiscation bills which were introduced soon after the close of the war.

House bill 3186, by Mr. Hudson, a Populist, provided—

That all pensioners for service in the Federal Army and Navy during the war may receive in one payment ten times the annual amount of the pension.

This would cost the Government this year $1,500,000,000.

House bill 3436, by Mr. Davis, Populist from Kansas, provides—

That the mortgage debt of any mortgagor of real estate used as a home or for support, shall be paid by the United States where an appraisement board finds the estate to be worth the full amount of the mortgage, and the debtor shall be allowed to redeem his property from the United States within twenty years by paying an interest of 1 per cent per annum.

It is estimated that this would enable persons to get money of the United States for twenty years at 1 per cent interest to an amount exceeding $12,000,000,000.

The rich and influential owners of real estate in cities would be the first beneficiaries, and the Government would become bankrupt before the farmers could get any benefit from the act.

House bill 3437, by Mr. Davis, Populist, from Kansas, provides for—

Granting a pension of $10 to $25 per month to all soldiers or sailors of the Union Army and Navy in the late war, and also to widows and minors; this to be in addition to disability pensions granted under present laws.

The Commissioner of Pensions estimates that this bill would increase our annual disbursements for pensions to $460,000,000 for the coming year.

House bill 6767, by Mr. Davis, Populist member from Kansas:

Directs the immediate enlistment of 500,000 men to be fed, clothed, paid, and provided for the same as the Regular Army; said army to be employed on works of public improvement, canals, rivers, and harbors, irrigation works, public highways, etc.

As the present Army of 25,000 men costs over $23,700,000 a year, the cost of simply the clothing, food, pay, etc., of this proposed army of 500,000 men would probably exceed $474,000,000.

If these bills should go into effect it would require the disbursement this year by the United States Government of $14,434,000,000, which is more than forty times the entire income of the United States, and as the entire amount of gold, silver, and paper money circulation of the world is only $10,037,568,000, the proposed expenditure this year by these four Populist bills would be one-half greater than all the money in the world. And yet these bills are only a few of the many impracticable measures which the Populists in Congress have prepared to have enacted into law.

The only possible way to raise this stupendous sum would be by a direct tax, and as the Constitution provides that direct taxes be apportioned according to population the amount Alabama would be required to pay this year would be $350,000,000. This would be about double the assessed value of all the property in that State. It is very clear that the passage and enforcement of these bills would bring bankruptcy and ruin upon all the people in the South.

The Democratic party has always befriended labor by insisting upon the strictest economy in the administration of the Government.

In order to show the difference between Democratic economy and Republican profligacy I have prepared Table No. 1, showing the expenditures of the Government for the seventy-two years from 1789 to 1861, during substantially all of which time we were under Democratic administration.

This table comprises all expenditures of every character, including the cost of all wars—the war of 1812, all Indian wars, the war with Mexico, and the preparation for a war with Tripoli. It is as follows:

TABLE NO. 1.—*Total expenditures of the United States under Democratic government from March 4, 1789, to June 30, 1861.*

Year.	War.	Navy.	Indians.	Pensions.	Miscellaneous.	Net ordinary expenditures.	Premium.	Interest.	Total expenditures, including premium.
1789 to 1791	$632,804.03	----------	$27,000.00	$175,813.88	$1,083,971.61	$1,919,589.52	----------	$1,177,863.03	$3,097,451.55
1792	1,100,702.09	----------	13,648.85	109,243.15	4,672,664.38	5,896,258.47	----------	2,373,611.28	8,269,869.75
1793	1,130,249.08	----------	27,282.83	80,087.81	511,451.01	1,749,070.73	----------	2,097,859.17	3,846,929.90
1794	2,639,097.59	$61,408.97	13,042.46	81,399.24	750,350.74	3,545,299.00	----------	2,752,523.04	6,297,822.04
1795	2,480,910.13	410,562.03	23,475.68	68,673.22	1,378,920.66	4,362,541.72	----------	2,947,059.06	7,309,600.78
1796	1,260,263.84	274,784.04	113,563.98	100,843.71	801,847.58	2,551,303.15	----------	3,239,347.68	5,790,650.83

It is well to remember that with such a record of Democratic economy the Republican convention which nominated Abraham Lincoln for President denounced the expenditure which averaged $38,625,351, as reckless extravagance; and yet the same Republican party immediately launched out into an expenditure which during the first few years of Republican administration averaged annually $835,595,102.61, more than twenty-one times as great as the average expenditure by Democrats.

REPUBLICAN PLATFORM 1860.

The language of the Republican platform of 1860 was in these words:

That the people justly view with alarm the reckless extravagance which pervades every department of the Federal Government; that a return to rigid economy and accountability is indispensable to arrest the systematic plunder of the public Treasury by favored partisans.

I call attention to the fact that the year immediately preceding the meeting of this Republican convention the total expenditure of the Government under Democratic appropriations was $63,200,875. The convention denounced this as reckless extravagance, and yet during the first four years of their control of the Government they expended the enormous annual average of $825,595,102.61.

I have also prepared Table No. 2, showing the total expenditures during the years of war, from June 30, 1861, to June 30, 1865.

It is as follows:

TABLE No. 2.—*Total expenditures of the United States under Republican government during the war period, from June 30, 1861, to June 30, 1865.*

Year ending June 30—	War.	Navy.	Indians.	Pensions.	Miscellaneous.	Net ordinary expenditures.	Premiums.	Interest.	Total expenditures.
1862	$394,368,407.36	$42,668,277.09	$2,273,223.45	$853,095.40	$21,408,491.16	$461,671,494.46		$13,190,324.45	$474,761,818.91
1863	599,298,600.83	63,221,963.64	3,154,357.11	1,078,991.59	23,265,965.39	690,010,878.56		24,729,846.61	714,740,725.17
1864	690,791,842.97	85,725,994.67	2,629,857.77	4,983,924.41	27,505,599.46	811,637,220.28		53,685,421.69	865,322,641.97
1865	1,031,323,360.79	122,612,945.29	5,116,837.08	16,338,811.13	43,047,658.01	1,218,439,612.30	$1,717,900.11	77,397,712.00	1,297,555,224.41
Total	2,715,782,211.95	314,229,180.69	13,174,276.41	23,254,822.53	115,218,714.02	3,181,759,205.60	1,717,900.11	169,003,304.75	3,352,380,410.46

Also Table No. 3, showing total expenditures from June 30, 1865, to June 30, 1895.

TABLE No. 3.—*Total expenditures of the United States, mostly under Republican government, from June 30, 1865, to June 30, 1895.*

Year ending June 30—	War.	Navy.	Indian.	Pensions.	Miscellaneous.	Net ordinary expenditures.	Premium.	Interest.	Total expenditures.

*The Army appropriation act for 1878 was passed during the special session of this Congress, but for the purposes of comparison is included under appropriations by the Forty-fourth Congress.

†The Army and legislative appropriation acts for 1880 were passed during the special session of this Congress, but for purposes of comparison are included under appropriations by the Forty-fifth Congress.

‡As passed the Senate.

§As reported to Senate.

a Fifty per cent of the amounts appropriated for the District of Columbia are paid by the United States, except the amount for the water department, which is paid out of the revenues of that department, and was first included in the bill for 1333.

b Prior to 1881 appropriations for the Agricultural Department were provided for in the legislative acts.

c The appropriations for the postal service are paid out of the postal revenues, and any deficiency in the revenue is provided for out of the Treasury of the United States.

d Includes $26,887,200 for pension arrears, appropriated by special act.

e Includes $9,240,000 for arrears and pension deficiencies for 1880, appropriated by special act.

f Includes $25,321,907.35, pension deficiencies for 1890.

g Includes $20,335,598.34, pension deficiencies for 1891.

I desire to call especial attention to the fact developed by this table that when the Democratic party came into control of the Forty-fourth Congress they reduced the regular annual appropriation $32,000,000 below the average appropriations by Republicans during the five preceding years. And again, that when Republicans fell into control of the Fifty-first Congress they increased appropriations $160,000 a year above the average appropriations by the seven preceding Democratic Congresses.

During the five years immediately preceding the Forty-fourth Congress the average regular annual appropriations by Republicans were..... $181,826,321.52

The Democrats then came into control of the House of Representatives and immediately reduced the regular annual appropriations to..... $149,572,894.44

Thus making an annual saving of..... 32,253,427.08

The Republicans again came into control of all branches of the Government in the Forty-seventh Congress, and they immediately increased the annual average appropriations to..... 264,652,624.96

This was an annual average increase by Republicans in excess of Democratic appropriations of..... 86,034,554.04

In the Forty-eighth Congress the Democrats again had control of the House and they immediately reduced the annual average appropriations to	212,652,935.63
Thus making an annual saving to the people of	51,999,689.33
During the six years of Democratic rule in the House of Representatives following the Forty-seventh Congress the average annual appropriations were	253,587,560.05
The Republicans then obtained control in the Fifty-first, commonly called "the Reed Congress," and immediately increased the average annual appropriations to	382,150,961.17
Which was an increase above the average annual appropriations during the preceding six years, when the House was controlled by Democrats, of	128,563,401.12
The appropriations for the last session of the "Reed Congress" exceeded any heretofore made by this country in a time of peace; without including anything for rivers and harbors, the regular appropriations were $402,531,864.55, and the total appropriations of that Congress were	525,018,672.59
In 1893, for the first time in a third of a century, the Democrats had control of all branches of the Government, and notwithstanding Republican laws which compelled them to appropriate $151,581,570 for pensions, and notwithstanding many other expenses made necessary by Republican laws, they succeeded in reducing appropriations to	391,156,005.03
A reduction below the appropriations of the last last session of the "Reed Congress" of	11,375,859.52
In these calculations I have confined the figures to the annual appropriations by Congress, regarding that as the most just method of comparison. If we should include permanent appropriations, the comparison with the last session of the "Reed Congress" will be as follows:	
Reed Congress, second session	525,018,672.55
The first regular session of the Fifty-third Congress—the first time in thirty-three years that the Democrats had control of all the executive and both branches of Congress—the appropriations were only	492,230,685.03
A saving of	32,787,987.56

Already the appropriations in this Republican Congress, which do not include the miscellaneous and some other appropriations, have run up to $521,877,942.45.

And this and similar legislation run them up until they exceed any Congress in the history of our Government.

Already the appropriations for this Congress exceed by $22,000,000 the average appropriations of the two sessions of the last Democratic Congress.

You have alarmed the country with your profligacy. You are destroying industry. You are retarding prosperity. You are placing a yoke upon the labor of this land which is too heavy for it to bear, and I repeat, Mr. Speaker, when I hear the rumbling sounds, the groans of the oppressed people, I tremble—I tremble for my beloved country. [Applause.] I appeal to this House to halt. I ask gentlemen to consider, to reflect.

Labor Commission.

SPEECH
OF
HON. W. JASPER TALBERT,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

Mr. TALBERT said:

Mr. SPEAKER: I offer as a substitute for the bill the following:

Strike out all after the enacting clause and insert:

"That the Department of Labor shall be an executive department, under the supervision and control of a secretary of labor, who shall be appointed by the President, by and with the advice and consent of the Senate; and section 158 of the Revised Statutes is hereby amended to include such department, and the provisions of Title IV of the Revised Statutes, including the amendments thereto, are hereby made applicable to said department.

"SEC. 2. That there shall be in said department an assistant secretary of labor, to be appointed by the President, by and with the advice and consent of the Senate, who shall perform such duties as shall be required by law or prescribed by the secretary.

"SEC. 3. That the secretary of labor shall receive the same salary as is paid to the Secretary of each of the Executive Departments, and the salary of the assistant secretary of labor shall be the same as that now paid to the First Assistant Secretary of the Department of the Interior.

"SEC. 4. That all laws and parts of laws relating to the Department of Labor now in existence, as far as the same are applicable and not in conflict with this act, and only so far, are continued in full force and effect."

Mr. Speaker, I desire on this occasion to submit a few remarks for the consideration of the House on this important question now under discussion. And in discussing this labor bill I desire, in connection therewith, to present some views which I have on the general subject of labor, for if there is any one subject that rests on my mind more than any another it is the question of labor and the welfare of those engaged therein.

To occupy a place, as I do, on the Committee on Labor may, in the estimation of some, be a thing of very little consequence and a place of very little or no honor and responsibility. But, Mr. Speaker, if I had been permitted to choose the committee on which I most preferred being placed, I would have chosen the Committee on Labor, for this committee is, or ought to be, the place where many bills and laws looking to the highest good and best interests of labor and laborers originate; it is the place for the laying of the corner stone and mudsill of all material prosperity and industrial progress and all national honor and pride. For, labor being the foundation of all other vocations, whatever benefits and strengthens it benefits and strengthens them.

Mr. Speaker, it is one of the proudest recollections of my life that I was brought up closely allied with labor and to know what it is to be a laboring man. It has always been the burden of my thought to devise some means by which to aid and dignify labor and to cheer up and relieve the laboring people of our country; for if there ever were any people who need cheer and relief it is the laborers, for history shows that in all ages the laboring man has toiled and tugged and struggled, hardly able to keep soul and body together, receiving only a scant support, while others who know not what labor is have reaped the benefits of it and grown fat and lived in luxury and ease. This has been the history of the laborer in all countries and nations. Whether he was engaged in Egypt, building great mounds and pyramids, or whether he toiled among the ancient Greeks, or whether he fell in among the "robber barons of the Rhine," or whether he was in Rome, constructing the great cathedrals and edifices for the honored senators and Roman officials; or whether he be engaged in modern Europe, or whether he labors in our own great nation, in Pennsylvania coal mines and iron and steel shops; or whether he toils in the great waving grain fields of Minnesota, or whether he eke out a miserable existence between the cotton rows of Texas and other Southern States; or whether he spends his days in the cane fields of Louisiana or in the orange groves of Florida, or whether he struggles for his mere existence in any other field of labor, in the factory or at the forge, the results have been and are still the same. Capital reaps all the reward, and he gets nothing but hardship and toil, and knows nothing of the enjoyment of the luxuries that he labors so hard to produce. But those who do not even so much as turn over their hands are always ready to scoop it all in.

"It is labor that erects the splendid palace, and yet is forbidden to enter it; it is labor that makes the silk and broadcloth, and yet is forbidden to wear it; it is labor that spreads the magnificent feast and banquet, and yet is forbidden to taste them; and it is labor that converts the forest into building material for the home, and yet is forbidden to occupy it."

It is said there are 12,000,000 laborers in this country adding to its wealth at the rate of $7 per day per capita, but they get less than $1 each. Now, who gets the other $6? Important query, and more so the answer.

In 1860 there were but two millionaires in the United States and no tramps, but to-day there are 35,000 millionaires and 2,500,000 tramps. Now, Mr. Speaker, what is the cause of all this? There is most certainly something wrong somewhere, and it should be righted, and in the near future, or there will be trouble and a great deal of it.

As some one has well said, "There is not the slightest reason why the man who labors every working day of the year (and oftentimes Sunday thrown in for good measure) should not be able to enjoy not only all the necessities but some of the luxuries of life, especially those that he labors so hard to produce. In short, the man who produces should be as well able to provide for his family as the one who speculates on his productions." For, as has been well said, the cornfield statesman and country schoolhouse orator made this country what it is, saved it intact, and must preserve it, if it is preserved at all. Therefore, Mr. Speaker, I think something should be done to help to relieve this condition of labor and laboring people. Something should be done to dignify labor and to elevate it, and to change that degraded view that most people have of it and to place the laborer where he will be enabled to enjoy at least the necessaries of life that he labors so hard to produce, if not the luxuries.

For this reason, with others, Mr. Speaker, I feel disposed to vote for this measure now before us, if it be properly amended so as to eliminate its objectionable features (the appointive power it vests in the President, etc.), provided I can not get what I want and what I think best—the establishment of a department of labor, etc., in the shape of the substitute I have offered.

I feel that the reasons assigned by the committee that reported this bill for its enactment into law, if applied to the bill as amended or to the substitute, are ample to justify us in supporting it, but I desire, Mr. Speaker, in the course of my remarks to assign some other reasons for its passage after having mentioned in a brief way some of the objects of the measure.

Briefly stated, this commission contemplates a commission to be composed of 21 members, 7 of which are selected from each of the three great divisions of productive effort—labor, agriculture, and commercial pursuit. Now, Mr. Speaker, this is too many, and the number should be reduced, and the provision allowing each subdivision of the commission a lawyer should be stricken out.

The duties of this commission are to investigate questions pertaining to labor, to agriculture, and to business, and to recommend to Congress such legislation as it may deem best upon these subjects.

Five of the Commissioners from each branch are appointed by the President, and the other 2 are elected by the 5. I am opposed to giving this appointive power to the President and thus increasing his patronage, but think the commissioners who are to represent the several branches of industry should respectively be elected by those who are engaged in that branch. They are all paid $5,000 a year, which is too much. It should be reduced; and they hold office for two years. There is also a provision which is intended to preclude the possibility of the commission being partisan. The provision which prevents this commission from being perpetual, but limited, is a good one. This bill, as it stands, will cost more than it will come to, and hence I can not vote for it even if the substitute offered by myself fails, unless it be amended otherwise so as to conform to my views.

The first question which naturally arises in the consideration of this measure is, What is the necessity for it? What is the necessity for any legislation on this subject? I desire to meet this question fairly and fully, because it will be relied upon more than any other by those who oppose the measure. They will say that there is no necessity of incurring this expense to simply have legislation recommended; that members of this House will at last be compelled to expend the same labor and pass upon the merits of each proposition. These and many other plausible objections will be urged to show that there is no necessity for the creation of a commission as provided in this bill, or even for the establishment of a department of labor, the object of which is to protect labor. I will not take up these objections separately, but simply present an affirmative argument, which I believe meets and overcomes them all at once. I lay down this proposition: There may be a necessity for a commission of experts, composed of an equal number from each of the three great branches of productive industry, for the purpose of technically examining and agreeing upon what legislation may be accorded one branch without being detrimental to either or both the other branches. This necessity grows out of and is a natural result of modern progress and development in productive pursuits. The world has been progressing rapidly since the commencement of the commercial era, and to-day has reached the highest point of development ever known to man, and in this great march we to-day lead every other nation on the globe. Our labor is more intelligent, competent, and productive than that of any other country. Our agriculture far exceeds that of any other nation, and our business pursuits are without a parallel. The growth and development of these great productive branches has been attended with more or less friction. Each being intent on its own objects, it is not strange that at times they demand things inimical to the best interests of some others.

For convenience sake, in illustrating this subject, let me divide the people of this nation into two classes, the producers and the exploiters. The former includes all labor, agriculture, and business (by business I mean not only all commercial pursuits, but manufacturing, mining, transportation, etc.), and the exploiters include capitalists, speculators, money lenders, politicians, and all that class of parasites and drones who filch a living from productive labor by means of their wits and their rascalities. Again, let me divide the legislation proposed in this body and regulating the relations between citizens into two classes: First, that affecting the relations between the exploiter and the producer; and second, that affecting the relations between producers of different kinds.

In considering all the legislation proposed here which affects the relations between exploiter and producer we can manage those questions if we are endowed with honesty, patriotism, and common sense. True, they are often complicated and intricate, but no technical knowledge is necessary to enable a man of ordinary intelligence, properly imbued with devotion to the best interests of his country, and true to his constituents, to detect and expose the selfish greed of the exploiter in bills granting class privileges and immunities, and those endowing vested rights which are really a function of the Government itself. Much might be said upon this feature of the question, but I will take up that feature bearing more directly upon the subject of this bill.

The amount of legislation proposed here which affects the relations between different kinds of products is very great, and has in recent years taken up nearly the whole time of the Congress. The committee rooms are constantly besieged by representatives of different industries desiring to be heard, and every member is flooded with demands in favor of or against legislation of this class. I give every member of this House credit for a desire to dispose of all this class of legislation in a manner for the best interests of all concerned, and it is no reflection on our intelligence to say that very few of us are qualified to properly consider all these questions merely at a glance. This is unavoidably true, because they often involve technical detail that can only be mastered by a specialist. It is to facilitate the proper consideration of this class of questions (and they comprise the greater portion of legislation offered) that this commission or any legislation in this direction is proposed. The great necessity for this must be apparent, and should, in my opinion, be an answer to all those who object on the grounds previously stated.

Having now shown, as we think, the necessity for a labor commission, or for something in this line, let us see how it would probably be conducted under the provisions of this bill and what the probable result would be. Under a separate department the work would be done a great deal cheaper.

When legislation is demanded by either of the great branches of production it will be presented to this commission, where both the other branches are equally represented, and where all the evidence in favor of and against its passage may be collected and prepared for our reference and an expert examination made as to its merits and demerits. The fact that each branch is represented by only one-third of the commission is a guaranty that no measure in the interest of one branch will receive its sanction if it conflicts with the best interests of the other two or either of them. This is a great safeguard and will be a great help to us, because we are now often called upon to vote for measures in the interest of one class of producers when we do not know and have no means of ascertaining, for want of expert knowledge along this particular line, its effect upon other equally meritorious industries. Now, right here, I believe that a secretary of labor, as a Cabinet officer, could do this work and do it much more economically, as the Bureau of Labor is already established, upon which the department could be built with an assistant secretary, etc.

Then, too, Mr. Speaker, this commission or this department of labor would be a great educator to our people; for its object, as stated in the title to the bill, is "to collate information, and to consider and recommend legislation to meet the problems presented by labor, agriculture, and business." And in order to do this, it will be necessary for them to thoroughly investigate the causes (so far as they can) of the thousands of strikes and lockouts we are now having every year; the general downcast condition of the laborer; the constantly falling prices of farm products, and depreciation of farming land values and the generally depressed circumstances that surround the farmer; the constant drifting of money into certain channels, and the great centralization of wealth, etc. And the people will get the benefit of all this information, which will be comprised in their reports from time to time, until their labors are finally done. And this will better enable them to know the causes of their general hard times, etc. They will thereby become educated along these lines at least, and it is of the utmost importance that they should, for the laboring people of our country have had sand thrown in their eyes for the last thirty years or more, in the shape of legislation that claimed to be for their relief, when in reality it was directly against them. And it is well that they should be posted on all these points, that they may know how to vote intelligently to send men here who will favor legislation that really is to their interest.

I do not claim that this bill is perfect, or that its workings will be all that could be desired, but I believe it to be a step in the right direction, and it is plain that something is needed.

It may be, Mr. Speaker, that time will demonstrate the necessity for the classification of all productive and useful pursuits into a given number of classes or divisions (say, thirty or forty), and that each class or division have representation according to its numerical strength and importance in a third house or industrial congress, or it may be that time and experience will demonstrate the wisdom of abolishing either this House or the one at the other end of the Capitol, and substituting such an industrial house, with equal representation according to industrial pursuit, in the place of the defunct relic of political domination. I wish it understood that I am not advocating this great innovation, but I say time and experience may demonstrate the wisdom of some action along this line, and certainly the present system of two partisan political

Houses can, in the light of the experience of recent years, have but few defenders, and just in this connection, Mr. Speaker, I wish to say that I think one of our greatest needs is for a constitutional convention to be called to right a great many national political evils that are now prevalent.

I am heartily in favor of such a call. Both Houses seem solely intent on conducting matters so as to gain some partisan advantage, while the wants and needs of the great productive interests, the wants and needs of the great masses of the people, are sadly neglected, or even sometimes injured, hampered, plundered, and in places destroyed by legislation for partisan purposes. We now see one House pass a measure known to be popular with the people, which they would not dare pass but for the knowledge, and perhaps agreement, that the other House will defeat it. And in this way, the existence of two political Houses is used by the party machine of both parties to present a smiling front to both the producer and the moneyed exploiter, who is seeking legal privileges and immunities by which to appropriate the proceeds of production. And I have only to read you a clipping from a Kansas paper to show you how well they are succeeding in their diabolical schemes. This pertains only to the State of Ohio, but is a fair specimen of the general condition all over the country. The Ohio State board of equalization shows that the appraised value of farm lands in that State has decreased $98,000,000 in ten years. And yet the National Census Report shows that during the past ten years the wealth of Ohio increased $243,000,000; while the State has grown $243,000,000 richer the farmers of the same State have grown $98,000,000 poorer. Can you explain this curious piece of business? Nobody could possibly have produced that wealth but the farmer and the laboring man, and it rightly belonged to them, but not only were they not allowed this $243,000,000 of increased wealth, which they themselves had produced, but they had taken from them $98,000,000 of what they already had. Now, gentlemen, is this right? Is this just? If robbery, theft, and plunder is right then this is right.

Statistics show, too, that while the farmer owns less than 22 per cent of the wealth of the country, yet he pays over 80 per cent of the taxes levied and collected. "Two-thirds of the wealth of the country is not assessed one farthing for purposes of taxation, and yet the Government has the power to force every taxpayer in the land to offer his life in defense of that untaxed wealth. With all his facilities for transportation, which are equal to the productive power of the country, and his accessibility to markets, he is forced to sell his products at prices barely covering the cost of production. In the great agricultural State of Iowa the mortgage indebtedness on farms alone is $104 per capita; in Kansas, $165; in Illinois, $100. And from Maine to the Rocky Mountains, and from the Lakes to the Gulf, the farmers are overburdened with debt." And why is it, Mr. Speaker? The farmer and the laborer are the only living people who really and actually produce anything—who bring anything into existence more than we already have. They are the only ones who actually produce wealth; and yet, while it is an admitted fact that the United States is growing richer and richer every year, still these very people who are bringing it about are getting poorer and poorer each day as they toil. Now, if it is a fact that these people toil and work and produce this wealth, and do not get it (or a part of it, anyway), it is simply because they are discriminated against; it is because something in our laws is radically wrong. So let us, at least, take one step in the right direction and pass this bill, or something in this line that is better, which will tend to relieve this condition of affairs in a small measure, anyway, by better looking after their welfare.

I desire here and now to go on record as one who violently condemns the neglect that the Congress of the United States has given the interests of the producer, and I challenge any man to stand before me and defend the undue prominence given to the wishes of the party machine by the members of the parties in Congress and the servile readiness with which many members respond to its slightest request. The party machine in a Presidential contest uses millions of dollars; and the great question which concerns every patriotic citizen is, Where do they get it? One does not have to examine far to be convinced that they sell offices and legislation for it. And that is not the strangest part of it. The machine is an autocrat, responsible to nobody, and has nothing expected of it but success. It is not strange that it would resort to any means calculated to secure success. But it is strange that men will come here to fill the high honor of a member in this House, take the oath, and then cooperate with the machine in delivering the goods it corruptly sold, and pander to the wishes of a favored few.

My stand is in favor of less partisan politics and more statesmanship in Congress; less party and more wisdom, patriotism, and honesty. It is on this high plane that I ask the careful consideration of this bill and the substitute I offer. It is a measure calculated to assist those who desire to legislate for the general good. It is not a bill calculated to grant any special privileges to labor, and I feel that I voice the sentiment of the great mass of the producers of this nation when I say that labor asks no special privileges, and desires none. All that labor needs is a fair and equal opportunity, with no discriminations for or against it; and under our system of government it has a right to demand that at our hands. But has it received it in the past? Has the laboring man been treated as he should have been? The fact that from 1880 to 1886 we had 3,902 strikes in the United States answers the question itself, and the following clipping goes to confirm it:

Seventy persons in the United States are worth $2,700,000,000; 31,000 people own over one-half the wealth of the country; 100 persons in the United States own $3,000,000,000 of wealth; there are 1,000,000 people out of work in the United States; there are over 500,000 tramps; 10,000 children die annually in the United States for want of food; in 1880 there were 57,000 homeless children in the United States; out of 2,000,000 people who inhabit New York City only 13,000 own homes; the last census showed 9,000,000 mortgages in the United States, or one to every seventh inhabitant.

Now, gentlemen, these facts show how one class is pampered and another plundered.

I have the honor to represent a district composed almost exclusively of producers. They are industrious, frugal and energetic, patriotic, virtuous, and devoted to principle. They are, perhaps, as prosperous as the average, but they are not as prosperous as they should be, simply and solely because they have been discriminated against; and they understand it, too. They know it, and still they would consider me recreant to the trust reposed in me were I to come here asking any special favors in their behalf. They want no special favors; but I give you warning that they demand justice, and if they do not get it they will know the reason why. The class legislation that has enriched the few at the expense of the many and is now fast concentrating the wealth of the nation in a few hands must be stopped, and that speedily, if the present form of Government is to be maintained by the people who pay the taxes for its support.

I said the laboring people did not ask for class or special legislation. So they do not; but suppose they did; it being an undisputed fact that labor is the foundation of all other vocations, if you pass a law benefiting or strengthening labor (the foundation) would it not benefit and strengthen all that rests on it—and everything does. Therefore everything would likewise be benefited thereby. The stronger the foundation the stronger the structure erected thereon. Whenever the farmer and the laborer cease operations all other avocations and professions will do likewise. Whenever the plow stands still in the furrow the fire will go out in the furnace, the blacksmith's anvil will cease to ring, the hum of the factory will be hushed, the preacher in the pulpit will be silenced, the lawyer will be without clients, the doctor unable to practice, and all industry, enterprise, and business will be utterly paralyzed. But if the plow moves successfully on everything else will follow suit. Therefore let us see to it that it is protected and cared for.

Men tell us that the distressed condition of labor, with its millions of tramps, its child labor, its sweat shops, its strikes and its lockouts; the distressed condition of agriculture, with its mortgages and annual losses, and the critical condition of business, with its failures, bankruptcies, and panics, are all the result of natural and unavoidable causes, and that it is impossible to legislate anyone rich; that these people could only get money by giving full value for it, and so on. But I say that all such arguments are an insult to the intelligence of the producers of this nation. They know (at least they do in my district) that the laws of Congress have enabled certain classes to amass colossal fortunes at the expense of the producer, and hence some have been legislated rich and many poor. Let me give an example:

Before the war there was a class of men who stayed at home and made large fortunes and found themselves possessed of a vast amount of money after the war closed. The producers, both North and South, at the close of the civil strife went home and went to work in earnest, little dreaming that a more deadly enemy could attack them through their trusted representatives in Congress than the one they had just fought over. But such was the case. This moneyed class, which I shall dignify by the name of exploiters, induced Congress to take their money and give them long-time, interest-bearing bonds and burn or destroy the money for which the bonds were given. The people at the time did not realize the full effect of this exchange, and it passed with only criticism of the interest expense. But time soon demonstrated that the interest was a mere bagatelle compared to other effects. The changing of the money of the nation into a bonded debt lessened the volume of money in circulation; and prices of products and everything else fell accordingly, as I have said before on this floor.

It is easy now to demonstrate that the fall in prices has been such that it will take more of the products of labor to pay the present debt than it would have taken to pay the total debt of 1867. And further, that the payments made from time to time of interest and principal, reckoned in products at prices current at such times, aggregate products sufficient to have three times paid the entire debt in 1867. In addition to this, the productive class was injured in a much greater degree by the disturbed relations between them and the exploiters. The latter had planned this contraction, with the consequent increase in the purchasing power of

money, and they converted their wealth into money, which they offered to loan to the producers, who in their zeal, in the laudable effort to prosper by developing the national resources of our great country, borrowed the money, reasonably expecting, as they had a right to do, that the Government would protect each man alike in the enjoyment and possession of the fruits of his labor. But they were mistaken; the Government contracted the volume of money faster than they could reduce their debts, and many a man found himself, after making payments for years according to contract, compelled to let his whole farm go to settle a relatively small balance, which, nevertheless, represented more of the products of his labor at that time than the entire debt did at the time it was contracted. Thus the exploiters not only filched the Government, but they were authorized by law to rob the producer; and their colossal fortunes show how well they have done that.

I say that these and similar acts by Congress have been the most destructive enemies productive labor has ever had. Labor has been betrayed on this floor, where it has sent men to represent it. I do not mean to say that the exploiters came here and bribed Congressmen to betray their constituents; but I do say that I believe the machine of the Republican party became as corrupt as hell itself during its long lease of power following the war. And the men who contributed the campaign funds ran the machine. The only regret I have in laying this charge at the door of the Republicans is that should they return it to the door of the party to which I belong at this time I possess neither the disposition nor the ability to deny the charge. But I can say and do say that I am a Democrat of the old-fashioned sort that stands upon principle, and do not propose to submit to machine dictation in politics any longer. And I here and now give notice to all concerned that the people must assert themselves and take charge of the Democratic party and run it on Democratic principles, independent of machine domination, or it deserves to be forever wiped from the face of the earth, and it will be done, and the Republican party also.

I have gone over this ground to show that the productive interests have been discriminated against by the laws of Congress; and I have attempted to show that such discriminating laws were not necessarily the result altogether of personal treachery and corruption on the part of the Congressmen who enacted them, but that they resulted from the system of allowing the party bosses to control the legislation. And I have admitted that that system, inaugurated and perfected by Republicans, was equally wrong when perpetuated by Democrats.

Now, I make an appeal to you as statesmen; let us stop all class legislation, and let us as speedily as possible repeal every law that gives one citizen an advantage over another. I believe you will every one agree to that, and if you do, let us accept the substitute I have offered; or if you will not do that, then let us pass the original bill, with the needed amendments, as a means of getting the data and information that will enable us to act intelligently on all questions that pertain to labor, as well as all others.

Mr. Speaker, it has been the case for years that the demands of nearly everybody upon Congress, except the laboring classes, have been heeded; but whenever they ask for a measure they are promptly told that "it's unconstitutional," or something of that sort.

It reminds me of the young farmer boy who fell in love with the daughter of one of his wealthy neighbors, to which the neighbor was bitterly opposed. But the girl herself was rather fond of this boy, and gave him considerable encouragement, and he insisted on visiting her occasionally at her home in spite of the protests of her parents. So he called in to see her on one occasion, and while there meal time came on. The dining room being used as a combination dining and sitting room, they were all sitting together in that room, and as the meal was placed on the table the old man gathered all his family around the table and asked the blessing, and did not invite this young man to eat with them at all, which, as a matter of course, very much wounded his feelings, as well as made him angry. But the old gentleman, as he and his family began to eat, said to this young man: "Well, John, is there any news over your way?" "Yes, sir; there is," he grumly and sharply replied; "dad had a cow t'other day that had five calves." "My, my," replied the old gentleman, "that is news, indeed; it's wonderful. Why a cow only has four teats, John; what does that fifth calf do?" "He just stands off like a darned fool and looks on like I'm doing now; that's what he does," replied the boy.

This is the way the farmer and the laborer have to do at Uncle Sam's table; they are the fifth calf, and have to stand off and look on while the favored few dine. But now, gentlemen, let us turn over a new leaf in national legislation; let us invite them to the table and at least give them a crust or a crumb; let us give them this bill, or something of the kind; let us discriminate against them no longer; let us adopt them into the family, where they can sit down and eat in common with all other businesses and avocations and feel that they are welcome and at home. Let us give give them a department of labor, with a Cabinet officer, or establish the commission to investigate this great centralization of wealth and power, this grinding down and oppression of labor; for if it long continues, sad will be the fate of our proud and powerful nation, for centralization of wealth and power always precede disintegration, overthrow, and final destruction. "When Rome went down 1,800 men owned all the world;" "when Babylon went down 2 per cent of her population owned all her wealth," and "when Egypt went down 2 per cent of her population owned 97 per cent of her wealth." And to-day, in our own United States, three-fifths of our entire wealth is owned by 34,000 persons; less than one-twelfth of 1 per cent of her population.

What does this mean, gentlemen? Do you see anything threatening in it? Abraham Lincoln showed that he understood something of its meaning even as early as 1865, when he said:

> I see in the near future a crisis approaching that unnerves me and causes me to tremble for the safety of my country. As a result of the war, corporations have been enthroned and an era of corruption in high places will follow; and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people, until all wealth is aggregated in a few hands and the Republic is destroyed. I feel at this moment more anxiety for the safety of my country than ever before, even in the midst of the war.

Now, gentlemen, let me urge you, take warning and change your methods of iniquitous class legislation in favor of wealth and capital and do something for labor. "But," think some of these great big bushy-headed statesmen who sit up here on the people's great watchtower and look wise like owls, "the people be damned; we care nothing for them except during election times." And when they cry up to you, "Watchman, watchman, what of the night?" the answer goes ringing back, "All's well; all's well! Plow on, boys; plow on! We'll be down in the fall to get the fried chicken and the votes!" As much as to say, "That's all you poor, ignorant devils are fit for. We've got all the brains; we've got all the intelligence and the learning, and you have none. All you are fit for is to plow and vote for us."

I will tell you, gentlemen, those of you who may entertain such a low idea of our laboring people are wide of the mark. Mr. Mason, a farmer of Virginia, was one of the members of the National Constitutional Convention, and when the Constitution was completed he refused to sign it, having eleven objections. He went back home to his people and was elected to the Senate, but he refused to serve, saying the Government was not a republican form of Government; and at the first session of Congress ten out of eleven of his objections were incorporated in the Constitution as amendments. And this eleventh objection was to the powers given the Federal judiciary; and it was, I think, a very timely objection, for this is indeed a day of injunctions by our courts. Now, this was the work of a common farmer, and, you may say, a laboring man; and none will deny its good, sound, common, practical sense and wisdom, and that it is for the good of the country at large, in spite of the fact that it was originated by a farmer.

Those who may have these mistaken ideas as to the intelligence, and its possibilities, of our laboring people have only to look at history to be convinced of your error. Look back through its pages, and see whence, from time immemorial, have come our grandest, noblest, and greatest men. Did they come from the ranks of those who were born with silver spoons in their mouths, and reared in the lap of luxury and ease, and taught that labor is degrading and disgraceful? No; they came from the ranks of those who were born with pewter spoons in their mouths, and reared in the lap of labor and struggle. Did they come from the ranks of those whose parents were wealthy and dwelt in splendid palaces with brownstone fronts, where the sunlight gently gleamed through stained and painted windows, and laughingly danced upon the beautifully frescoed walls? No; but they came from the ranks of those whose parents were poor, and dwelt in the rude log hut, where the sunbeams slowly entered through the little cabin window and sadly danced upon the crude log walls. Would that on this occasion I were endowed with the powers of oratory to express myself on this question of labor as I would so much like to do. Had I the eloquence of a Calhoun, a Clay, or a Webster I would bring tears to the eyes and aching to the hearts of those who would unfairly treat, abuse, and oppress the laborer. I would gladly reach down and take him by the hand and call him brother and raise him up and place him upon that high, respectable, and elevated plane on which he so well deserves to be placed. And I would, with that eloquence, strive to convert this House from its present goldbug ideas of legislation, and so fill their hearts with the good of the common, laboring class of people of our country that they would, with one accord, rise up in their might, like the true representatives of the people that they ought to be, and put down and wipe out all class legislation, and put only such statutes on our records as would be for the good of the whole people. Sooner or later this will be done; it must be done; the people are not going to be satisfied with anything less.

Mr. Speaker, I do not think I am a sensationalist or an alarmist;

I do not think I am a communist, or an anarchist, or a socialist; but if I know myself, I am an honest, straightforward, peaceful, but liberty-loving citizen, and one with my country's good at heart and the best interests of all our people; but I do want again, as I have done in nearly every speech I have made on this floor during the short time I have been here, to warn this House of the just and righteous wrath of a disturbed and oppressed, but a proud and determined people. And if you would continue the reign of peace in this country and preserve our grand, proud nation from ruin you must come to the relief of laborers. Already at different times and in different ways their discontent, unrest, and impatience have been manifested; and unless there comes a change, and that speedily, unless the voice of the masses is heard and heeded, I tell you, Mr. Speaker and gentlemen, that forbearance will soon cease to be a virtue and (while I am by no means in favor of it, and God forbid that it should come) an angry and enraged people will in person appear at the gates of justice well armed and demand their rights in no uncertain way. So now let us declare peace before it is everlastingly too late and do something for these people, for when once the flag of retribution and wrath is raised it is too late to cry peace! peace! Then there is no peace. I will tell you, gentlemen, unless something is soon done I am afraid the day is not far distant when the great laboring element of this whole country will rise up in arms and march to the doors of this great Capitol building and there justly cry out in thunder tones, in the language of the immortal Patrick Henry, "Give us liberty (relief) or give us death."

Labor Commission.

SPEECH

OF

HON. JAMES J. WALSH,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

Mr. WALSH said:

Mr. SPEAKER: I favor the appointment of a labor commission and desire to vote for this bill, although I confess the argument that it is an expensive experiment is not without reason. A very short time was given to the discussion of the immigration bill passed the other day—too short a time for such an important subject—because, while some of the friends of the bill as it was introduced professed anxiety to pass that bill in the interests of labor, I am very much afraid that a great many others supported it from entirely different motives. It was aimed principally at immigration from southern Europe—at this time principally Italian—and, as far as we could discover the direction of the law on its face, at illiterates.

All unworthy classes are excluded under present laws. We did not stop to consider all we were doing. We were reversing the policy of our own nation as well as that of every other civilized country. Even under the most distressing circumstances no civilized nation has ever closed its gates to immigrants from other nations.

China closed herself in, refused intercourse with the world, but in time she was compelled to change her position. Russia complained of the Jews—Russia, the most absolute Government on earth—yet with all its absolutism it did not dare in the face of the civilized world to close her doors to them, but began by her persecutions of them to do by indirection that which she dared not do by direction; and from nowhere in the civilized world was a more vigorous protest made against that persecution than from these United States. I have received petitions since I have been here asking me to favor the exclusion of all foreigners, especially the Irish, the Italian, and the Jew, and I can not accept the spirit in which these petitions are written as truly American. I am against the exclusion at this period of our history of any worthy immigrant, no matter what his race or religion may be, and I wish to say that I have had frequent and constant opportunity of seeing perhaps as closely as one could see the conduct and character of the Italian colony in the city of New York, and I can personally refute the statement that they come here temporarily, with no intention of remaining or of becoming citizens in this country. I think the poll lists of the country will tell a different story; so will our real-estate records, and our school rolls, where their children are being educated, where we were educated. There is not a profession or occupation that they are not engaged in, and their national characteristics are such that they succeed in nearly all occupations. On the whole, they are an intelligent people, and when I say this I am mindful of the fact that a great number of them come here illiterate. That is not their fault; and this fact is shown by their ambition and energy when they reach here. I will not speak of the Irish or the Jew. Ireland was the land of my ancestors, and the success of Irishmen here and the world over speaks for itself.

The Jew has demonstrated his ability to take care of himself, too.

This much I say on the question of excluding immigrants, because I think the bill now before us is much better statesmanship. What all these elements want is direction and information, an opportunity to distribute their labors which will be of advantage to the country of their adoption and of material advantage to themselves. This bill is a step in that direction. I believe it will draw labor from congested quarters and place it where it can best be utilized, and perhaps best paid. I therefore trust that this measure will pass.

The Pickler Pension Bill.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 25, 1896.

The House of Representatives being in the Committee of the Whole on the state of the Union for the consideration of the Pickler pension bill—

Mr. GROSVENOR said:

Mr. CHAIRMAN: It had been my purpose to speak at greater length on the subject of this bill than I shall feel justified in doing at this time, for there is such a demand upon the committee for time that I will only outline very briefly my views upon the important matter pending here now.

If I had my way I would make some amendments to this bill. I have studied it with a great deal of care in the light of my knowledge and observations of the pension question, and I am going to discuss it as a matter of practical business and not as a matter of politics. It has been one of the hopes and aspirations of my public life that I might live to see the time when the question of pensioning the men who saved the Union in the hour of its peril would cease to be a question that could by any possibility be dragged into party politics. I have always opposed the introduction of political considerations into the management of eleemosynary and reformatory institutions in my own State, and in this by a much stronger reason am I impelled to denounce the dragging of the various questions that arise along the line of pensions into the mire and dirt of party politics. I would lift this question out of politics and place it upon a permanent basis that could never again afford an opportunity for manipulation for or manipulation against the interest of the men who are asking for pensions in this country.

Along this line of thought I desire to say that, in my judgment, reversing the opinion that I held upon this floor in the early part of my service here, I do not believe that the condition to which I am looking will ever be reached and the aim be accomplished until the open door to a pension certificate and to a place upon the pension roll of the country will be simply a certificate of honorable service and honorable discharge, and nothing more.

Mr. PICKLER. That is right.

Mr. GROSVENOR. So long as this machinery of the Pension Bureau throughout the country is maintained, there will be manipulation and political agitation upon this question. There will be crimination and recrimination so long as we have these pension boards at the county seats in the various counties of the country passing upon the degree of disability of the soldier; and so long as we have a Pension Bureau in Washington that undertakes to parcel out the generosity of the Government by what General Harrison very aptly called "the apothecary scale, weighing the amount of disability," we shall always have this political manipulation and political interference.

I have not time now to discuss my views at large upon this question, but I believe there can be no better solution of the problem than to put it on one of two systems, either to draw pension for honorable service, regardless of the length of time, maintaining the disability pensions that exist, for we can not get rid of them, or taking the per diem or length of service system and administering the whole system upon that plan. Now, incidental to our present system, we have abuses and errors that have crept

in, and some of them are sought to be remedied by this bill, and some of them will be remedied by this bill, notably the question of disappearance, the absence, unexplained, of the husband of the applicant for a widow's pension.

Mr. MILES. Will the gentleman allow me to ask him a question?

Mr. GROSVENOR. Yes, sir.

Mr. MILES. Have we not already provided for that in the bill that has received the signature of the President?

Mr. GROSVENOR. I think so; but it is in this bill again. That is a wise provision, and I do not stop to inquire who first, in ignorance of the known principles of law and of the rules of evidence, inaugurated that practice. I do not stop here now to inquire when it was and by whom it was established as a rule of the Department, but I do say that it is greatly to be regretted that such a rule ever was established, for it was a flat reversal of all the rules of evidence which we have had knowledge of ever since we began to know anything of the rules of law in this country based upon the common law. It was a common-law proposition that if a man disappeared and his disappearance was unexplained for seven years there arose a presumption of his death, and that presumption was only overcome by proof of his being alive, and estates have been administered and distributed upon the adjudication of the death of the owner when the only knowledge of his death was that he had disappeared and that his disappearance was unexplained. And yet it has been within my knowledge that men have disappeared as though the ground had opened and swallowed them up, and for thirty years the Pension Office has refused to admit the death for the purpose of a pension for the widow.

Mr. BARTLETT of New York. Do you as a lawyer think it a good practice to reenact a law already in force on the statute book?

Mr. GROSVENOR. No, sir; I do not. I do not know why this provision is put here. I assume that it is in this bill. I think that during the debate upon that question the chairman of the committee or some member of the committee told me it was already in this bill.

Mr. MILES. That was the force of my question.

Mr. GROSVENOR. If I had the power, and the opportunity were given, I would move to strike out that section if it has already been enacted into law.

Mr. BARTLETT of New York. Will the gentleman allow me to ask him a question?

Mr. GROSVENOR. Yes, sir.

Mr. BARTLETT of New York. When the leaders revised the original Pickler bill, why did they not strike it out?

Mr. GROSVENOR. Mr. Chairman, I do not recognize "leaders" in this matter.

Mr. BARTLETT of New York. Does not the gentleman recognize the fact that he is one of the leaders?

Mr. GROSVENOR. I do not. I recognize myself as barely able to lead myself in my conduct.

Mr. SULLOWAY. I will state to the gentleman that that bill covered only the officers and enlisted men, and this section covers all.

Mr. GROSVENOR. Then there may have been some reason for it.

Mr. GIBSON. That is the reason.

Mr. GROSVENOR. That seems to be quite sufficient.

Now let me go forward a few seconds. If I had my way and were it not for the peculiar situation in certain sections of the country I would vote to strike out the first section of this bill; but, Mr. Chairman, I recognize the situation in two or more of the States of this Union among the men to whom we owe the highest obligation that a country can owe to its citizens. There were in East Tennessee, as well as in other sections of the country, large numbers of men who were conscripted by force into the rebel army, and who were as loyal Union men as ever bore arms in support of the Constitution of this country; and it has been impossible under existing law for them to be pensioned.

Now, it is said that this bill will pension a large number of men who are undeserving by reason of their service in the Confederate army, and I fear that that is so; but I know of no way to reach those who are entitled to our favorable action without hazarding exactly the danger which was complained of by my colleague from Ohio [Mr. LAYTON] on yesterday and by the gentleman from New York [Mr. BARTLETT] this morning.

Mr. MOODY. Let me ask the gentleman, is it not possible to draw a provision more carefully guarded than this, which will include the one class and exclude the other?

Mr. GROSVENOR. I think possibly that may be done, and if it can be done it ought to be done.

Mr. PICKLER. As to the number of these men, let me say that there were only five or six thousand of them at the start. The statistics show that half of those are dead. All through the Harrison Administration those men were granted pensions, and those who were wounded or disabled in the Union service have always been admitted to pension. The only ex-Confederates who come in under this bill are those who would come in under the law of 1890, and their number is inconsiderable after all.

Mr. GROSVENOR. I trust that is so, and upon that ground this section is perhaps tolerable. But there is nothing that is more intolerable to a Union soldier, and to those of us who were not Union soldiers, because we have all the same sentiment upon the subject, than the idea of granting pensions to men who voluntarily fought on the other side. I have not any objection to the people of the South pensioning their soldiers. I am glad they do it. I have not any objection to their giving them honor. But I do object to a provision in the law of my country which, under any circumstances, can be made an instrument by which may be pensioned the man who deliberately or indifferently went into the service of the Southern Confederacy, and afterwards, when the flag of the Union began to float above the mountains of his native State, came into our service and was honorably discharged in the end.

Mr. BARTLETT of New York. Does not the gentleman think——

The CHAIRMAN. The time of the gentleman has expired.

Mr. GROSVENOR. I ask for ten minutes more.

Mr. MILES. I ask unanimous consent that the time of the gentleman from Ohio be extended for ten minutes.

There was no objection.

Mr. GROSVENOR. Now, if the gentleman from New York desires to ask a question, I will try to answer it.

Mr. BARTLETT of New York. Do you not think that the provision of the act of March 3, 1877, allowing pensions to ex-Confederates who were wounded or disabled in the Union service in the line of duty is sufficiently broad?

Mr. GROSVENOR. It is sufficient certainly for those wounded in the service; but I do not think that at this late date I would make the distinction. With my knowledge of East Tennessee and of the mountains of Tennessee and of some of the men of West Virginia, I do not think I would draw the line on the mere matter of the men being wounded or disabled. It must not be forgotten that there were thousands of men placed in a most pitiable position by reason of the proximity of the Confederates upon the one hand and the Union troops upon the other. War menaced brothers and sisters, war menaced neighbors and friends, and men were driven from their homes who would gladly have remained and met the Union Army upon its arrival. They were forced either North or South as the exigencies of the occasion required, and I will not be the man at this late date to judge whether the men of East Tennessee and of other sections voluntarily or involuntarily were forced into the Confederate army.

Now, passing along, there are some splendid provisions in this bill which entitled it to the support of every friend of the Union soldier, in my judgment, although I do not wish to raise any controversy with the gentlemen who have drawn lines of criticism upon some of its provisions.

Mr. McCALL of Tennessee. I understand the gentleman to state that he opposes the idea of pensioning those who have Confederate records, who went voluntarily into the Confederate army, and afterwards left it and joined the Federal Army.

Mr. GROSVENOR. Yes; I am opposed to that.

Mr. McCALL of Tennessee. Did not the Government of the United States all through the war gladly accept the services of every Confederate soldier who left that side and swore allegiance to the Union and joined the Federal Army?

Mr. GROSVENOR. I believe it did.

Mr. McCALL of Tennessee. Then, if that be so, ought not those men to be placed on the same footing with other Union soldiers?

Mr. GROSVENOR. I do not know, but I would make a slight difference now.

Mr. McCALL of Tennessee. But it would not be so strong, I hope, as the gentleman stated it at the outset. [Laughter.]

Mr. GROSVENOR. Well, Mr. Chairman, I shall vote for this bill. I shall do it upon the ground of my personal knowledge of the injustice that has been done to the men of the gentleman's own State and of the States surrounding it. I wish that the third section of this bill had been more definite and certain, but it is a wise section, even in its present form. Following along very rapidly—for I can not go into detail in my limited time—the fifth section of this bill presents a remedy for one of the great evils that we have labored under in connection with our pension system. The idea that there ever was established in the Pension Office a rule in contravention of every rule of evidence known to the courts of the civilized world; a rule making a distinction, in the strength of the evidence presented in behalf of a pension claim, between the man who, by the accidents of the service, had a commission and the man who was prevented by the accidents of the service from having a commission, is something astounding to me. We now

get rid of that distinction, but why it was ever established I do not know. If the distinction was made on the assumption that the man who wore shoulder straps was a more truthful man than he who did not, I deny that that basis was a sound one.

These questions ought to be decided by the ordinary rules of evidence, and the question in a court of justice is not a question of the number of witnesses but of the strength of the testimony. One witness may swear to a fact; he may be the claimant himself. The court is to adjudicate upon the question and is to decide whether that testimony is true. Now, in fact, if the testimony is true, that is an end to the controversy, and any attempt to limit the right of claimants by the quantity or even the quality of the evidence is absolutely absurd in principle and unwise in practice. It is not a fitting limitation upon any judicial tribunal of any character, whether it be a court or a bureau of the Government. But we are getting rid of these two evils by this bill, and I am glad of that. These discriminations against the private soldier have been to my mind shockingly absurd. It has come to my knowledge more than once that the Pension Bureau would say to the applicant, "You must furnish the testimony of two enlisted men or of one commissioned officer." What more ridiculous proposition than that was ever made? It grew out of the old distinction in the life of the Regular Army and has had no justification in law or in morals. The Army that saved the Union was an army of volunteer citizens, not large, but the men who went forth to battle were equal in citizenship, equal in integrity, equal in truthfulness when they went out, and when they came back they came crowned equal with honor. Now that one of those men should be considered of higher importance than another, simply because one bore a commission and the other an enlistment, is too absurd to merit even defense.

Mr. Chairman, there is another thing. I believe that when a man who served in the Army and who has been honorably discharged thinks that he is suffering under a pensionable disability, and has made his application and has got it into the form provided by the Government, offered his evidence and gained his case and received his certificate, his pension should never be taken from him by any process short of that which should deprive him through the interposition of a court of justice of his title and possession to the property which he owns and holds. It is not necessary for the purposes of this argument that I insist that a pension is a vested right to a man who has won his case. It is more than a vested right of property. It is a vested title of nobility. It is a certificate of honorable service; it is a certificate of sacrifice for his country, and I demand that that certificate shall never be revoked by any process falling below in dignity and falling below in accuracy of proof and judgment the taking from him or from me or from you our houses, our farms, or our stock. He should have notice of the ground upon which it is being sought to take it from him, for it involves something more than the mere value of the pension.

It involves his honor, it involves the question of his integrity, it involves the truthfulness of his proofs, and it involves all that is honorable, and no man should be deprived of his pension without the fullest hearing, for there is a stigma which follows as a necessary result of the act that never under any circumstances should be placed on the record of a man who bore an honorable part in the war of his country. It places him in the position of a man seeking something that he is not entitled to, and it brands him in the community. I protest against it, as I have always protested against it. I draw no fine sights, no hair-splitting distinctions, but I stand upon the plain facts and evidence and insist that they shall not be stripped of their rights without due hearing and investigation. The money value of the pension to the beneficiary in nine cases out of ten is insignificant and unimportant as compared with the aspersion that follows such an act as a necessary result of what the Bureau does with reference to it. And so I rejoice, Mr. Chairman, that this section provides that the soldier who was placed on the pension rolls shall not be stigmatized by withdrawing from him this title of nobility without opportunity to be heard in his own interest, as he would be heard in any other claim in which he was a party.

To-day there is, in my judgment, a plain violation, not only of the spirit but even of the letter of the law. It is equivalent to depriving a man of his property without due process of law, and hence the action that heretofore has been taken in this regard by the Pension Office is in plain violation of the Constitution of the country.

Now, Mr. Chairman, I have no time to go through this bill in great detail, and will possibly avail myself of the opportunity to discuss it later on. What I have to say is that, considering all the circumstances surrounding the action of the Committee on Invalid Pensions, the demand there is for a great deal more beneficial legislation than we are able to furnish the means to supply, the demand for more radical action than has been taken here, and in view of all the difficulties that the situation has presented, I think the bill is so fair and such an improvement on the present condition of legislation that it ought to be supported by every friend of the soldier on this floor. If there shall be an opportunity later on—I know nothing of the purposes of the committee having the bill in charge—if there shall be an opportunity to make certain amendments here I shall vote for them, certainly for the amendment proposed by the distinguished gentleman from Iowa [Mr. HEPBURN], that puts into the bill, and hence into the law, a rule of construction that is due to the men who are the beneficiaries of the pension laws of the country, a rule that is in keeping and in consonance with the assertion of our appreciation of the great and gallant service of these men to the cause of the Union; but if it shall be the will of the House that no amendment is allowed and none adopted, and even if no opportunity to amend the bill be given, I shall vote for the bill as it stands here now. [Applause.]

Labor Commission.

SPEECH

OF

HON. WILLIAM F. STROWD,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 1, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

Mr. STROWD of North Carolina said:

Mr. SPEAKER: In deference to the wishes of the leaders of the labor organizations of the country, with a number of whom I have had correspondence, I shall give my vote for this bill. But viewing it from a farmer's standpoint, I fail to see any great necessity for it. I fear that "the play will not be worth the candle."

I think that the trouble all lies in a vicious financial system, under which the country is now groaning, the evils of which were predicted years ago by two great apostles of finance, Mr. SHERMAN and Mr. Carlisle. In 1869, in regard to the resumption act, Mr. SHERMAN said:

It is impossible to take this voyage without the sorest distress to every person except a capitalist out of debt or a salaried officer or annuitant. It is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprise, bankruptcy, and disaster. It means the ruin of all dealers whose debts are twice their business capital, though one-third less than their actual property. It means the fall of all agricultural products without any great reduction of taxes. When that day comes every man, as the sailor says, will find himself closereefed. All enterprise will be suspended. Every bank will have contracted its currency to the lowest limit, and the debtor, compelled to meet in coin a debt contracted in currency, will find the coin hoarded in the Treasury, no representative of coin in circulation, his property shrunk not only to the extent of the appreciation of the currency, but still more by the artificial scarcity made by the holders of gold. To attempt this task by a surprise upon the people, by arresting them in the midst of their lawful business and applying a new standard of value to this property without any reduction of their debts or giving them an opportunity to compound with their creditors, or to distribute the losses, would be an act of folly without an example in evil in modern times.

In 1878 Mr. Carlisle said, in regard to the destruction of the money of the common people—as there seems some doubt as to what Mr. Carlisle said in regard to these things, I will have it read from the RECORD:

CARLISLE IN 1878.

I shall not enter into an examination of the causes which have combined to depreciate the relative value of silver and to appreciate the value of gold since 1873, but I am one of those who believe that they are transient and temporary in their nature, and that when they have passed away or have been removed by the separate or united actions of the nations most deeply interested in the subject, the old ratio of actual and relative value will be reestablished on a firmer foundation than ever. I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the movable property of the world, including horses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.

They were prophets as well as apostles then; and if they had remained true to these convictions how well they would have deserved at the hands of their countrymen, how revered and honored by posterity! But, alas, how have the mighty fallen! In

these years these prophecies have been fulfilled before your eyes. All these direful calamities are upon the people of this country.

When the contraction of the currency commenced all was peace and happiness and prosperity. In 1842 Charles Dickens, twenty-four years after silver was demonetized in England, wrote from Boston, Mass., what was to him the marvelous statement that—

> There is not a man in this town nor in this State who has not a blazing fire and meat every day for his dinner. Nor would a sword in the air attract more attention than a beggar in the streets.

The statement could have been made in regard to the United States. But how changed the scene! Now, after twenty-four years from the demonetization of silver in the United States, we have millions of idle men thrown out of employment, tens of thousands of failures of industries and enterprises, and swarms of beggars and millions of tramps all over the land, all attributable to the contraction of the currency.

As another evidence of the direful effect of a shrinking volume of currency I will ask the Clerk to read from the Monetary Commission of 1876:

> At the end of the Christian era the metallic money of the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had shrunk to less than $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled, and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded condition of serfdom and slavery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and prices fell.
>
> History records no such disastrous transition as that from the Roman Empire to the Dark Ages. Various explanations have been given of this entire breaking down of the framework of society, but it was certainly coincident with a shrinking volume of money, which was also without historical parallel. The crumbling of institutions kept even step and pace with the shrinkage in the stock of money and the falling of prices. All other attendant circumstances than these last have occurred in other historical periods unaccompanied and unfollowed by any such mighty disasters. It is a suggestive coincidence that the first glimmer of light only came with the invention of bills of exchange and paper substitutes through which the scanty stock of precious metals was increased in efficiency.

That this cause has produced the same result in all nations and in all ages of the world's history I do not think any well-informed person will deny. See Persia, Babylon, Rome, and Greece.

All legislation apart from that looking to the restoration of silver and enlarged volume of currency seems to me to be but trifling with this most serious and important question. Three or four years ago the Senate appointed a commission, with Senator GEORGE as its chairman—than whom this country never produced a more honorable gentleman, barring the fact that he is a free-silver man fighting under a goldbug banner—the expenses of this commission being paid out of the contingent funds of the Senate, to investigate and report the cause of the low price of cotton, which report has been made in two volumes of four or five hundred pages each, thoroughly informing the country on this important matter, which is costing the South more than a hundred million dollars annually. When they came into possession of all this valuable information cotton touched the lowest price ever realized for that staple.

We have a Labor Commissioner, whose reports, numbering eight or ten large volumes, all bearing upon this important subject, have produced no good results, as far as I can see. But the "dance of death" goes merrily on.

Chauncey Depew says that fifty men can come together and in twenty-four hours so contract the currency as to paralyze every industry in this country.

When the bankers and capitalists desired legislation in their interests during the Fifty-third Congress they could not wait for the convening of Congress at the regular time, but it was called together in dog days to repeal the purchasing clause of the Sherman Act, which Mr. Cleveland said was the only menace to the prosperity of the country. But the closing of banks, the suspension of business, and failures of mercantile and manufacturing enterprises went on in regular schedule time. And all the while the screw of oppression has been turned down tighter and tighter upon the agricultural and laboring classes.

You may pass all the laws you will on the tariff question; you may increase or lower every schedule to any amount; you may build a Chinese wall around the products and manufactures of this country by tariff laws, but if they benefit any American citizen it will only be to make a few richer and the multitude poorer. You may pass all the financial laws that can be conceived by the combined wisdom of this House, but until you stop contracting the currency and devise some means whereby the business of the country can be conducted on a cash basis the toiling millions will sink deeper and deeper in poverty and wretchedness.

You may appoint every man in this House a commissioner of labor and let him devote his entire time to the subject, and until they are enabled to see that a money famine is the trouble and go to work to remedy that evil their labors, in my humble opinion, will fail of any good results to the toiling classes of America.

Is it a fact that the devil has bewitched the world on the money question? It is a fact that the love of money is the root of all evil? It is a fact that greed has destroyed all the civilizations of the past and is fastening her clutches upon ours. And yet this Congress is rather disposed to enlarge the power of the banks by allowing them to issue money to the full face value of their bonds, and to destroy the greenbacks, thereby putting the whole financial interests of the country in their hands.

President Garfield, great in intellect, in statesmanship, and in patriotism, said that he who controls the volume of money in a country controls the labor and all industries of that country. Money being the lifeblood of the nation, should flow from the heart of the nation, and when farmed out to any other power produces a diseased body politic.

If this Congress really desires to relieve the financial distress of this country, why does it not adopt the method of France when she was lying prostrate and bleeding at the feet of her conquerors at the close of the late war with Germany, when, in addition to the calamity of disastrous defeat, an indemnity of a thousand million dollars in gold as a condition of peace, and the surrender of her two beautiful provinces, Alsace and Lorraine, to secure these terms, Germany demanded a mortgage on the nation, which being impracticable, France had to accept the bayonet mortgage, so sure was Germany that these terms would crush France.

What did her statesmen do under this great emergency? Did she attempt to issue bonds to sell for gold? Did she deal with syndicates? Did she propose terms to Shylock? No! She issued a popular loan in denominations as low as 10 francs, which was intended to be used as money and was used as money. These bonds were taken eagerly by all classes of her people, by even house servants and laborers. This enlargement of her currency produced the greatest activity in all departments of industry. And so great was the stimulant in all departments of labor that the balance of trade in her favor became so great that she was enabled to pay this enormous indebtedness, not in gold, but in foreign exchange. And at the end of five years, under the beneficent influence of this large per capita currency, she had more gold in her vaults than any nation on the face of the earth. And this is what bankers and capitalists call dishonest money!

How different the financial system in America. When this Government wants money, she issues gold compound-interest-bearing bonds, which means more debt, more taxes, more interest, more burdens for an already overburdened people. More wealth for the rich man; more misery for the poor.

You boast that you broke the shackles from the limbs of four millions of black slaves in the South, and I rejoice that you did. But shame, oh, shame! you fastened ten times worse shackles upon ten times as many people. Mr. Cleveland says that it is not a theory but a condition that confronts us. But we say it is both. The theory, in the language of Mr. Vanderbilt, is, "The people be damned;" the condition, the nation of a few rich men and millions of awfully poor.

When I was a little boy one of the first lessons I learned in my old-fashioned geography was that governments were instituted for the protection of the weak and helpless; and in the simplicity of my heart I thought it was true, especially so of this Government. And for three-quarters of a century it was true. But, alas, how things have changed of late! Now we see all legislation in the interest of the rich and powerful; the weak and helpless are left to the mercy of greed and avarice.

We talk and weep over the condition of Armenia. In that we do right. But what sympathy have these shylocks for those upon whose shoulders in the final analysis all the burdens of this Government are placed? The toilers and farmers have been crushed so low by the weight of these burdens that they can not reach the first round of the ladder, and so begin to rise.

There is a bill before this House now in favor of the eight-hour law, but the farmer, who supports all, and, on the homestretch, pays nearly all the burdens, commences his day's work before the stars leave the sky in the morning and works till they appear again in the evening, is not once thought of in this great National Legislature. Nine-tenths of the farmers of this country to-day are as men standing on a quicksand, who feel and know they are sinking lower and lower, and utterly powerless to help themselves, looking every way and asking, "Who will show us any good?" They have sent petitions to Congress by the carload, and Congress has virtually said, "Ye be idle; we will not lighten your burdens, but will add to your burdens." There are thousands of families in North Carolina who are unable to employ a physician when their families are sick, who are unable to buy suitable clothing to send their families to church on Sunday; but when they complain at unremunerative prices for their products the old stereotyped cry of overproduction is thrown into their faces. Shame on that man's ignorance, or that man's perfidy, who utters such a cry. I deny that there ever was an overproduction of any good thing in this country.

It is too late in the day and conditions are too much strained to create a commission to ascertain the trouble between labor and capital. I am a farmer, pure and simple, and I am certain that as a class we are very well informed on that subject.

JUDGE CLARK IN MEXICO—A LETTER IN WHICH FACTS WITH THE POWER OF GREAT THUNDERBOLTS ARE PRESENTED—AN INVINCIBLE ARGUMENT IN FAVOR OF SILVER IS SHOWN BY OUR SISTER REPUBLIC—THE INJUSTICE OF GOLDBUG ROBBERY—THE MAGNITUDE OF THE PLUNDER—OVER TWO HUNDRED MILLIONS LOST ON COTTON ALONE—OUR PEOPLE ARE PATIENT, BUT WE WILL NOT GO DOWN.

Associate Justice Walter Clark, of the North Carolina supreme court, who is spending some time in Mexico, has written a vividly plain and instructive letter to the News and Observer, in which he says:

The climate is nearly perfect. Strawberries are ripe, and flowers of all kinds bring 10 cents a basket. They say it is no warmer here in summer, and never sultry, as these table-lands embracing 500,000 square miles—two-thirds of Mexico—average 7,000 feet above sea level, over three times as high as Asheville, and the snow on the taller mountains never melts.

This country is developing more rapidly probably than any other on the planet, and could not help being prosperous as matters stand. The dollar is exactly the same value it was ten or fifteen years ago, not having been artificially doubled in value by legislation, as has been the case with us. Consequently cotton is still 13 cents per pound and wheat $1 per bushel, while fixed charges, as taxes, passenger and freight rates, public and private debts, etc., remain actually (as well as nominally) the same. With us in the United States, by virtue of the legislation in favor of the bondholders, these fixed charges, while nominally the same, are in fact doubled, as it takes twice the amount of cotton, corn, wheat, etc., to pay them. One does not get a full idea of the enormity of this transaction till he gets here and sees the prosperity of this country and sees the very capitalists who, by securing this legislation, have doubled the value of their United States bonds, investing the principal and interest of their enhanced value in this country at old prices, thus securing $2 of property here for $1 loaned the United States Government—that is, they will sell $1,000 United States bonds for gold, buy $2,000 of silver, which remains at the old value, and invest in $2,000 of property here.

The looting of Rome by Genseric and the Vandals, of India by Hastings and Clive, of this very Mexico by Cortez and the Spaniards, or of Peru by Pizarro, all pale into insignificance compared with the magnitude and injustice of this robbery practiced upon the 75,000,000 of the American people in the interest and by the procurement of the half million of millionaires and their agents and dependents through the simple device of so controlling legislation that every dollar of national, State, city, and individual indebtedness is doubled by doubling the value of the dollar. Genseric, Clive, Cortez, Pizarro risked their lives and had brave men behind them, and they at least pillaged foreign nations. But this crime has been the manipulation of the tools of the bondholders. There has been nothing heroic, and the only greatness in it has been in the magnitude of the plunder, which surpasses all that has ever yet fallen to a conquering army in the wealthiest country.

There was no excuse for it, since silver, when demonetized, was worth more than gold, and there has been nothing since to depreciate it. That silver, in fact, has not depreciated in the least may be seen right here in Mexico and throughout the 50,000,000 people living on this hemisphere, south of the Rio Grande, in all which countries the silver dollar will pay for as much taxes, as much railroad freight and passenger fare, as much public and private indebtedness as formerly—and farm products and land bring as much as ever. Neither has silver depreciated with us, but it is the gold dollar which has been doubled in value; hence debts, public and private, taxes, railroad rates, etc., are actually, though not nominally, doubled, while the produce has to be sold at half price to pay them. Every farmer who sold a pound of cotton in the United States last year was in effect taxed 6 cents a pound, or $30 a bale, and 50 cents in the bushel on wheat. The robbery perpetrated on the farmers of the South by this legislation, procured by the machinations of the combined capital of London and New York, on the cotton crop alone, of 7,000,000 bales at $30 per bale, is $210,000,000 for the one year of 1895 alone. The profits reaped by the capitalists by the legislation which has doubled the values of their claims against the public and individuals is practically beyond computation. It "fatigues the imagination" to consider it. The wonder is not that there is widespread and incurable depression, but that we can continue to exist under such a state of things. Were we not the wealthiest and most energetic and most patient people on the face of the globe, we would sink under it.

It is by no means certain that we shall continue always to be the most patient. Those who have thus pillaged us, and who, elated with their success so far, threaten to still further contract the currency by retiring the greenback, and thus still more increase the value of the dollar, may learn a lesson right here in Mexico. The Catholic Church, by three centuries and a half of a policy as deliberate and as carefully planned as of the monopolies and the money power of the United States to-day, came to own absolutely one-third of all the property in this country and controlled the balance. The masses were kept in ignorance and the leaders and intelligence of the country were intimidated or bought. But there comes an end to such things. In 1859 the property of the church was confiscated. The church party called in the English, the Spanish, and the French, and the latter gave them an Emperor. But the French have been driven out, the Emperor has been shot, and to-day throughout this great country, four times as large as France or Germany, the Catholic Church does not own a foot of soil or a dollar of money. The very church buildings, hoary, some of them, with nearly four centuries of use, belong to the Government, and services are conducted in them only by permission of the authorities elected by the people. Not a priest can walk the streets in his official robes.

Mexico remains Roman Catholic in her religion, but when the alternative was presented whether the church should own the country or the country should own the church, Mexico, in spite of centuries of veneration for religious authority and the influence of consolidated wealth and the ignorance and poverty of her masses, was able to vindicate the rights of her people. What this priestly monopoly was to Mexico, the money power is to the United States. The multimillionaires, the bondholders, the trusts, and monopolies already own over one-third of the property of our country and are reaching out for the rest. Many leaders they nominate and elect to office, others they intimidate or corrupt. But our people, while patient, are not ignorant, and if the course of the monopolies and combinations continues unchecked, they will wake up some morning to find, as the Catholic Church did here, that the sovereign people own the country and all that is in it. The Catholics here venerated the church fully as much as we ever did the rights of individual ownership of any species of property, but the welfare of the people is the highest law, and when that becomes imperiled, as it was in Mexico by the money power in the shape of the church, and as it is in the United States by the same deadly enemy in the guise of multimillionaires and monopolies, the manhood and the brains and the honesty of the people will assert themselves, and we shall not go down under the same enemy that destroyed Rome and so many other nations in the past. The world is older and wiser.

The gold dollar in the United States may well be called a mythical dollar, Not one man in a hundred ever sees one. It is not used to buy corn, or wheat, or flour, or railroad tickets, or dry goods. It is only for the sacred use of the idle rich when they wish to measure by a high standard, double in value the principal and interest of bonds, which, on their face, by the contract, are payable in coin—i. e., in either gold or silver.

In drawing these lessons from the past experience and the present prosperity of Mexico, there are those who will say Mexico is inferior to the United States in education, in civilization, and in many other respects. And so it is; and so much the worse for the objectors. For if Mexico, notwithstanding all these disadvantages, is prosperous and going forward by leaps and bounds by keeping her standard of values at the same level, so much the greater is the condemnation for the men who, in spite of our great and manifest superiority, have brought the curse and blight of a long-enduring depression upon us by robbing the wealth producers in the interest of the wealth consumers, through the device of doubling, by crooked legislation, the value of the dollar. And if Mexico, with three hundred and fifty years of priestly rule, three hundred of which were also under a foreign yoke, and fifty more passed amid internal dissensions, could assert themselves and throttle the gigantic money power which oppressed them, what can not and what will not 75,000,000 of the foremost people of the earth be able to do when satisfied that they owe it to themselves and their prosperity to break the yoke which galls them?

Much more might be said, and more forcibly.

WALTER CLARK.

CITY OF MEXICO, *January 15, 1895.*

The farmers of the South for ten years after the war were exceedingly prosperous. Poor men bought homes for their families. Prices of products being high and money plentiful, the creditor demanded only a portion of the purchase money for the land, but rather encouraged them to improve their homes; and everything went on well until, unexpectedly to them, a contraction of the currency took place. The gold basis was established; money went up and prices down and down until the last margin of profit was taken from his product. And now it is demanded of him that he pay his debt in dollars that are ten times as hard to get as they were when the debt was contracted and worth twice as much. And these are the dollars that the money mongers call honest dollars!

It is a sad sight for a man to grow in years and feebleness and to feel that he is growing poor and poorer, and with no hope in the future for his wife and little ones but taxation, debt, unrequited toil. Nothing can sustain a man under these circumstances but a strong faith in a merciful God and a courageous will. Without these he breaks down under his burdens and trials and seeks relief either in suicide or, what is worse, dissipation. He is not a communist nor an anarchist, he does not ask for any division of the wealth of the country, but he does demand that there be such legislation as shall give every man an equal opportunity to obtain wealth.

Professor Walker says:

That prices will fall or rise as the volume of money be increased or diminished is a law that is as unalterable as any law of nature.

Daniel Webster says:

Liberty can not long endure in any country where the tendency of legislation is to concentrate the wealth in the hands of a few.

Abraham Lincoln says:

If a government should contract a debt with a certain amount of money in circulation, and then contract the money volume before the debt was paid, it would be the most heinous crime a government could commit against the people.

This is precisely what this Government has done. All the laws it has enacted on the subject of finance since the death of that great and good man have been with a view to produce the results stated.

The record shows there is no hope of any relief for the plain people from either of the old parties. While they both pose before the people as the friends and champions of the toiling masses of the people, it matters not which may be in the majority in the House, they turn up in favor of the money sharks and gold gamblers of Wall street and Lombard street. The Democratic party, elected as the especial champions of free silver, with 148 majority in the Fifty-second Congress, smothered to death a free-silver bill passed by the Senate. Pleading upon their knees before the people for another chance to prove their loyalty to the interests of the people, they were intrusted with another lease of power and returned to the Fifty-third Congress with a handsome majority. Instead of redeeming their pledges and fulfilling their promises to the people, they proved their treachery by repealing the only law that gave any value to silver, thereby putting the farmers below the level of the same class of laborers in China.

The people, in their righteous indignation, hurled them from power, and elected an overwhelming majority of the Republican party to the Fifty-fourth Congress. And now, before our eyes, are enacted by the Republicans the same scenes that caused the people to condemn the Democratic party.

The only hope for the people is in the People's Party, which is the only national party breathing the same resolves in all sections of the Union, "Equal rights to all men, and special privileges to none."

Labor Commission.

SPEECH

OF

HON. HARRY SKINNER,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 1, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

Mr. SKINNER said:

Mr. SPEAKER: I have endeavored to obtain the consent of my mind to give H. R. 6119, to "authorize the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital," a hearty, favorable support, because I am intensely and sincerely the advocate and friend of labor and agriculture. No one realizes better than myself how both of these strong arms of the country have been paralyzed by adverse legislation; and no one would sooner come to their relief and repair, as far as practicable and possible, the injury they have sustained.

Then, again, I understand this measure has the approval of the Knights of Labor and other labor organizations of the country and they also command my sympathy; and I stand ready now and at all times to strengthen their hands, to increase their power, to resist the steady encroachments of capital upon the rights, privileges, and conditions of labor. I stand ready to alleviate and lighten the burden of labor, to bring them better wages, shorter hours, more education, a higher civilization, and better Christian influences, and opening up to them all the possibilities of the true American. Still, Mr. Speaker, I must file my feeble dissent to the passage of this bill creating this nonpartisan industrial commission. I can see nothing in it for labor or agriculture, only as it makes more taxes for them to pay and relieves Congress of some of its present duties.

I am not objecting to the collection of information concerning labor, agriculture, and capital, but I seriously contend that this is the constitutional duty of the Labor Committee of Congress specially, and Congress generally, and this legislation is simply employing at an expense of about $300,000 per annum assistants for the Labor Committee, when they have plenty of time and are already paid for this service. Let us for a moment examine this bill:

The President of the United States is authorized and directed to appoint a commission, to be called the industrial commission, composed as follows: Three men representing labor, three men representing agriculture, three men representing manufacturing, and three men representing business.

Each division of three shall have the right to employ one legal adviser and one secretary. The commissioners and legal advisers shall receive $5,000 per annum and the clerks $200 per month, and the commission is granted a contingent fund of $50,000 per annum.

Their duty shall be to investigate questions pertaining to immigration, to labor, to agriculture, to manufacturing, and to business, and to recommend to Congress such legislation as it may deem best upon these subjects.

I would like to inquire what else remains for Congress to investigate? If this commission is created we had best create it the third house and make it the permanent conference of the two Houses, as their investigations will equip them to decide all matters of difference between the two Houses in a nonpartisan and patriotic manner.

Mr. Speaker, seriously, if this industrial commission is a necessity, then, in the name of economy, in the interest of labor and agriculture, let it be created out of the Senate and the House upon the same principle, with the same powers and privileges and duties, and without any additional expense to the people. Created in this manner, in my judgment it will accomplish more, the members thereof will feel more directly the influence and needs of the people, and being members of Congress they will stand a better show to formulate their matured plans into practical legislation. Suppose this commission is created and Mr. Cleveland makes the appointments. Does anyone doubt the complexion of the commission? It would be a machine at the expense of the people to make it appear that the single gold standard was to the best interest of labor and agriculture. It is exactly what SHERMAN, Carlisle, and Cleveland desire—some official source whereby they can educate the people against their will to the single standard and to their injury and ruin.

It does seem that this House has gone far enough on this line; that is, legislating in their own interest to relieve themselves of work and to give themselves more pay. I do not like to appear small or captious, but it is a very true lesson in finances to care for the pennies, and the dollars will care for themselves. We have restored the franking privileges, and still retain the allowance for stationery. We have given not only session clerks but also vacation clerks, and now we are asked to relieve ourselves of duty and to transfer the duty of investigating all matters to an industrial commission, at the additional expense of more than a half million dollars, to be paid in gold prices out of the joint results of the soil and labor.

I have not referred to the increased naval appropriations, to the increased river and harbor appropriations, to the increased civil-service sundry appropriation, and to the alarming increase in the pension appropriations, nor to the increase of the public debt through Executive orders in the sale of bonds. These, taken into consideration at one and the same time, are truly alarming when we look at the condition of labor and agriculture, which, under the organization of society, must bear these burdens and create the wealth from which shall be taken the taxes to meet these obligations, which necessarily diminishes their proportion of that which they bring into existence through their toil and sacrifices.

The condition of labor and agriculture are luridly portrayed by their respective organizations, by the strikes, the lockouts, and the increasing army of the unemployed, by the sheriff and mortgage sale, by the absolute and appalling poverty of the Southern and Western planter, marked by scant food, poor raiment, torn-down fences, filled-up ditches, dilapidated farm houses, and the depressed appearance of the honest planter, with no hope to pay his debts, educate his children, or to reserve a surplus for sickness and old age. Along the path he daily trods from the rising to the falling of the sun can not be plucked either flower, blossom, or bud of hope.

It is idle, it is trifling with the needs of an almost exasperated people, to say that you must first establish a nonpartisan commission to inquire into the condition of agriculture, labor, and capital and wait for them to recommend legislation before you can act, before you can give the people relief. And you present this as a measure in their interest! They ask for bread, and you throw them a stone. They cry for meat, and you offer them a bone. How long will you thus abuse their patience? How long will their patience endure and countenance your abuse?

These delays and postponements are dangerous. The wrath of the people when once kindled becomes a consuming fire that will not be quenched until its force is spent and its path marked by desolation, waste, and ruin. Mr. Speaker, I plead with this Congress to act before it adjourns and give the people relief. Remember that Mark Antony lingered in dalliance soft and sweet before the star-eyed Egyptian Queen and lost Actium at the hands of the second Cæsar. That Cæsar, in the plenitude of his power, said, "The ides of March have come." When they had passed he lay at the foot of Pompey's statue. Louis XIV, playing at locksmith, wrote in his diary, "Nothing particular has happened to-day." The only thing that did happen was the siege and fall of Paris. Charles II said scornfully, "What can these Roundheads do?" He found out later they could cut off his head. In the shadow of a great crisis, throughout history we find these flippant sayings.

Surely, Mr. Speaker, we are standing in the shadow of a pending crisis that throws its dark pall of gloom and despair over every section of our country, paralyzing all industries and threatening the perpetuity of American institutions. Shall this House turn a deaf ear to the plaintive wail of hunger, nakedness, and despair as they well from the garrets and cellars of the overcrowded city and from the humble farm houses of the country?

If so, Mr. Speaker, you may not be surprised to see the people organize as they have never organized before in a nonpartisan way to secure practical legislation, and party ties will hereafter fall lightly around the people who desire and need relief.

In the history of the Old World the philosophic observer can find but few incidents gratifying to the philanthropic mind and no satisfactory evidence of the capacity of the mass of mankind for the maintenance of popular government.

Greece, the cradle of letters and nursery of arts, the land of Homer, of Solon, of Herodotus—the theater of Thermopylæ, of Leuctra, and of Marathon—classic Greece, in the heyday of her glory, beguiles the scholar with her minstrelsy, her eloquence, and her army, and fires his genius with illustrious examples of devoted patriotism; but a calm survey of her history exposes lamentable scenes of disorder and injustice, and in the débris of her wreck and ruin will be found the same evidences of a neglect of the people's interest which are manifest in America to-day, which, if not corrected in time, surely mark us as their victims.

Rome, once mistress of the world, was in her best days the great arena of contending factions. She, too, had her demagogues, and "the majesty of the Roman people" was their watchword. And though she had her Fabricius, her Regulus, her Cato, her Cicero, she also had her Clodius and her Sylla and her Cæsars, honored

in their day as the friends of the people; and whether Marius or Sylla, Cæsar or Pompey, prevailed, the victory was in the name of liberty. The Republic was honored with a triumph and a clamor of approbation echoed from the Forum to the Capitol. Augustus Cæsar, absolute as he was, preserved the forms of a republic, whilst by the perversion of his vast patronage to his own aggrandizement, Grover Cleveland-like, he made an obsequious and prostituted senate the register of his will, and in the name of liberty fastened a heavy yoke forever on an applauding populace.

The fast-anchored isle—the natal land of our fathers and the mother of our common law—has had her scenes of civil strife and blood; she has had her Wakefield, her Smithfield, and her Bosworthfield; she has had her Tudors, her Stewarts, her Jeffreys, her Bonner, and her Cromwell, as well as her Sidney, her Cramer, and her Hampden, her Beaconsfield, and her Gladstone; and after ages of reformation in church and state her aristocracy still governs, her heirarchy still prevails, and the Harp of Erin hangs tuneless and sad upon the leafless bough of her blasted oak, and her finances govern the world and seek the subjugation of American dominions.

The French Revolution had its Dantons and its Robespierre; and after the bloody idol of licentious liberty had, like the Car of Juggernaut, crushed its thousands and overturned the temples of the true God, a Prætorean band of grenadiers delivered over the "Republic" to the safe-keeping of a Bonaparte.

After contemplating such scenes, well may we doubt the capacity of man for self-government, and exclaim in the language of Mme. Roland under the guillotine, "Oh, liberty, what crimes have not been perpetrated in thy name!"

But from the waste around us we cast our eyes upon this green sward sloping from the Atlantic to the Rockies, then down to the Pacific, the land of present hope and measureless possibilities, and the inestimable truth is born the mind that there is still hope for popular government, and under its benign influences and protection man will ultimately be elevated to the full and undisturbed fruition on earth of the great ends of his moral being.

That God who gave us this country, who preserved Christianity through the gloom and desolation of the Middle Ages and has preserved this country through depressions in peace and the perils of war, will not suffer liberty, its offspring, to perish. Both have taken deep root in American soil. They were planted by our forefathers under circumstances peculiarly propitious, and so long as we may live it will be our duty and pleasure to cherish and defend them.

The serious problem that confronts us is to save the Republic by restoring the contentment, the happiness, and prosperity of the people.

In my humble judgment, this can only be done by the exercise of wise economy in the administration of the Federal Government, so that the burden of taxes may be made as light as possible, and that without the restraint of their individual liberty involved in the maintenance of the internal-revenue system.

Secondly, by such legislation as shall insure more and constant employment to labor, with shorter hours, with increased wages and better prices for farm products. The legislation that shall produce these results will restore hope, contentment, happiness, and prosperity to the masses; and these will not only temporarily save the Republic, but cause us to build more permanently and wisely than we knew, and develop the now latent possibilities of our measureless wealth.

Upon the question of Federal economy, the House will pardon me if I again refer to House bill 4141, introduced by myself January 16, 1896, to reduce all Federal salaries 33⅓ per cent. With the consent of the House I will incorporate the bill just here as a part of my remarks:

A bill (H. R. 4141) to reduce the compensation of all persons in public service and thereby to meet the deficiency in the Treasury.

Whereas the demonetization of silver has resulted in the depreciation of land, labor, and products, and the stagnation of business and the depression of all industries, and has thereby reduced the people's means of meeting the expenses of the Government; and

Whereas the enforced underconsumption has resulted in the revenues of the Government falling below its expenses; and

Whereas the salaries of all Government officials and employees were fixed and based upon prices and conditions existing prior to the demonetization of silver; and

Whereas all Government officials and employees are receiving salaries and wages in excess of what the same service would command in any other field of employment; and

Whereas there is a deficiency in the Treasury which should be met by practical economy rather than by the increasing of taxes or the selling of bonds: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all compensation, whether paid as salaries, fees per diem, mileage, or otherwise, of any person, officer, or employee in any branch of the public service shall be, and is hereby, reduced to the extent of 33⅓ per cent of their present amounts.

SEC. 2. That on and after the passage of this act all compensation of persons employed in any branch of the public service shall be computed and paid on a basis of the reduction provided for in section 1 of this act.

SEC. 3. That the law which shall hereafter be passed authorizing the opening of the United States mints for the free and unlimited coinage of silver at the ratio of 16 to 1 shall work and operate as a repeal of this act, and restore to all persons, officers, or employees in any branch of the public service the same salaries and wages that they received prior to the passage of this act.

SEC. 4. That all laws, clauses of laws in conflict with this act are hereby repealed.

This bill can be passed by both Houses in two hours, and thereby $100,000,000 per annum be saved to the people. The same scale applied to the appropriation bills will save $200,000,000 additional per annum, and thereby secure an aggregate saving of $300,000,000 per annum to the people. And all of this can be done without detriment to the public service.

Upon the subject of better prices for farm products, the current admissions of the press and the statesmen of the decade justify the statement that free coinage of silver at 16 to 1 doubles the current money of the realm and the world, and the result of this is to double the prices of the world, especially of labor and products.

Just at this point I desire to read H. R. 8999:

A bill (H. R. 8999) to prohibit the further issuance of interest-bearing bonds without the consent of Congress.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the issuance of interest-bearing bonds of the United States for any purpose whatever without further authority of Congress is hereby prohibited.

It is the same bill now being considered in the Senate; it prevents the issue of bonds without the authority of Congress. If the Executive is deprived of this power to issue and sell bonds, he may be necessitated to resort to the free coinage of silver at 16 to 1 and to the recognition of silver at the Treasury Department as primary money of redemption. I have thought, I do believe, that if the Secretary of the Treasury would only exercise his discretion in the interest of silver and redeem silver certificates in silver, and Treasury notes in silver, that he would break the endless chains, and would accumulate a surplus of gold in the Treasury, that would avoid a necessity for the issuance of gold bonds either by executive or legislative authority. It is certainly dangerous to leave this power in the hands of the Executive. Certainly no bonds of any class or species should be issued except be express legislative authority.

On this line I call attention to House resolution introduced by me on the 22d day of January, 1896:

Whereas by the act entitled "An act to strengthen the public credit," approved March 18, 1869, it was provided and declared that the faith of the United States was thereby solemnly pledged to the payment in coin or its equivalent of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of such obligations had expressly provided that the same might be paid in lawful money or other currency than gold and silver; and

Whereas all the bonds of the United States authorized to be issued by the act entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, by the terms of said act were declared to be redeemable in coin of the then present standard value, bearing interest payable semi-annually in such coin; and

Whereas all bonds of the United States authorized to be issued under the act entitled "An act to provide for the redemption of specie payments," approved January 14, 1875, are required to be of the description of bonds of the United States described in said act of Congress approved July 14, 1870, entitled "An act to authorize the refunding of the national debt"; and

Whereas at the date of the passage of said act of Congress last aforesaid, to wit, the 14th day of July, 1870, the coin of the United States of standard value of that date included silver dollars of the weight of 412½ grains each, declared by the act approved January 18, 1837, entitled "An act supplementary to the act entitled 'An act establishing a mint and regulating the coins of the United States.'" to be a legal tender of payment, according to their nominal value, for any sums whatever: Therefore,

Resolved by the House of Representatives (the Senate concurring), That all the bonds of the United States issued or authorized to be issued under the said acts of Congress hereinbefore recited are payable, principal and interest, at the option of the Government of the United States, in silver dollars of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor.

I also call attention to H. R. 8535, entitled "A bill to secure international free coinage of silver at the ratio of 16 to 1," etc.:

A bill (H. R. 8535) to secure international free coinage of silver at the ratio of 16 to 1; to maintain the gold reserve; to regulate the exportation and to protect the production and manufacturing of cotton within the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That after thirty days from the passage of this act no raw cotton in any quantity, of any grade or quality, shall be exported from any of the ports of the United States, except by the permission and under the direction of the Secretary of the Treasury.

SEC. 2. That the Secretary of the Treasury, under rules and regulations prescribed by the board hereinafter created, shall purchase and export raw cotton for sale upon the United States Treasury account.

SEC. 3. That the commissioner of agriculture of each of the cotton-growing States, together wich the Secretary of Agriculture and Secretary of the Treasury of the United States, shall constitute, and are hereby created, a board to direct the purchase and sale of the Southern cotton crop, with all incident and necessary powers to attain practical results; this board, within their discretion, shall meet in Washington not earlier than the 1st day of February nor later than the 1st day of August of each and every year and name the price and formulate the plans and regulations under which the Secretary of the Treasury shall purchase, care for, store, sell, and export the Southern States cotton crop for the ensuing fall.

SEC. 4. That the Secretary of the Treasury, for such raw cotton according to grade, under the rules and regulations fixed by the board created in section 2 of this act, at the price named, delivered at such ports or points as shall be designated, shall pay for the same in all cases with Treasury notes in denominations of $1, $2, and $5, $10, $20, and $100, redeemable on their face, either in gold or silver, 16 to 1, or Government 2 per cent bonds, payable in series from $100 to $1,000, within twenty-five years, at the option of the

Secretary of the Treasury, these bonds to be on their face interconvertible at the option of the holder in this same class of Treasury notes, with interest added, and these bonds extended the same banking privileges as existing bonds have now or may hereafter have.

SEC. 5. That the Secretary of the Treasury shall sell to American manufacturers, either from the interior or from ports, at cost to Government plus expense of carriage, insurance, and storage, and shall accept as payment from them gold or silver, 16 to 1, the above-described Treasury notes, or any national United States currency or the above-described bonds, with interest added, at the option of the purchaser. Nothing herein shall operate to prevent the American manufacturers from purchasing directly or indirectly from the planter.

SEC. 6. That the Secretary of the Treasury shall have the power, and is hereby authorized, to negotiate and sell for export at not less than 33⅓ per cent net advance of cost to Government.

From bimetallic countries, to the extent of their manufacturing capacity, he may accept payment therefor in the same classes of money, currency, and bonds as he is authorized to accept from American manufacturers.

From single-standard gold countries he shall exact payment in gold until there shall be an international agreement for the free coinage of silver at the ratio of 16 to 1. Such an international agreement shall operate as a repeal of this act.

SEC. 7. That the Secretary of the Treasury is hereby fully authorized, under the rules and regulations of the Treasury Department governing the preparation and issue of Treasury notes and bonds, to have prepared, issue, and pay out, and redeem the Treasury notes and bonds in accordance with and to carry into effect all the provisions of this act.

SEC. 8. That all provisions of law, whether of statute or treaty, now in force in anywise inconsistent with or in conflict with this act are hereby repealed and set aside.

Mr. Speaker, this is truly a nonpartisan industrial commission and without expense to the Federal Government.

1. I claim that this bill would secure international bimetallism. By way of example, say that the Secretary and the board had met in February, 1896, and under the provisions of this plan advertised that he would give the planter 10 cents per pound on a basis of middling, under the rules and regulations prescribed, and in the Treasury notes named. The single-standard countries absorb the large bulk of our export cotton; under this plan, at 33⅓ per cent advance, it would cost them 13.33 cents in gold; this would be covered into our Treasury, amounting, estimating that they take (and must have) 5,000,000 bales per annum of our crop, over $300,000,000; this, if kept up, in a few years would drain the single-standard countries of their gold and put it into the Treasury of the United States and thereby make us the dominating factor in the world's finances. The single-standard Governments would see this result, and to prevent it they would promptly come to an international agreement for free coinage of silver at the ratio of 16 to 1, so that they might supply their mills with our raw cotton on the same terms that other countries do and thus reserve their gold. We would bring them to international silver 16 to 1 or destroy their manufacturing interests. Our Secretary of the Treasury would occupy the attitude that is clearly to the interest of this country of selling our great staple, cotton, for gold at our price, rather than hawking our bonds and surrendering our credit to an English syndicate in order that the gold owners of the world may be perpetuated in their power to dictate the price of our export crop.

2. I claim that the bill will secure, so long as in force, equitable protection to the field and shop in the highest, most practical, and patriotic sense of the word, and will afford a net revenue of one hundred millions to the Government. It is to be observed that under this plan the American cotton manufacturer would have 33⅓ per cent advantage in the cost of raw material. This would to a great extent stimulate and multiply our manufacturing interests, and make us exporters of manufactured cotton goods—competitors in the world's trade in this line. It would give cotton growing stability and prosperity, making the South a larger consumer of all other raw and manufactured goods; the planter would know what he would get before he planted, and his planting could be regulated so as to prevent a Southern overproduction, as we need not fear the stimulating effect this plan would have upon other cotton-producing countries. For example, note the effect upon the world's market resulting in short exports during the war. We have for more than fifty years held the supremacy in the world's production of raw cotton, but it is evident, under the controlling influence and power of the single gold standard, that we must take some steps to regulate the price or else go out of the cotton-growing business. Estimating that the gold-standard countries would be compelled to have 5,000,000 bales per annum of our cotton, and this is a small estimate, which, at 13.33 cents, would put over three hundred millions into our Treasury at 33⅓ per cent advance, the net revenue thereby made by the Government would be more than one hundred millions per annum. In other words, the Southern people would surrender their cotton crops and take the Government's noninterest-bearing paper in payment therefor, and furnish the Secretary of the Treasury with cotton to sell for gold instead of his sacrificing the Government bonds for gold. The Administration plan is to sell us in debt, and give the gold owners of the world the power of dictating prices. This bill contemplates naming our own prices, and relegating gold to the position of a servant in the great international exchanges of the world.

3. The Treasury notes issued under this plan, to the extent of the size of the American manufacturing interest, will prove perpetually self-redeeming. To the extent of the cotton exported we will put $1.33 in gold in the Treasury for every dollar issued. The profit to the Government would be as stated—on a basis of $300,000,000 value exported at 33⅓ per cent advance, it would return a net revenue of more than $100,000,000 per annum, which the cotton planters of the Southern States are willing to contribute as a tax to the Government for governmental supervision as above indicated. The bonds growing out of the plan would form a basis for the creation of such a new system of banking as may be practically hereafter devised, and within themselves furnish a currency. I will not discuss the objections that may be raised to this plan, for I expect criticism; but I wish to emphasize one great truth, that the price of our great staple, cotton, can be controlled by the Government without hazard or loss and to the benefit of all sections of our country. The Southern States hold the supremacy of the world in the production of raw cotton, both as to quality and quantity. The Manufacturers' Record, commenting upon this subject, says:

> Try as it may to avoid it, the world at large will have to draw the bulk of its cotton from the Southern States, and consequently we can and ought to determine what its selling price shall be instead of leaving that to be dictated by the consumer.

Hon. J. M. Rusk, then the Secretary of Agriculture, in a letter upon Southern progress, says:

> The supremacy which the South possesses in the markets of the world as a cotton-producing country there is reason to believe will never be forfeited. The natural facilities of the South for the production of this great cotton crop, aided and directed by intelligence, must assure for all time the supremacy of the Southern States as the cotton-producing region of the world.

In the same line of thought, Secretary McCulloch, in his fiscal reports, refers to the active movement of the crop of 1865 and the good prices commanded, drawing largely on the old country, as saving the United States from a threatened financial wreck. Mr. Edward Atkinson, the statistician, in a paper read before the Cotton Manufacturers' Association of New England, says:

> The Appalachian chain, gathering moisture from the Gulf Stream and spreading it over the fertile fields of the Southern States, has fixed our supremacy in cotton production.

If other authority is desired, I refer to the centennial sketch of the cotton trade of the United States by that distinguished cotton statistician, Mr. Thomas Ellison, of Liverpool; to Bulletin No. 9, United States Department of Agriculture; to "Production and price of cotton for one hundred years," by James L. Watkins; the "Annual cotton movements and fluctuations," by Latham, Alexander & Co., of Wall street, New York; the Encyclopedia Britannica; article "Cotton," by Thomas Ellison; and to any standard commercial geography. After reading these authorities anyone will be convinced that any person, syndicate, corporation, or Government owning the cotton crop of the Southern States could and would control the price of cotton. Under the plan that I have suggested the Government can become the owner of the Southern crop with a handsome net revenue attached, and under conditions that surround us it is but patriotic that we exercise this great commercial power to save the great industry and our country from wreck and ruin. If the Belmont-Morgan-Rothschild syndicate had the same lever power they would crush us in twenty-four hours, and it is but right that we use it as an instrument to buy what gold may be necessary for our purposes, to enforce international bimetallism, to extend and protect cotton manufacturing, and to regulate and protect cotton production. Every other nation in the world has legislated in the interest of cotton except this Government. They have done so for the purpose of making themselves competitors with us in the production of cotton. With all their governmental assistance they have signally failed and have finally resorted to gold monometallism so as to purchase our cotton at their price, and the time has come when the Government should come to the rescue of the American cotton crop, when it is so plain that by doing so they can make it to the advantage of the Government by making cotton the controlling factor of the world's finance and commerce and bless humanity by restoring bimetallism, and thereby emancipate labor, production, and commerce.

Lest the public may be misled in believing that I regard an international agreement necessary to the success of free and unlimited coinage of silver at the ratio of 16 to 1, I will emphasize that I believe in independent action without delay, and this plan carried out in detail exemplifies our ability to so act. There are other reforms on the other side of free silver that I believe in, but it is a useless waste of time to discuss them until we unshackle labor, production, and commerce from the dominating influences of gold. The patriotic influences of America need to be marshaled and focalized under this available issue of free silver 16 to 1 to route the common enemy of humanity and civilization before we can seriously contemplate the many other reforms needed in the fiscal and economic administration of our Government.

And the Southern staple is the available weapon with which to route monometallism and restore universal bimetallism, and thereby bless humanity.

Cotton is still king if it can be treated and dealt with fairly. If the Government would extend the same ratio of protection to this the greatest of all of our industries cotton culture would

keep pace with cotton manufacture. Upon every conceivable argument the culture of cotton is entitled to the same protection as is its manufacture. It gives employment to more labor, creates a larger home market for Western produce. Better prices for cotton means better prices for the landowner, better prices for farm labor, better prices for Western corn, wheat, and pork, and more prosperity to the country generally. In considering legislation along this line we must keep before us the relation of the Southern cotton crop to that of the world and hold fast to the fact that we do to-day and have done so for half a century and will continue for the next half century, under all conditions, to raise at least 80 per cent of the raw cotton of the world; that we consume about 33⅓ per cent of our production, and that the cotton mills of Europe must have two-thirds of our production to keep them running, and that all the mills must run on reasonable time to supply the world's increasing demand for cotton goods.

It looks reasonable that any Government whose people raise 80 per cent of a staple that is so important and necessary to the world, that is essential to clothe the human race, to furnish the home comforts, equip commerce, and shelter the camping armies of the world, and that employs so much labor in its production and manufacture, ought to receive some fostering care from the Government, so that its producers may not become paupers. All I contend for is that the Government shall throw around cotton culture the same arm of protective care that it gives to manufacturers, and thereby assist the cotton planter and relieve him from his present dependent position of being compelled to market his cotton crop certain months of the year at such price as the New York and Liverpool cotton exchanges shall dictate. It is a rule of trade acknowledged the world over that the owner of eight-tenths—even of 51 per cent—of any article of necessary consumption can regulate and control the price of the whole. So, reasoning from analogy, a Government whose people raise eight-tenths of all the cotton raised in the world can dictate to the consumers of that cotton what they shall pay. And in justice to ourselves and to every conceivable interest of this country this power should be exercised, not for purposes of oppression, but for the purpose of so regulating the great industry as to make it profitable, and those engaged in it prosperous and happy.

No nation is esteemed by the comity of nations so wealthy as that nation which from her resources can draw sustenance from her own soil to clothe and feed her soldiers in war and make them happy, prosperous, and contented in peace. Measured by this standard we are independent and capable of formulating our own political, commercial, and financial policy.

It must be admitted that this cotton commission, or Government control and supervision, would destroy the cotton speculation of the world and this profit would remain with the planter. My sympathies are with the cotton planter, for equal prosperity to all sections, for life on the farm as well as in the city, and against the evil spirit of the age by which speculation, monopolies, and trusts enrich the few at the expense of the many.

I admit that the recognized law of supply and demand ought to be left free to control prices. But in these days of unequal protection, monopoly, trust, and speculations the unprotected industries and the unorganized farmer, as against all the other combinations, unless some relief shall be extended to them, must sink and become and remain enslaved to the money trust.

The single gold standard is a simple trust upon the redemption money of the world, and this makes the gold owners—I may say 51 per cent of the gold of the world—the absolute owners and controllers of man, earth, church, and state.

The gold owners under this policy have caused this Government to surrender its sovereign function of issuing money to the national banks as a trust upon all secondary money, and they foster all other trusts of which we complain and whose heavy hand we feel paralyzing the heaven-appointed institution of farming.

It is indeed surprising to me that we shall supinely permit such trust, against the happiness and the welfare of the human family, when by utilizing our monopoly in raw cotton production we can break the trust and restore to the people their rights and prosperity.

Should the Government take advantage of its position and exercise its power in the premises?

Should the Government permit so great an industry to languish and those engaged in it to become paupers by raising a staple so essential to the comfort of the world and so necessary for the extension of civilization, and permit the continuance of prices fixed in Liverpool, dictated by a foreign policy, to command the American crop with as little money as possible, when it possesses the power to prevent it, and can, with this staple under governmental supervision, provided for in my bill, in due time drain Europe of all its gold and put it into the Treasury of the United States? I speak for the cotton planter. He will willingly raise cotton upon the faith of Uncle Sam's credit, accept Treasury notes therefor, redeemable so as to never receive a dollar of gold for their product, and turn it over to the Secretary of the Treasury to sell for gold for Government account. I repeat, the cotton industry is second to no interest in the United States, and deserves the fostering care of the Government, especially when by exercising this care the Government can make it the weapon with which to drain Europe of her gold and break the trust on money. The condition of the cotton crop, from planting to harvest, as well as the statistical position of the product, with the regularity of the daily course of the sun is bulletined around the world, and its staple is as current as gold across the counters of every bank in Christendom (only we permit its value to be measured in gold, when the reverse could be accomplished by action on our part). It constitutes fully one-half of our export, and is the lever with which we can raise the balance in our favor. The greater purchasing power we can give to this our great export crop the better it is not only for the producers of the South, but for all sections of the country, which hold a joint interest in our national wealth, to which cotton is the largest contributor. Is it right for the few million of people, those engaged in this industry, at the expense of great labor, exhaustion of soil, and sacrifice of health to produce 80 per cent of the great staple which is necessary to the comfort of fourteen hundred million people, the population of the world, at prices that are ruinous to the producers, when this can be prevented by this Government supervision, and the industry converted into a blessing to them with profit to the Government, and to the good of every section of our country and all mankind?

For the purpose of verifying my arguments, that we hold the monopoly in cotton production, I will at this point refer to a tabulated statement furnished me by the Agricultural Department, showing the world's supply and distribution of cotton:

World's supply and distribution of cotton.

	Visible and invisible beginning of year.	Crops.			Total actual consumption.	Balance of year's supply.

1881–82	3,640,000	3,198,000	2,197,000	389,600	9,424,600
1882–83	3,744,000	3,380,000	2,375,000	447,400	9,946,400
1883–84	3,666,000	3,380,000	2,244,000	520,700	9,810,700
1884–85	3,433,000	3,255,000	1,909,000	584,800	9,181,800
1885–86	3,628,000	3,465,000	2,278,000	630,300	10,001,300
1886–87	3,694,000	3,640,000	7,423,000	711,800	10,468,800
1887–88	3,841,000	3,796,000	2,531,000	771,670	10,938,670
1888–89	3,770,000	4,069,000	2,685,000	870,880	11,394,880
1889–90	4,034,000	4,290,000	2,731,000	988,293	12,043,293
1890–91	4,230,000	4,528,000	2,958,000	1,155,328	12,871,328
1891–92	4,020,000	4,576,000	3,220,000	1,142,619	12,958,619
1892–93	3,706,000	4,576,000	3,189,000	1,170,000	12,641,000

From these statements it appears the consumption is quite equal to the production and the crops of all other countries have not appreciably increased. I will read an extract from an interview with Mr. Sam Inman, of Atlanta, Ga., in the Minneapolis Tribune:

The extent and value of the cotton crop in the United States is hardly appreciated by people generally. During the past forty-two years, or since the discovery of gold in California, the gold product of that State amounts to $1,200,000,000. The cotton grown during the past four years was valued at $1,400,000,000. This immense yield is confined to a few States. If the cotton planters would be wise the South would eventually be the richest section in the world. The consumption of cotton in the world increases on an average of about 500,000 bales a year. There has been practically no increase in the cotton yield in the foreign cotton-growing countries of the world, so that the United States is expected to make up the increased consumption. Every part of the world, you might say, raises wheat; but it is not so with cotton.

But, Mr. Speaker, I am met with the argument that if we legislate in the interest of cotton specifically, that the grain grower, the hog, horse, and cattle raisers, and the producers of all other products will want similar legislation. My answer is that no other crop is analogous; besides, I am using cotton simply as the instrument to secure free coinage, and all of these producers admit that their prices will be doubled with free coinage.

Mr. Speaker, if it will be germane to the pending question, I will offer House bill No. 8353 as a substitute for the industrial commission bill; its sole mission is to collate information. This bill, which I now read, will collate information, without cost and in a most satisfactory manner, upon very important questions. It was for the purpose of information and instruction that I introduced it:

A bill (H. R. 8353) to submit to a direct vote of the people free coinage of silver at 16 to 1; a graduated income tax; the election of President, Vice-President, and United States Senators by a direct vote of the people.

Whereas this is a Government of, by, and for the people, and the people have the power to advise their servants, the President and Congress, concerning their governmental policies; and

Whereas it is highly important that they should be advised of the will of the people on important questions, that their will may be executed: Therefore

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That at an election for Presidential electors to be held in November, 1896, there shall be submitted to the citizens qualified to vote for such Presidential electors at said election the following questions:

First. Shall Congress make a law allowing free and unlimited coinage of silver at the ratio of 16 to 1, as it was prior to 1873? Yes. No.

Second. An amendment to the Constitution providing for the election of the President and Vice-President and United States Senators by direct vote of the citizens of the United States. Yes. No.

Third. An amendment to the Constitution providing that taxes shall be imposed as Congress in its wisdom may deem proper. Yes. No.

Fourth. Shall Congress, so soon as it may do so constitutionally, make a graduated income-tax law? Yes. No.

SEC. 2. That the intention of the voter shall be expressed, if he votes in the affirmative, by canceling the word "No"; and if he votes in the negative by canceling the word "Yes."

SEC. 3. That it shall be the duty of the judges and clerks of election appointed or elected as judges and clerks of said election for Presidential electors to also act as judges and clerks of this special election to determine the questions heretofore set forth. And the ballots and ballot boxes shall be returned to and canvassed by the same persons who by law are required to canvass the returns and determine the election of Presidential electors in each State; and the said persons so canvassing the returns shall certify to the President the number of votes for and the number of votes against each question. As soon as the President shall have received these returns, certified through the proper officers, he shall transmit them to Congress for its advice and consideration.

Pass this bill and you will not only have been informed but instructed by the people how you shall act.

Mr. Speaker, the President, the Senate, and I fear the House, is too far removed from the people; they all seem careless and indifferent of the people's needs and wants, and we are inaugurating and making permanent a system that removes all office-holding classes from the people. I refer to the civil-service laws. That is creating a life tenure in all appointive offices. In my opinion it is the creature and the ally of the single standard that will create the office-holding and the property-owning classes out of one and the same class, and both will be indifferent to the needs and wants of the people.

On January 14, 1896, I introduced H. R. 3959, and will now read the same:

A bill (H. R. 3959) to repeal the civil service laws.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the act entitled "An act to regulate and improve the civil service of the United States," approved January 16, 1883, with sections 1753 and 1754 of the Revised Statutes, section 4, page 374, paragraph 1 of chapter 667, page 772 of the Supplement to the Revised Statutes, volume 1, and all the amendments to said act of January 16, 1883, be, and the same are hereby, repealed.

I can not enter upon an extended argument for the repeal of the civil service laws. Briefly I will state that I believe in the doctrine of Marcy, that to the victors belong the spoils; and in the language of our late Senator from North Carolina, Vance, the horse that pulls the plow should eat the fodder.

Again, the civil-service law practically closes the doors to the plain people holding office. It is only the educated and the upper classes that can stand those technical examinations; the plain honest farmer boy and girl with the old-school learning need not apply. This law says to them, "Plow on; the offices of the country were not created for you." Again, experiences have proven that life-tenure, office-holding classes become in time careless, arrogant, and indifferent to the good of the people. I believe the best service will be secured by making all offices, appointive and elective, as near to the people as possible, and as dependent upon their favor as practicable. It makes them more considerate, more cautious, more attentive, and more anxious to render the best practical service. Grover Cleveland is extending the service, and in a few years all Federal officers except Congressmen will be holding for life, and in time these will desire to be embraced within its provisions.

Doubtless this industrial commission, if created, would become permanent, and in time covered and saved to life service by Executive order. This would certainly follow if their reports should prove favorable to the single standard.

The people of this country are at the present time suffering from the effects of thirty years of blundering, if not dishonest, legislation. During this entire period, in my opinion, not a single law has been placed upon the statute books of the nation that has for its ultimate result the welfare and prosperity of the people. This species of legislation has continued so long and its results are so disastrous that a radical change for the better must be made in the immediate future or the beginning of the next century will disclose a condition of affairs in this nation that will jeopardize, if not destroy, the grandest experiment in self-government that the world has ever witnessed.

Mr. Speaker, the people have suffered beyond all reason, and if

carefully considered, beyond all conception, through this vicious and criminal legislation which has been forced upon the country, reeking with treachery and corruption that "smells to heaven."

The manipulation of our finances in connection with unfair laws granting special privileges to corporations, trusts, and syndicates are the controlling factors in all the discontent and misery now seen among the people. The destruction of our silver currency, followed by a general contraction of our medium of exchange, is the prime cause of all our financial woes. The laboring people of our country were the first to feel the effects of this financial brigandage. Previous to this labor was abundant and wages were remunerative; now more than twenty million of our people are unemployed and thousands are in hunger and want. Then the laborers of our country were prosperous and contented; now more than five million are tramping our streets and swarming throughout the land, appealing alike to our sympathy and alarm. This class of people, dependent upon the labor of their hands, have been ruthlessly thrown out of work, to become mendicants and criminals, in order that a favored few might revel in luxury and idleness. The second class to feel the iron hand of this oppression was the farmer, the strength and bulwark of our free institutions.

This class of people have been dragged down from prosperity and progress to a condition of absolute bankruptcy and stagnation. All species of agricultural property has declined fully 50 per cent, while its products have fallen so low in price as not to repay the cost incident to production. In 1850 the wealth of the United States amounted to $8,000,000,000, of which the farmers owned $5,000,000,000. In 1890 the wealth of the country amounted to $65,000,000,000, of which the farmers owned but $16,000,000,000. In 1850 the farmers owned five-eighths of the wealth of the nation, while in 1890 they owned less than one-fourth. During the past thirty years the mortgage indebtedness of the farms of this country has increased, upon a conservative estimate, more than 2,000 per cent. The number of farms in the United States in 1890 was 4,555,734. Of this number, 2,302,941 were under a mortgage. From being comparatively out of debt in 1866, over 50 per cent of the farms of this country were mortgaged in 1890. I might continue statistics upon this point, but have given enough to show that the farmers of the country are in a most deplorable condition on account of unjust and unfair legislation.

The third class to feel these depressing conditions are the manufacturers. They are becoming unwilling victims of this same vicious legislation. With 20,000,000 of people out of work, with 50 per cent of the farms under mortgage and our agricultural population bankrupt, is it any wonder that manufacturers are going out of business or into the hands of receivers and their goods remaining unsold? A bankrupt and idle people can not consume products of either the farm or factory. This wholesale destruction of values following such vicious legislation is but the natural results of cause and effect. These conditions will continue to intensify, unless speedily remedied, until all business will become paralyzed and all labor efforts abortive.

MINNESOTA:

The Field for the Laborer and the Home for the Immigrant.

SPEECH

OF

HON. ANDREW R. KIEFER,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

Mr. KIEFER said:

Mr. SPEAKER: It may have escaped the attention of many of the members that most all of the immigration measures reported with a favorable recommendation originated and are advocated by our Eastern friends. And it has already become apparent during the progress of this discussion that of the two bills recently under consideration which proposed to throw certain restrictions around immigration into this country the one which merely requires that the incoming foreign stranger who desires to become a citizen of the greatest nation on earth shall be able to read or write in some language was the more popular. Mr. Speaker, that qualification, in addition to the many other restrictions that have been placed on our statute books, will not bar the worthy and desirable person from seeking our shores. I intended to offer an amendment providing that any parent who has children residing permanently in the United States may be permitted to land and become part of our people, providing always that there are none of the objections raised under the laws that exist at the present time, but the special rule would not permit.

Mr. Speaker, we are a nation of immigrants. Ever since the landing on our shores of the *Mayflower* there has been an incoming flow of the people from other climes—from Brittany, Germany, Norway and Sweden, Poland, Ireland, France, Italy, and from every other government where liberty has been fraught with continual danger, and where the individual under government regulations has not been permitted to enjoy that freedom which has made this country the haven of the oppressed from every other nation on the globe. It may be true, Mr. Speaker, that the people of Massachusetts and of Pennsylvania do not desire to add to the material wealth of those great commonwealths by offering any inducements whatever to immigration. It may also be true that the people on the far-away Pacific Coast are fearful lest the honest Polander or the intelligent and industrious Scandinavian or German come in and secure, even at the price that agricultural lands are held at, some of the choice acres of those five and ten thousand acre bonanza farms for which California has become famous.

But, Mr. Speaker, the people of Pennsylvania to-day owe it to the sons and daughters of foreign lands that they have developed into such a prosperous and progressive community. The thrifty German immigrant made his home in Pennsylvania and has become such a part of that great State that his descendants in the Western States are very frequently spoken of as "Pennsylvania Dutch," and the phrase has come into such general usage that it is used to designate many of our Western immigrants. We hear no demands for restrictive immigration as embodied in the bill offered by the gentleman from Pennsylvania [Mr. WILLIAM A. STONE] coming from the great Mississippi Valley, that magnificent empire which has only reached a preliminary stage of development. The people of that great domain will not, I am quite sure, oppose this proposition of establishing an educational test for the intending citizen. Indeed, they will throw every safeguard possible around the elective franchise by State legislation. But this does not mean that Minnesota desires to place any obstacles in the way of the deserving and honest son of toil who chooses to make that great productive region his future permanent abiding place. Within the past six months our State has been organizing for the purpose of offering every possible inducement to the immigrant and the laborer. Conventions have been held and local effort is being put forth to induce any honest man who desires to make a home or build up a business to locate in our midst.

In November last there was organized a State immigration association, and since that time every Congressional district in the State has held a convention in the interests of immigration.

On Friday last there was opened for settlement a portion of the great Red Lake Reservation, which is an agricultural garden, and where the industrious head of a family may soon become the possessor of a home. I desire to insert (with the permission of the House) an extract from the official circular which presents the aims and objects of the State immigration association. It is as follows:

A cordial invitation is extended to the citizens generally to join hands with the members of the executive committee from their respective Congressional districts, the county organizations, and with the secretary of the association in the important movement to increase the population of the State by 100,000, the mark set by the president of the association to reach at an early day, and within a reasonable period of time to double the present number (1,500,000) of inhabitants of the State and aggregate a population of 3,000,000.

Every citizen of Minnesota is invited to send the names and addresses of friends and acquaintances living in other States, Canada, or foreign countries to the secretary of the association at St. Paul, so that publications descriptive of the diversified resources of this great agricultural, stock-raising, and dairying State can be mailed to them. Also to request that their friends and acquaintances send the names of any intending settler whom they may know.

Farmers are invited to prepare letters giving their practical experience in farming since their settlement in Minnesota; give the name of the town, county, and State, or foreign country from whence they came; the amount of means, stock, etc., which they had on arrival in the State; the means they now have and the details of their progress in acquiring an independent home. It is the intention to print letters from farmers in the descriptive publications which are to be issued by the association in bringing to the attention of intending settlers the many advantages which Minnesota offers for new settlement.

As the agricultural lands and the timber and mineral resources of the State vary in localities, citizens are requested to prepare full descriptions of their respective counties and districts and send to the secretary at St. Paul for use in publications for distribution by the association. Include a description of the towns, manufactories, transportation facilities, public buildings, the number of churches, schools, population, the unoccupied lands, and other opportunities for securing new homes.

Local publications should be arranged for by cities, towns, counties, and districts, containing letters from farmers and descriptive matter containing the advantages and opportunities which their respective localities offer for the success of settlers. This can be done by special illustrated editions of local newspapers, or by local folders and pamphlets. If several thousand copies of such special or local editions are provided for by citizens, it is requested that a portion of each of such publications be sent to the secretary of the association at St. Paul to mail to intending settlers in answer to letters of inquiry, or to otherwise distribute.

It is the intention of the secretary to visit various counties and districts in the State to confer with citizens on plans for organized efforts to induce new settlement as soon as the duties at headquarters connected with the preparation of printed matter and the perfecting of other arrangements to advance and facilitate the work in hand will admit.

Members of county organizations and citizens generally are invited to visit St. Paul, when they can find it convenient to do so, and confer with the secretary on the subject of the best and most practical methods for promoting settlement in the State.

Truly, yours,

P. B. GROAT.

Secretary and Treasurer Minnesota State Immigration Association.

But our State is not alone in making extra efforts at this time to induce immigration. I will here insert a letter, or rather extracts from a letter, from Hon. T. L. Schurmeier, president of the State association, in which reference is made to an interstate association.

[Theodore L. Schurmeier, president; P. B. Groat, secretary and treasurer.]

MINNESOTA STATE IMMIGRATION ASSOCIATION,
HEADQUARTERS, 309 JACKSON STREET,
St. Paul, April 3, 1896.

MY DEAR SIR: The Minnesota State Immigration Association, an outgrowth of the Northwestern Interstate Convention, held at St. Paul last November 19, 20, and 21, has surpassed all expectations in the enthusiastic support which has been given to the movement in all parts of the State. Minnesota was the first of the Northwestern States represented at the interstate convention to organize after the adjournment of that body. The delegates to the interstate convention from Minnesota appointed an executive committee of seven members, one from each Congressional district. These, acting in conjunction with the secretary of the association, appoint county immigration committees. This measure has been carried out with so much vigor that we have county immigration committees organized and actively at work in 68 of the 81 counties in the State. The interest manifested in furthering the immigration movement is surprisingly great—in fact, has surpassed all expectations.

It has resulted in calling county and district conventions, mass meetings, etc.

A county convention was held at Hinckley, Pine County, soon after the State organization was formed, and was largely attended. A convention was held at Duluth for the Sixth Congressional district, and was attended by delegates from all over the district. It was held January 22 and 23 and was largely attended. Prominent speakers from various parts of the State were present and addressed the convention.

All of the other Northwestern States have organized State associations on or about assembling for that purpose, and the Northwestern immigration movement is assuming wonderful proportions and will result greatly to the advantage of the whole region, and Minnesota especially.

Very respectfully, yours,

T. L. SCHURMEIER.

Hon. A. R. KIEFER,
Washington, D. C.

The gentleman from California [Mr. JOHNSON] presented early in the session a bill which if enacted into law would stop the progress and hinder the prosperity of any unsettled and undeveloped community. It seems to be aimed directly at the Polish people, and I have received and presented here many petitions from the Polish-American citizens of my district protesting against the passage of the Johnson measure. I am glad that the Committee on Immigration have not reported it to the House for consideration.

MINNESOTA AND CALIFORNIA.

Mr. Speaker, on March 3, 1849, the Congress passed the bill giving to Minnesota a Territorial government. On July 4 of the same year the returns of the first census were taken, and it gave the Territory a population of 4,680. At that time the California gold fever was at its height, and the rush to the Pacific Coast during that period has never been equaled. In 1850 California had increased so rapidly that Congress received her as one of the States of the Union. It was an entire decade before Minnesota was admitted. And yet to-day we have as many Representatives on this floor as California, and we have a population of a million and a half of as intelligent, enterprising, successful, and patriotic people as exists in any Commonwealth in the Union. I now desire to quote, with the permission of the House, the law in respect to restricting immigration. The acts approved March 3, 1891, provides as follows:

That the following class of aliens shall be excluded from admission into the United States, in accordance with the existing acts regulating immigration, other than those concerning Chinese laborers: All idiots, insane persons, paupers, or persons likely to become a public charge, persons suffering from a loathsome or a dangerous or a contagious disease, persons who have been convicted of a felony or other infamous crime or misdemeanor involving moral turpitude, polygamists, and also any person whose ticket or passage is paid for with the money of another or who is assisted by others to come, unless it is affirmatively and satisfactorily shown on special inquiry that such person does not belong to one of the foregoing excluded classes or to the class of contract laborers excluded by the act of February 26, 1885; but this section shall not be held to exclude persons living in the United States from sending for a relative or a friend who is not of the excluded classes under such regulations as the Secretary of the Treasury may prescribe: *Provided*, That nothing in this act shall be construed to apply to or exclude persons convicted of a political offense, notwithstanding said political offense may be designated as a "felony, crime, infamous crime, or misdemeanor involving moral turpitude" by the laws of the land whence he came or by the court convicting.

That certainly is effective and far-reaching. It may not always have been enforced, but in spirit and intent it is in my judgment sufficient for the ample protection of our people from the dangerous classes. Of all the suggestions and recommendations made by the Immigration Investigating Commission appointed under the act of June 13, 1894, there are none more important than those referring to the proper distribution of immigration. And I may say with a feeling of pride that the people of Minnesota were among the very first to take action on the lines suggested by the Commission in the following:

DISTRIBUTION OF IMMIGRATION.

"While this Commission fully believes in the exclusion of all undesirable immigrants, it is nevertheless its sincere conviction that the solution of the vexatious immigration problem is to be found not so much in a restriction of immigration as in a wise distribution of it. There are some comparatively small, densely-populated sections, to be sure, where no immigrants or only the most highly qualified are desired; but in the larger part of this country those immigrants are still needed who are only fitted for unskilled manual labor. This is particularly true of the vast undeveloped agricultural and lumber areas of the Northwest, South, and Southwest. And now that the business depression has practically passed, manufacturing and construction enterprises, in both the newer and the older sections, will cause a steady demand for labor. Some arrangement should be made, therefore, whereby all immigrants who arrive without a fixed destination can be helped to find one of exactly the right sort. Such an arrangement the Commission has to propose.

"At present, many immigrants herd together in the densely populated centers. Nearly half of the steerage arrivals at the port of New York, for example, give their destination to the immigrant inspectors as New York City, because they know of no other place to go. That a considerable portion of them eventually drift elsewhere, for better or worse, is evident from the figures of the census; but quite too large a proportion remain to swell the ranks of the paupers or depreciate the labor market. Only a small percentage get where they really ought to be—that is, into the work for which they are peculiarly fitted, in the localities where they are peculiarly needed. Existing conditions, in a word, exhibit a clear case of maladjustment, and the maladjustment is principally due to the lack of reliable knowledge on the part of the immigrants and their complete inability to obtain it.

"Notwithstanding the rapid mail and cable connection and the enormous transatlantic trade, the geography, topography, resources, and industrial and social conditions of the different sections of the United States are practically unknown in Europe. The only information accessible to an intending immigrant is contained in the letters received by himself or his neighbors, or in the circulars of speculators, and steamship and railroad companies, within or without the limitations imposed by sections 3 and 4 of the act of 1891, as the case may be. He leaves home finally with the expectation of abundant opportunities of bettering his condition, and with an eager determination to avail himself of them, but without any precise knowledge of where or how he is to do it. Under the circumstances it would be strange indeed if glib-tongued agents did not sometimes, in spite of all the vigilance of the Federal authorities, induce him to invest his funds in worthless lands and played-out enterprises, or to let his labor to an unscrupulous padrone. The officers of the immigration service have no authority to direct immigrants where it is to their advantage to go, nor could they, even if they had the authority, undertake so difficult and complicated a task in addition to their present duties.

"The Commission therefore recommends the erection on the unoccupied space of Ellis Island of a large, permanent exhibition hall. This hall should contain, in easily accessible form, maps, charts, photographs, printed descriptions, and sample products; also tabulated up-to-date records of the demand for particular kinds of labor in particular localities and the oversupply in other localities. All immigrants should be conducted leisurely through the hall by immigration officials and given an opportunity to choose their destinations. The building should be erected by private enterprise, said private enterprise being allowed to recoup itself for its outlay by being granted for a term of years, possibly ten, the exclusive privilege of letting offices to State boards of immigration and such private companies as are eligible from their known character and reliability.

"The wisdom of intrusting the erection of the building to private enterprise will be readily seen. It not only avoids the assumption of a new and possibly burdensome responsibility by the Federal Government, but it also precludes the possibility of serious complications with foreign governments and the governments of the States and the varied and powerful transportation and colonization companies involved. At the same time the building should be under the control and supervision of the Federal Government to such an extent as may be necessary to guarantee the best interests of the community at large.

"The practicability of such an exhibition hall and labor clearing house has been demonstrated on a small scale by the Italian bureau of Professor Oldrini, already referred to. (See page 25.) It is significant of the great possibilities of such an institution on a large scale that the news is gradually traveling through the sections of Italy from which most immigrants come that at the Italian bureau in New York information and assistance may be had that is not mercenary.

"The Commission feels sure that the adoption of this or a similar plan for bringing about an intelligent distribution of immigrants will not only be the death of the padrone system, but will permanently silence the majority of the complaints now made against immigration."

Let us for a moment consider what immigration and the policy which has characterized our laws heretofore have accomplished for our country. There arrived in this country from the year 1820 to 1892, 16,611,060 immigrants. It will be interesting to note, in passing, the proportion of each of the leading nationalities in the grand aggregation.

There came from Germany, 4,748,440; Ireland, 3,592,247; England, 2,534,955; Norway and Sweden, 1,032,188; Austria and Hungary, 585,666—1 to 140 people; Italy, 526,749; Russia and Poland, 517,507; France, 379,637; Scotland, 347,900; Switzerland, 185,488; Denmark, 163,769; China, 296,219; all other countries, 2,700,295.

From this aggregation I gather that these immigrants and their offspring unquestionably contain fully one-half of our present population of 70,000,000 people. I find that there arrived at the port of New York during the six months ended June 30, 1892, 152,360 immigrants above 20 years of age, who brought with them $3,060,908.05, 22,351 being German immigrants, who brought $791,672. All of them brought willing hands, honest hearts, and healthy bodies, and all have found or will find the object for which they came here—a home in this land of liberty, justice, and equality. They have materially assisted in making this Government the progressive empire that it is to-day; they have given their adopted country laborers, farmers, mechanics, merchants, manufacturers, lawyers, doctors, teachers, bankers, ministers, soldiers, and statesmen. They have erected colleges, schools, and churches. I refute the statement which we have heard made, that a large proportion of the immigrants remain in the big cities. It is the Scandinavian, Irish, and German aliens who have settled upon the fertile prairies and fruitful fields of the great Northwest and made it a wealth-producing empire. It is they who have aided in building up cities, towns, and villages. Take, for instance, the city of New York, with its population of over 2,000,000. Less than 39 per cent of that population consists of the German nationality. Chicago has less than 38 per cent. The progressive and enterprising city of St. Paul, the great commercial metropolis of the Northwest, has less than 32 per cent. Minneapolis has less than 13 per cent, and so on through the long list of cities until we find Portland, Me., with less than 2 per cent. This all goes to show that the foreign-born citizen is found largely outside of big cities.

In dealing with this question it will not do to rely too much on sentiment. The argument of existing condition and the logic of the pocketbook is far more potent than all the theories of the persistent pessimist who invariably is on the outlook for danger signals. What part have our alien citizens played in the history, growth, and development of the United States during the last half century? Eliminate their record, and while not detracting in the least from the name and fame of our noble, native-born citizens, I say, without fear of successful contradiction, that the very best thought, noblest action, and patriotic impulses from other lands have been given ample play and have found full vent in the resources of the United States. Now, it is held by some that the resources of our country have been fully tested by the present population and no more labor should seek employment within our borders. This argument, I am free to say, has been advanced with some force since the present Administration of our Government assumed control; but such argument in general can not maintain. Our own State, the imperial Commonwealth of Minnesota, contains 53,000,000 acres of the finest agricultural and grazing lands in the world, of which less than 7,000,000 acres are under cultivation. Upon a territory covering 80,000 square miles there now resides 1,500,000 happy, law-abiding Christian people, the larger part of them being of foreign birth or descent. In no locality has this country been more lavishly enriched than has our State; and yet consider the opportunity yet open in that magnificent domain under conditions which have prevailed during the last decade up to the time when dire distrust and free importation of materials manufactured by cheap labor have threatened disasters to our commercial and industrial growth.

We are a people claiming to stand upon the very pinnacle of Christian civilization. We are proud of being called the most magnanimous and unselfish of all nations. We are proud, too, of being the owners of untitled land enough in our own borders to give labor and happiness to millions and millions of our fellow-beings. Let us not forget that many of our noblest citizens were happy to find this country the land of plenty, peace, and prosperity, and were permitted to make this their home by those who came before us.

Yes, it is claimed, and justly so, that the Mississippi Valley alone, with its neighboring territory, is capable of furnishing homes for fully 500,000,000 people. We own nearly one-seventh of the fertile lands of the world, and yet you hear people say that we are too thickly populated, and that we must take measures to stop immigration, that no more room is left for newcomers. People who talk thus know nothing of the geography of the country wherein they are born. In this country 500,000,000 men, women, and children can find bread, can live and be brought up. We need not fear to double and triple our present population. What we must do is to educate their children when they reach here, and in a generation or two we will see them American citizens of whom the Republic may well be proud. Who knows of better citizens than those hundreds and thousands of foreign-born citizens who risked their lives to save the Union and Republic? Do you not regard them as just as high and worthy as the native born? Their minds, their hearts, their views, are what we should look to. We should not ask where one is born, but ask, "Is he a good man? Is he willing to grant others what he demands for himself?" That seems to me to be the true test.

What American does not know the noble and patriotic words of Jefferson, embodied in the Declaration of Independence, and sanctioned in the Constitution, which makes ours the land of liberty and the asylum of the oppressed of every nation? These are his words:

Every attempt to abridge the present privilege of becoming citizens and owners of soil among us ought to be resisted with the same spirit which swept the alien and sedition laws from our statute books.

Labor.

SPEECH

OF

HON. GEO. B. McCLELLAN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896.

The House being in Committee of the Whole on the state of the Union and having under consideration the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital—

Mr. McCLELLAN said:

Mr. CHAIRMAN: In a partly civilized community where ignorance is prevalent, labor is of necessity, on the surface at least, content. Whatever discontent may exist among the laboring classes finds no intelligent method of expression. In such communities labor can only assert itself by uprisings accompanied with physical force. Under such circumstances the laborer knows that his condition is not what it should be, but is unable to either discover the cause or suggest a remedy. Uprisings may occur in partly civilized communities, but they are eventually suppressed and labor finds itself in even a worse condition than before. It is a curious commentary on modern conditions that the greater the civilization the greater the apparent discontent of labor.

The almost universal discontent of labor at the present day is due primarily to the great increase of education and intelligence among the wage earners of the world, to the specialization of labor with the introduction of modern machinery, and to the displacement of labor through more economical methods of production and distribution.

All concede the truth of the abstract proposition that it is the duty of government to legislate for the good of the greatest number. It is certainly the duty of Congress, in accordance with a strict construction of its constitutional powers and limitations, to do all that it can for the improvement of the condition of the great majority of its citizens, the wage earners.

THE "FREE AND UNLIMITED COINAGE OF SILVER" ARGUMENT.

During the present session of Congress I have heard gentlemen in all seriousness charge the present discontent of labor in this country to what they are pleased to call the "demonetization of silver," and suggest, as the only relief for the struggling masses, the free and unlimited coinage of silver at the ratio of 16 to 1.

Free-silver advocates base one of their strongest arguments in favor of the free and unlimited coinage of silver upon the fact that since the so-called "crime of 1873" prices of almost all commodities have fallen. Observing that the price of silver has fallen even more than that of other commodities, they have jumped to the conclusion that there is the relation of cause and effect between these two facts, and that the fall in the price of silver has caused the fall of prices in other commodities, and that were the price of silver to be restored by any means the prices of other commodities, including labor, would in consequence rise. This argument is absolutely unwarranted, and more worthy of the nursery than of the House of Representatives.

It is one of the canons of logic and of common sense that where simple explanations for given phenomena are at hand complex explanations should not be sought. It is safe to assume that where

the price of an article rises greatly the demand has outrun the upply, and that where the price falls the supply has outrun the demand. With this simple explanation of the cause of the fall in prices in the last quarter of a century, it is scarcely conceivable that anyone should attribute a general fall in prices to the fall in the price of one specific article. The claim that the fall in the price of silver has caused the fall in the price of other articles can not be proved and never has been proved. Gentlemen have generalized upon the floor of this House, free-silver advocates have repeatedly made the claim, but they have never attempted to prove it. The logical and sensible explanation that the fall of prices has been caused by overproduction is, on the contrary, capable of proof.

HON. DAVID A. WELLS PROVES THE CORRECT THEORY.

The wonderful advances of the world during the last quarter of a century in improved and economical methods of production and distribution, which have been mainly due to the progress of invention and discovery, have resulted in an enormous production of all the necessaries of life. While the demand has to a certain extent kept pace with the supply, competition and greater facilities of transportation have constantly kept the supply in excess of the demand.

The Hon. David A. Wells, in his epoch-making book, Recent Economic Changes, has proved this view of the case by giving a detailed history of each of the leading commodities the price of which has fallen, and has shown that in every case the fall of price has been preceeded by a very great increase of production; that the supply has outrun the demand, not the demand in the abstract, for in a certain sense there is no limit to the demand for useful and desirable things, but the demand at the preexisting price. He cites instances, not only of the naturalness of the decline of price, but also of the benefit that that decline has afforded to the great majority of the people of the world.

The beet-sugar industry, for instance, has been built up largely at the expense of the cane-sugar industry. Regardless of the question of the soundness of the policy of paying bounties, the result of this has been that the world now gets very low-priced sugar. The industry of tea cultivation has, in a natural manner, been transferred from China to India, and the price has greatly fallen. Quinine, which not long ago sold for $1 an ounce, is now cultivated in the East Indies and is sold at but a fraction of its former price. These are merely instances taken from Mr. Wells's book. The list might be continued indefinitely. They are sufficient, however, as an illustration, and it may be said in passing that the Europeans engaged in raising beets and making beet sugar have to work upon the gold basis, while most of the countries interested in cane sugar are upon the same silver basis as are the Chinamen who have been injured in their tea industry, but never raised a hand against silver, and that South America, which has been deprived of its quinine industry, is also upon a silver basis. It will be seen that in none of these three cases has the silver standard succeeded in maintaining the price of the injured industry.

WAGES HAVE RISEN AND PRICES FALLEN.

Prices have constantly fallen since 1860, except during the period of inflation under the suspension of specie payments. If gentlemen interested in the free and unlimited coinage of silver would carefully examine part 1 of Senate Report 1394, second session, Fifty-second Congress, called the "Aldrich report," they would find therein many facts that would probably shake their allegiance to the white metal.

I have prepared a table, which I shall ask the permission of the House to insert in the RECORD, which is merely a comparison taken from a number of tables in the Aldrich report. All the prices are computed upon the basis of 1860, being percentages of the averages during that year. The average price of 53 articles of food rose during the period of inflation of 1865 to 216.5, fell in 1873 to 129.8, and has since then been falling until 1891, when it reached 103.9. The average price of 28 articles of cloths and clothing rose in 1865 to 299.2 and has been steadily falling ever since until 1891, when it reached 81.1. The average price of 10 articles of fuel and lighting rose in 1865 to 237.8 and has been falling since then until it reached 91 in 1891. The average price of 54 articles of metals and implements rose in 1865 to 191.4 and has since been falling until in 1891 it reached 74.9. The average price of 35 articles of lumber and building material rose in 1865 to 182.1 and had fallen in 1891 to 122.3. The average price of 18 drugs and chemicals had risen in 1865 to 271.6 and fallen in 1891 to 86.3. The average price of 15 articles of house furnishings rose in 1865 to 181.1 and had fallen in 1891 to 70.1. The average price of 10 miscellaneous articles, such as soap, etc., rose in 1865 to 208, and in 1891 had fallen to 95.1. The average price of these 223 articles, all necessaries to the wage earner and all used in daily life, rose in 1865 to 216.8 and have been falling ever since until 1891, when their average was 92.2.

The advocates of free silver are undoubtedly sincere in thinking that a rise of prices would be a benefit to the community. They overlook the fact that while the prices of most commodities have fallen during the last twenty-five years, the price of that all-important commodity, labor, has risen.

Estimating as before upon the basis of 1860, the average price of labor in the following leading industries, agricultural implements, ale, beer and porter, books and newspapers, building trades, carriages and wagons, city public works, cotton goods, dry goods (stores), ginghams, groceries (stores), illuminating gas, leather, lumber, metals and metallic goods, paper, railroads, sidewalks, spice, stone, white lead, woolen goods—21 in all, was, in 1865, in currency 143.1, in gold 66.2; in 1870, in currency 162.2, in gold 133.7; in 1873, the year of the so-called "crime," in currency 167.1 in gold 148.3; in 1875, immediately after the so-called "crime of 1873," in currency 158.4, in gold 140.8, and has been rising ever since the resumption of specie payments until in 1891 the average had reached in gold 160.7.

The hours of labor in these twenty-one industries have steadily fallen from eleven per diem in 1860 to ten and a half in 1873 and to ten in 1891.

A further examination shows that the average wages paid to anthracite coal miners rose in currency in 1870 to 233.4, and are in gold to-day 177. The average wages paid to iron-ore miners rose in currency in 1865 to 161.8; in 1870 to 214.7; and are to-day 213 in gold. The average wages paid to teachers in four cities, St. Louis, Boston, Cincinnati, and Baltimore, rose to 134.7 in 1865, 186.3 in 1870, 183 in 1873, and have been rising ever since to 1891, when the average was 186.3. Meanwhile it may be interesting to note that while the ratio of silver to gold in 1860 was 15.29; in 1865, 15.44; in 1870, 15.57; in 1873, 15.92; in 1875, 16.59; in 1880, 18.05; it has been steadily increasing, until in 1894 it was 32.56; and while the value of the silver dollar in gold was in 1873, 1.004; in 1875, 0.964; in 1880, 0.886; it was in 1894, 0.491. In other words, beginning in 1860, with the exception of the period of inflation exaggerated by the speculation incident to the war, prices of the necessaries of life have been steadily decreasing until to-day they have reached the lowest point in modern times.

Silver has had about the same price history as all other commodities. It may have fallen lower than some others, but if it has, it is merely because the supply has more greatly outrun the demand and because the demand has fallen farther behind the supply.

FALLING PRICES A BENEFIT TO THE PEOPLE.

Were the buyers and the sellers in a community numerically equal, a rise or fall of prices would have no relative effect; but as the buyers vastly outnumber the sellers, as the wage earners outnumber the capitalists, a fall in prices must benefit the great majority of the people. While invention and discovery and the increase of supply over demand have forced the producer to place his goods upon the market at greatly reduced rates, he has at the same time been obliged by competition and organized labor to pay higher wages to his employees.

There can be no question but that incomes have been reduced. Since the period of inflation the rate of interest has gone down, and possibly the well-to-do, living upon the interest of their capital, are poorer to-day than they were twenty-five years ago; but wages have increased steadily since the "crime of 1873," and the prices of the necessaries of life have fallen, and the hours of labor have been reduced; so that the condition of the wage earner is infinitely better to-day than it was before 1873.

If the so-called demonetization of silver has brought about this condition, it was certainly the greatest act of beneficence ever performed by a legislative body. Applying the same reasoning to the rise in the rate of wages that the free-silver advocates do to the general fall in prices, it would be no more ridiculous to say that the improved condition of labor to-day is due entirely to the so-called demonetization of silver. Had there ever been any danger prior to 1873 of our drifting upon a silver basis this argument might hold. But it is ridiculous, for the "crime of 1873" was merely the recognition of existing conditions brought about by the fact that in 1837 the bullion value of the silver dollar was made a little greater than its face value in gold, which resulted in silver being driven from the country under the operation of Gresham's law: that the least valuable money always drives the more valuable out of circulation.

It is a fact that during a period of rising prices the price of labor is the last to join an upward movement. The price of this commodity is the slowest to adjust itself to a general rise in the prices of all commodities. Were the free and unlimited coinage of silver to be permitted, it is probable that for a time we would pass through a period of inflation, of rising prices and of mad speculation. The prices of most commodities would probably be doubled to adjust themselves to the new 50-cent dollar. Manufacturers and producers, realizing the short duration of the boom, would greatly increase the prices of their commodities to take advantage of the inflation; but, until the speculative era had passed by and we had established ourselves upon a silver basis, no producer could afford to raise the price paid for labor.

CHEAP MONEY THE WAGE EARNER'S CURSE.

The chief sufferers from the free coinage of silver would not be the rich but the poor. The capitalist, with his credit or hoard of merchandise, could stand the strain of a depreciated currency, and, joining the mad debauch of speculation incident to inflation, double or treble his capital. The wage earner, who has but one commodity for sale, labor, would be the chief sufferer. Labor can not be hoarded, but must be sold at once. A man having nothing for sale but his own labor must find a ready market for it, as he lives from hand to mouth and from day to day depending on his daily wages. The employer would be able to take advantage of unsettled prices in selling his goods, but could not afford to pay increased prices in purchasing labor. Wages would remain the same, while the prices of other commodities would not only be doubled to adapt themselves to the depreciated dollar, but would receive a speculative upward impetus. The price of labor would, for the time at least, remain at the same nominal rate, which, with a 50-cent dollar, would be half what it formerly had been. In the end wages might possibly adapt themselves to the new order of things; but it is noteworthy that during the civil war, while the prices of the 223 articles before mentioned rose 116.8 per cent, during the same period the price of labor only rose 43.1 per cent; and during the period of inflation the prices of labor never caught up to the prices of other commodities measured in the depreciated dollar. The same has been the case in free-silver Mexico, in Chile, in Italy, and in fact in every country using depreciated money. Even if wages were eventually to adjust themselves to the silver dollar it would be the task of many years filled with untold misery and suffering to the men who have made this country what it is, the wage earners. The advocates of free silver are the worst enemies the laboring classes have.

THE INTERESTS OF LABOR AND CAPITAL THE SAME.

Many of the causes of the discontent of labor in specific instances are due to the disregard of the fact that the interests of labor and capital are the same. It must be acknowledged that only too often capital is grasping and exacting in its demand upon labor and that labor regards capital as its natural enemy. In civilized communities the only redress ready to the hand of labor is the strike. One of the usual methods employed by capital for enforcing its demands upon labor is the lockout. No strike and no lockout can possibly occur without tremendous loss to both employer and employed; greater to the employed, for they are not in a position to successfully withstand the suffering incident to the loss of employment. It is one of the hopeful signs of the times that we are tending in all the affairs of life to settle differences by arbitration. Most of the differences between labor and capital are in part susceptible of explanation and would almost always be subject to adjustment could the natural bitterness of a contest for mastery be eliminated.

THE ERDMAN BILL.

There have been reported from the Committee on Labor two bills—one the Phillips bill, which we are now discussing, and the other the Erdman bill, which I understand is to be considered before adjournment. They are both drawn in the interest of labor and capital alike.

The Erdman bill provides for an easy, economical, and certain method of arbitration. It appears to be satisfactory to both labor and capital. It shows on the part of its author a profound knowledge of labor problems, a deep interest in the cause of labor, and extreme care in drawing it so as to make it apply with equal fairness to both employer and employed.

THE PHILLIPS BILL.

The Phillips bill proposes the appointment of a commission to investigate the causes of the discontent of labor and to suggest to the different States of the Union uniform legislation for the solution of the problem.

In 1878 Mr. Thompson submitted a resolution to the House of Representatives, which was agreed to, for the appointment of a committee of seven "to inquire into and ascertain the causes of general business depression, etc."

The royal (British) commission on the depression of trade, which reported to Parliament in 1886, went more deeply into the subject than has any similar body.

The British gold and silver commission, which reported in 1888, also investigated to some extent the causes of the question of the discontent of labor.

The Aldrich committee, to which I have previously referred, collected a vast amount of valuable data bearing upon the subject, but did not attempt to draw conclusions.

CAN THE DISCONTENT OF LABOR BE REMOVED?

It is an open question whether or not the discontent of labor can be removed by legislation, and whether it is not caused by natural laws and by the complicated conditions of modern society, which legislation would be powerless to change. The commission proposed in this bill would have powers and facilities which no other commission has ever possessed. While it might not find a remedy, it would at least be in a position to suggest the probable causes. It is urged against this bill that the commission would be a costly luxury born in the mind of a doctrinaire. The gentleman who has drawn this bill is not only a close and able student of economic problems, but one of the most practical and successful business men in the country. In the preparation of his bill he has consulted all the interests involved, and it is the result of the best thought obtainable among laboring men and capitalists. If the commission accomplishes an infinitesimal part of the work that has been laid out for it, it will be the most successful in history. When the happiness and the welfare of millions of people are at stake, the expenditure of a few thousands of dollars is not worth considering.

The Government, however, has a duty to perform more essential to the welfare of the country than any legislation on any one specific question; it is a duty that it owes to the capitalists of the country and to the business men, but more especially to the wage earners. The most important duty of this Government is the maintenance beyond question of the present standard of value—the gold dollar.

Table showing the rise of wages and the fall of the prices of all other commodities since 1860.

Articles.	1860.	1865.	1870.	1873.	1875.

Apsley on Protection.

Protection and Reciprocity—Repeal of the Tariff Law of 1890—Its Effect on National Revenues and on Commercial Conditions.

SPEECH

OF

HON. L. D. APSLEY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896,

On the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collate information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital.

PRESIDENTIAL HYSTERICS.

Mr. APSLEY said:

Mr. SPEAKER: Our present Chief Executive has on several occasions dealt largely in literary hysterics. Among his latest examples is his message of December 17, 1895, on the Venezuelan boundary question; but that in his message of August 7, 1893, on the repeal of the Sherman law is still more extraordinary.

All that was required in the Venezuelan matter was a simple statement of the facts then known and an intimation to Congress that he desired funds to enable him to ascertain such additional information as he thought necessary. All his suggestions as to war, as to resisting by every means within our power, as a willful aggression by Great Britain, the exercise of jurisdiction over lands which she claimed in an unknown region under the equator, were wholly uncalled for. It was worse than this. Such idle and needless threats against a friendly nation can only be properly designated as a political crime. Should occasion unfortunately arise, we trust all Americans would be united for any national interest or sentiment; but it is a well-known fact that those who have once fought have more conservative ideas as to war than those who have delegated their fighting to a hireling. To add to the inconsistency of the action, on the third day thereafter he sent a melodramatic message to Congress begging them to vote him money to relieve the nation from impending bankruptcy caused by the maladministration of national affairs by his own party and aggravated by the hysterical deliverance to which I have just alluded.

Even these are eclipsed by the words he used in the midsummer message of August 7, 1893. He had then been President for more than five months, President-elect for nine months, and having been President once before he was no groundling. He well knew, or should have known, that the conditions which he described so graphically were caused by the change in national policy foreshadowed by the election of November, 1892, when his party, the champion of free trade and of a tariff for revenue only, had been voted into power at the polls.

THE COUNTRY UNDER PROTECTION.

Let us look on the two industrial pictures—the one drawn by Harrison of the condition of affairs under the Republican policy, and that shown by Cleveland under the Democratic policy of free trade.

President Harrison, fourth annual message, 1892:

In submitting my annual message to Congress I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people.

* * * * * * *

There never has been a time in our history when work was so abundant or when wages were as high, whether measured by the currency in which they are paid or by their power to supply the necessaries and comforts of life.

* * * * * * *

WHERE ARE THESE SAVINGS NOW?

Another indication of the general prosperity of the country is found in the fact that the number of depositors in savings banks increased from 693,870 in 1860 to 4,258,893 in 1890, an increase of 513 per cent, and the amount of deposits from $149,277,504 in 1860 to $1,524,844,506 in 1890, an increase of 921 per cent. In 1891 the amount of deposits in savings bank was $1,623,079,749. It is estimated that 90 per cent of these deposits represent the savings of wage earners.

* * * * * * *

THE PROTECTIVE SYSTEM.

I believe that the protective system * * * has been a mighty instrument for the development of our national wealth and a most powerful agency in protecting the homes of our workingmen from the invasion of want.

He did not attempt to argue as to the merits of protection. That system, he said, had now been put into the hands of its avowed enemies, and the results of their action would be awaited with intense interest. While he warned us that the immediate results would be a decreased revenue from customs duties, he was yet generous enough to say that those who had so advocated protection and had predicted dire results from its abandonment could well afford to be disappointed in their forecasts.

We had had, he said, in our history several experiences of the contrasted effects of a revenue and a protective tariff; but this generation had not felt them, and the lessons learned by one generation were not always accepted by that which followed it. He added, however, that the friends of the protective system would await with confidence the verdict of the future.

INCREASED MARKETS ABROAD.

In his review he noted as the only serious question the low prices of wheat and other farm products. This condition had been due to increased production in other countries and to our exports being discriminated against. To remedy this he announced the negotiation of reciprocity agreements with Brazil, Spain for Cuba and Puerto Rico, Germany, Austria, and various Latin-American countries. Others were in course of negotiation, and had it not been for the change announced and determined on by the incoming party these would have soon included nearly every nation with whom such were advisable.

While these treaties were just beginning to demonstrate their value he was even then able to show that our exports of domestic products, mostly in wheat, flour, meat, and dairy products, manufactures of iron, steel, and lumber, to these countries had increased $20,772,621, in this way widening the market of our farmers for the wheat and other products which had been displaced by recent extraordinary outputs in the Argentine Republic and Russia, and had caused such a marked decrease in the Old World prices. All who were interested knew then that our flour was going by carload lots from far interior towns to the seaports for export to Cuba, where, for the first time in the history of the nation, the Spanish Government had been obliged, because of the retaliatory clauses of the tariff of 1890, to let in our food products on favorable terms. We are all well aware that the Wilson law repealed these provisions and that as a consequence our magnificent new trade was stricken down, our favorable terms of importation into Cuba and Puerto Rico were promptly done away with by the Spanish Government, and our flour and other productions had to find consumers at home.

WHAT IS RECIPROCITY?

Many Democratic authorities declare that reciprocity in trade between nations is in fact free trade, pure and simple. They forget the first condition to such treaties. There must be a tariff list from which to except certain articles. Without this the United States would have nothing to give. If all the products of a foreign country were already free they would laugh at our offer to make them any freer by means of a treaty. Having given away our markets, our appeal would have to be made to the generosity and not to the self-interest of other nations. Lord Salisbury once said that free trade might be noble but it was not business; but whatever may be said of reciprocity, it is certainly business. It is fair and open exchange. We say to Spain we will remove all duties upon your sugar if you will admit our flour free, and the American people taste the sweets of free sugar, the Cuban people eat untaxed bread, and the producers of flour and of sugar have an enlarged market.

UNDER THE M'KINLEY LAW WE HAD A TARIFF.

The law of 1890 had been so framed that the President could negotiate treaties, conventions, and agreements with foreign nations to secure larger sale of our surplus agricultural and manufactured products, and if such nations would not join us in this effort he could impose retaliatory duties on the imports from that country.

This confronted these nations with a condition and not a theory; where they had to consider whether they should lose this great market entirely or whether they should give us something of value in return.

NATIONS MAKING SUCH TREATIES.

The following is a list of the nations which entered into the special tariff agreements: Brazil, in effect April 1, 1891; Spain for Cuba and Puerto Rico, September 1, 1891; German Empire, effective February 1, 1892; Salvador, British West Indies, Nicaragua, Guatemala, Costa Rica, Honduras, France, and her colonies, Austria-Hungary, and others.

WHAT WE GAINED BY RECIPROCITY.

With Spain (to Cuba and Puerto Rico) we gained at once at the rate of more than ten millions per year; with Brazil, from ten to fifteen millions; Guatemala, nearly one and a half millions; Venezuela, one and three-quarter millions; Haiti, two millions three hundred and sixty thousand; British West Indies, over two and a half millions; and so on through the list, so that the net gain, allowing for all losses by reason of civil war and financial disturbances in some of these countries—to the South was for the year over twenty-five millions. All this and all the growth of this trade, which was estimated as certain to grow to more than one hundred millions, was thrown away by the Democratic repeal. It did more than lose this; it gave our trade to these countries such a blow, because of the dishonor which attaches to this abrogation of a treaty, as will require time to recover from.

All the increase in these exports was in grain, corn, wheat, flour, lard, provisions, and the general list of manufactured articles. These people all want our goods, but they had to pay extra duties on them, so as to foster the mother country back in Europe, until the law of 1890, by the clauses mentioned, enabled the President to call a halt on such acts and to say to them, Let in our goods on fair terms or we will tax your goods out of our markets. Of course these various European countries did not love the Republican party for this action. They looked with little favor upon the party which had enacted a law declaring in effect that America was for Americans, and their great public newspapers were a unit in demanding its repeal. So soon as the Republican tariff was out of the way these nations, France, Germany, and others, shut out our food products or discriminated against them so as to almost ruin our trade there in many lines. It is useless for our ministers to protest; we have deliberately thrown away the only lever, the only weapon, with which we could have prevented this action, and we now have to pay, in the great loss in our export trade, the cost of Democratic incompetence and hostility to the interests of labor and agriculture in the United States.

PRESIDENT CLEVELAND'S MESSAGE OF 1893.

The evil results of the change in national policy which was to be inaugurated by the Democratic party began to show themselves with the first days of the year 1893. By the time the new President was installed this had become so threatening that Cleveland was censured by many for not at once convening Congress. Perhaps he was afraid of the newly elected Representatives. At any rate, he neglected to avail himself of their counsel and assistance until the industries of the country were in a state of complete prostration. No such spectacle had ever before saddened the American people; their honest workmen were idle in hundreds of thousands; anarchists and "Coxeyites" held high revel, and all the world looked on in surprise at the awfulness of the disaster which had so suddenly come upon us.

After waiting five long months he finally called Congress in special session. On the 8th of August he addressed them a message, which stands, and I trust may ever stand, separate and apart among the utterances of our Presidents—an abject confession of incapacity and a blind accusation of all existing conditions on the party and policy which had ever been successful in preventing such conditions from arising:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that, through a wise and patriotic exercise of the legislative duty with which they solely are charged, present evils may be mitigated and dangers threatening the future may be averted.

The President thus proceeds to give his diagnosis of the sudden prostration which had come upon the country coincident with the beginning of his Administration:

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

HE STATED CONDITIONS CORRECTLY.

All the facts he states above were true, too true, as we are all aware. And what a contrast to the times left by the preceding Administration, and which were correctly portrayed in the message of President Harrison sent to Congress only eight months before. National and individual prosperity on the one hand; national and individual poverty on the other.

HE ASKS THE REPEAL OF THE SHERMAN LAW.

He had waited five months to find some other excuse for the awful ruin in view, to find some other cause to allege than the plain and well-known one of impending free trade. At last he chose his "Bogy," the thing with which to cover with obloquy; on which he might safely vent his spite. With a Treasury bankrupt because importers chose to wait for the promised free trade, he found the sole and only cause was the so-called Sherman law. Here is what he said of this:

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

If the principal cause be removed the evil must needs soon pass away. Has this happened?

THE SHERMAN LAW IS REPEALED.

We of the United States have now endured existence nearly three years since this awful law was repealed, and have we grown sleeker and fatter since? Has the steady decline in every branch of legitimate industry ceased for a day, or have we found our resources ever growing less day by day? Did this country, so prosperous in 1892 in spite of this Sherman law, regain even that prosperity after its repeal in 1893? Let the undeniable business conditions answer; let the people of this country answer, waiting, as they have been, for the time to pass and counting the months and days until they should have an opportunity to express their opinions on the conduct of affairs and to return to the policy of protection, under which this country has ever had its widest and safest prosperity.

The Democratic party repealed the Sherman law; the purchase of silver bullion stopped for once and all. And what have been the results? Not even the bullion in the Treasury or the seigniorage or profits on the coinage of silver can be used, while we have pledged the future to pay for current expenses to the extent of $260,000,000, against a saving of $250,000,000 in the public debt by the last Republican Administration.

Has business improved? Are all financial distrust and fear passed away? Not exactly! If not, then it must have been a false alarm of President Cleveland, an incorrect diagnosis of the national ills. Or was it not in fact caused by the threat of the tariff reduction, a threat made good by the passage of the "Wilson-Gorman" bill, a measure so corrupt and ill designed that the President himself was compelled to let it become a law without his signature?

The Sherman law had done but little harm under the Republican conditions of a solvent Treasury and an increased export trade to foreign countries; but the reduced revenues caused by the impending reduction of the tariff brought about incipient national bankruptcy, a condition which Democratic blindness charged entirely to the Sherman law.

THEY PUT THEIR HEADS IN AMBUSH.

After four months of wrestling, the Democratic party, in November, 1893, finally repealed this awful law, and, thinking the country was now saved from Republican wickedness, took a few weeks' rest before giving us the "simonpure" free trade which they had promised the country. With their heads safely hidden, ostrich-like, in the bushes, they could not sense the terrible storm of ruin then sweeping the country. They had done their duty, and if the people did not know when they were saved it was no fault of the party. Indeed, many of them charged that merchants were deliberately throwing away their money, sacrificing their whole fortunes, just to say so to the Democrats. The American people were to their eyes like the obstinate and opinionated patient who insisted on dying when the doctor declared he had given the proper remedies, that he must get well, that all the Democratic doctor books said that was the proper treatment, and that he did not treat the physician rightly by insisting on going off when in fact all theories said he should get on and recover.

THE WILSON-GORMAN BILL.

Now, with clear decks, with President and Senate and House, all the machinery of the Government, in their hands for the first time since poor, old, pottering Buchanan was their political idol, they fell to with shouts of glee to execute their long-cherished desires. The chief manufacturing and agricultural industries of these now unfortunate United States lie, for the most part, to the north of the Ohio; and it would have seemed only the part of ordinary prudence to let the representatives of these States have a chief hand in the pulling down of the columns of the building. But no, this mighty work was intrusted in the House to a college professor from West Virginia, to distinguished ex-Confederates from Georgia and Tennessee. From the House this bill, halting and lame on its new theoretical lines, strong only in the ruin it wrought, went to the Senate to be developed by other Southern statesmen—JONES of Arkansas, MILLS of Texas, and VEST of Missouri—with BRICE of New York and Ohio, and GORMAN of Maryland assistants for the rescue of trusts and special interests. We all know that this bill, with 600 amendments, returned to the House, where the esteemed college professor swallowed them all at one gulp and then fled to far-away Mexico to try to forget what his party had forced him to do, while the Chief Executive reluctantly let it become a law without his signature.

AFTER THIS THE DELUGE.

What has transpired since the passage of this monstrous bill is a part of the bitterest history of the country. That there should be hard times during or after a great civil war is a thing to be excused, to be expected. But to have ruin heretofore unknown and unparalleled in extent and duration come in a period of profound peace, to have our national credit at so low an ebb that the Government was compelled to appeal to the money changers of Europe for rescue, to burden the energies and lives of another generation with the immense burden of a debt of $260,000,000 in less than three years, where, under the wise policy of the preceding Administration, this debt had been reduced $250,000,000 without being felt by the people; this mere recital would seem enough to damn such a party and such a policy to another period of thirty years outside the breastworks. But this does not begin the recital of the wrong done or the ruin caused by this suicidal policy of the Democratic party.

IN HANDS OF RECEIVERS.

Heretofore these United States, in peace and in war, through evil report and good report, had been for thirty years managed as a great and solvent corporation. Since March, 1893, it has been in the hands of an incompetent receiver. He has begged and borrowed money for current expenses when all that was needed was to take advantage of the plain resources of the country and make it self-supporting and helpful to all the people. With the Governmant in such a condition it is idle to expect any marked or permanent improvement in the general business of the country.

Under the last Republican Administration we had an ample Treasury supply, we decreased the debt almost as much as this one has increased it, and the magic breath of life and public credit was throughout all. With similar conditions the now serious problems of silver and sufficient money for the exchanges for the needs of the country will all solve themselves in natural and orderly sequence. It has been shown to be idle to expect such wise and patriotic action from the party now in power.

FREE TRADE THE TRUE CAUSE.

When one fatal and strong-rooted disease gets hold of a sick man it follows, as a matter of course, that symptoms of many other minor diseases come to the front. It is not, however, the policy of the wise physician to turn all his attention to these, but rather to reach the seat of the main difficulty and expect the removal of the main cause to bring about the amelioration or disappearance of the minor ones. Thus with a safe, protective tariff—one framed to secure a just degree of protection to the labor of the farm and the workshop, and the capital which nourishes and keeps these all in successful operation—we will once more be on the highway of national prosperity. With this we will have ample provisions for a wider market abroad for the rapidly growing surplus of our agricultural and manufactured products under the wise system of reciprocal treaties inaugurated by Harrison and Blaine and so contemptuously repealed by the "Wilson-Gorman" law.

To Prevent the Issuance of Interest-Bearing Bonds Without Further Authority of Congress.

SPEECH

OF

HON. MARION BUTLER,

OF NORTH CAROLINA,

IN THE SENATE OF THE UNITED STATES,

Friday, May 29, 1896.

The Senate having under consideration the bill (S. 1341) to prohibit the further issuance of interest-bearing bonds without the consent of Congress—

Mr. BUTLER said:

Mr. PRESIDENT: The opposition which this measure has met every time it has come before Congress in any shape this session has surprised me no little. This bill does not affect in the least the bonds that have already been issued. It does not refer to the coin to be used in the payment of the same bonds. It does not provide that no further bonds shall be issued. It simply provides that the President of the United States shall not issue further bonds without the consent and advice of Congress. Its language is plain, simple, and direct. It is in these words:

That the issuance of interest-bearing bonds of the United States for any purpose whatever without further authority of Congress is hereby prohibited.

There may be some reason why the President of the United States should desire that this bill should not pass, but why any member of Congress, whether in favor of bonds or opposed to bonds, should oppose the bill is strange indeed—very strange, to say the least. It is true that the greed of the bondholder has not yet been satisfied, because the greater the public debt and the more it is refunded the more oppressive it is to the people and the greater the blessing of such a debt to the bondholder and gold combine. But why should even the bondholders oppose the bill? Do they feel satisfied that they can rely upon the President more safely than they can upon Congress to tax the people for their benefit?

I hold in my hand a letter which the bankers and the bondholders have just sent out to their agents and correspondents all over the United States, which shows clearly that they are determined to control the nomination and election of the next President of the United States from either the Democratic party or the Republican party. They are not sufficiently frightened with the strength of the People's Party to send out orders to their agents to control our convention; but they want one of their old and trusted servants; they want one of the parties that have been serving them for so many years to be fixed on this question, and they do not care which. Four years ago they were anxious to fix the Democratic party. Why? Because the Republican party had made itself odious. The Republican party had not only to bear the result of its mistakes but also the blame of the people for hard times and depression. Therefore the same gold combine sent out its instructions and raised its campaign fund and nominated Grover Cleveland for President and elected him in 1892.

The Democratic party went into that campaign promising the people that they would repeal the infamous laws put upon the statute books by the Republican party. The Democratic party went into that campaign denouncing the infamous crime of 1873. They denounced the Senator from Ohio as the archenemy of civilization. They denounced the financial legislation that has been put upon our statute books under his guidance and by the Republican party. That party, though they had a candidate for President who seemed to be the willing tool of this gold combine, promised to correct the evils. They promised to wipe out the evils that the country was suffering from, placed upon them by bad Republican legislation.

In my State every Democratic candidate on the stump declared that the last Democratic platform meant free silver. Every Democratic elector declared that Mr. Cleveland was for silver. I canvassed my State as one of the electors at large for the People's Party. The Democratic elector that I canvassed with on every stump promised the people of my State that if that platform did not mean free silver, and if Grover Cleveland did not stand for free silver, he would repudiate them after election. He promised the people on the stump that if the people would only give them "one chance," that was, a Democratic President, a Democratic House, and a Democratic Senate, and that if that Congress and that President did not wipe out the infamous financial laws put on the statute book by the Republican party and restore the money of the Constitution, as it was provided for in our Constitution and placed on the statute books by Jefferson and our forefathers, he and those who felt like him would leave the Democratic party and join the People's Party.

These were the promises in my State and over the whole South. Where are the performances? Every promise broken and the people basely betrayed to SHERMAN and the gold ring.

The Democratic party went into power the last time under false pretenses. Its victory was won by fraud. Broken promises and base treachery stand out to-day as the hideous and ghastly record of that party. That has not been forgotten by the voters of the country. That party came into power and broke every pledge that it made to the American people. That party stands to-day disgraced and dishonored. It stands to-day with shame written across its brow for its perfidy and its treachery to the American people. It not only did not keep its promises, but it adopted the policy of Mr. SHERMAN and the Republican gold combine, and commenced right away where he left off and carried on the infamous work. Instead of restoring silver they wiped out the only silver law on the statute book and placed us as near on the gold standard as they could, and with the help of Mr. Carlisle and Mr. Cleveland and their interpretations of the law, using their discretion against their own people and Government and in favor of SHERMAN'S gold combine, we are to-day on the gold standard—on the gold standard not by law altogether, but by the abuse and disregard of law.

Therefore the Democratic party is odious. It is more odious, if anything, than the Republican party was four years ago. Hence the gold combine can not use the Democratic party this year as a stalking horse to fool the people and to put a gold candidate in the White House under more false pretenses.

The purpose of this circular, the purpose of the men behind it this year in instructing their bankers, their agents, to use their influence on every creditor of the banks is to control the Republican party. The purpose is to nominate a gold man at the head of the Republican ticket. I guess they will put up a free-silver straddling bagatelle around his brow to fool the people with, because it is against their training and their interests to be bold and straightforward. Duplicity is their father and their godfather and the food they nurse on. This gold ring will nominate McKinley, but they are getting alarmed at the growth of the silver sentiment; they are getting alarmed at the awaking of the people and the independence manifested. Therefore it is now necessary to fool a number of free-silver Republicans and get them to vote for McKinley. To do this they are now having some of their gold organs in the East to declare that they are not satisfied with McKinley on the money question, and that if they do not become better satisfied that the gold men of the East can not support him. This is the Eastern end of the goldbug scheme. How is it worked in the West, where a large majority are for silver? The so-called free-silver papers are publishing this very day the threats of the gold papers made yesterday in the East. They say that the fact that the East is not satisfied with McKinley is the best proof that McKinley is for silver and that the West should support him and ram him down the throats of the gold men.

This is the game and it is now at work. In the meantime the Senator from Ohio [Mr. SHERMAN], who is on the inside, smiles and looks knowingly. But this game will not work. The people are now too wide awake and too thoroughly aroused to be caught in such a trap as that. This will fool only those who want to be fooled. It will fool only those who are willing to take Senator SHERMAN for their free-silver leader.

The gold ring is now putting nearly all of its attention to the Republican party. They will not try to control the Democratic party because they have no use for it this year. They will allow

the free-silver men to control the convention. Why? Because they know that the most effective way to hurt silver, the most effective way to make the silver cause lose votes and to make it odious is to make the cause of silver and financial reform suffer for the crimes, misdeeds, treachery, and sins of omission and commission of the Democratic party. On this scheme the gold combine has deliberately made up its mind. It is a plot; they will lay upon the head of silver and financial reform all of the crimes and the odium and the bad odor that hangs around the Democratic party for its treachery. It is fine politics. There is no more effective way that the gold combine can damage the cause of financial reform than to have this party to attach its label to it.

The gold ring can not be beaten unless those who are opposed to Shermanism and Clevelandism unite in a common fight against the common enemy. They can not unite in the Democratic party. No man wearing the Democratic label can be elected President this year. Therefore the only thing that can possibly make the election of a gold man for President certain is for the silver Democrats to put up their own candidate and go it alone. This will surely divide the silver forces. This must not be done.

And here and now I appeal to the friends of silver in the Democratic party that if they love their country, if they are anxious to see the money of the Constitution restored, if they are anxious to see the Republican crimes, augmented by their own crimes, wiped from the statute books, if they are anxious to see prosperity return to the American people—I appeal to them in the name of all that is good and holy, in the name of our forefathers, in the name of the Constitution, in the name of the American people who toil and spin, in the name of our wives and children, to have the manhood and the patriotism to join hands this year with all other silver forces in America regardless of party name. For God's sake do not drag the name of your bad-odored party into this cause. Leave that name that has become a stench in the nostrils of the American people. Have the manhood to shake it off and to step out on a common footing with all other independent voters who put country and financial reform above party. Throw aside the name and return to the principles of true democracy and true republicanism. Do that, and let us draw the issue squarely in this campaign between the gold combine and the people. This course would beat the gold combine and give the people relief. This is the only way it can be done. Then let us do it.

The greatest duty and responsibility to-day rests upon the silver Democrats. You may be able to defeat silver this year by hanging to your party and hanging your party label upon silver; but it will not defeat the cause of silver more than four years, for in 1900 your party will go out of existence for want of members. The people, regardless of party, will unite. Let us do it now. I met a prominent man yesterday who is a silver Democrat. I believe he is as good a silver man as I am; I believe he is as sincerely desirous to see silver restored as I am. Yet he said to me, "It is the duty of all you silver men in other parties to come into our party and help us to get silver in it." I can see how a man who is honest and brave and conscientious can feel that way. He has venerated the name of the Democratic party so long that it has become a part of his religion, and his prejudice has persuaded him against his better judgment that inside the party is the best way to get silver. But if that silver Democrat and every other silver Democrat will shake from their brains their party prejudices and their special pet love for names that no longer represent the principles of Jefferson and Jackson, they must agree with me in this statement of facts. What is it? The gold trust can not be defeated in this country unless you combine all the friends of silver together under one banner in the coming campaign.

I asked that silver Democrat if he would be willing to leave his party and go into the Republican party if they should declare for free silver, and he said no. He said, "I would not go into the Republican party if they put the Ten Commandments in the platform."

Now, I want to say to you, silver Democrats of the South, if that is your feeling how can you expect the Western Republican, who also stands for silver, to be more patriotic than you are? If you are not willing to put silver and financial reform and country above party, then do you admit that the men you have invited to come with you are better and more patriotic than you are? That is the only logical conclusion. Every silver Republican of the West loves the name of his party as well as you love the name of yours. The Southern Democrats can never be moved en masse into the Republican party as such. The Western Republican who puts silver above party will not go into the Democratic party as such.

The People's Party came from both of these parties. Every man in the People's Party was a few years ago either a Democrat or a Republican. Why did they leave those parties? Because they were true Republicans and true Democrats; because they reached the time, before others did, when they were willing to put country above party. Every man who left the Democratic party and joined the People's Party did it why? Because he believed in the principles of Thomas Jefferson and Andrew Jackson. He saw and believed that the party he loved, the party that he was born in, the party that his father belonged to, and his grandfather before him, had deserted the principles of the Democracy. He saw and knew that that party was controlled by the money power, which had also been controlling the Republican party.

Every man who left the Republican party and joined the People's Party did it for the same reason—that is, because his party had deserted the principles of Abraham Lincoln and sold out to the gold ring. Can these men be expected to ever go back into these old parties and follow the leadership of the men who fooled and betrayed them? No. Therefore the time has come when all patriots must meet on common ground outside of the two old parties and allow the gold bugs and party bugs of the two old parties to get together in one party, and call it the Demo-Republican party.

But let us return for a moment to that silver Democrat to whom I referred. He said to me that I could not charge all these hard times and evils, from which the people suffer, to the Democratic party. In answer to that I say this: That while the Republican party has been guilty of placing nearly all of this bad legislation upon the statute books, yet the Democratic party in every campaign since the war has nominated for its candidate for President a gold man. I challenge any Democrat here to contradict it. I will wait for a reply. [A pause.] Therefore, if you had won every election, been in power constantly since the war, you would have done just what the Republicans have done. You nominated every time the same kind of men for your standard bearers. Your conventions have been controlled for twenty years by the same influence that has controlled the Republican conventions and nominated the Republican candidates. They happened to get in every time up to 1884. Therefore nearly all the mischief was done under the name of the Republican party. But no matter which party won, the gold ring has had its agent in the White House. Therefore for twenty years the machinery of these parties has been controlled by the same influence that now has determined to use the Republican party as the agent of the gold combine in the next campaign.

I ask permission to print in my remarks at this point the same secret bank circular which I presented and made public for the first time a few days ago. The circular will be found in full on page 6113 of the CONGRESSIONAL RECORD for May 22. The following is the essential extract from it:

THE AMERICAN BANKERS' ASSOCIATION,
2 WALL STREET AND 90-94 BROADWAY,
New York, March 23, 1896.

[President, Eugene H. Pullen, vice-president National Bank of the Republic, New York; first vice-president, Robert J. Lowry, Lowry Banking Company, Atlanta, Ga.; chairman executive council, Joseph C. Hendrix, president National Union Bank, New York; treasurer, William H. Porter, vice-president Chase National Bank, New York; secretary, James R. Branch, 2 Wall street, New York.]

To the bankers of the United States:

At a meeting of the executive council of the American Bankers' Association, held in this city on March 11, 1896, the following declaration was made by unanimous vote:

THE EXISTING STANDARD OF VALUE.

"THE EXECUTIVE COUNCIL OF THE AMERICAN BANKERS' ASSOCIATION DECLARE UNEQUIVOCALLY IN FAVOR OF THE MAINTENANCE OF THE EXISTING GOLD STANDARD OF VALUE AND RECOMMEND TO ALL BANKERS AND TO THE CUSTOMERS OF ALL BANKS THE EXERCISE OF ALL OF THEIR INFLUENCE AS CITIZENS IN THEIR VARIOUS STATES TO SELECT DELEGATES TO THE POLITICAL CONVENTIONS OF BOTH THE GREAT PARTIES WHO WILL DECLARE UNEQUIVOCALLY IN FAVOR OF THE MAINTENANCE OF THE EXISTING GOLD STANDARD OF VALUE."

Your influence is earnestly requested to give practical effect to this action.

* * * * * * *

The association seeks to unite all banks and bankers in one efficient national organization, and it solicits all national and State banks, savings banks, and banking firms to become members.

* * * * * * *

EUGENE H. PULLEN, *President.*
JAMES R. BRANCH, *Secretary.*
JOSEPH C. HENDRIX,
Chairman Executive Council.

As I said the other day when presenting this circular in reply to the Senator from Ohio [Mr. SHERMAN], that circular instructs these banks, which are creatures of and are protected by the Government, to try to corrupt politics and rob the American people. It instructs these banks, which are in charge of the circulating medium of the country to a large extent, to use their power, influence, and money to corrupt conventions and to control them in the interest of the bondholders. These banks that are given the great and dangerous power of contracting or expanding the circulating medium of the country at will; these banks which were brought into existence by the Republican party; these banks which were rechartered in 1882 with the help of the Democratic party; these banks which Thomas Jefferson opposed; these banks which Andrew Jackson, God bless his memory, fought and triumphed over as long as he was President; these banks which the Democratic

party in its platform before the war, before it was corrupted by the gold power, declared should never be chartered and that they were more dangerous to the liberty and prosperity of the American people than standing armies; these same banks, now enjoying the protection of the Government, enjoying the special privileges granted to them as a semi-function of Government, are to-day boldly using their power, their money gotten from their Government protection and special privilege—using this tremendous power to contract and expand the currency, to control legislation, to control nominations in this country, and to put an agent of the English gold trust in the White House.

Whether or not similar efforts are being made to control the election of the members of Congress, which would be much more expensive, is not yet known; but one thing is clear, and that is that the banks and bondholders are determined to control the Republican nominee for the Presidency at all hazards since they think the Democratic party has no chance of winning.

The man the Republican party nominates for President can be relied upon to serve the bondholding and bank interest this year and for the next four years, if unfortunately he should be elected, just as faithfully and as servilely as Grover Cleveland has done. The bill now under consideration, if enacted into law, simply restores the power to borrow money and to fasten a mortgage on the country to Congress, the legislative branch of the Government, where such tremendous, dangerous, and far-reaching power not only naturally belongs, but where the Constitution expressly places it.

I stand here now and lay this down as an incontrovertible proposition, that Congress has no power under the Constitution to delegate this power to the Chief Executive or to anybody else. I believe that any fair, honest court in America would decide that the law of 1875, if it does give to the President the power to issue bonds without limit, is unconstitutional. I believe the only power that Congress has in this direction is to authorize the issue of bonds for a specific purpose and for an amount not only limited, but a fixed amount to be executed by the President in his executive capacity. I do not think that any man who has any regard for his reputation as a fair, honest constitutional lawyer will contradict that.

This bill is a plain and just proposition, and that is why there is so much opposition to it. The great and violent opposition from certain quarters to so fair and just a proposition has caused me to investigate the question more fully than I otherwise would have done. Yes, I have been impelled to investigate this bond question from the bottom up, on account of the fact that this simple little bill has raised such a tremendous opposition from the agents of the gold trust; the fact that this little bill has been denounced more viciously than ever a free-coinage bill was denounced; the fact that this bill has raised all of the ire of the cold, placid Senator from Ohio [Mr. SHERMAN], and made him join loving arms with the Senator from New York [Mr. HILL]. That is a beautiful picture! A picture, however, that no true Democrat could look upon with pleasure, neither any true Republican with pleasure, to see the Senator from New York, the Tammany tiger (the man who parades and masquerades under the banner, "I am a Democrat," which is the beginning and the end of his vocabulary), and the placid and icy Senator from Ohio, the godfather and sponsor and wet nurse of the Republican party, run together as quick as lightning at the sound of danger to the British Rothschilds, and locked arm in arm, join together in the common defense, join together in making a common attack on the prosperity and welfare of their own country. It shows that they are close kin and are serving the same interest. It shows that there is in this country a party called the gold party, and it shows that the Senator from New York and the Senator from Ohio both belong to that party and consider themselves its special defenders. The gold men have formed a party. They stand together on all occasions. They run together at a moment's notice. May Heaven have mercy on the people and teach them to have the same wisdom of union and self-defense to run together against these common enemies of humanity and good government.

I said, Mr. President, that this peculiar conduct of the gold men on the Democratic side and the gold men on the Republican side, running together to denounce this bill, has caused me to look into the question of bond issues from the beginning up to now more thoroughly than I ever would have done. What do we find? Up to the late war the debt of this Government was a mere bagatelle. At the close of the war, or rather in October, 1865, the interest-bearing debt of the Government in the form of bonds was $1,144,832,100. The interest-bearing obligation in the shape of currency and used as currency was $1,208,885,378. This interest-bearing currency, together with other forms of currency, gave at that time a per capita circulation of about $52; and in spite of loss of life and property from a four-years bloody and disastrous war, the people were 100 per cent more prosperous then than they are to-day.

Think of it, Mr. President. At the close of the most terrible war the world has ever seen, at the close of the war where there was the greatest sacrifice of life and property, at the close of the war where it seemed that our fertile fields and happy homes of the South had been divested almost beyond hope of recovery—at the close of that terrible war the people were 100 per cent more prosperous than they are now after twenty years of peace, twenty years of unexampled prosperity in the fields and the workshop and in the mines—the greatest amount of production per capita, and yet the least amount of money per capita. At that time, right after the war, the general prosperity was so pronounced that Secretary McCulloch, in his report for 1865, made the following remarkable statement:

> The people are now comparatively free from debt. * * * Expansion has now reached such a point as to be absolutely oppressive to a large portion of our people, while at the same time it is diminishing labor and is becoming subversive of good morals. The remedy, and the only remedy, within the control of Congress, in the opinion of the Secretary, is to be found in the reduction of currency.

Look at that situation: The people out of debt, with plenty of money, with every business industry prospering, with good prices for products. And yet the Secretary of the Treasury is fearful that this condition would corrupt the people's morals; and to obviate this sad and threatening disaster (?) he recommends the destruction or contraction of the people's money; the money which made them prosperous then would make them prosperous; the money which put them out of debt then would get them out of debt; the money which made good times then would make good times now. He said it was dangerous, and he said we must contract it and reduce its quantity; though population was increasing each day, though business was increasing each day, yet we must contract the money, when every man knows, when every cornfield hand in North Carolina knows, and I believe the people over the rest of the country know, that as population increases, as business increases, the amount of money in circulation should increase in the same proportion. That is a fixed law, and it is one that can not be deviated from without disaster; and yet here was the Secretary of the Treasury, who deliberately recommended that that disaster be brought upon us. At that time Mr. Carlisle, the present Secretary of the Treasury, and Mr. SHERMAN both agreed that the contraction policy of Secretary McCulloch was wrong. But the bad and ruinous policy commenced then has been continued ever since. Since that time Mr. SHERMAN and Mr. Carlisle have both been Secretary of the Treasury, yet both have followed the disastrous policy of contraction, till the people are almost poverty stricken and the nation almost bankrupted.

On April 12, 1866, in response to the urgent demand of the Secretary of the Treasury, Congress passed the first contraction act, by which all of the interest-bearing obligations which were used as currency were to be called in and funded into interest-bearing bonds.

Through this operation the bonded debt of the country was increased to over $2,000,000,000 in 1868, and the currency among the people was contracted, according to several high authorities, to the extent of over $900,000,000, to be exact, $968,502,963. Mark it, this bonded debt was created after the war was over and peace was established. This currency which had enabled the Government to carry on the war; this currency which had been used to pay the soldiers on the battlefield; this currency which had enabled the Government to maintain the Union as it exists to-day, was, after peace had been restored, turned into a bonded debt at the instance and by the influence of the bondholders and the gold trust.

Strike down the currency, turn it into interest-bearing bonds—bonds that could not circulate as money, but bonds which would go to work day and night to draw what money was left from the pockets of the people and tie it up in the hands of the few. It was a double crime. To burn half the money and put nothing in its place was bad enough, but to burn half our money and put in its place a rapacious interest-bearing bond—an eating sore—an interest-bearing debt that would act as a force pump, or rather as a suction valve, to constantly draw what money was left from industry, from business, from the avenues of trade, and pile it up in the coffers of those who neither toil nor spin, those who produce nothing, those who do nothing to make this country rich, those who do nothing to defend the honor and integrity of the country, those who did not bear muskets in time of war, was one of the most cold-blooded and infamous acts that has ever stained the statute books of this or any other country. It was done, too, for the benefit of those who refused to loan the money necessary for carrying on the war except at ruinous rates of interest, those who were so unpatriotic that when Abraham Lincoln called upon them to furnish money to save the Union, they, with their cold-blooded, devilish greediness, proposed terms of usurious interest so exorbitant that that great patriot would not tolerate it, and then it was that he called upon Congress to exercise the supreme legislative power to issue Treasury notes, to issue greenbacks to enable him to carry on the war, and to defy the bondholder and the gold sharks.

They are the fellows to-day that the Senator from Ohio and the Senator from New York talk about as the sacred fellows whose rights must be preserved, and they say the integrity of the nation must be preserved—God save the mark—to make them rich; that contemptible lot of traitors, for they betrayed their country in the hour of peril, and tried to put a halter of usury around its neck to curse future generations; they cared not what might be the result of that war so that in the future they and their children should be pensioned with a pension that grew, not a pension of $50 a month that would be the same all the time, but a pension that grew with usurious interest each year bigger and bigger, a pension to be paid by those who would dig the wealth out of the ground in the future.

Mr. HAWLEY. I only caught a sentence of the Senator's speech, but I would ask him who are the bad men to whom he refers?

Mr. BUTLER. I will take great pleasure in informing the Senator. I am sorry that they are at large, and if we could by law make a properly constituted sheriff out of the Senator from Connecticut he would have plenty of duty to perform.

Mr. HAWLEY. I should very likely have to arrest somebody other than those to whom the Senator refers.

Mr. BUTLER. I let that quibble pass; but in answer to the question of the Senator from Connecticut, who asks me who the bad men were to whom I was referring, I will say that at the time I was referring to that class of capitalists who refused to furnish money to save this Union when Abraham Lincoln, the President of the United States, called upon them to lend their money to the Government at a reasonable rate of interest and under fair and honest conditions; the class of men who hoarded their gold and demanded such hard terms of that great patriot that before he would submit to their terms and pile up for future generations an unjust and burdensome debt he appealed to Congress to exercise its highest legislative power under the Constitution, to issue greenbacks, so that the war could be carried on without having the Government subject to the infamous demand of this gang of gold contractionists, or rather, I should say, greedy gold hoarders, who tried then and have since succeeded in fastening themselves like leeches upon the purse strings of the nation.

In continuation of my answer to the very pertinent question asked by the Senator from Connecticut, I have just described to him the particular kind of men which I was referring to when he asked me the question, but there are some others that I desire to refer to in this connection. But first I should like to ask the Senator from Connecticut if he approves the action of those bad men, or if he, too, does not think with me that they are bad men?

Mr. HAWLEY. You mean the men who would not lend money to the Government?

Mr. BUTLER. The men who would not lend money to the Government on fair and reasonable terms, such as President Lincoln was willing to accept.

Mr. HAWLEY. The Government issued its bonds to the world and was glad to have anybody buy them, and anybody could buy them who had the money to purchase them and pay the premium. Everybody had the privilege of taking the bonds.

Mr. BUTLER. I should like to ask the Senator what made Mr. Lincoln issue the greenbacks, or call upon Congress to do it?

Mr. HAWLEY. He did not do it.

Mr. BUTLER. He called upon Congress to do it.

Mr. HAWLEY. If any one man did it, it was Mr. Spaulding, of Buffalo, N. Y.

Mr. BUTLER. Does the Senator deny that Lincoln called upon Congress to issue legal-tender greenbacks, and that Congress did do it to escape the clutches of the gold sharks?

Mr. HAWLEY. I am sure I do not know what Mr. Lincoln said about the greenbacks. He had never been associated prominently with that movement. It originated in Congress. The greenbacks were simply the demand notes given by the Government—its promise to pay.

Mr. BUTLER. Does not the Senator know that President Lincoln, in a message sent to Congress, called upon Congress to come to the relief of the Government by issuing greenbacks?

Mr. HAWLEY. That is quite possible. The greenbacks, as well as the bonds, were simply the promise of the Government to pay, and every dollar of money agreed upon ought to be paid.

Mr. BUTLER. Does not the Senator know that the reason we did not raise the money by bonds, the reason we stopped raising it in that way at that time, and the reason why Mr. Lincoln called upon Congress to issue greenbacks, was because these "bad men" had a corner on gold, and refused to pay a decent price for the bonds, and demanded tremendous discounts or rates of interest?

Mr. HAWLEY. The money market is never controlled by any one, or two, or half dozen men. Our bonds were sold in every part of the world—in Germany, in England, and elsewhere—and they were largely in this country bought by patriotic people who do not gamble in such things, people who said if this Government wanted money upon its bonds they would take them, and if the Government survived the bonds would be valuable, and if it should be broken up they did not care whether or not they had any money.

Mr. BUTLER. Does not the Senator know that President Lincoln said, "By the Eternal, we will save this country in spite of these shylocks," and that then the greenbacks were issued by authority of Congress, that this broke the corner of the gold ring, and that then the bonds were sold at a better price? But I understand the Senator from Connecticut to refer to these shylocks as patriots.

Mr. HAWLEY. If the Senator will let me off I will never ask him another question; there are so many things he knows that I never heard of.

Mr. BUTLER. Then the Senator from Connecticut, barring his attempted irony, ought to be patriotic enough to state the facts as they are or show that what I state is not true; and if he could, there is no man in the Senate who would take greater pleasure in doing it. We can not find a gold man on this floor who will meet us in honest, fair argument on this question. They are driven from every position they take; they have to resort to subterfuge, and have to fall back on such catch phrases as "sound money" and "save the credit of the country" and "keep good faith" with these bondholders, and all such pretenses. Were it not for the word "parity" I think for the rest of their days they would be in misery to a superlative degree.

Mr. HAWLEY. I am perfectly willing to admit that gold men do not wish to meet the Senator.

Mr. BUTLER. That is very evident, because they have found so far in this discussion that they were getting the worst of it; that their side was showing up in a bad light; that they could not answer the arguments; and now they are the most anxious persons on this floor to take a vote and stop the discussion.

Now, Mr. President, since I have referred to the catalogue of bad men, I will call the Senator's attention to another class of bad men, or some of the same class which I just called bad men, who bought Government bonds as low as 47 cents on the dollar and paid for them in greenbacks. They bought bonds when they were below par. As soon as the war closed, and those bonds went to par and were worth 100 cents on the dollar, at once their values were doubled, and the bond holder had made 100 per cent clear outside of his interest. Were these bad men, whom the Senator from Connecticut would defend if he could, satisfied? No. What did they do? Just as soon as the war closed and they saw that they had made 100 per cent profit their greed increased. What was their next move? Their next move was to surround Congress and this Senate Hall with a hired lobby, paid by these usurers to come here and get this Congress to do what? Here is what they did. They came here and got this Congress to pass a law providing that certain bonds should be paid in coin, instead of lawful money, as the bonds read on their face. This act was passed on March 18, 1869, and is known as the act "to strengthen the public credit."

They came here and lobbied this Congress to change the contract in their favor, and I suppose if the Senator from Connecticut had been here he would have voted for it. Congress voted to change the contract and to make those bonds payable in coin instead of lawful money. Those bondholders would not furnish Lincoln the money to save the Union; they forced him to issue greenbacks; they took the greenbacks and bought bonds at 47 cents on the dollar. Then, when the bonds were worth 100 cents, they were not satisfied to take the same greenbacks, though they got in payment $3 in greenbacks for every dollar in greenbacks which they paid for bonds. They were not satisfied to take the greenbacks which saved the Union, which Lincoln called into existence; but they came here and got this Congress to pass this act of 1869 and change the contract and agree to pay them in coin. Those are some of the bad men to whom I refer.

And in this connection I might say that these are the same bad men who got Congress to put the exception clause on the back of every greenback, after the first issue, so that they would not be a full legal tender.

And it was this money based upon the faith and credit of the Government that sustained the Government in its most trying hour, while gold had slunk away in its hiding place, as it always does in war or times of need and danger. In war, gold is a coward. It goes in hiding, and often retreats beyond the seas at the firing of the first gun. Even before the first gun was fired at Fort Sumter every bank in New York suspended specie payment, refused to furnish the funds for carrying on the war except at ruinous rates, and left both the people and the nation to their fate. It was not gold or silver, but it was the greenbacks that whipped the South and sustained the Union.

Twelve years after the war, Hon. William B. Kelley, of Pennsylvania, addressing an assembly of ex-Confederate officers at Macon, Ga., said:

Your leaders were mistaken in their financial theory. They believed that the United States could use nothing but gold and silver as money, and that

as they had none of these metals they could not put armies in the field to overwhelm you, or fleets upon the ocean to blockade your coasts. They had not studied the Constitution to see that the Government has control of the question of what shall be money. We discovered that it had, and when we could not get gold or silver, we made the greenback, and it was that that whipped you.

Yes—

Said one of the officers with enthusiasm—

Judge Kelley, you are right; it was the greenback that whipped us.

And, Mr. President, it was this money that the bondholders and bankers urged to be destroyed and turned into an eating, cankerous bonded debt as soon as the war was over. Strange, indeed, that the faith and credit of the Government should be good enough to back a currency during the trying period of war, when the existence of the Government was in doubt, but that as soon as peace was restored, when the Government stood on a firm and unquestioned solvent basis, that the faith and credit of the Government should not be good unless backed by the gold of Shylock. How any fair-minded, honest man can advance such a preposterous claim is beyond my comprehension.

At that time, as now, the great metropolitan press manufactured public opinion, and the cry was started that the national credit must be sustained at all hazards, and to do this that it was necessary for the Government to change its contract and pay these bonds in coin. Upon this question there was considerable discussion throughout the country, and even in the Halls of Congress. The credit of the Government was good during the war, though it had no gold or silver. But when peace was restored Shylock said that the credit of the Government was not good unless he went Uncle Sam's security. The bondholder that fattened upon the misfortunes of the Government, while other men were giving their lives, their property, and their all as a free offering, now steps in and claims the right to be a special pet and bounty receiver.

In order that we may see what certain public men thought of the proposition at that time I will quote from the language of the present senior Senator from Ohio.

In a speech delivered in the Senate February 27, 1867, Mr. SHERMAN said:

Equity and justice are amply satisfied if we redeem these bonds at the end of five years in the same kind of money, of the same intrinsic value it bore at the time they were issued. Gentlemen may reason about this matter over and over again, and they can not come to any other conclusion; at least that has been my conclusion after the most careful consideration. Senators are sometimes in the habit, in order to defeat the argument of an antagonist, of saying that this is repudiation. Why, sir, every citizen of the United States has conformed his business to the legal-tender clause. He has collected and paid his debts accordingly.

In 1868 he wrote to a friend as follows:

DEAR SIR: I was pleased to receive your letter. My personal interests are the same as yours, but, like you, I do not intend to be influenced by them. My construction of the law is the result of careful examination, and I feel quite sure an impartial court would confirm it, if the case could be tried before a court. I send you my views as fully stated in a speech. Your idea is that we propose to repudiate or violate a promise when we offer to redeem the "principal" in legal tenders. I think the bondholder violates his promise when he refuses to take the same kind of money he paid for the bonds. If the case is to be tested by the law, I am right; if it is to be tested by Jay Cook's advertisements, I am wrong. I hate repudiation or anything like it, but we ought not to be deterred from doing what is right by fear of undeserved epithets. If, under the law as it stands, the holders of the five-twenties can only be paid in gold, then we are repudiators if we propose to pay otherwise. If the bondholder can legally demand only the kind of money he paid, then he is a repudiator and extortioner to demand money more valuable than he gave.

Truly, yours, JOHN SHERMAN.

I quote further on this subject from Senator Wade, of Ohio:

VICE-PRESIDENT'S CHAMBER, *Washington, December 15, 1867.*

Yours of the 8th instant is received, and I must cordially agree with every word and sentence of it. I am for the laboring portion of our people. The rich can take care of themselves. While I must scrupulously live up to all the contracts of the Government, and fight repudiation to the death, I will fight the bondholder as resolutely when he undertakes to get more than the pound of flesh. We never agreed to pay the five-twenties in gold; no man can find it in the bond, and I never will consent to have one payment for the people. It would sink any party, and it ought to. To talk of specie payments or a return to specie under present circumstances is to talk like a fool. It would destroy the country as effectually as a fire. And any contraction of the currency at this time is about as bad. But I have not time to give my ideas in full.

Yours, truly, BENJAMIN F. WADE.

Hon. Thad. Stevens declared in the House of Representatives in 1868:

If I knew that any party in this country would go for paying in coin that which is payable in lawful money, thus enhancing it one-half; if I knew there was such a platform and such a determination this day on the part of any party, I would vote for the other side, Frank Blair and all. I would vote for no such swindle upon the taxpayers of this country. I would vote for no such speculation in favor of the large bondholders, the millionaires who took advantage of our folly in granting them coin payments of interest.

Senator Morton, of Indiana, declared:

We should do foul injustice to the Government and to the people of the United States after we sold those bonds on an average for not more than 60 cents on the dollar now to propose to make a new contract for the benefit of the bondholders.

During the brief discussion on the public credit strengthening act Senator Bayard, of Delaware, said:

Suppose, instead of issuing paper money, it had pleased Congress to order an abasement of our national coinage. Suppose 25 per cent more of alloy or worthless metal had been interjected into our currency, and with that base coinage men had come forward to buy our bonds. What would be thought of the man who, when the day of payment of those bonds arrived, should say, "I gave you lead or lead in certain proportions, but for all the worthless metal I handed you you must give me back pure gold"? Whether he was more maddened or more dishonest would be the only question arising in men's minds.

Notwithstanding such declarations as given above, and in spite of a well-defined opposition, the bond owners corrupted public opinion and debauched Congress to such an extent that, as I have before said, on March 18, 1869, under the whip and spur of the previous question, what is known as the public credit strengthening act was passed, which in substance declared all the obligations of the United States payable in coin. For the purpose of information I will quote this act in full:

That in order to remove any doubt as to the purpose of the Government to discharge all just obligations to the public creditors, and to settle all conflicting questions and interpretations of the laws by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes, and of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money or other currency than gold and silver. But none of said interest bearing obligations not already due shall be redeemed or paid before maturity unless at such time United States notes shall be convertible into coin at the option of the holder, or unless at such time bonds of the United States bearing a lower rate of interest than the bonds to be redeemed can be sold at par in coin. And the United States also solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin.

As Senator Davis declared at the time, this act added nine hundred millions to the public debt of the nation by making it payable in coin instead of lawful money. This act changed the contract between the people and the bond owners without the consent of the people and plundered them of the enormous amount of $900,000,000, which went directly into the pockets of the bond owners.

While Lincoln was President, when called upon to contemplate a proposition similar to this deed, he said: "If a government contracts a debt with a certain amount of money in circulation, and then contracts the money volume before the debt is paid, it is the most heinous crime which a government could commit against its people." Such a heinous crime was committed against the people and for the benefit of the bondholders in 1869. And, strange to say, there are men to-day who defend this national fraud and try to glorify it under the name of national credit and national honor. What would Lincoln or Jefferson say of such men? They would denounce them as public enemies.

Great as this crime was, yet this was but the beginning of that plundering financial legislation which has followed in all our financial changes.

These same bad men were not satisfied. Greed is never satisfied. A considerable number of bonds would, by their terms, mature in 1870. So in order to make this piece of public robbery secure and of the greatest value it was necessary that these bonds should be refunded in new long-time coin bonds. Therefore the bondholders followed Congress with another lobby in 1870 and had the refunding act of July 14, 1870, passed, which they said would still further strengthen the public credit. What was that law? This act refunded the entire amount of interest-bearing indebtedness into ten, fifteen, and thirty year coin bonds, bearing respectively 5, 4½, and 4 per cent interest.

The bondholder was so anxious that every one of his bonds should be paid in coin—he was so afraid that in the future Congress might authorize the bonds to be paid in any kind of lawful money—that he came to this Congress with a lobby and had this Congress pass a law providing that every one of those bonds should be refunded in coin bonds; and as to the new bonds that there should be written across the face of each one that this bond shall be paid in what? "Shall be paid in coin of the present standard value of July 14, 1870." They were so delighted with their success in getting Congress to change the contract and double the value of their bonds at the expense of the taxpayers; they were so delighted that this Congress (which is supposed to represent and guard the interests of the American people) could be so easily controlled by them for their own selfish and greedy ends, that they said to themselves, "Why not make more money?" These same bad men, these same men who would not help to save the Union, but hired substitutes or ran away to Europe to keep from hiring substitutes, were not satisfied. The next step—and here comes the kernel of this whole business—was to see how to make the coin dearer in which their bonds were to be paid. They got it put in the face of the contract that the bonds should be paid in coin.

Then they commenced the next grand step in their devilish and hellish conspiracy, which no honest man, in my opinion, can indorse or defend. What was it? It was to have the contract changed again and have their coin bonds changed into gold bonds. They had it on the face of the bonds that they should be paid in coin. In their opinion it would not do to change the contract on the

face of the bonds again so soon. They feared to arouse the attention and wrath of an outraged though still sleeping and unconscious people. They thought it safer to find some indirect method of accomplishing the same result. Now, they took counsel in Wall street and in London and said to themselves, "If we can strike down one of these coins, then there will be left but one kind of coin in which to pay us, and the one left as money will be doubled in value and we will make another hundred per cent; we will get Congress to again tax the people double the debt they owe us." They had doubled it once after the war; it was doubled when the bonds went to par; they doubled it again when they had them made payable in coin, and now they proceeded to double it the third time, when their infamous conspiracy of 1873 and 1874 striking down silver was consummated.

In the meantime there had been many conversions among those who had differed with these bond owners heretofore, notably that of the Senator from Ohio [Mr. SHERMAN]. Instead of standing by his position in 1867 and 1868, as I have quoted, he had changed his moorings some time about 1870 and become the leading advocate on the other side, and this makes it necessary to look into the real purposes for demonetizing silver. During all of this discussion regarding the restoration of silver to its constitutional position the reason to my mind why silver was destroyed in the first place has not been clearly established so that the average citizen might understand it.

While it is true that the destruction of silver as money reduced the volume of currency, and thereby reduced the remuneration of the laborer and the value of all property, and assisted in bringing about great financial distress and disaster, yet in my opinion these were but the effects and not the reason for destroying that portion of our metal money. It is as plain as the noonday sun that silver as money was destroyed in order that the bonded indebtedness of this nation might be paid in gold alone and at the same time to double the purchasing power of the gold in which the bonds were to be paid. This was the prime cause for such action, and the disasters which have followed are simply its sequence. These bonds were payable in coin. Coin meant at that time both gold and silver, and the destruction of silver as money meant the payment of these bonds in gold and doubling the price of gold. Here is the incentive for such action, and the only one that can be reasonably and safely put forth. I desire to call the attention of this Chamber and the people of this nation to this fact: That silver was destroyed absolutely in the interest of the bondholders; and that, to the payment of these bonds in gold, which less than ten years before had been bought with greenbacks at an average of 67 cents on the dollar, all the disasters and wretchedness which have come upon our nation for the past twenty-three years are directly chargeable.

I have said before on this floor, and I repeat it, and I defy contradiction, that the men who demonetized silver, the men who lobbied this Congress—who corrupted it, I was about to say (for what else can you call it?), and I will stick to it, because it could not have been done without corruption somewhere—the men who did it were the bondholders, the same bad men who would not furnish Abraham Lincoln with the money to save the Union. It was the bondholder who demonetized silver. The bondholder did it to double the value of his bonds; but as to every Senator and Congressman who voted for it knowingly—I say "knowingly," because there were lots of men who voted for it without knowing that that provision was in the bill—I say he committed a crime and a fraud, and not only a crime and a fraud, but a crime and a fraud purchased by perjury. Therefore, every man who voted for that measure knowingly is a man who deliberately stole from the pockets of the American people of this generation and the next, and turned money into the pockets of the shylocks—the bad men who would not furnish Lincoln with money on reasonable terms to save the Union.

How was that conspiracy worked? In 1873 a bill was passed to stop the coinage of the American silver dollar. Their crime was then only partially accomplished. They did not dare, it seems, to commit so great a tragedy in one act. There had already been appointed a commission to revise the statutes of the United States. I want to state exactly how this was done in 1873 and 1874. As I said before, the act of 1873 did not demonetize silver. As has often been said, it simply stopped the coinage of the silver dollar and refused to admit silver in the future to the mints; but it left what silver dollars had been coined a full legal tender. Nearly every man on this floor speaks of silver as having been demonetized in 1873. The coinage was stopped in 1873, but what silver had been coined was left a full legal tender. It was the act of 1874, or rather the action of the revisers of the statutes of the United States, who did their work in secret, who inserted the clause in the Revised Statutes without authority of law, and in violation of their oaths of office, which did the fatal work. The clause is as follows:

SEC. 3586. The silver coins—

Mark the language—

The silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

The words "the silver coins," etc., include all silver coin. Therefore that clause stuck into the Revised Statutes did what? Demonetized the silver dollar that was left unscathed by the act of 1873 and made it only subsidiary coin and a legal tender for the amount of only $5 in any one payment.

This section, as I have said, was put in the Revised Statutes against authority of law. What right has it to be there to-day? The law providing for the revision of the statutes did not give to the revisers any authority to change the law or to add any new sections to the law. The authority of the revisers was simply to codify the law. The first section of the act authorizing the revision of laws permitted and directed the revisers to do what? Here are the exact words:

Revise, simplify, arrange, and consolidate all statutes of the United States, general and permanent in their nature, which shall be in force at the time such commissioners shall make their final report of their doings.

That is all the authority they had—simply to codify what laws were in existence at the time they did their work. I defy any man living to show any place on the statute books where such a law ever existed as they stuck into the Revised Statutes.

Mr. President, who were these commissioners? These commissioners took solemn oaths to make the revision in accordance with the above restrictions and limitations. They made their report at the close of the year, and it was laid before Congress. General Butler, of Massachusetts, and Mr. Poland, of Vermont, gave assurances to the House of Representatives that the law had been rigidly carried out. General Butler said:

I desire to premise here that your committee felt it their bounden duty not to allow, so far as they could ascertain, any change of laws. * * * We have not attempted to change the laws in a single word or letter so as to make a different reading or a different sense. All that has been done has been to strike out the obsolete parts and to condense and to consolidate and to bring together statutes in pari materia, so that you have here—

[Holding up the volume]—

excepting so far as it is human to err, the laws of the United States under which we now live.

The book of Revised Statutes contains more than 1,000 large pages, and, of course, the Congressional committee to whom it was referred did not read the book and compare it with the laws in existence. They probably never read a page. They took the word of the revisers that the law had been rigidly executed. The law directing the revisers what to do and the oaths which they took were plain and could not be misunderstood. It is safe to say that the commissioners did not make any mistake; they knew what they were doing. They deliberately palmed off a forgery upon Congress, and they did it in disregard of their solemn oaths.

This is the way you get your honest money. This is the way you get your sound money. Honest money! Honest money, indeed! Money that was gotten by forgery and perjury as base as was ever proven in court of justice upon the fabrication of a clause in a will. Your "honest money" is a child of fraud and perjury and corruption. Let us in the future call it perjury money. Let us call it blood money, for that is what it is—perjury money, blood money, but like all men who want to advocate something dishonest, they put on the livery of heaven or use the words honesty and fairness. Their consciousness that their money is not honest, but obtained through perjury and forgery and fraud, prompt these men to call it honest money.

How can any man who knows this—and is there a man in the Senate who does not know it?—defend this fraud and this perjury without being particeps criminis?

Mr. Bogy, a Senator from Missouri, on April 25, 1876, referring to this transaction in a speech, said:

This is a fraud. There was no law of that character existing at that day in the country.

That charge was made by Senator Bogy on this floor and no Senator dared to deny the charge of fraud, and no Senator now when I make it and repeat it dares to deny it. I am willing to be interrupted by anybody now to deny it either in a short speech or an elaborate one. I repeat, Mr. Bogy charged it is a fraud, committed by perjury. No Senator denied it. I repeat it, and there is no Senator here who dares to deny it now.

Mr. Logan, of Illinois, asked Mr. SHERMAN how the demonetizing clause got into the Revised Statutes. What did Mr. SHERMAN say? Mr. SHERMAN said, "I do not know." He admitted it was a fraud; he admitted it ought not to have been there, but he simply satisfied himself with saying he did not know.

Mr. Beck, of Kentucky, on January 10, 1878, said:

Any provision of our statutes changing existing laws was and is a fraud upon the country, whether intended or not, and should now be corrected.

At that date, January 10, 1878, Mr. Beck appealed to this body to correct that fraud. Everybody admits it is a fraud. Nobody defends it. He appealed then to the Senate to correct the fraud. The Senate refused. I appeal to the Senate to-day to correct this fraud. On next Tuesday we shall see how many Senators vote deliberately to sustain this fraud, knowing that it is a fraud.

I have so far called attention to three acts of Congress, namely, the credit-strengthening act, so called, of 1869, the refunding act of 1870, and the demonetization acts of 1873 and 1874. The clear purpose of these acts was—

First, to double the value of the bonds by making them payable in coin instead of lawful money.

Second, to perpetuate the bonds and make them everlasting by the postponement and prevention of payment.

Third, to strike down silver and to force the payment of these bonds in gold, and to enhance the price of gold, in which they were to be paid. That was the mainspring and the moving force behind all of this dark legislation.

All of this was getting ready for the act of 1875, another part of this scheme of these bad men who would not help Mr. Lincoln to save the Union—the men who played traitors in the hour of need, the men who committed a crime a thousand times worse than the poor soldier who deserted and went home to get bread for his starving family and was shot for doing it. These same bad men were preparing for the grand act of 1875, to be followed by specie redemption a little later, in 1879. These bondholders, who had on the face of their contracts the pledge to pay in coin, determined that before the time came for specie resumption there should be no specie that was legal tender but gold. They deliberately determined to double every debt in the country. They appealed to every little usurer in the country and every bank and every little man who loans money to come to their side and share the profits in a small way by doubling the debts the people owed and had to pay to the bondholder.

Yes; the next step in that crime was in 1875, preparatory to the resumption of specie payment in 1879. But before the day for resumption came there was another important event in the financial tragedy, and again these same bad men played their accustomed part. What was it? When the people of this country found out, in 1876, that silver had been demonetized, when they realized the extent of the crime of 1873–74, there was almost as much an arousal of public sentiment from ocean to ocean on the silver question as there is now. The people pledged their candidates for Congress in 1877 to come here in 1878 and wipe out the crime of 1873 and 1874. They pledged their Senators to do it. They made the mistake of not pledging the President to do it, too. They elected their Congress, pledged to remonetize silver. The House was overwhelmingly for silver. They passed a free-coinage act wiping out the crime of demonetization before the resumption act took effect. The people were anxious before resumption began to restore silver as money, so they could pay in the money they promised to pay. They made haste to elect a Congress pledged to do this in 1878.

The House passed the bill. It came to the Senate, and here, as is always the case—either in this body or the other—these bad men, these bankers who are trying to capture the next national convention, who would not help Lincoln to save the Union, came here and captured one branch of Congress. They always center their efforts on one House. They never waste their time on two. They try one House. They always try to shield their President from having to veto a good measure; but when they fail on both Houses then they fall back on the President. This time they did not bother the House. They did not decide to capture the House as Mr. Cleveland did in 1893. They let the House go; let the House free, and it acted free; acted according to its pleasures and according to the wishes of the people, and passed the free-coinage bill in 1878 and sent it to this body.

These bad men centered their evil influences around the lobbies of this end of the building. They delayed. They put off. They held up the Senate, as it were, until they got the body fixed. This body at that time would not dare to kill the bill outright. But what happened?

Mr. GALLINGER. Does the Senator know of any one individual Senator who was corrupted at that time, or at any other time?

Mr. BUTLER. If I knew, instead of talking here I would use my efforts to put him in the penitentiary.

Mr. GALLINGER. The Senator does not know. He is simply talking about something that he does not know about.

Mr. BUTLER. I am talking what the people of this country have a right to believe, and what is a moral certainty, and what the Senator will never be able to dislodge from the minds of the people.

Mr. GALLINGER. If the Senator will permit me, there was a distinguished murder trial up in New Hampshire, and the party who was accused appealed to the court and said he thought it was very unjust that he should be convicted on the testimony of one man, when he could bring thirty men to swear they did not see him do it. The Senator has not even brought one witness to prove that any corruption has ever occurred in the Senate of the United States, or in the other House of Congress, in regard to the matters about which he is talking.

Mr. BUTLER. Let the Senator call it what he pleases. He would like to use a more euphonious term, and instead of calling it "corruption" would call it "influence," I suppose. Influence, influence! The Senator will not dare to deny that somebody tries to influence this body against every important measure that comes up that concerns the people of the United States.

Mr. GALLINGER. If the Senator will permit me, I do not know how that may be with the Senator himself, but I think I can speak for one Senator, and I will say he is not importuned by anyone as to important matters that are before the Senate for its consideration. Of course, if the Senator has had experience he knows about it. I do not.

Mr. BUTLER. Then it may be that the Senator is always on the side of these very fellows when he comes here who would do the influencing. It may be that he came here that way, and therefore he does not need to be influenced. I need to be influenced in their eyes very much, and they have to some extent tried it on me, but not successfully.

Mr. GALLINGER. I am glad the Senator is virtuous.

Mr. BUTLER. They did not succeed with me before I got here, either, and they have not since.

Mr. GALLINGER. If the Senator will permit me, I should like to ask him two or three questions in good faith and in calmness concerning the crime of 1873. I ask the Senator if he knows for how long a time that bill was before the Congress of the United States for consideration?

Mr. BUTLER. I have some slight knowledge about that point. Has the Senator finished his question?

Mr. GALLINGER. For the present; yes.

Mr. BUTLER. I was careful to get the information and have it in my desk, because I was certain I would find somebody just like the Senator from New Hampshire who would be ignorant on this question. He has heard somebody say—I am sure he would not be on the side of the question that he is if he were correctly informed—that the measure was fairly and fully discussed, that the measure was debated in this body a long time, that it was up time after time and printed and reprinted and the greatest amount of time taken on it, and therefore he sat back and thought to himself, "Well, how silly these men are to call it a crime and say it was slipped through!" and thus he has satisfied his conscience until he is perfectly happy that he is right.

Now, I am making this speech for his benefit. I have brought here the information to get him perfectly straight, and I shall try to do it in perfect good humor and coolness. I have it here, and it will surprise him and open his eyes, because it is going to convert the Senator, and next Tuesday when the vote comes he is going to be right on this question. When he finds that he has been imposed upon so basely, he is going to be very indignant with the people who have treated him that way. I hope he will not treat them roughly, but that he will try to convert them, too, unless they are beyond converting, beyond the hope of salvation.

I have brought along, as I said, the information for his benefit. I knew there would be some good men opposed to the measure who would do right if they knew the facts. I call attention to the act of 1873, and the conditions under which it was passed. I will elaborate on the conditions. The conditions under which it was passed deserve special attention, and that attention I will give right now.

The first step in this direction was the passage of the act of February 12, 1873, erroneously known as the act which demonetized silver. This act has been called the crime of 1873, which it undoubtedly was; but it has been so thoroughly discussed in this Chamber that I will not make any extended remarks upon it. I wish to say, however, that in my humble opinion that while this act may be truly called a crime on the one hand, yet it is an example of inexcusable negligence on the other.

Here are two classes of men I want to deal with—those who were standing up for silver and did not do their duty to silver. How all of these death-dealing provisions against the money of the Constitution and against the contract which the Government had made, how this "heinous crime," in the language of Lincoln, could be incorporated into this bill and escape the knowledge of the friends of the people, is beyond my comprehension. It shows beyond question the necessity of the People's Party on the floor of both Houses of Congress to watch the interests of the people with eternal vigilance. This act of 1873 dropped the standard full legal-tender silver dollar from the list of coins and substituted therefor a trade dollar of greater weight, and therefore of greater intrinsic value, and yet made it only a limited legal tender. This was a cunningly devised blow against silver. The alleged reason for coining this trade dollar of 420 grains was to supply the demand of trade with China and Japan. The real reason for its coinage, in my opinion, was to prevent the people from inquiry into why the standard silver dollar (which was a full legal tender) was dropped. It was to make the people think they had a better silver dollar on account of its weight being increased.

Of all of the acts of Congress, this is probably the most confusing. It suspends the coinage of the standard silver dollar of 412½

grains, but at the same time provides for a trade dollar of greater weight, and makes it a partial legal tender, and also continues the coinage of silver halves, quarters, and dimes at the rate of debasement provided by the act of 1853, and also made them a limited legal tender. Here is presented a condition without a parallel in monetary legislation. We have a standard silver dollar of 412½ grains, though no longer coined; a trade dollar of 420 grains, and minor coins containing but 384 grains to the dollar to be coined, all being of the same standard of fineness and each of the minor coins a legal tender to the same amount as the trade dollar, which contained 36 more grains of silver. I doubt whether there could be found in the coinage laws of any other nation on earth such a glaring inconsistency. If such legislation would not sooner or later bring silver coins into disrepute, such as to enable the gold men to raise a howl against it, it would be very strange indeed.

It has been questioned by some whether or not this act had the effect to demonetize the standard silver dollar, or whether it simply stopped the coinage of said dollar. But that question is not material in this discussion, because if the manipulators of the crime of 1873 bungled in their direful measure, they certainly completely succeeded in the act approved June 24, 1874, which was the report of a joint committee to revise and codify the laws of the United States. By turning to section 3586 of the Revised Statutes, as revised by this commission, we find the following under the head of legal tender:

> The silver coins of the United States shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

This certainly covered all of the silver coins of the United States and destroyed the full legal-tender quality of all. But probably the most fatal section of the act of February 12, 1873, was section 14, which reads as follows:

> That the gold coin of the United States shall be a one-dollar piece, which at the standard value of 25.8 grains shall be the unit of value.

Will the Senator from New Hampshire say that that was ever discussed on the floor either of the House of Representatives or of the Senate? The most important legislative act that any country can pass is one which changes the standard or unit of value in a country, and which at the same time contracts is legal-tender money. Up to that hour the legal-tender dollar of 412½ grains had been the unit of value in this country, and at one stroke of the pen it was wiped from the statute books and the gold coin made the unit of value.

Mr. GALLINGER. The Senator from North Carolina asks me a question. I wish he would answer my question before he asks one.

Mr. BUTLER. I am now answering your question, and I will answer it fully before I get through. It is necessary to get a few facts straight before we come to examine the pages of the CONGRESSIONAL RECORD on February 12, 1873, and at certain later periods in 1874 and 1876. Will you now answer the question I have just asked?

Mr. GALLINGER. I will answer the question of the Senator, and I will try to do it directly. I may be wrong about the historical facts connected with the crime of 1873, but my recollection is that the bill was drafted by the Hon. George S. Boutwell, I think in the year 1870, originally, and sent to the Congress of the United States.

Mr. BUTLER. Yes; they went to work on it just as soon as they got through that act in 1870 which made it certain that the bonds should be paid in coin.

Mr. GALLINGER. I am giving the historical facts as I understand them.

Mr. BUTLER. I want to correct the statement of historical facts.

Mr. GALLINGER. If I remember correctly, John J. Knox, Deputy Comptroller of the Currency at the time, gave an opinion on the question, and it was before the Congress of the United States, and I know that Dr. Linderman, who was a very distinguished financial authority in those days—of course he would not amount to anything in North Carolina, but he was a very distinguished financial authority——

Mr. BUTLER. If he would say that coin obligations can be paid in gold, and ought to be paid in gold, he would not amount to anything in North Carolina.

Mr. GALLINGER. He sent a communication to the Congress of the United States, from which I will quote a few words. Dr. Linderman gave it as his opinion that it would be wise "to discontinue the issue of the silver dollar altogether." That is what he said to Congress.

Mr. BUTLER. From what does the Senator read?

Mr. GALLINGER. From a communication of Dr. Linderman, of whom the Senator has heard.

Mr. BUTLER. To whom?

Mr. GALLINGER. To the Congress of the United States.

Mr. BUTLER. Is it in the RECORD?

Mr. GALLINGER. I think the Senator will find it there. He said:

> The gold dollar is really the legal unit and measure of value. Having a higher value as bullion than its nominal value, the silver dollar long ago ceased to be a coin of circulation, and being of no practical use whatever it should be discontinued.

Mr. BUTLER. Under what date is that?

Mr. GALLINGER. I think that was written about 1871 or 1872. I am not absolutely sure about the date; but it was while this matter was under consideration by the Congress of the United States.

Mr. BUTLER. I should like for the Senator to inform me where in the RECORD that can be found.

Mr. GALLINGER. I will refer the Senator to the RECORD. He can find it for himself. It is a report. It has been cited here over and over again before the Senator or I came to Congress, and it has been cited during the time I was here when the Senator was not a member of this body.

Mr. BUTLER. The Senator will, I trust, tell me where it can be found in the RECORD.

Mr. GALLINGER. I make the statement, and the Senator can hunt it up and disprove it if he can.

Mr. BUTLER. I hope the Senator will point to the place in the RECORD where that communication can be found.

Mr. GALLINGER. The Senator is a very industrious man, and he will find it if it is there. If it is not there, he will make that discovery.

Mr. BUTLER. The Senator says that it is in an official communication to Congress?

Mr. GALLINGER. Yes, sir; I make that assertion.

Mr. BUTLER. Under what condition was it sent to Congress?

Mr. GALLINGER. I can not say just what was being considered by the Congress of the United States at the time.

Mr. BUTLER. Was he an expert called upon by Congress to send his opinion?

Mr. GALLINGER. I do not know.

Mr. ALDRICH. He was Director of the Mint at the time.

Mr. GALLINGER. Certainly.

Mr. BUTLER. Then it is in his report as Director of the Mint and not in the RECORD?

Mr. GALLINGER. I think the Senator will find it there.

Mr. BUTLER. In what report, will the Senator from Rhode Island state?

Mr. ALDRICH. In 1870 or 1871.

Mr. BUTLER. The Senator will help me to find it?

Mr. GALLINGER. We will help the Senator to find it. I have answered the Senator's question. It was perfectly understood that the silver dollar was to be legislated out of existence. It was stated by Dr. Lindermann, as I read from his communication, and I think it was discussed by financiers generally. Now, I wish to ask the Senator a practical question.

Mr. BUTLER. Just a minute before you go any further. You say it was perfectly well understood that the silver dollar was to be legislated out of existence and the gold dollar made the unit of value?

Mr. GALLINGER. I think so.

Mr. BUTLER. Will you name a single Senator who was on the floor at that time who will say he knew it and understood it, or for whom you can say he knew it and understood it?

Mr. GALLINGER. I have not consulted the Senators who were here at that time.

Mr. BUTLER. The Senator from Ohio [Mr. SHERMAN] is in the city, he is in this Capitol, and I will wait for you to send for him and ask him if he will say that he understood it at that time.

Mr. GALLINGER. It is unaccountable that a bill of that kind should be discussed, with Dr. Lindermann's words before Congress and the opinion of Mr. Knox, the Deputy Comptroller of the Treasury, before Congress, without somebody understanding it. It does not speak well for the body of which the Senator is a member to be arguing that sixty or seventy men did not know what was going on or what they were voting on when the matter had been discussed for two or three years.

Mr. BUTLER. Will the Senator say that those opinions and expressions were used by any Senator on this floor in support of the bill when it was under consideration?

Mr. GALLINGER. I was not here and I can not say.

Mr. BUTLER. I say they were not, and there is not a line or a sentence in the CONGRESSIONAL RECORD which shows the real purpose of the act of 1873. Not a single Senator said on the floor of this Senate at the time that he was in favor of such a scheme and such robbery, and everyone who voted for it repudiated it afterwards and said he did not know that the act carried such a provision.

Mr. GALLINGER. The Senator will permit me another very brief question. The Senator speaks of corrupt influences being around Congress. I suppose he knows the assertion has been made on the floor of the Senate over and over again that the Bank

of England contributed £500,000 to send a trusted agent over here to corrupt Congress and pass the law.

Mr. BUTLER. I can not say where it came from. I should not be surprised if some of it did not come from there, because the large profits wrung from our people by the passage of that act have been going over there since. But wherever it came from or what kind of influence it was, it is my belief, and it is the belief, I am sure, of a majority of the American citizens, that there was undue influence used on a few to smuggle it through Congress. Of course the majority voted without knowing, but there must have been an undue influence used on a few to put that bill through with such radical and monstrous provisions in it without the knowledge or wishes of the American people. Those who voted for it brand it as a fraud.

Mr. GALLINGER. Does the Senator know what a silver dollar was worth when that act was passed?

Mr. BUTLER. I will have the Senator state.

Mr. GALLINGER. I will state that it was $1.02¼. Yet England, the great creditor nation of the world, came here and corrupted Congress to destroy money that was worth $1.02¼, so that she might be paid in money worth a dollar.

Mr. BUTLER. So she might be paid in money worth $2. So that she might get two pounds of cotton from the Southern cotton fields for every one we owed her.

Mr. GALLINGER. That is another thing.

Mr. BUTLER. So she might get two bushels of wheat for every one we owed her. Yes, this is another thing, but it is the thing that is true. There was not then, nor is there now, half gold enough in the world for money. England knew that the United States and the whole world was in debt to her and if she could reduce one-half of the money of the world then by the same stroke of the pen she would double the debts the people would pay to her. The Senator knows it. The Senator in his heart to-day is not for the single gold standard. He knows it is wrong. He knows it is an infamous wrong. The Senator—and I hope I do him no injustice—if he were a free man——

Mr. GALLINGER. Now, Mr. President——

Mr. BUTLER. And if his constituents did not happen to think like they do, or to be controlled in some way by certain agencies, I believe the Senator would vote now for free silver, for this anti-bond bill. There are a number of good men on this floor who vote wrong on this question. The question confronting them is this. It is when they are converted and convinced here, if they were not before they came, of what is right, whether they shall vote with the controlling influences among their constituencies, or whether they will vote for what they think here would be the best. I do not intend to impugn their motives in doing it, because it is a question with them whether it is their duty to vote their own sentiments or to vote the sentiments of their constituents, and you know a man has constituents and constituents.

Mr. GALLINGER. Mr. President, just a word in this connection. I am not going to get into any angry altercation with the Senator. He is amiable to-day, and I am always amiable. But I do want to protest against the methods of the Senator. This has not been his first offense in that direction, when standing on the floor of the Senate he makes assertions concerning what other Senators believe. I want to say for myself that I do not believe what the Senator attributes to me. I have convictions on this matter as he has convictions. I am not going to impugn his motives nor to call in question his convictions, but I do protest against the Senator putting in my mouth words that I have not uttered and attributing to me convictions that I do not have. That is all.

Mr. BUTLER. Then the Senator is not in favor of the single gold standard?

Mr. GALLINGER. I did not say so. I will in my own time, at my convenience, if I find it proper, state to the Senate what my views are on this question. I do not propose to have the Senator from North Carolina state them for me.

Mr. BUTLER. Of course what I said was in the utmost good humor; but at the same time I want to say to the Senate and to the country that I believe the time has come when it is the duty of every man here who believes that this gold conspiracy must be struck down before ever prosperity can come back to the people to raise his voice in no uncertain way. I believe the time has come for men who so believe to speak out boldly and use words that mean something, to express his honest conviction, to denounce what he considers wrong, and to call the attention of the country to it in fitting language and in no euphemistic terms.

I have spoken plainly on the floor of the Senate about this question because I feel earnestly about it. I feel that the salvation of the Republic as well as the prosperity of the people depends upon stopping this infamous crime that is now being carried out each day by the Secretary of the Treasury under such infamous legislation as has been plastered upon our statute books since the war. I believe it is necessary to arouse the conscience of the American people to the enormity of the wrong and to the still greater danger in store if this thing is not stopped. I believe that it is necessary to do it to solve this question peaceably, and if I know my conscience between me and my God, my greatest desire and the greatest sacrifice that I would make would be to see this question solved at the ballot box and at the earliest day possible. That is the way I pray for it to be solved. But it must be solved soon if ever solved at the ballot box. Therefore if I hurt anyone's feelings I am sorry for it. I do not mean it as a personal offense, but I will speak plainly, and I will call things by their right names.

Mr. GEAR. Mr. President——

Mr. CHANDLER. I should like to have the attention of the Senator from North Carolina. He found fault, I understood, because an agreement had been made to vote upon the bill on Tuesday afternoon next.

Mr. BUTLER. No, I did not.

Mr. CHANDLER. If the Senator did, then I will ask unanimous consent to rescind the agreement to take a vote on Tuesday afternoon.

Mr. BUTLER. I object, Mr. President.

Mr. CHANDLER. Then the Senator does not think the gold-bugs got a time fixed in order to avoid the discussion of this subject?

Mr. BUTLER. I do not know that, but I think they are realizing that they were not getting the better of the discussion.

Mr. CHANDLER. They have had no chance. The authors of the measure have had the whole time, and if it is all to be taken up by the friends of the measure between now and 5 o'clock Tuesday afternoon, or whenever we get through with the business of the Senate, it seems to me the unanimous-consent agreement ought to be rescinded.

Mr. BUTLER. I distinctly gave notice that I would not even permit one hour to be used to-day upon the conference report if there was anybody who wanted to speak upon the pending bill. I gave notice that if anybody wanted to speak this evening, either for the bill or against it, I would give way, but no other Senator was ready to speak.

Mr. CHANDLER. I am unwilling that the assignment shall stand for a vote upon the bill if the Senator insinuates that it was made unfairly or is unwilling to have it stand.

Mr. BUTLER. I do not say it was made unfairly, because the Senate agreed to it and nobody objected. It was an agreement that if I had been here I would not have agreed to myself; but I do not desire to have it changed unless the Senator is anxious for a vote at an earlier day. I will stop talking now if a vote can be had this evening.

Mr. CHANDLER. That is quite a consideration, perhaps.

Mr. BUTLER. I thought I would offer the greatest one possible. Of course to a representative of the gold men it would be a consideration.

Mr. CHANDLER. I do not think it would be in order for the Senate to vote upon the bill before the time fixed next Tuesday.

Mr. GEAR. I wish to ask the Senator a question. The Senator said that this question might be settled at the ballot box. Is there any other method which the gentleman proposes except by the ballot box? I should like to have the Senator inform the Senate if there is.

Mr. BUTLER. I propose no other method.

Mr. GEAR. I understood him to propose other methods, at least by implication; that if it were not settled at the ballot box it might be settled in another way. The Senator occasionally has such a way of talking, and I would like to know by what other method he proposes to settle this question other than at the ballot box.

Mr. BUTLER. I do not know whether it would add to the gentleman's comfort and ease to tell him, but I might remind him how questions similar to this one are settled in a much less civilized country than this—China, for instance. Of course we are getting very civilized, but in countries less civilized they have to settle these questions in another way. Whenever the class of fellows like those who sent out the bank resolutions which I read buy up and corrupt political parties and use their influence on the legislative halls and steal from the people indirectly or directly by having their banks break and not paying their depositors, they take such a man out and hang him or they take him to a block, if he prefers and is fastidious about it, and chop off his head. But I propose and favor no method but the ballot box for correcting these financial evils. We consider China much less civilized and progressive than the United States, yet the Chinese Government, when recently it borrowed $75,000,000 and issued its bonds for the same, managed to get it from the money trust by paying a commission of 5¼ per cent. This was a large bonus, but how does it compare with the financial operations of this great, strong, and highly civilized Government of ours?

Last year, in February, our President, without consulting Congress, made a contract with a private syndicate by which a loan of $62,000,000 was floated. The private syndicate paid 104½ for the bonds and sold them at about 119. That is, the rich, stable,

highly civilized, and honest American nation, that never defaulted and never threatened to default on a dollar of principal or interest, had to pay a commission of 14½ per cent.

On the last loan of $100,000,000 the President paid to these money sharks a commission or bonus of over 10 per cent. Thus we see that China is either smarter than we are or else her credit is better than ours. And it is in China that whenever a bank fails they chop off the head of the bank president. The consequence is they never have bank failures in China, while here we have them by the thousand.

Mr. GEAR. The gentleman would prefer that method of punishment probably.

Mr. BUTLER. I say the time might come when an outraged people might swing some man to a limb. I hope that time will not come, because I prefer not to correct evils and crimes of any kind by that method if avoidable. I have, however, seen criminals hung to a limb that were less criminal and less dangerous to the peace of this country than the men who are to-day fastening this infamous system upon the country.

Mr. GEAR. That is the way they act down in your country. It is not the way they administer justice in my part of the country.

Mr. BUTLER. No; because it seems in your State that the people are not opposed to or as yet have not realized the extent and enormity of the evils of the gold standard.

Mr. GEAR. I should have been sorry to be sent from North Carolina if my people were of the same opinion as those who sent the gentleman here. I represent as good a constituency in my State of Iowa as lives on the earth; they are a man-loving, God-fearing, and law-abiding people. They commit no crimes such as the gentleman adverts to.

Mr. BUTLER. If inadvertently I reflected upon the gentleman's constituency I beg——

Mr. GEAR. That is all right.

Mr. BUTLER. I did not so intend. I want that distinctly understood.

Of course, if I did not speak pleasantly in my tones, I want to say that I do not feel any personal animus in regard to the matter. But of course some States send men here holding one view and other States send men here holding a directly opposite view. Of course, States like North Carolina, that have a large agricultural population, that have the great bulk of their people engaged in farming and wealth producing, a people like that where there are only a few who are gathered into towns, would send a different representative here from a State where the population is congested in and around great cities. The Senator's State is also agricultural, I think, but my State more so than any other State in the Union. There are fewer people in towns compared to the percentage of population in North Carolina than in any other State of the Union.

Mr. GEAR. May I make a statement? In the State I represent in part on this floor there are more people engaged in agriculture than there are in the State the gentleman represents. These questions have been submitted to them time and time again, and the good people of that State have rendered their verdict, and that is the reason why they have sent me here, because I am in full harmony and sympathy with the views which they express at the ballot box.

Mr. BUTLER. The people of your State may have grown rich, but mine continue to grow poorer while they work harder. They create more, they make two blades of grass grow where one grew before, they carry out the divine injunction to earn bread by the sweat of the face; but the more they make, the harder they work, the poorer they get under the policy you advocate.

Mr. GEAR. I beg to say that in the State I represent, although the people may have less money, they are in a more prosperous condition; their farms have been advancing more in value in the last ten years than they did before in twenty. It is true the price of property is low, and yet with all that our people, while they earn their bread with the sweat of the face, live in comfort and peace, and piety, I might say.

Mr. BUTLER. Then there is no dissatisfaction among your people about their present financial system?

Mr. GEAR. There are a majority of the Democrats in my State, who take the same position on financial questions that the gentleman takes, who believe in debasing and destroying the credit of the Government as the gentleman proposes to do by the pending bill.

Mr. BUTLER. Destroying the credit!

Mr. GEAR. Destroying the credit, as it would be destroyed by the passage of such a law.

Mr. BUTLER. Destroying the credit!

Mr. GEAR. And not only expel the gold from this country, but you would bring us to a gold basis, and thereby bring to the same basis every dollar of paper that the Government issues.

Mr. BUTLER. How much gold is there in the State of Iowa? They must have it all.

Mr. GEAR. It is not much, but they have enough for the banks to pay their debts with, and plenty for individuals to pay their debts where the contract is that they shall pay in gold.

Mr. BUTLER. The Senator may speak over his State and ask every man in the audience when he spoke who had a gold dollar in his pocket to raise his hand, and if the Senator got all the votes of those who had gold dollars he would not get enough votes to elect him constable of one township if he had all the votes in the State.

Mr. GEAR. The people of my State keep bank accounts. They do not carry money around in their pockets. They simply draw checks and pay their debts in that way.

Mr. BUTLER. That will be news, I suspect, to the farmers of Iowa.

Mr. GEAR. Not much.

Mr. BUTLER. It will be news to the farmers of Iowa that they are all strutting around with bank accounts. There must be close communication between them and Wall street, and there must be a "divvy" between them. That is the only way I can understand it. I hope it is so; but if it is so, then I appeal to what patriotism there is in your hearts, and I believe there is a great deal, to turn your eyes to view and consider the condition of the remainder of the country, and not to do like the President, who can not see anything out of Wall street and Buffalo. I appeal to you to turn your eyes over this country and see what misery and distress there is from ocean to ocean—the business of every wealth producer going down who is trying to live honestly. Their farms are going down, their land is falling, the price of their products is falling in value, and they can not pay their honest debts. I appeal to what patriotism there is in you to help change this policy which is helping nobody but Iowa and Wall street and bringing the curse of hard times on all the rest of the country.

I am glad that Wall street and Iowa are prosperous. I am glad that they are not suffering from hard times as are the people in the rest of the country. But, Mr. President, I do protest against their kind of patriotism when they are satisfied to see everybody suffer and go to the poorhouse but their own chosen few, the four hundred of Wall street and Iowa.

And, Mr. President, before proceeding, there is something else that I wish to protest against. It is the habit of certain gold Senators on this floor to try to misrepresent every Senator who, when discussing earnestly the financial question, expresses a hope that this irrepressible conflict may be settled peaceably and at the ballot box. I say it is the custom of certain Senators to try to misrepresent such statements and to make it appear that the expressing of such a wish implies lawlessness and a desire for bloodshed. I protest against such unwarranted and unfair methods. It is resorted to by those who can not answer our arguments. I expressed, a few moments ago, the wish that these financial evils might be corrected, and the contest between labor and capital might be settled peaceably and at the ballot box. I submit that that is a patriotic sentiment, and one that every good citizen joins me in.

In fact, if we did not have so much sad history to the contrary in the fall of empires and republics; if the pages of history were not strewn with the failures of republics and governments that started out in a manner which allowed the people to prosper and then have decayed, fallen from evils and unjust conditions like these which now curse our body politic; if we did not have——

Mr. HAWLEY. Will the Senator yield to me for a moment?

Mr. BUTLER. I will not yield just now. If we did not have those warning examples, our best and most patriotic men would not feel so solicitous about seeing this country continue on the downward road it is going, nor would they have occasion to express such sentiments. It is a patriotic sentiment, and I hope the Senator from Iowa feels that way. It would be unworthy of him not to hope, whatever his views of this question are, that this irrepressible conflict should be settled at the ballot box.

But what I do want to protest against is this: I do it in no bad feeling, but I protest against the method of Senators who favor the gold standard taking advantage of those opportunities and statements like that to rise on the floor to try to twit the Senator who makes the statement or to try to goad him with questions of their own framing into saying something that can be perverted.

The Senator from Iowa knows that the statement I made is one that is worthy of any patriotic citizen, and it is one that he can make himself, I hope, and one that will be worthy of him and do credit to him to make.

Mr. GEAR. May I interrupt the Senator to say a word?

Mr. BUTLER. In the heat of discussion it is often the case—and I have seen Senators other than myself do so—that Senators answer those questions and do so in such a way that their answers can be misinterpreted.

Mr. GEAR. Will the Senator permit me to say a word? It was not what the Senator said or his words or terms, but what he said by implication. I want to say right now that I do not believe the Senator wished to be understood as even by implication saying anything harsh. If I have said anything unjust with regard

to the people of North Carolina, whom the Senator represents, I want to say that I have no desire and no wish to say anything reflecting on the people of his State.

Mr. BUTLER. I thank the Senator from Iowa for his very candid statement, because I felt it was my duty to make a statement. What he has said makes it almost unnecessary for me to put in the RECORD what I am about to say. No more law-abiding people live in the United States than the people of North Carolina. I challenge any State of the Union to show a people more conservative, more law abiding; a people who suffer longer and endure even when they feel they are suffering from wrongs, than the people of good old North Carolina. They are slow to move. They do not go off suddenly at a tangent. They are not volatile in their temperaments. They are of the old original Anglo-Saxon stock, and there is a smaller foreign element to-day in North Carolina than in any other state in the American Union.

Mr. PEFFER. Oh, the Senator is mistaken.

Mr. BUTLER. I repeat it.

Mr. PEFFER. The Senator is wrong.

Mr. BUTLER. Name your State.

Mr. PEFFER. Kansas.

Mr. BUTLER. Kansas?

Mr. PEFFER. Yes.

Mr. BUTLER. I appeal to the census. The last census of this Government shows that there were more men living in North Carolina who were born there, whose fathers were born there, and whose great-grandfathers were born there, whose ancestors lived on the soil and fought in the Revolutionary war as citizens of North Carolina—there are more of those people; that is, a larger percentage, in my State than in any other State in the Union. It is the pure, original American stock. I do not say it as reflecting on any other State in this Union, but I state as a fact that our people are, as the criminal records will show, as law abiding as any people in the American Union, and one thing is sure, that I correctly represent them and their sentiments on this financial question. If I have said anything here that can be twisted into a different construction or leaving a different impression as to the kind of people who compose the citizenship of my State, then I was simply unfortunate in not expressing myself clearly.

Mr. GALLINGER. The Senator is good-natured to-day. He has had put in the RECORD two or three times a resolution of the bankers of New York City in favor of the gold standard. Will the Senator yield to me just a moment to have a resolution go into the RECORD which was adopted by the New York Association of Savings Banks, representing 1,700,000 depositors, with aggregate deposits of $700,000,000? The most of that money is deposited by poor men and women and children. I should like to have the resolution read from the desk. It is very brief.

Mr. BUTLER. All right.

The Secretary read as follows:

Resolved, That this association, representing the interests of 1,700,000 depositors, with deposits aggregating over $700,000,000, solemnly protests against any and all efforts to change the gold standard now existing for the currency of the country, and affirms its conviction that any departure from this standard will not only impair the prosperity of the laboring classes, but that the only classes or individuals to be benefited would be the capitalist and foreign investor, who would be quick to take advantage of the rise and ultimate fall in prices sure to follow a premium on gold.

Mr. BUTLER. I did not hear that resolution, but I heard just enough. I think the savings banks folks were protesting. Were they?

Mr. GALLINGER. Yes, sir; the representatives of 1,700,000 depositors, poor people in this country who have a little money in the savings banks.

Mr. BUTLER. And they were protesting against any change from the gold standard?

Mr. GALLINGER. Yes, sir.

Mr. BUTLER. Mr. President, of all the kinds of cunning men who use cunning devices that are first cousin to his satanic majesty; of all the men who play upon the laborer and the supposed interest of the laborer, in order that they may deceive the laborer and help to rob him, is the class of bankers that I have referred to here, who are the very conspirators who are behind that movement to hoodwink the poor depositors of savings banks and get them to ask for laws that will each year diminish their earnings. These bankers are the same fellows who are trying to capture your convention and will do it; trying to put a gold bug, the agent of Shylock, in the White House, and they will do it unless the people get together, as I hope they will, on financial reform. They are the very men who are behind that movement. A part of their campaign fund which they raised has been used to get that resolution passed.

Yes; they go to the laborer and tell him that now you have got a chance to get a drop on somebody else. You have got so many dollars put in the savings banks. Now, they go and appeal to that man's selfish instincts and ignorance—I say ignorance in no offensive sense, but because the laborer, who has to work ten hours a day on scant food and lie down to sleep on a hard bed and not get sleep enough to refresh himself the next morning, has not time to inform himself on such a question—they appeal to that man's ignorance and cupidity—for we all have some of it in us—and say to him, "You have $10 in the savings bank. If you vote for the gold standard your $10 will be $20." That is the kind of infamous argument that is poked at these men who are being ground down daily by this system, the men who can not get work to-day. Out of the millions of men in this country who want to work, there is not 25 per cent of them who can get work. That is what is the matter. And these gold men go to a few who happen to have several dollars and appeal to them to vote to double their dollars at the expense of their brother laborers who are out of employment.

They appeal to them to keep the other laborers from getting employment. They appeal to those laborers to keep producers from getting a fair price for the products of the field. They appeal to those laborers to have themselves taxed in order that we may pay Great Britain double what we owe her. The Senator knows himself the kind of spirit, the kind of greed that is behind the movement that got them to pass that resolution; and I am astonished that he stands up here and helps them to continue the deception, to continue the fraud by giving credence to it and publishing it.

Mr. GALLINGER. The Senator has offended again in saying that I know a thing that I do not know. I wish that he would confine himself to statement of fact concerning himself and not me.

Mr. BUTLER. The Senator is so intelligent looking that I am bound to suppose he does know some of these things, but if he does not I beg pardon for transgressing the limit of his intelligence.

Mr. GALLINGER. That is right. Of course, you can not measure me by yourself in that direction.

Mr. BUTLER. No; that would be unfair. The Senator from Iowa [Mr. GEAR] has gone from his seat. I was interrupted. I was not quite through with him. I am very much interested, extremely interested, now, in Iowa.

Mr. GEAR entered the Chamber.

Mr. BUTLER. Here he is. I have just referred to the Senator from Iowa. I am glad to see that he has returned. Here is a letter, under date of March 10, 1890, written by the distinguished Senator from Iowa. These honest convictions to which he referred—we all have them, but they get wobbly sometimes and they wobble and wobble, and then they turn a somersault, and sometimes they are not as pretty when they turn a somersault as before they did.

Mr. President, I guess it is not out of order, inasmuch as we are anxious to get the truth about this question and to do what is the greatest good to the greatest number, to ask that the letter be read.

The Secretary read as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., March 10, 1890.

MY DEAR JUDGE: I have yours of March 6, and note what you say on the silver question. There is no question in my judgment that you are absolutely correct in the position you take on this question. We dig silver as we dig potatoes, and it is as much a product of the soil as anything else which costs labor to produce, and I always have been of the opinion that it was the bounden duty of the Government to coin silver for anybody who may present bullion, still you know, as I do, that a large number of Eastern people are bitterly opposed to free coinage. The Administrations for the last twenty years, without exception, have used all their influence adverse to such a measure, but I think the day will come, and that at no distant time, when anybody who has bullion can take it to the Treasury and have it coined on his own account. I will send you to-morrow a copy of the Allison bill, which is looked upon with great favor, and if enacted into law and honestly carried out it would in my judgment advance the price of silver in less than sixty days; still it is not as good as free coinage itself.

With kind regards, I am, yours, truly, JNO. H. GEAR.

Hon. P. HENRY SMYTHE, *Burlington, Iowa.*

Mr. BUTLER. The Senator from Iowa at that time could have been elected a Senator from the State of North Carolina.

Mr. GEAR. I should have been very sorry if I had been. I ask, Mr. President, the date of the letter which has been read.

Mr. BUTLER. It is dated March 10, 1890.

Mr. GEAR. In 1878 or 1880—I have forgotten in which year it was—I had the honor of being chief magistrate of my State. At that time I took up and discussed in my inaugural message to the general assembly of my State the question of free silver. The demonetization act had been passed but a short time before. I stated then, if I recollect aright—I can not quote the exact words—that I was not in favor of that act. I can say now, perhaps with equal truth, that I am not in favor of it. I thought then as a great many men did, and I thought as a great many men think now who have not thoroughly investigated the question, that the way was open for free coinage, and I advocated that, I am frank to say, but when I became a member of the other House of Congress, and when it became my duty to examine and investigate this question with all due care, being called upon as I was to represent in part the interests of 2,000,000 people, I investigated it carefully and gave it much study, and I came to the conclusion, as very many must who investigate the question without prejudice and without bias, that free coinage as proposed then and as proposed now would be

a detriment to the American people, a damage to their currency, and a damage, above all others, to the farmers and laborers of this country. I can not see, Mr. President, how any fair-minded man who thoroughly investigates this subject can come to any other conclusion.

I do not take back anything contained in the letter which has been read. At the time it was written I believed just exactly as I there stated; but I have changed my mind, as I presume the Senator has changed his mind, and I presume there are many Senators and members of the House of Representatives who had not investigated this question until they were obliged to examine it, as they were to be called upon to vote upon it, and when they fully investigated it they came to the same conclusion I have, and as many others have, and perhaps some of them have come to the same conclusion which the Senator now maintains.

Mr. BUTLER. How long had the Senator been in the House of Representatives when he wrote that letter?

Mr. GEAR. One session.

Mr. BUTLER. The Senator had not been in the House of Representatives long. The Senator was not very well acquainted with national legislative matters at that time?

Mr. GEAR. That is true.

Mr. BUTLER. And, therefore, he was lead off into the support of free-silver coinage?

Mr. GEAR. I had been about the same length of time in the House of Representatives as the Senator has been in the Senate, and was probably as well posted then as the Senator is now. [Laughter].

Mr. BUTLER. Possibly, but inasmuch as that is about the only kind of reply that a man can give for becoming a gold bug, I want to give the Senator the full benefit of that. The Senator from Massachusetts [Mr. LODGE] seems to enjoy it so much, and he has had so little comfort for him and the goldites in this debate that I will wait a minute if that remark adds to his pleasure, because I am going to reply to it.

Mr. LODGE. I think the remark of the Senator from Iowa has been quite sufficient. I do not think it is necessary that I should say anything.

Mr. BUTLER. The Senator from Iowa admits frankly enough that he was mistaken; so does Hoke Smith, so does John G. Carlisle, and——

Mr. GEAR. I object to being placed in the same category with John G. Carlisle.

Mr. BUTLER. I beg pardon. I will not place the Senator in that category if it is disagreeable to him; but the cases are similar.

Mr. GEAR. I wish to have some choice with regard to the company I am in. The difference between John G. Carlisle and me is this: John G. Carlisle voted for free silver, as he stated, when he was in the other House, and I had the honor of being in the House with him, to embarrass the Republicans. That was his excuse for that vote. I do not want to be put in that category.

Mr. BUTLER. Then the Senator from Iowa comes to the defense of the Secretary of the Treasury.

Mr. GEAR. Not at all. I do not want to be put in that position.

Mr. BUTLER. To explain why he so voted, he gives an excuse that Mr. Carlisle, the Secretary of the Treasury, has never, I believe, given himself. I congratulate the Secretary of the Treasury upon having the addition of the help of the Senator from Iowa in getting him out of his apparent great difficulties in explaining his position. It is well to have somebody to stand sponsor for him and give a reason which I think Mr. Carlisle never has dared to give himself. The difference between the Secretary of the Treasury and the Senator from Iowa is that the Senator from Iowa was for square free coinage, while the Secretary of the Treasury hedged and quibbled on that little dividing line that, though in favor of coining silver into legal-tender dollars, he was not in favor of free mintage, and therefore the only injustice done is that it seems the Senator from Iowa has backslided farther from his original position and convictions than has the Secretary of the Treasury. The Senator gave better reasons in 1890 for his position then than he seems to be able to give now for his new and opposite position.

Mr. GEAR. I want to say in reply to that that it is only fools who do not occasionally change their minds. This is a great question, a question that ramifies amongst and affects all the people of this country. The gentleman who wrote that letter was one of my neighbors—I will not express an opinion about his sending a private letter to a Senator here; that is a matter for him to settle—and has been an intimate friend of mine for forty years. The only crime I can charge myself with in connection with him was that once when he was a candidate for supreme judge of my State on the Democratic ticket I was weak enough to vote for him. I apologize for that. I do not deny the letter; I affirm it, and say just what I said before, that any intelligent man who gives this question proper study must, in my judgment, come to the same conclusion at which I have arrived.

Mr. BUTLER. The gentleman to whom you wrote this letter has not been able to see the error of his way, as you have, and he is a near neighbor of yours——

Mr. GEAR. He is a Democratic Populist.

Mr. BUTLER. He is a man who refuses to go backward. He believes in standing by the principles of Thomas Jefferson, Andrew Jackson, and Abraham Lincoln; he is a man who is so good a Republican and so good a Democrat that he is a Populist. It has gotten now so that a man does not dare to talk patriotism or express patriotic sentiments unless he is willing to be classed as being a Populist. Some men claim to think that it is almost equivalent to ridicule to charge a man with being a Populist, but when this present goldbug reign is over we will be merciful to those who favor the gold standard, because they will need mercy. Patriotism then will be at par.

Mr. GALLINGER. Will the Senator yield to me a moment?

Mr. BUTLER. In one moment; I wish to say first that I had some hesitancy about using a private letter, but the gentleman to whom it was sent requested that it should be used, and I saw nothing in it that was private. It was about public affairs, and it was a letter which was not marked "private"; it was about no private business, but it was exclusively in relation to the great and important question which is now before this body, and I was sure that the Senator from Iowa was not ashamed of his sentiments then.

Mr. GEAR. I made no objection to the Senator reading the letter.

Mr. BUTLER. Therefore the Senator can have no objection to the letter having been read.

Mr. GEAR. Not at all.

Mr. GALLINGER. With the indulgence of the Senator, as he suggested a little while ago that he trusted I would assist him in finding certain facts that I stated regarding Mr. Knox and Dr. Lindermann, I have found one important fact in relation to the "crime of 1873," and I will promise the Senator to find one or two more before I get through. I want to read to the Senator, under date of April 25, 1870, a communication which he will find in this book, which I will be pleased to call to his attention.

Mr. BUTLER. What is it?

Mr. GALLINGER. A letter of the Secretary of the Treasury, Mr. Boutwell, to the chairman of the Committee on Finance, communicating to Congress the bill which has been referred to. Mr. John Jay Knox, who signs himself Deputy Comptroller of the Treasury, expresses these views. This was in the year 1870, nearly three years before "the crime of 1873" became an established fact:

> The coinage of the silver dollar piece, the history of which is here given, is discontinued in the proposed bill.

There was not any ambiguity about that.

Mr. BUTLER. What was that?

Mr. GALLINGER. That was "the crime of 1873."

> It is by law the dollar unit, and assuming the value of gold to be 15½ times that of silver, being about the mean ratio for the past six years, is worth in gold a premium of about 3 per cent (its value being $1.0312) and intrinsically more than 7 per cent premium in our other silver coins, its value thus being $1.0742. The present laws consequently authorize both a gold-dollar unit and a silver-dollar unit, differing from each other in intrinsic value. The present gold dollar piece is made the dollar unit in the proposed bill and the silver dollar piece is discontinued. If, however, such a coin is authorized it should be issued only as a commercial dollar, not as a standard unit of account, and of the exact value of the Mexican dollar, which is the favorite for circulation in China and Japan and other oriental countries.

That is the communication.

Mr. BUTLER. From what book is the Senator reading?

Mr. GALLINGER. I am reading from Miscellaneous Documents of the Senate of the United States in 1871.

Mr. BUTLER. Was it printed then as a document?

Mr. GALLINGER. It is a letter of the Secretary of the Treasury to the Congress of the United States.

Mr. GRAY. And written three years before 1873?

Mr. GALLINGER. Yes; three years before "the crime of 1873" was an accomplished fact.

Mr. GRAY. And it gave three years' notice?

Mr. GALLINGER. Yes; it gave three years' notice by the Comptroller of the Currency communicating the bill to the Congress of the United States, which was prepared by Mr. Boutwell in 1871.

Dr. Linderman, in his report as Director of the Mint—I do not find in this report the exact language I used, but I will find that later, for I will say to the Senator I looked that matter up very carefully at a time when I had to be exact—Dr. Linderman in 1871 said:

> In general, the country's currency must always be, as it has been, chiefly in paper redeemable in gold. A perfect domestic money system would seem to be bank or Government notes for large payments, gold coin for occasional use in large or small, silver coins for the fraction of a dollar down to the tenth part, and an inferior alloy for smaller denominations.

That was the opinion of the Director of the Mint when the so-called "crime of 1873" was pending before Congress.

Mr. BUTLER. Was that ever laid before Congress?

Mr. GALLINGER. I do not know.

Mr. BUTLER. That is important.

Mr. GALLINGER. They were official documents communicated to Congress, and if the Senator's friends, or those who sympathized with his views then, and presumably do now, overlooked this official communication and were ignorant of the fact that Dr. Linderman, the Director of the Mint, and Mr. Knox, the Deputy Comptroller of the Currency, had given notice to Congress three years before "the crime of 1873" was going to be committed by Congress, of course we can not at this late day be held responsible for the culpable negligence of the men who at that time were here.

Mr. BUTLER. It is very important to know whether that was ever laid before Congress and went into the CONGRESSIONAL RECORD.

Mr. GALLINGER. I do not know about that.

Mr. BUTLER. When the Senator from New Hampshire said he would look up that wonderful information, of course I realized then, as I do now, that it was immaterial to this discussion. But as I am always anxious to get all the information that is going, I certainly wanted to know whatever the Senator knew that caused him to take such a strange position on this question. I was very anxious indeed to know it, and see how much weight it had, to see on what kind of facts and information he has been misled into taking up the views he holds; but the fact that that statement was in a document, something which was stuck up in the pigeonholes in the document room, is no more evidence that the Senators knew what was being done here in that bill on February 12, 1873, or that the country knew that they were being put on a gold standard, than it is for the Senator to point to the act which passed and say the bill provided for it as it was afterwards published. Nobody denies that the bill itself probably lay on the desks of Senators on that day. So that is no evidence, because the bill itself which was passed was better evidence than that. That document probably never came into the Senate Chamber. If it did, it was never read, as such documents are not usually read.

The point I make is that Senators on the floor at the time who knew of that document and what it said, and who knew the provision in the act of 1873 which demonetized silver, quietly kept the fact to themselves and never mentioned it on the floor of the Senate; they never once said in all the discussion here that this bill contained that important provision.

But, on the other hand, I have lying on my desk the CONGRESSIONAL RECORD, with marked extracts. The Senator from Ohio—if I am mistaken I can be corrected—assured the Senate, and the same was done in the other House, that that bill simply made a few minor changes in the mint act, some little minor things which did not make any material difference. It was in a great big report, in a great big document, which nobody could go through except a few men who were specially charged with the duty to do it. Nobody now would attempt to go through 3,000 pages. If you were to codify the laws of this country and the report was brought in and laid on our desks, and if the Senator from New Hampshire was a member of the committee, and the one who did the work were to stand up here and assure the Senate that there was nothing important in it, no one here would take the trouble to wade through 3,000 pages to scan every line of it.

Mr. STEWART. If the Senator from North Carolina will allow me, I will call his attention to abundant evidence.

Mr. BUTLER. I have it all here.

Mr. STEWART. To abundant evidence of what those who were present said of that report.

Mr. BUTLER. I have it all lying here. I am coming to that in a minute.

What I wanted to set forth before coming to that was what Senators said afterwards when it was found out by the people. But I will take that up last. What you have claimed to be documentary evidence is no evidence at all, and even less evidence than the bill itself. What I claim is, and what the people claim is, that that bill was not known to contain the provision that demonetized silver. The bill as it came to the Senate did not contain the provision, and the CONGRESSIONAL RECORD does not show that such an amendment was adopted in open Senate, but it was found in the act after it was a law. What I charge is, that provision was put in by fraud, and that the men who had charge of it never told the truth about it.

Mr. GALLINGER. That must be a serious reflection upon the Senator from Nevada [Mr. STEWART], who was here.

Mr. BUTLER. It would have been no reflection upon the Senator from New Hampshire if he had been here and had accepted the statement of the gentlemen having charge of the bill; but I tell you what you would have done if they had fooled you. You would have done as the Senator from Nevada has done since; you would have stood up, when you found out you had been fooled and how the country had been tricked and robbed, and grown indignant and denounced it as a crime, and that is what I think you ought to do now, and I believe you will when I get all the facts before you.

Mr. GALLINGER. I think, if the Senator will go to the speech of the Senator from Nevada, he will find that that Senator uttered very different sentiments from what are now attributed to him.

Mr. STEWART. What is that?

Mr. CHANDLER. If the Senator from North Carolina will allow me, I will say to him that there is a very general desire that he should yield the floor to the Senator from Nevada in order that he may state his views on this subject.

Mr. STEWART. Will the Senator from North Carolina allow me to ask the Senator from New Hampshire a question?

Mr. BUTLER. I will yield in a moment.

Mr. GALLINGER. If the Senator from Nevada will permit me to say so, I will say that I have read some of the most eloquent and conclusive arguments I have ever read anywhere which the Senator has made once in his lifetime while a member of the Senate in favor of the gold standard.

Mr. STEWART. Never.

Mr. GALLINGER. Then I did not understand the Senator's language.

Mr. STEWART. I have repeatedly stated what that was. That is a trick of the enemy. Of course we knew nothing about the demonetization of silver when that bill was passed. No word to indicate such a purpose was ever uttered in this Chamber during the time.

Mr. GALLINGER. I was going to ask the Senator right there if he had not read Mr. Knox's statement concerning it?

Mr. STEWART. I had not read it. Nobody pays attention to the reading of these public documents. The Senate had not read that. It was not known during the whole of the debate upon this bill from beginning to end. It was never suggested by anyone that there was to be a change in the currency law.

With regard to what I said about the gold standard, it occurred in the debate on the resumption of specie payments. When I used the word "gold" I meant specie—gold and silver. No distinction had been made; but it had been the popular language on the gold board, and we got in the habit when we meant gold and silver coin of frequently saying "gold." As I said, I was arguing in favor of the resumption of specie payments; that was the bill before us; and I used on one or two occasions the term "gold." They wrenched my language from its context. There was no question in that debate on the bill before the Senate of discriminating for or against either metal.

I made that speech, I think, in 1874. It was after that bill had been passed; but nobody then knew its contents. I did not know that silver had been demonetized until after I left the Senate. My term expired in March, 1875. I had no idea that it had occurred. More than that, there were others who had not any idea of it. If the Senator from North Carolina will hand me the RECORD he has, I want to call attention to others who were in company with me in regard to the same transaction.

The idea that that bill should have been pending here, of such great importance as it was, and that the chairman of the committee never mentioned the fact that it demonetized silver, is hardly credible, yet such is the fact.

In this connection I may remark that the chairman of the committee who had charge of that bill which demonetized silver visited London in 1867. He then visited Paris. At Paris there was a convention to equalize weights and measures and coins. In 1865 the Latin Union was formed which made the coin of five nations a legal tender in each. France, Italy, Greece, Belgium, and Switzerland were parties to it. Louis Napoleon undertook to extend that to all the civilized nations. We had a delegate there, Samuel B. Ruggles, whom I dined with the night before he left, discussing weights and measures and coins. No word was spoken of dropping either one of the coins, but we were in favor of the metrical system, and it was thought that this would facilitate trade. Mr. SHERMAN, after visiting London, visited Paris, and at Paris he wrote a letter advocating the single gold standard, which was translated into French and printed in the French papers, laid before the Emperor, and also laid before the committee of the conference having the matter in charge.

The conference finally decided in favor of the single gold standard. The United States and Great Britain made it a condition to entering the union to maintain a common coin that it should be a gold coin. The other nations all protested. There was a long debate. Mr. Ruggles reported it to the United States frequently. France and the other nations finally conceded that it should be a gold coin alone which should be the common coin. The Senator from Ohio came home. He introduced a bill in 1868, adopting the gold standard, with a harmless title, a bill with reference to the coinage. The bill was referred to the Committee on Finance and reported back favorably. Nobody paid any attention to it, no more than they would to any other abstract matter. They did not know what was in it. The title did not indicate it at all.

E. D. Morgan, a Senator from New York, was on the committee. He filed a minority report which set forth the evils which would result from it. But nobody saw the report. It was not called up

for action at all until after Mr. Morgan's time expired. His term expired in 1869.

Then there was a committee formed in the Treasury Department to codify the mint laws, and John J. Knox was at the head of it; and the extracts I have here are from the report of the committee. An elaborate bill was prepared, codifying the mint laws. It was sent to the Senate and introduced by the Senator from Ohio in the spring of 1870.

Mr. MITCHELL of Oregon. The Senator neglected to state that the bill he referred to was never called up in the Senate at all.

Mr. STEWART. Yes, it was.

Mr. MITCHELL of Oregon. I think not.

Mr. STEWART. It was called up in January, 1871, and the Senator from Ohio offered an amendment to it. That amendment provided for a seigniorage on coinage, a charge of three-tenths of 1 per cent upon the coinage of gold and silver, and that raised a discussion. It was the only discussion that was had on the bill. It was carried in the Senate as in Committee of the Whole, and when it was reported to the Senate the fight was renewed. It lasted two days, and the amendment was then rejected. The bill then passed, and the Senator from Ohio voted against his own bill.

The question that in that codification the silver-dollar coin would be left out was never raised and never known. It went to the House, and in the House it was acted upon. Finally, late in the discussion, after it had been there a year or more, Clarkson Potter discovered that it demonetized silver, that it changed the coinage laws, and a very lively discussion arose over it. It was withdrawn by Mr. Hooper from consideration, and some days after that, when Clarkson Potter was not in his seat, a substitute was presented by Mr. Hooper. He asked to have it passed without being read. It was passed without being read. But it raised questions on every side. They asked questions, and the questions and answers occupy two pages. They asked Mr. Hooper if the coinage laws were changed; if those matters which had been discussed were left out. He assured them that every matter that had been discussed and objected to was eliminated from the bill.

It came here. It went through the Senate without the attention of anybody being called to it. Nobody, of course, had read the discussion in the House. I had not. It was a codification bill. It passed here without anybody knowing anything about it. Here is the evidence—and it may as well go in—as to how the bill was passed. I read from the Senator from Ohio, Mr. Thurman, who was a most attentive member, observing with great care the proceedings in this Chamber. He was always in his seat, taking part in important legislation. On the 15th day of February, 1878, Mr. Thurman, in the debate, said:

> I can not say what took place in the House, but I know when the bill was pending in the Senate we thought it was simply a bill to reform the mint, regulate coinage, and fix up one thing and another, and there is not a single man in the Senate, I think, unless a member of the committee from which the bill came, who had the slightest idea that it was even a squint toward demonetization.—*Congressional Record*, volume 7, part 2, Forty-fifth Congress, second session, page 1064.

In the face of this we are accused of negligence, of participation, because, not being on the committee, not having our attention called to it, we did not stop it. How many things go through here daily coming from the Finance Committee, as to the details of which one-half of the Senate are ignorant? Senator Conkling, in the Senate March 30, 1876, during the remarks of Senator Bogy on the bill (S. 236) to amend the laws relating to legal-tender silver coins, in surprise inquired:

> Will the Senator allow me to ask him or some other Senator a question? Is it true that there is now by law no American dollar; and if so, is it true that the effect of this bill is to make half dollars and quarter dollars the only silver coin which can be used as a legal tender?—*Congressional Record*, volume 4, part 3, Forty-fourth Congress, first session, page 2062.

Mr. BUTLER. And that is the first time, as the CONGRESSIONAL RECORD shows, that any Senator on this floor (except the few who had charge of the bills of 1873 and 1874) had any suspicion that silver had been demonetized. In this connection it is important to note who answered the above question and what the answer was. It was the Senator from Ohio [Mr. SHERMAN]. What did he say? Here it is:

"I will answer the Senator from New York that since the law of 1853 the use of the silver whole dollar has been discontinued and none have been issued. That has been so since 1853."

Mr. Conklin further asked: "Is there power to issue it?"

Senator SHERMAN answered: "There is no power, and has been none."

It was this answer of Senator SHERMAN that gave the first direct knowledge to the public that the standard silver dollar of 412½ grains had been destroyed and the unit of value changed. Right here it is highly important that the facts be gotten straight. It is highly important for this Senate and the country to understand that from 1873 until 1876, through all the intervening legislation which had been so important to American industry and to the prosperity or adversity of our people, the fact that the silver dollar of our forefathers had been stealthily destroyed had remained a profound secret. I doubt whether the annals of history can parallel such an instance. This discovery led to inquiry as to how such legislation was made possible, and it is both painful and amusing to read the confessions of our eminent legislators upon the fact that they were absolutely ignorant that silver had been demonetized until the declaration of Senator SHERMAN that such was the fact. In fact, it was impossible to discover one single individual who was willing to stand up and become responsible for the outrage.

And now, if the Senator from Nevada will pardon me, for I see that he is still standing, I will say that, in further answer to the question asked by the Senator from New Hampshire, I intend now to proceed to take up the explanations, every one or as many as time will permit, that the various Senators made on the floor when they found that silver had been demonetized, and expressing their opinion about it and how it was done and the fact that they did not know it. I have all of those facts collected here. They have been put before the Senate by the Senator from Nevada [Mr. STEWART] and by a number of other Senators, but they can not be put before the Senate and have the attention of the country called to them too often, especially in view of the fact that we have a few men, patriotic men, like the Senator from New Hampshire, who want to do what is right and who have been imposed upon. It is important to get the facts before the Senate.

Mr. STEWART. I trust that the Senator from North Carolina will yield to me for a moment before he proceeds, for I can not sit in my seat when the Senator from New Hampshire accuses me of participation in this crime. The Senator from North Carolina will put these other things in.

Mr. GALLINGER. The Senator will permit me. I did not accuse him of participation in a crime. I accused him of participating in what I think was very patriotic action.

Mr. STEWART. Patriotic to rob the people and destroy their money? [Laughter.] A new kind of patriotism. Will the Senator allow me to point out this fact? There is one thing which the Senator may not have observed himself, to which I should like to call his attention.

Mr. BUTLER. Even if the Senator from Nevada had favored the gold standard, he was patriotic enough to change from it, and I am sure the Senator from Iowa does not object to a man changing his opinion.

Mr. STEWART. The Senator will indulge me for one moment. I will not read what numerous Senators have said in regard to the way the bill was put through, when they knew nothing of it. The Senator from North Carolina will do that. But I want to call attention to a little piece of strategy that was played on the passage of the bill. The provision of the bill which demonetized silver was contained in the sixteenth section. It was an amendment proposed by the Committee on Finance. All the other amendments were considered consecutively and acted upon until the sixteenth section was reached. The sixteenth section was stricken out by the Senate on the recommendation of the committee, but the Globe (the RECORD) does not show that the Senate ever took action on it, or that anything was put in its place by a vote of the Senate. The Globe read thus:

> The PRESIDING OFFICER. The question is on the amendment striking out the fifteenth section.
> The amendment was agreed to.
>
> The record then skips.
>
> * * * * * * *
>
> The next amendment was to strike out section 17, in the following words:
> "SEC. 17. That the minor coins of the United States shall be a 5-cent piece, a 3-cent piece, and a 1-cent piece; and the alloy for minor coinage shall be copper and nickel, to be composed of three-fourths copper and one-fourth nickel; the weight of the piece of 5 cents shall be 5 grams, or 77.16 grains troy; of the 3-cent piece, 3 grams, or 46.30 grains; and of the 1-cent piece, 1½ grams, or 23.15 grains; which coins shall be legal tender, at their nominal value, for any amount not exceeding 25 cents in any one payment."
> And to insert in lieu thereof the following:
> "That the minor coins of the United States shall be a 5-cent piece, a 3-cent piece, and a 1-cent piece; and the alloy for the 5 and 3 cent pieces shall be of copper and nickel, to be composed of three-fourths copper and one-fourth nickel; and the alloy of the 1-cent piece shall be 95 per cent of copper and 5 per cent of tin and zinc, in such proportions as shall be determined by the Director of the Mint. The weight of the piece of 5 cents shall be 77.16 grains troy; of the 3-cent piece, 30 grains, and of the 1-cent piece, 48 grains; which coins shall be a legal tender, at their nominal value, for any amount not exceeding 25 cents in any one payment."
> Mr. SHERMAN. There is an omission in the matter proposed to be inserted by the committee. I move to insert, in line 11, after the words "25-cent piece," the words "and a dime, or 10-cent piece."
> The amendment to the amendment was agreed to.
> The amendment as amended was adopted.
> The next amendment was, in section [18] 19, line 2, to insert, etc.

So, in passing the measure through the Senate, section 16, the section which demonetized silver, was not read at the desk, and if read at the desk it was not reported. It was skipped over, and I defy any man to find in all the proceedings in the Senate the slightest allusion to this transaction. The section which has made this country poor was not read at the desk, as all others were, and passed upon. Another peculiarity is that the Senate was full——

Mr. BUTLER. I call the attention of the Senator from New Hampshire to that, and I want him to help me find in the RECORD

some reference to the passage of the section which demonetized silver.

Mr. GALLINGER. It was printed in the bill.

Mr. BUTLER. But the point the Senator from Nevada makes is that it was not printed in the bill, but that it was an amendment proposed by the committee, and there is no record of it ever being offered in the Senate for action and there is no record of the Senate ever having acted upon it, or of it ever being read at the desk while the other amendments were being acted upon or upon the final passage of the bill.

Mr. GALLINGER. The Senators could not read.

Mr. BUTLER. They proceeded to act section by section——

Mr. GALLINGER. Does the Senator from Nevada charge that the Clerk, who was acting under his oath of office——

Mr. STEWART. I charge that it was not read. I charge nobody. I charge, according to the RECORD, that it was omitted; that it was an amendment which was not read, but which afterwards appeared in the law which demonetized silver.

Mr. GALLINGER. I will ask the Senator if it was not in the printed bill?

Mr. STEWART. No; it was not in the bill that lay on Senators' desks that day; it was a proposed amendment of the committee.

Mr. GALLINGER. And it had been printed, I suppose?

Mr. STEWART. Yes; it had been printed.

Mr. GALLINGER. Very well. I do not see who was deceived or imposed upon. It seems to me that if Senators could read in those days—I do not know how that may have been—they could not have been imposed upon in that manner.

Mr. STEWART. How many bills are there where the Senator from New Hampshire follows the amendments that are printed and thrown aside? Do you get the amendments? No; you rely upon their being read at the desk. They are read very carefully, sometimes repeatedly. When you have a bill under consideration you rely on the desk for information as to amendments which are being passed upon.

Mr. GALLINGER. I should like to ask the Senator what proof he has that the amendment never was read at the desk?

Mr. STEWART. Because it is not reported as all other amendments were.

Mr. BUTLER. The Reporter takes down everything that is read.

Mr. STEWART. He takes it down, and he has plenty of time to take down an amendment, if it is read. It does not appear in the Globe. It was omitted.

Mr. BUTLER. Now, this one very important fact is fixed beyond controversy, and we have the CONGRESSIONAL RECORD, or rather the Globe, as it was then called, for the proof. So now, if the Senator from Nevada will excuse me, I propose to show by the RECORD that when the specie resumption act of 1875 was passed Congress and the country did not know that silver had been demonetized, and I will prove this by the discussion that took place on this floor while that act was under consideration. I will also show that Congress would never have passed the act of 1875 if the fact had been known. Next, I propose to show by the testimony of Senators who, as soon as they discovered that silver was demonetized by the acts of 1873 and 1874, stood here in their places, whom we all know to be patriotic, wise, careful, and diligent—that they stood here and testified that they did not know that any such provision was contained in the act which was passed.

This specie resumption act of January 14, 1875, was introduced early in December, 1874, was briefly discussed in both Houses, but not a single reference was made to the fact that silver as one of the money metals had been destroyed. But, to the contrary, there is ample evidence that the fact of silver being demonetized was entirely unknown save to the few conspirators who manipulated that crime; that this act of specie resumption never could have become a law with the full knowledge of the destruction of silver is clearly proven by the passage of the Bland Act, and the Stanley Matthews resolution of 1878, which followed its discovery. This act was reported from the Committee on Finance by Senator SHERMAN on December 22, 1874, and after less than three hours' debate it was passed. It went to the House, where, on January 7, 1875, it was called up, and after being read was passed with even less debate than in the Senate.

In this hurried manner one of the most important, if not the most important, financial bill that ever passed any Congress was rushed through. During the brief discussion, however, in the Senate, we find a number of expressions which go to show that no one in this Chamber, save perhaps those who were managing the bill, knew or imagined that silver as money had been destroyed. It would be proper here to say that the present Senator from Ohio [Mr. SHERMAN] had full charge of this bill. Senator Schurz, in the course of a few remarks, said:

> The matter which I want to consider so as to give an intelligent vote is whether under present circumstances we can issue silver and keep it in circulation, or whether the circumstances surrounding us to-day or liable to surround us to-morrow are not such as will make it probable that silver put out will be melted into bullion and sent abroad.

The very fact that all the silver being coined at that time excepting the trade dollar was worth less than 100 cents in any market is conclusive evidence that Senator Schurz was not alluding to subsidiary coin. In discussing the bill, Senator Bayard, in objecting to some of its features, said:

> It is to contract your paper currency until you shall have such a volume that gold and silver, the money of the world, shall flow into the country to swell the combined volume of paper and coin again.

Senator Hamilton also declared in the course of the debate:

> The idea that this American Republic, this great country extending from the Atlantic to the Pacific, a gold producing and silver producing country, should at this day be paralyzed in all its industries, its shipping interests, its manufacturing interests, its agricultural interests, all going to the ground, mainly, if not altogether, from the fact that we have not a competing currency with the world, is insupportable.

Certainly none of these men knew that silver had been demonetized. But perhaps the most positive proof that this bill was passed without the knowledge that silver had been destroyed may be found in the special message sent to Congress January 14, 1875, by President Grant when he signed the bill. After making some suggestions as to providing for specie resumption, he said:

> In fact, to carry out the first section of the act would take a period probably beyond that fixed by law for final specie resumption. * * * It would seem a fair argument in favor of adopting one or more of these cities as the place or places for the establishment of new coining facilities.

In brief, President Grant recommended the establishment of mints at Chicago, St. Louis, and Omaha for the coinage of silver money in order to provide for this resumption act.

Not only this, but eight months after the passage of the bill President Grant wrote a letter to Mr. Cowdrey, which shows that he was still ignorant of the fact that silver had been demonetized. The following is an extract from that letter:

> The panic has brought greenbacks about to a par with silver. I wonder that silver is not already coming into the market to supply the deficiency in the circulating medium. When it does come, and I predict that it will soon, we will have made a rapid stride toward specie payments. Currency will never go below silver after that. The circulation of silver will have other beneficial effects. Experience has proved that it takes about forty millions of fractional currency to make small change necessary for the transaction of the business of the country. Silver will gradually take the place of this currency, and, further, will become the standard of values, which will be hoarded in a small way. I estimate that this will consume from two to three hundred millions, in time, of this species of our circulating medium.
>
> It will leave the paper currency free to perform the legitimate functions of trade and will tend to bring us back where we must come at last, to a specie basis. I confess to a desire to see a limited hoarding of money. It insures a firm foundation in time of need. But I want to see the hoarding of something that has a standard of value the world over. Silver has this, and if we once get back to that our strides toward a higher appreciation of our currency will be rapid. Our mines are now producing almost unlimited amounts of silver, and it is becoming a question, "What shall we do with it?" I suggest here a solution that will answer for some years, and suggest to you bankers whether you may not imitate it: To put it in circulation now; keep it there until it is fixed, and then we will find other markets.—*McPherson's Handbook of Politics for 1874*, pages 134 and 135.

This, supplemented with the fact that such champions of the free coinage of silver as the Hon. Richard P. Bland is recorded as not voting against the bill, ought to be sufficient evidence to every fair-minded man that it was passed without the knowledge that silver had been destroyed as one of the money metals of this country. Imagine, for a moment, the real situation and the amount of scheming and plotting that it had required to bring about the final and successful action upon this bill. President Grant had signed February 12, 1873, the act which prohibited the further coinage of the standard silver dollar. On June 22, 1874, he had signed another act which completely demonetized that silver dollar, and now, on January 14, 1875, he signs still another act to bring about specie resumption, and on that date sends to Congress a special message urging the establishment of two or more mints for the avowed purpose of coining these silver dollars which by his own acts he had previously destroyed. Such ignorance and want of ordinary care fails to inspire the political student of the present time with any marked degree of confidence in American legislation, except where the people are so thoroughly aroused that their representatives are as vigilant as their enemies. This act of 1875 was the most destructive in its final interpretation of any act which has passed Congress during the last quarter of a century.

It is this act which has kept sequestered in idleness in the vaults of our National Treasury one hundred millions in gold, upon which the people have been paying interest at the rate of 4 and 4½ per cent for bonds sold to obtain this vast hoard for the past twenty years. It is this bill that vitalized the act of 1870, and the still more infamous act of 1873. It is this bill, or rather the interpretation placed upon some of its provisions, under which the President of the United States claims the right to issue bonds to-day. It is under this act that he has issued two hundred and sixty-two millions of interest-bearing bonds in times of peace—issued them under questionable authority, issued them at less than their market value under questionable circumstances and

conditions to say the least, and issued them under the nose of Congress; issued them last year with a Democratic Congress sitting in these Halls; issued them again this year with a Republican Congress sitting in these Halls, with the country indignant at the outrage, with a majority of members privately criticising his action; and yet no bill has been offered by either Democrat or Republican to stop it.

It is this act, under the construction of the present Administration, which makes possible the so-called "endless chain," which is used to furnish speculators with gold from the United States Treasury whenever they so desire. In fact, this act, which was the crowning infamy of a series of infamous legislation, was consummated and successfully placed upon the statute book by the deepest fraud and deception. These United States bonds, which had been purchased at such a ruinous discount, were made payable in gold alone through the several acts which I have stated, each having been passed through both Houses of Congress and signed by the President without the knowledge that they contained provisions which destroyed silver as one of the money metals of this country and made our entire national indebtedness payable in gold alone, which has doubled the debt. This want of information as to the real status of the silver dollar was at last given to the public through an incident in a debate in this Chamber. During a discussion of a bill concerning the trade dollar, on March 30, 1876, Senator Conkling said, in speaking to Senator Bogy:

Will the Senator allow me to ask him or some other Senator a question? Is it true that there is now by law no American dollar; and if so, is it true that the effect of this bill is to make half-dollars and quarter-dollars the only silver coin which can be used as a legal tender?

This was referred to and read a few moments ago by the Senator from Nevada [Mr. STEWART], and in the same connection, it will be remembered, I called attention to the fact that it was the Senator from Ohio [Mr. SHERMAN], who made haste to reply. The reply of the Senator, which I read, was the first information that silver had been demonetized.

Now, let us see what other Senators said on this floor about the matter.

Senator ALLISON, on February 15, 1878, when the bill (H. R. 1093) to authorize the free coinage of the standard silver dollar and to restore its legal-tender character was under consideration, observed:

But when the secret history of this bill of 1873 comes to be told, it will disclose the fact that the House of Representatives intended to coin both gold and silver, and intended to place both metals upon the French relation instead of on our own, which was the true scientific position with reference to this subject in 1873, but that the bill afterwards was doctored, if I may use that term, and I use it in no offensive sense, of course—

Mr. Sargent interrupted him and asked him what he meant by the word "doctored."

Mr. ALLISON said:

I said I used the word in no offensive sense. It was changed after discussion, and the dollar of 420 grains was substituted for it.—*Congressional Record*, volume 7, part 2, Forty-fifth Congress, second session, page 1058.

On February 15, 1878, during the consideration of the bill above referred to, the following colloquy between Senator Blaine and Senator VOORHEES took place:

Mr. VOORHEES. I want to ask my friend from Maine, whom I am glad to designate in that way, whether I may call him as one more witness to the fact that it was not generally known whether silver was demonetized. Did he know, as Speaker of the House, presiding at that time, that the silver dollar was demonetized in the bill to which he alludes?

Mr. BLAINE. I did not know anything that was in the bill at all. As I have before said, little was known or cared on the subject. [Laughter.] And now I should like to exchange questions with the Senator from Indiana, who was then on the floor and whose business it was, far more than mine, to know, because by the designation of the House I was to put questions; the Senator from Indiana, then on the floor of the House, with his power as a debater, was to unfold them to the House. Did he know?

Mr. VOORHEES. I very frankly say that I did not.

(*Ibid.*, page 1063.)

Senator Beck, in a speech made in the Senate January 10, 1878, said:

It [the bill demonetizing silver] never was understood by either House of Congress. I say that with full knowledge of the facts. No newspaper reporter—and they are the most vigilant men I ever saw in obtaining information—discovered that it had been done.—*Congressional Record*, volume 7, part 1, Forty-fifth Congress, second session, page 260.

Senator Hereford, in the Senate, on February 13, 1878, in discussing the demonetization of silver, said:

So that I say that beyond the possibility of a doubt (and there is no disputing it) that bill which demonetized silver, as it passed, never was read, never was discussed, and that the chairman of the committee who reported it, who offered the substitute, said to Mr. Holman, when inquired of, that it did not affect the coinage in anyway whatever.—*Ibid.*, page 989.

Senator Howe, in a speech delivered in the Senate on February 5, 1878, said:

Mr. President, I do not regard the demonetization of silver as an attempt to wrench from the people more than they agree to pay. That is not the crime of which I accuse the act of 1873. I charge it with guilt compared with which the robbery of two hundred millions is venial.—*Congressional Record*, volume 7, part 1, Forty-fifth Congress, second session, page 764.

Mr. President, these are some of the expressions of Senators. Now, let us see what Congressmen and public men said on the floor of the House and elsewhere at that time.

The first witness I will introduce is Mr. Kelley, of Pennsylvania, who had charge of the bill. In a speech made in the House of Representatives on March 9, 1878, he said:

In connection with the charge that I advocated the bill which demonetized the standard silver dollar, I say that, though the chairman of the Committee on Coinage, I was ignorant of the fact that it would demonetize the silver dollar or of its dropping the silver dollar from our system of coins, as were those distinguished Senators Messrs. Blaine and VOORHEES, who were then members of the House, and each of whom a few days since interrogated the other: "Did you know it was dropped when the bill passed?" "No," said Mr. Blaine, "did you?" "No," said Mr. VOORHEES. I do not think that there were three members in the House that knew it. I doubt whether Mr. Hooper, who, in my absence from the Committee on Coinage and attendance on the Committee on Ways and Means, managed the bill, knew it. I say this in justice to him.—*Congressional Record*, volume 7, part 2, Forty-fifth Congress, second session, page 1605.

Again, on May 10, 1879, Mr. Kelley said:

All I can say is that the Committee on Coinage, Weights, and Measures, who reported the original bill, were faithful and able, and scanned its provisions closely; that as their organ I reported it; that it contained provision for both the standard silver dollar and the trade dollar. Never having heard until a long time after its enactment into law of the substitution in the Senate of the section which dropped the standard dollar, I profess to know nothing of its history; but I am prepared to say that in all the legislation of this country there is no mystery equal to the demonetization of the standard silver dollar of the United States. I have never found a man who could tell just how it came about or why.—*Congressional Record*, volume 9, part 1, Forty-sixth Congress, first session, page 1231.

Mr. Holman, in a speech delivered in the House of Representatives July 13, 1876, said:

I have before me the record of the proceedings of this House on the passage of that measure, a record which no man can read without being convinced that the measure and the method of its passage through this House was a "colossal swindle." I assert that the measure never had the sanction of this House, and it does not possess the moral force of law.—*Congressional Record*, volume 4, part 6, Forty-fourth Congress, first session, appendix, page 193.

Again, on August 5, 1876, he said:

The original bill was simply a bill to organize a bureau of mines and coinage. The bill which finally passed the House and which ultimately became a law was certainly not read in this House.

* * * * * * *

It was never considered before the House as it was passed. Up to the time the bill came before this House for final passage the measure had simply been one to establish a bureau of mines; I believe I use the term correctly now. It came from the Committee on Coinage, Weights, and Measures. The substitute which finally became a law was never read, and is subject to the charge made against it by the gentleman from Missouri [Mr. Bland], that it was passed by the House without a knowledge of its provisions, especially upon that of coinage.

I myself asked the question of Mr. Hooper, who stood near where I am now standing, whether it changed the law in regard to coinage. And the answer of Mr. Hooper certainly left the impression upon the whole House that the subject of the coinage was not affected by that bill.—*Congressional Record*, volume 4, part 6, Forty-fourth Congress, first session, page 5237.

Mr. CANNON, of Illinois, in a speech made in the House on July 13, 1876, said:

This legislation was had in the Forty-second Congress, February 12, 1873, by a bill to regulate the mints of the United States, and practically abolished silver as money by failing to provide for the coinage of the silver dollar. It was not discussed, as shown by the RECORD, and neither members of Congress nor the people understood the scope of the legislation.—*Ibid.*, Appendix, page 197.

Mr. Burchard, of Illinois, in a speech made in the House of Representatives on July 13, 1876, said:

The coinage act of 1873, unaccompanied by any written report upon the subject from any committee, and unknown to the members of Congress, who without opposition allowed it to pass under the belief, if not assurance, that it made no alteration in the value of the current coins, changed the unit of value from silver to gold.—*Ibid.*, page 4560.

General Garfield, in a speech made at Springfield, Ohio, during the fall of 1877, said:

Perhaps I ought to be ashamed to say so, but it is the truth to say that, I at that time being chairman of the Committee on Appropriations, and having my hands overfull during all that time with work, I never read the bill. I took it upon the faith of a prominent Democrat and a prominent Republican, and I do not know that I voted at all. There was no call of the yeas and nays, and nobody opposed that bill that I know of. It was put through as dozens of bills are, as my friend and I know, in Congress, on the faith of the report of the chairman of the committee; therefore I tell you, because it is the truth, that I have no knowledge about it.—*Congressional Record*, volume 7, part 1, Forty-fifth Congress, second session, page 989.

Mr. Bright, of Tennessee, said of the law:

It passed by fraud in the House, never having been printed in advance, being a substitute for the printed bill; never having been read at the Clerk's desk, the reading having been dispensed with by an impression that the bill made no material alteration in the coinage laws; it was passed without discussion, debate being cut off by operation of the previous question. It was passed, to my certain information, under such circumstances that the fraud escaped the attention of some of the most watchful as well as the ablest statesmen in Congress at that time. * * * Aye, sir, it was a fraud that smells to heaven. It was a fraud that will stink in the nose of posterity, and for which some persons must give account in the day of retribution.—*Congressional Record*, volume 7, part 1, second session Forty-fifth Congress, page 584.

Here are the unqualified acknowledgments of eminent statesmen that certain laws upon our statute books were placed there by fraud, stealth; that they were never knowingly acted upon by Congress, or in any manner were a part of the legislation of any Congress; yet, in the face of all this, every effort to rectify this wrong, to set aside this fraud, or to relieve the people from the baneful effects of this statutory monstrosity, has been met with

the most vicious resistance by the beneficiaries of these frauds and their advocates and abettors in both Houses of Congress.

Mr. President, was there ever an occurrence more strange or remarkable than this in the legislative history of this or any other country? Was there ever before passed as a law a measure of such tremendous and far-reaching results without the knowledge of the legislators? Has there ever before been slipped through such an important and dangerous measure, that has been so indignantly denounced by so many of the legislators and public men as a fraud and a crime, yet which continued to remain on the statute books with all the force and effect of law in spite of its paralyzing and poverty-breeding results for more than twenty years?

Mr. President, it is not only strange, but it is monstrously strange. Three-fourths of the American people demand that this fraudulent act be wiped from the statute books; yet for twenty-three years this fraud and this crime and its perpetrators have flourished, while the people have grown poorer, business has become stagnated and paralyzed, and the Government itself is on the verge of bankruptcy.

If there were sitting in the gallery of the Senate to-day a stranger from a foreign land who was not familiar with our political conditions, he would ask. "How is such a thing possible in a free government where each man has a vote and where the will of the people as expressed at the ballot box is the supreme law?"

There may be such a man now in the gallery, so I will explain it to him. It has happened in this way: In this country, until very recently, every voter has been bound and tied as a slave—a party slave—to one of the two old political parties. Each one of these parties had bound to them about the same number of slaves or voters. The masters or party leaders (as we call them) of these slaves have taught them that their greatest enemies were the poor slaves in the other party, and therefore that their highest patriotic duty was to beat the other slaves and to see to it that their own masters were placed in power.

These masters or party leaders not only took for themselves all the offices when they won, but they also accepted large campaign funds from the few gold gamblers and speculators who had been benefited and made immensely rich by the passage of this fraudulent law. Hence this fraudulent law has remained upon the statute books by the connivance and treachery of these masters or party leaders of both old parties, while their slaves have grown poorer each year and been bled and robbed by these money changers and gold sharks.

But you ask, "Why do not these slaves or voters rebel against such false and treacherous leadership?" The answer is, because the slaves are not organized, and therefore can not act in unison and concert. If one slave rebels, he has nowhere to go but over into the ranks of the other slaves. He simply changes masters and is still a slave and has no better master. Several hundred thousand of these slaves have been doing this very thing every election for the last twenty years, and hence first one set of masters or party leaders have gone into power and then the other. But the result each time has been the same. Everything has continued to go from bad to worse. It has proven to be a case of jumping from the frying pan into the fire.

But you ask, "Why do not these voters on both sides rebel at the same time, come together, assert their independence, and form a party of their own?"

That is just what they are now doing. They are rebelling from both sets of masters. They are coming together and forming a great and grand People's Party, and now there is for them hope in the near future. They will soon wipe out this fraud of 1873. They will wipe out many other crimes that these false and treacherous old-party masters have placed upon the statute books to rob the people for the benefit of the few. They will break down class legislation; they will provide for equal justice to all and special privileges to none. They will stop falling prices and restore prosperity to every laborer and to every honest industry.

As soon as this fraud of 1873 was discovered by the people in the year 1876, indignation ran high, and they determined to wipe out the crime through the instrumentality of one of the old parties. They elected a Congress in 1878 pledged with a large majority to repeal the demonetizing act and to restore the money of the Constitution.

The House of Representatives promptly passed a free-coinage bill and sent it to the Senate, but here the bondholders again succeeded in partially defeating the will of the people. The senate doctored the measure until it was only a shadow of its former self. Instead of the free coinage of silver bill, the Bland-Allison Act, providing for coining only a limited amount of silver by purchase, was passed. Thus the will of the people was defrauded by the Bland-Allison Act, which did not wipe out the crime of 1873, but which simply gave to silver a limited coinage under unfavorable conditions, and, besides, there was an exemption clause stuck in the Bland-Allison Act which almost entirely destroyed its limited good purposes and which has been of material help to the gold men. Under that section of the Bland-Allison Act, the provision allowing gold notes and mortgages, the gold sharks and usurers have plastered this country, and the same gold-exception clause is in force to-day. All of the act that was good has been repealed; the bad is left on the statute books. When the Senator from Iowa [Mr. GEAR] sent the bill to his constituent at home in 1890, and told him that it was not so good as he wanted, he did not know then, as strong as he was then for free coinage, that it provided for appreciating gold and depreciating silver. The Senator states in his letter which I have here that that bill would cause silver to rise, and he hoped it would go to par.

Mr. GEAR. It did, I believe.

Mr. BUTLER. It did rise for a short while only, but just as soon as the gold notes and mortgages which were provided for began to operate and the gold sharks had time to plaster this country with them, just so soon did the disparity begin to appear, and has almost steadily grown greater each year.

The people saw that they were defrauded by the Bland-Allison Act, so again in 1890 they rose up in arms with their ballots and elected another Congress pledged to completely wipe out the crime of 1873 and to restore silver to its constitutional place as legal-tender money on equal footing with gold. This time the Senate promptly passed a full free-coinage bill by a majority of 17, and sent it to the House.

The House had a large majority favoring the measure, but before it could be brought to a vote the bondholders and the bankers again got in their work. The party leaders in a Republican House, with the use of the party lash and with the use of Executive patronage, with the cooperation of their co-conspirators in the Senate, framed as a substitute a bastard bill known as the Sherman Act. Under the whip and spur of the party lash this act of 1890 was passed, which, instead of restoring silver as the people demanded, instead of improving on the Bland-Allison Act of 1878, as Congress was pledged to do, it actually struck another death blow to silver and resulted in a still greater triumph for the gold monopoly. Again the people were betrayed in the House by those elected as their friends. The indignation of the people against this cowardly makeshift, this latest crime in the galaxy of crimes, had no avail.

Mr. GEAR. I believed the Sherman law would perhaps raise silver to par. Silver did advance under that act at first, but then it began to go down, and the Republicans joined with the Democratic party to repeal that law, because they thought it was doing detriment to the country.

Mr. BUTLER. I will come to that in a minute; but did not the Senator know that that act could not bring back parity as long as the exception clause was in the law, permitting gold notes and mortgages payable in gold alone? Does he not know that that act is one of the most potent agents in the fall of prices and the appreciation of gold, to say nothing of treating silver as a commodity and denying it free coinage as gold has? Nothing but the purchasing clause of the Sherman Act was repealed. The gold exception clause and the infamous "parity clause" are still in force.

Mr. GEAR. Would the Senator set aside the law of contracts?

Mr. BUTLER. This Congress has the power to say to-morrow that there shall not be another gold note or a gold contract made in this country. I would not violate past contracts, but I would make them unlawful in the future if they call for payment in any particular or special kind of the lawful moneys of the United States. Every contract or obligation should be payable in any kind of lawful money.

Mr. HILL. Mr. President——

The PRESIDING OFFICER (Mr. PUGH in the chair). Does the Senator from North Carolina yield to the Senator from New York?

Mr. BUTLER. Not if the Senator wishes to move to adjourn. I desire to conclude my remarks this afternoon, and I am now nearly through.

Mr. President, when I was interrupted I had just shown how the bondholders had defeated the free-coinage bill in 1890 and put in its place the Sherman law, which was even worse than the Bland-Allison Act. It not only contained the fatal gold exception, but it reduced silver to a commodity, and provided for coining even a smaller amount.

But the greed of the bondholder was still unsatisfied, and he set about to control the nominee of both old parties in 1892, as he is now doing to control them in 1896, for the purpose of wiping out the last feeble resistance to the sway of the bondholders. Grover Cleveland and the Democratic party were this time the chosen agents for the deed. But in spite of the fact that the gold men controlled the nominee for the Presidency, the people, determined upon putting free coinage in the place of the Sherman Act, elected a Congress pledged to the free coinage of silver; but again, by the use of patronage and the party whip, this majority for the people was turned, in the special session of 1893, into a majority for the bondholders. What a humiliating, what an alarming spectacle!

And thus we stand to-day, with the mints of the United States closed to silver, with the people bound in the gold standard, with the Administration paying the debt of the country in a gold dollar three times more valuable than the Government promised to pay, with a Government not satisfied with this, but piling up more bonds under the fraudulent act of 1875 to be paid in still dearer dollars by future generations. Not only this, but every debtor forced to pay his debts in a constantly appreciating currency, while *his labor* and products constantly diminish in price measured in this unsound and dishonest gold standard. When shall this be stopped? If this Congress can not wipe out the crimes that have been committed, will it not at least raise the legislative arm of the Government and stop the Executive from piling up more debt upon the already outraged, oppressed, poverty-stricken, overburdened people?

This bill does not ask for much in behalf of the people of America; it does not even ask for the righting of past wrongs; it simply asks that no more crimes be committed upon the people. The burdens they have now are too grievous to bear. Shall the pillaging go further? Will either party raise its hand to stop it? The People's Party stands with six votes in this body to give either side a majority, or to join with patriots from both sides against the goldites to stay the hand of the gold thief and the bond grabber.

If you do not pass this bill you can not go into the next campaign and fool the people by telling them that you and your party are opposed to these infamous bond deals.

Let us pass this bill at once and send it to the other House for their action before we adjourn Congress. Notice the reports from the Treasury Department every morning. Over a million of dollars of gold is being now daily drawn from the Treasury under the "endless-chain" process and shipped to Europe to satisfy the demands of the ever unsatisfied gold ring. The President refuses to exercise the option vested in him by law to stop this raid, but he yields the option of the Government and bows to the demands of these foreign gold sharks. If we do nothing, bonds will be issued before Congress meets next December and more debt will be heaped upon the backs of an already overburdened and outraged people. Let us pass this bill and put a stop to such folly, to such madness, and to such crimes against the people.

Against Independent Free Coinage of Silver.

SPEECH

OF

HON. ROBERT J. GAMBLE,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 21, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 6119) authorizing the appointment of a nonpartisan commission to collect information and to consider and recommend legislation to meet the problems presented by labor, agriculture, and capital—

Mr. GAMBLE said:

Mr. CHAIRMAN: My remarks may not in all respects be germane to the subject now under consideration, but I desire at this time to ask the indulgence of the committee to a question that, in my judgment, seriously concerns every interest of labor, agriculture, and capital. After the subject has been so ably and exhaustively discussed by so many of the distinguished leaders upon either side in the present Congress, it may seem presumptuous in me at this time to claim your attention. Sufficient reasons to myself, however, justify me in asking recognition and expressing myself unreservedly upon the question of the independent, free, and unlimited coinage of silver by the United States at the ratio of 16 to 1. Such a discussion in every aspect is immediately concerned with the interests involved in the pending measure.

It is not my purpose to enter at large upon the history or philosophy of money. Its history and important functions have already been traversed by those more competent to illumine this great subject with the product of their research and the statement of their argument. It is sufficient to say that money has been one of the most potent factors in civilization, and probably next to language itself has been "the greatest instrument of association" amongst the peoples of the world. Its certain and steady influence upon all the forces of organized society for good or ill during the history of the race makes it especially important that in the closing years of the nineteenth century no step be taken involving such vast consequences without due regard to the history of mankind or an enlightened judgment from the world's experience.

I will confine myself to a more practical view of present conditions, the causes for their existence, and the duty of the Government in remedying existing evils, whatever they may be.

HOUSE REVENUE AND BOND MEASURES.

Very early in the present session, and before this House was fully organized for the proper transaction of business by the appointment of its committees, the President, on December 20, 1895, communicated to Congress, requesting that it—

Grant prompt aid, as it alone had the power to give, to prevent in a time of fear and apprehension any sacrifice of the people's interest and the public funds, or the impairment of the public credit in an effort by executive action to relieve the dangers of the present emergency.

The report of the Secretary of the Treasury at that time showed that during the fiscal year ended June 30, 1894, there was a deficiency of $69,803,260.58; for the year ended June 30, 1895, $42,805,223.18; and from the last-mentioned date to December 1, 1895, $17,613,539.24; making an existing total deficiency of $130,222,023. At the end of the present fiscal year it will amount to over $140,000,000.

The Republican majority of this House promptly and patriotically responded to the President's appeal, and within one week from the receipt of the message, by a decisive vote, passed House bill No. 2749, entitled "A bill to temporarily increase revenues to meet the expenses of the Government and provide against a deficiency." It was in no sense a Republican measure, but was born of the exigencies of the occasion to meet the admitted deficiencies in the revenues of the Government and to protect the integrity of the Treasury. The measure was only intended to be temporary, and by the limitations of its provisions would have expired, had it been enacted into law, on the 1st day of August, 1898.

It is idle to claim that the provisions of the measure were in all respects satisfactory to the Republican membership of this House. But, with a hostile Executive to confront, it would have been a disregard of the business interests of the country to have consumed the public time in the preparation of a measure strictly in line with Republican principles, well knowing, even if it met the sanction of the coordinate branch of the legislative department of the Government, it was sure to receive the disapproval of the President. Any other course than the one pursued would have added a still greater uncertainty and placed a still heavier burden upon the business disturbance without any prospect of compensation or relief.

It was admitted that the measure prepared would have added to our depleted revenues an annual increase of exceeding $40,000,000. It would have placed the Government in time of peace in a position so that it could meet its engagements without negotiating bond sales, or conducting itself as a spendthrift—living beyond its income—a condition in our business affairs that ought to bring a blush to every self-respecting citizen of the Republic.

The Republican majority of this House, in answering the President's appeal, did not stop with the passage of the revenue bill. On the 28th day of December, 1895, to more surely protect the credit of the Government, it passed House bill No. 2904, entitled "A bill to maintain and protect the coin-redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue."

By the courtesy of the House I was permitted to express my approval of the bill, when it was pending for consideration, and summarized my conclusions thereon, in part, as follows:

The bill is no departure from Republican doctrine, but simply supplements the present statute, leaving all existing provisions in full force upon the subject.

The provisions are all in favor of the Government, making the rate of interest lower and the time for which the bonds are to run much shorter.

It will preserve the gold reserve for the use which the original law contemplated, and prevent it from being wantonly diverted to replace the deficiencies in the revenues.

This bill was returned by the Senate with a free-silver substitute, and on the 14th day of February last was nonconcurred in by this body by the decisive vote of 215 to 90.

REPUBLICANS OF SOUTH DAKOTA ON SILVER IN 1894.

In obedience to the following resolution of the convention by which I was nominated, my vote upon the proposition was recorded in the affirmative:

We favor the use of both silver and gold as money, at a ratio of 16 to 1, confining the coinage of silver to the American product at the net cost of the actual expense of coinage; and we demand that silver as well as gold shall be a legal tender for the payment of all debts, both public and private; and we pledge the Congressional nominees of this convention to support the principles herein contained.

Since that time, however, the Republicans of my State have spoken upon this question, in their convention recently held, and I am released from the obligations of that instruction.

It is the highest gratification to me that henceforth I am permitted to follow my own judgment upon this important subject, guided by the declarations of the national platforms, and as interpreted by the great leaders of the party. I acknowledge the right of a convention to bind by affirmative expression its candidates upon any legitimate issue, and the Representative who would willfully violate such an instruction is unworthy of public confidence. In principle I was and am opposed to the Senate substitute to the bond measure of the House. If I misunderstood my obligation I am willing to accept the fullest responsibility. If I erred in the construction of my duty under the resolution I meant it should be against my bias as well as my inclinations. To me it seemed plain I could not in good faith take any other course under the conditions existing. I could not with propriety, when the question was pending, speak one way, in harmony with my convictions, and vote another, according to the instructions.

In my remarks upon the coin redemption fund I endeavored to show that the real seat of the present trouble is largely, if not wholly, due to a false economic policy, insisted upon by the Democratic party, in the face of overwhelming facts, as well as the logic of the present unfortunate condition of our industrial and commercial interests. As shown by the official records of the Government, the net loss in trade balance of the United States has been enormous during the operation of the Wilson-Gorman tariff as compared during a like period with the McKinley law.

I feel justified in making these preliminary observations for the reason I believe the subject of the tariff, as well as Democratic maladministration, alike project themselves into this discussion, and that the tariff is the controlling question for wise and conservative legislation. The reversal of the tariff policy of the Government, in my judgment, brought about the unfortunate condition in our financial operations, which heretofore did not manifest itself under Republican legislation.

"THE CRIME OF '73.

It is a favorite prelude to many of the advocates of free and unlimited coinage of silver to revert to the "crime of '73." For my part, I am not so much concerned as to the manner of the passage of that act as I am with the mighty changes that have been wrought in our own and in the world's history during the period intervening, and especially in its great industrial, commercial, and monetary relations. I trust I am candid enough at the outset to admit that, in my judgment, a great mistake was committed by demonetizing silver, not alone by this Government, but practically by the whole of Europe. I believe it ought to be restored, and in due time will be by international action. Could the hands be turned back upon Time's dial, and could we stand in the presence of the conditions then existing, I would favor undoing what was then done. But now we are confronted by changed conditions that are not lightly to be reduced by speculation or theory, or by bold denunciation or declamation. It sounds well to assert the necessity for a new "declaration of independence," and an absolute freedom in our commercial and monetary systems. It is a matter for just pride to proclaim that, although we are the youngest among the great powers of the world, we are the greatest in population, in wealth, in the producing power of labor, in the product of our manufactories, in physical resources, and in all the potential powers of development and growth.

It is well, however, to remember that a nation, like an individual, does not live unto itself alone. Our commerce and exchanges have a world-wide relation. We stand associated, in spite of legislation and of boundary, to the great governments of the world. We meet them in every port, compete with them in every market, and our transactions are measured by the world's recognized medium of exchange. Forceful as we are as a nation and as a proud and powerful people, yet our laws largely stop at the sea. They can not reach beyond and control and dominate the great nations of the earth in their commercial and monetary relations, which have been fixed by the world's experience and by its common consent.

Mr. Chairman, if we were called to act upon this proposition, and could we disassociate ourselves from the great world of commerce and its exchanges, with which we are most intimately related, it would be a much simpler proposition. It occurs to me, however, that we are dealing with a question world-wide in its proportions, and is not confined distinctively by geographical limitations. The consensus of the world's enlightenment and its judgment must be considered.

To my mind the advocates of free and unlimited coinage of silver by this Government alone take too narrow a view of the question. It is contended by no one with any degree of information upon the subject that the demonetization of silver by the United States alone brought about the appalling disaster to that metal and produced its tremendous fall. It must be conceded that the action of this Government was only a part of the transaction. Germany, Russia, France, Austria, Denmark, Norway, Sweden, Belgium, Holland, Switzerland, India, and to say nothing of Great Britain, alike struck the blow by which it was assailed, These are the powers that joined in the general assault.

After the lapse of over twenty years, and years the most marvelous in all the world's history, can it be asserted that this Government can now undo what was then done, and unaided and alone lift this tremendous weight that the world's civilization has pressed upon this metal, and make it current coin, which this overwhelming judgment has denied? If disaster has befallen silver, that as a matter of fact it has depreciated 50 per cent as the result of adverse legislation by the Governments named, as well as by the United States, what rule of logic will justify the assertion that this Government alone, without the concurrence of a single one of these powers, can replace silver to its position in the world, in monetary exchange, on a parity with gold at its old ratio, to whose demonetization they alike contributed?

WOULD CONTRACT INSTEAD OF EXPAND CIRCULATION.

The proposition, it occurs to me, would not lead to bimetallism, but would result in silver monometallism. Gresham's law would prevail and gold at once would go out of circulation. Instead of expanding our circulating medium it would contract it. This would mean the instant withdrawal of the entire stock of gold in the country, which is shown by the Report of the Director of the Mint for 1895 to be $636,229,825. It would mean even more than this if the advocates of free coinage failed in their prophecy, that by this act of the Government the price of silver did not raise in its commercial value 100 per cent. Nothing can be more certain in human affairs than as a result we would be on a silver basis. That such act by our Government would raise the commercial price of silver there is no question, but as to what amount, it occurs to me, is entirely speculative.

The amount and kinds of money in circulation in the United States when the Senate substitute was under discussion was as follows:

Gold coin	$499,262,686	
Gold certificates	49,847,849	
		$549,110,535
Silver dollars	56,629,676	
Subsidiary silver	64,387,135	
Silver certificates	331,614,339	
Treasury notes	110,221,185	
		562,852,335
Paper money:		
Greenbacks	245,745,840	
Current certificates	28,925,000	
United States national-bank notes	203,086,897	
		477,757,737
Total		1,589,719,607

As I have heretofore stated, the entire volume of gold coin and gold certificates would disappear, and it would cause a contraction of our circulation exceeding 34 per cent. Under such a condition our silver coin would not be sustained by gold as it now is, and it would be obliged to take its chances in the broad commercial world for its own survival. Upon the assumption of silver remaining at the same price in the markets of the world, unaffected by the proposed legislation, and assuming there would be an appreciation in the prices of all commodities in this country equal to the increase in the legal over the commercial ratio of silver, then the silver coin, silver certificates, and notes outstanding would in purchasing power be lessened one-half. Under such circumstances the same would be true as to the amount of uncovered paper. It would take years to supply the deficiency in the circulation with the mints of the Government run to their fullest capacity for that purpose, to say nothing as to the needs for the ordinary increase in population.

At any rate, serious if not disastrous consequences would follow if the disparity between the two metals were even 20 per cent, as it was admitted in the discussion it might be, when now it is 50 per cent. This disparity would have relation to all values and would not be confined alone to our circulation in the change from one standard to another.

COMPARISON IN COMMERCIAL TRANSACTIONS.

Our industrial business and commercial interests could in no way be benefited by such a course. We can not afford to chance all on assumption and bare hypothesis. It would be unwise to part company in our commercial relations with the great governments of mankind, representing the most potent factors in the world's civilization, in intellectual, social, and material development, and which, according to Muhleman, represent over 87 per cent of the world's commerce, and ally ourselves in a monetary policy with governments of an inferior civilization which have to do with less than 13 per cent of the commercial exchanges.

In order to make still more direct application to our own Government, let us examine the following table as to the value and destination of the exports of the United States during the period

named, based upon the authority of the Bureau of Statistics of the United States Treasury for 1895:

Valuation and destination of the exports from the United States.

Countries.	Exports, 1885 to 1894, inclusive.	Annual average.	Per cent of total.	Approximate population.
1. United Kingdom, Great Britain and Ireland	$4,060,135,619	$406,013,562	51.12	40,000,000
2. British colonies and dependencies	712,054,131	71,205,413	8.97	{ *10,000,000 / †300,000,000
	4,772,189,750	477,218,975	60.09	350,000,000
3. France, Germany, Holland, and Belgium	1,809,533,962	180,953,396	22.78	104,000,000
	6,581,723,712	658,172,371	82.87	
4. Russia, Austria, and other European states	482,379,273	48,237,927	6.07	230,000,000
	7,064,102,985	706,410,298	88.94	
5. China, Japan, and other countries in Asia not under British rule	116,481,826	11,648,182	1.47	
6. Africa, not under British control	6,847,818	684,782	.09	
7. Hawaiian, Philippine, and islands not British or Spanish	44,348,757	4,434,876	.56	642,000,000
8. Small unenumerated places	13,953,245	1,395,324	.17	
	7,245,734,631	724,573,462	91.23	
9. South America, omitting British Guiana	295,285,939	29,528,594	3.70	36,000,000
10. Spanish and French West Indies, Haiti, and Santo Domingo	244,755,771	24,475,577	3.08	2,500,000
11. Mexico	113,517,519	11,351,752	1.43	12,000,000
12. Central America, omitting British Honduras	44,053,995	4,405,309	.56	3,500,000
13. United States				70,000,000
Total	7,943,346,955	794,334,695	100	1,450,000,000

*White. †Mixed.

In the first, second, third, fourth, and practically the whole of the sixth group named with which we have any export trade silver is not admitted freely to the mints, and substantially the gold standard prevails. The silver standard prevails in the balance, subject to the following exceptions: In the ninth, Brazil, Uruguay, Chile, and Venezuela have discarded silver, and as our export trade to these countries amounts to over two-thirds of the whole group, the per cent of the whole as applying to this group would be 1.23 instead of 3.70.

In the tenth group the French colonies and Santo Domingo should be excluded. The same is true of Cuba and Puerto Rico, as they are under the Spanish system and silver has not been admitted to the mints of Spain since 1878, except on Government account. The volume of the metals in Cuba in 1895 was as 1 to 6 in favor of gold. Our export to these countries amounted to over three-fourths of the whole, and this would leave the per cent as representing that group 0.77. Combining, then, as thus corrected, the fifth, seventh, eighth, ninth, tenth, eleventh, and twelfth groups, we have 6.19 per cent as against 93.81 per cent.

In other words, the value of our exports to the countries practically upon a silver basis represents 6.19 per cent of the whole volume of our export trade, as against 93.81 per cent with the great governments of the world that have denied silver coinage on private account at their mints and to-day, although using silver enormously, are upon a gold basis. If free silver is to open to us so enchanting a field in our export trade as the silver advocates picture, it would seem from this view there is an intense necessity for its development. Their statesmanship, I think, is hardly equal to the task from such an outlook.

WHERE FREE COINAGE EXISTS SILVER ALONE CIRCULATES.

No country can be named where free coinage exists in which both metals circulate upon equal terms. Gold has disappeared in every nation where it is now attempted, and silver alone is the medium of exchange. Shall we take the highway that leads to the same sure result? History and experience are more weighty than assertion, and practical applications of principles as well as theories are best known by their fruits. If there were no other element to be considered in this discussion than the simple demonetization of silver by this Government alone, it could be approached with some degree of assurance. It might then be safely conceded that the injury could be repaired by its restoration to its old position by the sole act of this Government. But, Mr. Chairman, as I have already endeavored to show, it was not this single cause that wrought the injury, but the combined action of practically the whole of Europe. Nor is it seriously contended by any standard authority on monetary history that the action of this Government in 1873 alone produced this result. How could such an effect have been produced by such a cause under the conditions then existing?

EARLIER COINAGE OF THE UNITED STATES.

As shown by the last report of the Director of the Mint, the total amount of silver coined at our mints from 1793 to 1873 was $146,589,000. It practically all consisted of subsidiary coin. During this entire period only $8,000,000 of silver went to our mints and received the stamp of the Government in one-dollar coins.

From 1803 to 1839, a period of thirty-six years, only 1,621 silver dollars were coined. In consequence of our mintage law of 1834 undervaluing silver, it sought a market elsewhere, and when in 1853, in order to prevent it, we debased our subsidiary silver, there was practically none in circulation. In 1861 our metallic money entirely disappeared from circulation, and this condition existed in 1873. As a matter of fact, at that time as a nation we were in possession of little or no silver. The total coin in circulation was $25,000,000, and this consisted almost entirely of gold, and was confined to the Pacific Coast. In 1878, the year before the resumption of specie payments, the total amount of silver in circulation was $16,269,079. Is it possible the act of 1873, when it only had direct relation to so small a volume of our circulating medium, could impress itself with such disastrous consequences upon the coined silver of the world, at that date amounting to $1,816,516,657? Some other power must have been in operation aside from the law upon our statute books of that period to work the tremendous change.

If other causes intervened, and causes which we can not now control by legislation, in what manner can those forces be readjusted except by the concerted action of at least a part of those powers which brought about the original disturbance? It is asserted that opening the mints of the United States to the free coinage of silver at the old ratio, backed by the unlimited resources of this Government, would fix the price of the product the world over. Were this statement sustained by sufficient proof, historical or otherwise, I would be willing to accept it. But this assertion is the very essence of the contention, and ought to be sustained by substantial evidence. In a matter of such tremendous consequences to the business and commercial interests of the country an argument should be sustained by something other than assertion, something more than a mere hypothesis, something aside from speculation, and not in contravention of the teachings of history and the experience of mankind.

BALFOUR ON BIMETALLISM.

The position of Mr. Balfour, the recognized leader of bimetallism in England, a man of great learning and ability, and silver's conscientious friend, has often been referred to in this discussion, and especially by the advocates of the free and unlimited coinage of silver. He recognized grave difficulties at the outset in the solution of this question, as mentioned in his Mansion House speech in 1894. The first difficulty was the ratio between the two metals. He next asserts that no nation independently and for itself can successfully regulate its currency without regard to other governments, and that he who asserts to the contrary is a "dreamer of idle dreams." The following is that part of his address to which I refer:

> Now, the question with which we are concerned is whether it be or be not inexpedient to adopt by international agreement this double standard, and I am far from denying—and I think a bimetallist is a very poor friend of his cause who would deny it—that there are difficulties, difficulties of detail it may be, but still difficulties, inevitably attaching to the solution of this question.
>
> I have only to mention one of these difficulties—the difficulty, namely, of what shall be the ratio on which the nations of the world are to agree as that which is to govern the future relations between gold and silver in the double standard?
>
> I believe there are individuals who cherish the dream that currency is a matter for the State to regulate independently and for itself alone; that with its currency no foreign nation has a right to interfere; that it is a matter simply for the citizens of every community in relation to each other, and that the outside world need not be taken account of at all in coming to a decision upon a question which is one of purely domestic policy. Ladies and gentlemen, this is a dream. I will go further and say it is a dream worthy only of a mediæval dreamer. We have long passed that stage of civilization when each country was a self-contained or approximately self-contained national unit, and when it could afford to disregard the internal commercial relations of other countries. Those days have gone by; they have gone by never to return, and I do not think there is a man in this room who regrets it.

INTERNATIONAL BIMETALLISM IN EUROPE.

And this same eminent statesman and high authority on bimetallism stated no longer ago than the 17th day of last March, in the English House of Commons, when the Whitely bimetallic motion was pending before that body, that "he regarded the resolution as an indication that England was prepared to bear her fair share in establishing an international agreement for the use of both metals in the currency on a reasonable basis, just to debtor and creditor alike."

England, he says, is prepared to bear her "fair share in an international agreement." The thought of that great money power

alone assuming the responsibility does not seem to him worthy of consideration. Upon the same day the Protectionists' leader in the French Chamber of Deputies presented a resolution that the Government open negotiations for the bringing about of an international monetary agreement. The premier of the Belgian Government before the Chamber of Deputies of that Government, on March 13 last, urged "the reestablishment of international bimetallism, and assured the Chamber that the Government would acquiesce in any measure insuring by international agreement the stability of the monetary exchange of gold and silver."

No longer ago than last December a resolution passed the German Reichstag, by a decisive vote, declaring in favor of a larger use of silver and favoring international action looking to that end. From no quarter in Europe do we hear independent action by one government suggested, much less advocated by any respectable authority. They seem to recognize the fact that money has an international relation that can not be independently or arbitrarily controlled or regulated by the separate powers.

As stated by Mr. Balfour in his Mansion House speech, even the question of the ratio is an important consideration, but this is passed over lightly by our friends, as though 16 to 1 were the fixed and immutable law of nature, designed by the Creator from the foundation.

HAMILTON AND JEFFERSON ON LEGAL AND COMMERCIAL RATIO.

It did not appear to be so considered by Mr. Hamilton or Mr. Jefferson, the founders of the system in our early history. They sought most carefully and diligently to determine in the first instance the commercial relation between the metals, and thereby be able to declare by law the fact as it then existed in the commercial world irrespective of the statute. It does not appear to have been contemplated by these wise and farseeing statesmen that legislation as to the ratio would have any effect, or in any manner would modify the commercial ratio as then recognized by the business and commercial world.

Hamilton stated in his famous report to Congress:

> There can hardly be a better rule in any country for the legal than the market proportion. * * * The presumption in such case is that each metal finds its true level, according to its intrinsic utility, in the general system of money operations.

Jefferson entirely agreed with this position and expressed himself as follows:

> Just principles will lead us to inquire into the market price of gold in the several countries with which we shall be principally connected in commerce and to take an average from them.

CHANGING OF LEGAL RATIO BY UNITED STATES.

The ratio determined upon by the act of Congress of April 2, 1792, was 15 to 1. It was very soon made manifest in the exchanges that an error had been made, and which the law was unable to control. Although the mints were open to the free coinage of both metals at the above ratio, gold was undervalued, although by only a small per cent, yet it sought the markets of the world at its commercial value, avoided our mints, disappeared absolutely from circulation, and this in the face of our legislation, which in no manner appeared to control or affect it. Silver was current coin.

This was the condition up to 1834–1837, and again an attempt was made to fix the legal ratio so as to conform to the commercial value of the metals, and thereby be able to secure the concurrent use of both gold and silver in circulation. Congress fixed the ratio at 16 to 1. The new order was no better. A mistake was again made. This time silver was undervalued at its commercial ratio, and instead of silver seeking our mints and retaining its place in our coinage and circulation it absolutely disappeared and gold alone was in circulation. To such an extent did silver disappear from use by the shipment of our coins abroad that in 1853, in order to retain in circulation the subsidiary silver coin, it became necessary to reduce the amount of silver contained in them, and thereby prevent their shipment.

The greater part of the silver coins that had been in circulation from the organization of the Government up to this time was foreign and had been made legal tender by act of Congress. But on February 21, 1857, an act was passed declaring "that all former acts authorizing the currency of foreign gold and silver coins and declaring the same a legal tender in payment for debts are hereby repealed." This act struck down the larger part of the silver then in circulation and was the first act in its demonetization.

I cite these facts of our monetary history, not to sustain the proposition that the two coins can not be maintained in concurrent circulation at a fixed ratio or that this is absolutely necessary, but that they did not do so under most favorable conditions when the legal and commercial ratio only varied in a slight degree, and when we had the cooperation practically of all the great powers of the world. If we failed then, how can it now be asserted, with the disparity in ratio between gold and silver of 50 per cent, that we alone could succeed in lifting this tremendous weight with the pressure of the commercial world against it, and without their recognition or assistance.

I may be mistaken in my conclusions, but I shudder at such a step for the safety of my country. To my mind every interest of labor would be imperiled, all commercial, business, and industrial prosperity would hang in the balance. If the lessons of history are any guide, it occurs to me the results would be disastrous in the extreme. I hesitate to accept the opinion of any man, and refuse to take such a step unsupported by any evidence and contradicted by every parallel in the world's experience.

FOLLOW EXPERIENCE OF ENLIGHTENED GOVERNMENTS.

The Latin Union, after a fair trial, under favorable conditions, surrendered the responsibility, and shall we now assume what they laid down, with the tremendous changes that have since ensued? Shall we profit by the experience and enlightened judgment of French statesmanship that now maintains the parity of the two metals in full circulation, or shall we join Mexico in free coinage, with practical silver monometallism? Shall we place less reliance in the German Empire, with its high order of talent in statecraft, in philosophy, and in learning, than in China, that stands palsied in the presence of modern civilization? Shall we join progressive Japan in a policy recognized by her as entirely inadequate to her growing necessities, and from which she is struggling to release herself? There free coinage of silver has recently been arrested except on Government account. Shall we break the commercial bond with the Anglo-Saxon race, upon which rests the highest aspirations for the world's future in civil government and ally its endeavors in the Western world with the stolid movements of the Orient?

In short, shall we keep in commercial sympathy with the leaders and potential factors in the world's enlightenment and progress, that have given it its history and its genius in civil government, or shall we turn our eyes for brighter hope to nations of inferior standing in all the elements of mental, social, and material development?

USE OF SILVER BY UNITED STATES SINCE 1873 AND ITS FALL.

We have listened to very much harsh criticism as to the hostile treatment of silver by this Government since 1873. It is well to admit it was demonetized and robbed of full money function. But it suffered like treatment at the hands of the other governments I have named. Aside from this one fact (which I am free to admit is a very grave one), no other government has been more generous in its recognition or use. Under the Bland-Allison Act of 1878 and the Sherman Act of 1890, which authorized and directed the Secretary of the Treasury to purchase a certain amount of silver per month, and in pursuance of that legislation the Government up to the latter part of 1893 purchased practically the entire product of the mines of the United States, amounting to nearly 460,000,000 ounces. The vast output of silver which has been coined by the Government since 1873, as shown by the Director of the Mint, amounts to $538,444,467, and which by the legislation of the Republican party has been maintained at a parity with gold. And by the same authority it is stated we had on hand on July 1, 1895, of silver (including bullion in mints and mercantile safe deposit companies), $625,854,949.

Yet, notwithstanding this immense purchase of silver bullion by the Government during this period, it apparently had little or no influence upon its market value. It constantly, with but little variation, declined. The following table, taken from the Report of the Director of the Mint for 1895, shows the average price of silver per fine ounce during the period to which I have referred:

Average price of silver from 1878 to 1894.

1878	$1.2048	1887	$0.9810
1879	1.1218	1888	.9547
1880	1.1440	1889	.9338
1881	1.1328	1890	.9668
1882	1.1351	1891	1.0901
1883	1.1174	1892	.9402
1884	1.1120	1893	.8430
1885	1.0897	1894	.7313
1886	1.0334		

WORLD'S PRODUCTION AND USE OF SILVER SINCE 1873.

In addition to the large use of silver by our own Government we find its coinage was marvelously augmented in the mints of the world, as shown by the Report of the Director of the Mint for 1895, at page 51. It is there stated that from 1873 to 1894 there was coined in silver $2,756,423,015. By the same authority, at page 41, we find the stock of coined silver in the world on January 1, 1895, was $4,070,500,000, and that of this amount $3,439,000,000 is full legal tender. Excluding recoinages, it will be observed that exceeding 66 per cent of the present stock of the coined silver of the world has gone to the mints since the act of 1873 was passed.

It occurs to me, Mr. Chairman, there is another fact, aside from the act of demonetization in 1873, which ought to be considered in connection with the tremendous fall in silver during the period in question. Two facts are practically coincident in the year 1873—demonetization and enormous production of silver—which has

since continued. The following table is taken from the Report of the Director of the Mint for 1895 (pages 248–249):

Production of gold and silver in the world since the discovery of America.

[From 1493 to 1885 is from a table of averages compiled by Dr. Adolph Soetbeer. For the years 1886 to 1894 the production is the annual estimate of the Bureau of the Mint.]

Period.	GOLD. Annual average for period.		SILVER. Annual average for period.	
	Ounces, fine.	Value.	Ounces, fine.	Coining value.
1493–1520	186,470	$3,855,000	1,511,050	$1,954,000
1521–1544	230,194	4,759,000	2,899,930	3,749,000
1545–1560	273,596	5,656,000	10,017,940	12,952,000
1561–1580	219,906	4,546,000	9,628,925	12,450,000
1581–1600	237,267	4,905,000	13,467,635	17,413,000
1601–1620	273,918	5,662,000	13,596,235	17,579,000
1621–1640	266,845	5,516,000	12,654,240	16,361,000
1641–1660	281,955	5,828,000	11,776,545	15,226,000
1661–1680	297,709	6,154,000	10,834,550	14,008,000
1681–1700	346,095	7,154,000	10,992,085	14,212,000
1701–1720	412,163	8,520,000	11,432,540	14,781,000
1721–1740	613,422	12,681,000	13,863,080	17,924,000
1741–1760	791,211	16,356,000	17,140,612	22,162,000
1761–1780	665,666	13,761,000	20,985,591	27,133,000
1781–1800	571,948	11,823,000	28,261,779	36,540,000
1801–1810	571,563	11,815,000	28,746,922	37,168,000
1811–1820	367,957	7,606,000	17,385,755	22,479,000
1821–1830	457,044	9,448,000	14,807,004	19,144,000
1831–1840	652,291	13,484,000	19,175,867	24,793,000
1841–1850	1,760,502	36,393,000	25,090,342	32,440,000
1851–1855	6,410,324	132,513,000	28,488,597	36,824,000
1856–1860	6,486,262	134,083,000	29,095,428	37,618,000
1861–1865	5,949,582	122,989,000	35,401,972	45,772,000
1866–1870	6,270,086	129,614,000	43,051,583	55,663,000
1871–1875	5,591,014	115,577,000	63,317,014	81,864,000
1876–1880	5,543,110	114,586,000	78,775,602	101,851,000
1881–1885	4,794,755	99,116,000	92,003,944	118,955,000
1886	5,135,679	106,163,900	93,297,290	120,626,800
1887	5,116,861	105,774,900	96,123,586	124,281,000
1888	5,330,775	110,196,900	108,827,606	140,706,400
1889	5,973,790	123,489,200	120,213,611	155,427,700
1890	5,749,306	118,848,700	126,095,062	163,032,000
1891	6,320,194	130,650,000	137,170,919	177,352,300
1892	7,102,180	146,815,100	153,151,762	198,014,400
1893	7,609,242	157,297,000	165,165,876	213,547,800
1894	8,705,836	179,965,600	166,601,995	215,404,600

While the production of silver from 1493 to 1873, a period of three hundred and eighty years, amounted to $589,088,000, yet from 1873 to 1894, a period of twenty-one years, it amounted to the enormous aggregate of $1,978,296,000. In other words, in the brief period of twenty-one years the output exceeded that of nearly the four centuries preceding by almost 350 per cent.

I am free to admit the production of gold also increased in almost like ratio from the year 1850 and that it has been greatly accelerated during recent years. From the mere inspection of the table it occurs to me other causes have contributed to the fall of silver aside from the act of our own Government. Physical causes, as well as legal, have alike been potent. In consequence of the vastly increased production of gold there has been much more of that metal to take the place of silver in the mints where the free coinage of the latter is denied. And of the vast amount of silver now in use in the world, as before stated, over 85 per cent is full legal tender. And this, with the gold, has thus been enabled to do the work that heretofore was performed by both metals with silver having free access to the mints.

If silver has had such a large use during this period, greater than during any like era in the world's history, must there not be some far-reaching and controlling cause other than the action by this Government that has gradually borne it down? To assent to such a proposition seems to me the very acme of credulity. And to assert that by the mere fiat of this Government, great as is its wealth, its resources, and its potential energies, it can add 100 per cent in value to the immense stock of silver in the storehouses of the world is outreaching the limits of the possible in human affairs. The ablest champion of the proposition on this floor, and to whom I have heretofore alluded, admitted it might not be possible, and there might be a difference in the ratio in favor of gold of 20 per cent. Such a confession, it seems to me, destroys the force of the whole contention. If we lost our gold at one time and our silver at another in the earlier part of our history, when the difference in the ratio was only nominal, there can be no question under such a condition that every dollar of our gold would at once disappear from circulation.

EFFECT ON VALUES, BUSINESS, AND LABOR.

Mr. Chairman, I will not stop to consider or even forecast the condition of our business affairs under the impending change. Every man could foresee it. When it was known that the Congress of the United States would pass such a measure, and that a President would approve it, every creditor would seek to enforce his demands and reduce his holdings to money or its equivalent. The foreign as well as the domestic holders of our bonds and securities would flood every market in the eager rush for their redemption before such a law could be placed on our statute books. The same would be true of every security and obligation. All would want to convert into cash, and none would be purchasers.

Every debtor would be pushed to the extreme. No extensions would be granted, and every debtor would go down in a general maelstrom of disaster. Pandemonium in business disasters would run riot. The selfish creditor would make haste to secure the full equivalent of his securities before the impending disaster of a depreciated currency would ensue. Defenseless debtors would be driven into hopeless bankruptcy, their mortgages foreclosed, their collaterals sacrificed upon a market where chaos reigned, with capital in hiding and bidders dumb. Wealth could protect itself, but the debtor of whatever class would be swept down in the common avalanche of disaster. And labor, until a readjustment under the new order was made, would be helpless; at best the purchasing power of his wages would be reduced immeasurably, and in proportion to the depreciation of the money in which it was paid.

The level of all prices would advance as measured by the inferior money. But wages never have increased in like proportion to the depreciation in the value of money in circulation or in the increase in the price of commodities. Labor in the meantime would stand at a tremendous disadvantage and would suffer untold loss for an indefinite period. This fact was abundantly demonstrated during our late war. It was four years after the close before the rates of wages corresponded with the rise in prices of commodities. During the intervening period, in which we had a depreciated currency, there was a difference between the advance in the rate of wages and of commodities which the laborer was obliged to purchase for his necessaries as follows: In 1862, nearly 18 per cent; in 1863, 38½ per cent; in 1864, 65 per cent; and in 1865, 74 per cent. It was 1869 before the equilibrium was finally established.

FALLING PRICES.

It occurs to me, Mr. Chairman, that we might stop here for the absolute lack of evidence on the part of the advocates of free coinage to sustain in any manner their contention. I desire, however, to enter into another branch of the discussion upon which so much stress is laid, and that is, the fall in the prices of commodities since 1873. I will not claim "that there is not a single important product of industry in agriculture, manufacturing, transportation, or commerce in which there has not been a reduction in the cost of production or distribution which will not more than account for any reduction in price which has occurred between 1873 and 1892." I believe, however, the statement is to a certain extent correct.

The method usually pursued to sustain this claim is inaccurate and misleading in the extreme. Miscellaneous articles are combined without any relevancy as to character or method of production, an index number is taken for a particular year at 100, and averages follow for corresponding years. Conclusions are arrived at surprising in the extreme, but absolutely lacking in credibility when subjected to analysis.

"Falling prices" in certain articles is that for which ingenuity and mechanical skill have been persistently struggling. The manufactured article has fallen, fallen enormously, and it is well that it should. The forces of modern civilization must have wrought in vain if this desired result has not in some manner been realized. The inventive ingenuity of our citizenship has displayed itself in every avenue of our industrial and commercial life. As a result, labor-saving devices have been multiplied. Within these years the artisan has changed from a mere laborer to a director of mechanical appliances, and his product has been vastly augmented. Improved processes in manufacture, the lowering of rates of transportation by more than one-half, the lessening rates of interest, the forces of more extended competition, a higher culture, and the greater efficiency of labor itself have all alike contributed, as they properly should, to the lessened cost of production, and hence to the price of the manufactured article, and with which the act of 1873 bears no possible relation.

PRICES OF AGRICULTURAL STAPLES AND FOOD PRODUCTS SUSTAINED; MANUFACTURED ARTICLES DECLINED.

If in the preparation of these tables the articles of manufacture are included with the staple products, the result will and should show a fall in prices. But, on the other hand, if these articles be kept separate, the result demonstrates the fact that, while the fall in price is most marked in the products of manufacture, the agricultural staples and food products as a whole have been sustained, especially up to the latter part of 1892, when it was known that Democracy and "tariff reform" were triumphant. Illustrating as well as demonstrating this statement, I insert as a part of my remarks the following table, subdivided into groups, prepared by the eminent statistician, Dr. Soetbeer, from the most trustworthy data, based on the prices of 100 articles at Hamburg and 14 leading articles of British manufacture from 1851 to 1885. The average price of all of these articles from 1847 to 1850 was taken as the base, or 100

in the comparison, for the reason that these years prices as a whole were normal:

Groups.	1866-1870.	1881-1885.
Products of agriculture, etc	137.74	130.77
Animal and fish products	138.35	150.65
Southern products, etc	121.54	134.41
Tropical products, etc	118.32	119.91
Mineral and metals	95.47	81.55
Textile materials	129.17	96.65
Miscellaneous	105.90	91.11
14 British manufactured articles	130.55	103.28

As further demonstrating the same proposition, and having perhaps a more direct application, for the reason of its more recent compilation, and as practically having relation to our own domestic concerns, I insert the following table. It is from the Forum of April, 1895, which has heretofore been referred to in this discussion. In the compilation of the table the prices and wages are derived from the report of the Finance Committee of the United States Senate, compiled under the direction of the Hon. Carroll D. Wright. The prices, as well as the prices in London, which are given in terms of gold, compiled by Mr. Augustus Sauerbeck, have been completed and compared on the unit of 100 in 1860 by Prof. Roland P. Falconer, of Johns Hopkins University:

Prices, wages, purchasing power.

	1845.	1850.	1855.	1860.	1865.
Meat	79.4	86.6	104.7	100	197
Other food	82.8	80.7	114.5	100	240.3
Cloths and clothing	97.1	91.3	94.7	100	209.2
Fuel and lighting		102.6	121.1	100	237.8
Metals and implements	110.8	114.8	117.8	100	191.4
Lumber and building materials	106.7	102.2	103.4	100	182.1
Drugs and chemicals	121	123.6	129.2	100	271.6
House furnishing	102.3	125.6	121.1	100	181.1
Miscellaneous	114.8	107.7	115.2	100	202.8
Average of all prices	102.8	102.3	113.1	100	216.8
Average of all wages	86.8	92.7	98	100	143.1
Average wages by importance	85.7	90.9	97.5	100	148.6
Salaries of city teachers	74.8	83.8	91.4	100	134.7
Paper money	100	100	100	100	49.5
Gold price of silver bullion in London	95.3	97.3	100	100	99
Purchasing power of wages	84.4	90.6	86.6	100	66

	1870.	1875.	1880.	1885.	1890.
Meat	174.3	140.4	103.6	107.6	99.6
Other food	146.3	135	116.9	97.2	103.5
Cloths and clothing	139.4	120.1	104.5	84.8	82.4
Fuel and lighting	196.5	156.5	100.2	89.6	92.5
Metals and implements	127.8	117.5	96.3	77.4	73.2
Lumber and building materials	148.3	143.7	130.9	126.6	123.7
Drugs and chemicals	149.6	144.2	113.1	86.9	87.9
House furnishing	121.6	95	85.2	70.1	69.5
Miscellaneous	148.7	122.9	109.8	97.5	89.7
Average of all prices	142.3	127.6	106.9	93	92.3
Average of all wages	162.2	158.4	141.5	150.7	158.9
Average wages by importance	167.1	158	143	155.9	68.2
Salaries of city teachers	186.3	188.1	182.8	186.3	86.3
Paper money	81.1	88.8	100	100	100
Gold price of silver bullion in London	98.2	92.2	84.7	78.7	77.4
Purchasing power of wages	114.1	124.1	132.3	162	172.1

It is evident from an inspection of the foregoing table that the products of agriculture in 1890 maintained and even exceeded the prices of 1860, when silver was admitted to the mints. All articles of manufacture, with the single exception of lumber and building material, have been wonderfully reduced in price, and very much below that prevailing in 1860, and especially in the succeeding years up to 1890. The implements of husbandry, the furnishings of the home, clothing—these articles so indispensable to comfort and domestic happiness—were brought within the reach of the individual.

And at no time in our history or in the history of the world had the product of the day's labor so great a purchasing power. What was true in 1890, as demonstrated by the foregoing table, was still further manifested in 1892. And although wages had increased 58 per cent since 1860, the purchasing power had increased 72 per cent, indicating that this greatest of all commodities had been most marvelously conserved. At that time also the most fortunate conditions prevailed in all our industries, and labor found the fullest employment, and few, if any, were unemployed.

The same distinguished authority, in the May number of the same periodical for 1892, speaking of the conditions then existing, which it will be remembered was when Mr. Harrison was President and before the calamity of the present Administration was foreshadowed, stated:

There has never been a period in this or any other country when the general rate of wages was so high as it is now or the price of goods relatively to the wages as low as they are to-day, nor a period when the workman, in the strict sense of the word, has so fully secured to his own use and enjoyment such a steadily and progressively increasing proportion of a constantly increasing product.

FLUCTUATION IN ENGLISH GOLD PRICES BEFORE AND SINCE 1873.

I desire now to show the fluctuation in the English gold prices of forty-three articles of necessity which are in common use, comprising vegetable and animal foods, tea, coffee, sugar, minerals, textile materials, and sundries. The table was compiled by Professor Falconer from Sauerbeck's table of gold prices in London, the unit or index number being taken at 100 in 1860. Silver had free access to the mints in the period between 1846 and 1872, inclusive; and in the second period the gold standard practically prevailed. In the first period unusual conditions prevailed to abnormally raise prices. The great conflicts between Austria and Prussia, Germany and France, the Crimean as well as our own great struggle, occurred in this period. The war of England with China also marked this era. During the second period it was practically a time of peace and of unusual production and competition, which is conducive always to lower prices:

1846 to 1873, inclusive.

1846	92.2	1856	102.8	1866	106.5
1847	97.9	1857	106.9	1867	103.9
1848	79.9	1858	93.3	1868	103.1
1849	76.4	1859	95.2	1869	101.9
1850	79	1860	100	1870	100.3
1851	77.1	1861	99.6	1871	102.6
1852	80.8	1862	105.6	1872	112.5
1853	96.9	1863	109.3	1873	116.6
1854	106.2	1864	112.3		
1855	103.1	1865	105.8		

1873 to 1891, inclusive.

1883	116.6	1880	91.8	1887	70.7
1874	107	1881	88.5	1888	73.9
1875	100.3	1882	88	1889	76.7
1876	97.5	1883	86	1890	76
1877	97.4	1884	79.3	1891	75.4
1878	91.2	1885	75.4		
1879	86.7	1886	72.4		

Recourse, as a rule, is always had by the advocates of unlimited coinage to the table prepared by Mr. Sauerbeck to establish the "fatal fall" in prices since the demonetization of silver in 1873. From a careful survey of the foregoing table it will be discovered that during the first—the bimetallic—period, when the price of silver was practically uniform, there was a fall in the year 1849 to substantially the same average as in 1890 and 1891. Then a rise, a fall, and a rise in 1864 to nearly the same level as prevailed in 1873. Succeeding 1864 there was a fall, and then succeeded "The final great speculative rise and financial debauch in 1873, when English credit and goods began to spread over the world in a way which but lately culminated in the disastrous losses in Australia and South America."

Will some advocate of unlimited coinage explain the lack of parallelism between silver and commodities in the first period, when there was constant fluctuation of the price of commodities, and silver remained fixed and stationary? In the second period, however, they argue there is the closest sympathy and inseparable relation. I do not believe the demonetization of silver in 1873 is a sufficient answer.

As further explaining the tables in question I read from the article to which I have referred:

It will be observed that there were greater fluctuations and variations in the course of prices and almost as great a fall at one period between 1846 and 1872, when the Latin Union was in existence, and silver was coined in France freely at the ratio of 15½ of silver to 1 of gold, as there have been since silver was deprived of its full function of legal tender.

When each separate type of the 43 articles is dealt with year by year, it is found that a few have risen since 1873, others have fallen but little, others greatly, others have varied from year to year, but there is no sign of any influence causing a steady tendency to depression, such as is asserted by the so-called bimetallists.

Since 1873 there have been less fluctuations than before, rather an orderly reduction in most prices, varying slightly with the difference in seasons in each year, but corresponding closely with reduction in cost. This beneficial fall has been accompanied by a corresponding or correlative rise in wages—greater in the United States than in any European states. Since 1873, under the influence of peace and the stability of the gold unit of value, this beneficent fall in prices has also been accompanied by a vast development of international commerce.

FALL IN PRICES COMMENCED BEFORE 1873.

Mr. Chairman, as a matter of fact, and as conclusively established by the tables of Mr. Sauerbeck, in which full reliance is placed by the advocates upon either side of this controversy, not only on account of the eminent character and ability of the author, but by his exhaustive and far-reaching investigations, the "fatal fall" in prices really commenced in 1864–65 instead of in 1873. In the latter year and the one preceding it abnormal and unusual conditions existed, that forced prices up in the speculative and financial excesses then prevailing, to which I have heretofore alluded. The facts of our own history conclusively demonstrate that falling prices set in almost immediately after the close of the civil war.

These tables further show, and as most forcibly illustrated by the chart prepared therefrom and used by my learned and able friend from Minnesota [Mr. McCLEARY] in his speech recently upon this subject, that the average fall in prices during the bimetallic period between 1818 and 1852 was as great as, and even greater than, during the gold period from 1873 to the present time. The year 1873 was not the commencement of the fall of prices in that era, but such a condition had for some time been prevailing.

This position is sustained by one of the most eminent authorities, Jevons, in his admirable work on Money and the Mechanism of Exchange. In speaking of the value of money, he states: "From 1809 to 1849 it rose again in the extraordinary ratio of 100 to 240, or 140 per cent." In other words, if the purchasing power of money rose so enormously it means that prices fell in a corresponding degree, or at the ratio of 240 to 100. Can it be claimed by the most ardent advocates of unlimited coinage that the fall in prices since 1873 bears any like proportion to the conditions then existing, and that, too, at a time when silver was freely admitted to the mints and practical bimetallism was in force with the commercial nations of the world?

During the existence of the mint ratio of France, from 1803 to 1873, though persistently asserted to the contrary, it is nevertheless true that the prices of commodities constantly fluctuated. Evidence is wholly lacking to show any relation as between prices and silver, which, during this period and long prior to the enactment of the French law, had maintained the same unvarying ratio with gold. Another fact is strongly brought to light by the tables of the eminent statistician, Dr. Soetbeer, that from 1851 to 1885, inclusive, the years covered by his investigations, at no time did the average prices of agricultural products fall below his standard of comparison (the prices from 1847 to 1850), when bimetallism was in force, and in 1885, as well as the average price from 1873, was very much higher.

It is further demonstrated by these tables, and it was strikingly illustrated by appropriate charts in the discussion recently had by the learned gentleman to whom I have already alluded, that the chief animal food products, which is a subject of especial interest to the agriculturist, although subject to frequent fluctuations, have since 1873 maintained a price very much above that prevailing with the standard of comparison in 1847–1850, when silver was admitted to the mints.

SENATE REPORT ON PRICES AND WAGES.

We are not confined, however, to the data even of such eminent authorities as Dr. Soetbeer and Mr. Sauerbeck. The investigation made upon the subject of prices and wages under the authority of the Finance Committee of the United States Senate, to which I have heretofore referred, covered 223 different articles from 1860 to 1891, but only embraced 85 from 1840. The accuracy of the deductions I have never heard questioned. Partisanship in no sense entered into the inquiry, and the report has been accepted as unbiased.

This report shows that the average of all wages, without taking into consideration the lessened hours of labor, as I have already stated, had increased 58 per cent as compared with those prevailing in 1860, and that its purchasing power had increased 72.1 per cent. If regard be had, however, to the hours of employment, real wages had increased 97 per cent in effectual purchasing power. The report further shows that food products from 1873 to 1891 had fallen less than 10 per cent, but making the comparison with the prices prevailing in 1860 they were higher in 1891 by 18 per cent. Building materials had fallen nearly 20 per cent, house furnishings 27 per cent, clothing 32 per cent, and agricultural implements 35 per cent.

As further showing the enormous increase in the rate of wages, I refer to a recent address delivered by Hon. Carroll D. Wright, in which his examination covered an extensive period, the most important in modern times—from 1850 to 1890. They show a constant increase from an average of $247.38 per year in 1850 to $302.08 in 1870, and to $444.83 in 1890. Strange as it may seem, the rate of increase has been at a much higher percentage since the act of 1873 than before. Marvelous discoveries and the multiplicity of inventions in these years have amazingly developed man's capacity in production, and it has become an age more of mental than physical exertion in every department of life. As stated by an eminent authority, "the productive capacity of an average operative in a given mill, working year by year throughout the period, has increased from 4,320 yards a year in 1830 to 9,607 yards in 1840, and in 1894 was over 30,000 yards."

It is also stated by Mr. Wright, in the address to which I have already referred, wherein he combats the proposition of the growing proportion of the unemployed, that a comparison between 1870 and 1890 shows that in the former year 32 out of every 100 population were engaged in some gainful occupation, while in 1890 the ratio was 36 to the 100, a very considerable gain as affecting our entire population. He also states that the total number of employees in the manufactories of this country increased from 731,137 in 1850 to 3,745,123 in 1890, while the wages rose from $236,750,000 to $2,225,000,000; that while in 1860 Great Britain exceeded us in the amount of her manufactured product by more than 50 per cent, yet in 1890 the United States outstripped her great rival by nearly 125 per cent. He further speaks of the "decadence of profitable agriculture, the absorption of the small farm and homesteads by the land sharks and the shylocks, and as to the increasing burden of mortgages," which are some of the themes so often sung, and at no time so persistently as in this discussion. The facts are, however, that the 1,500,000 farms in the United States in 1850 had increased in 1890 to 4,500,000, and their value had risen from $151,500,000 to nearly $500,000,000. The average size of the farm had fallen in the same time from 203 to 137 acres.

WHEAT RAISING AND PRICES.

The subject of unprofitable wheat raising, especially in my own section, is a theme for most hostile attack, and I desire to briefly allude to it in this connection. After such able discussions upon this subject during the present session it seems like a waste of time to further pursue it. If any article has had a "fatal fall" in the last few years it surely is wheat. I am at a loss to persuade myself, however, that the causes for its decline are alone to be found in the legislation of 1873. In the first place, the production of wheat in this country has been wonderfully augmented since 1873. Compare the last crop marketed before that year with that of 1891, the last one marketed before the election of Mr. Cleveland. It increased from 225,035,000 bushels to 570,833,000—over 150 per cent. The exports of wheat-raising countries have also wonderfully increased during the same period, and have been brought into direct competition with our own production.

In 1873 the Argentine Republic exported no wheat, while in 1892 she exported over 470,000,000 kilos. India increased her export from 394,000 hundredweight in the same year to 30,306,000 in 1892. Russia increased her exports from 6,957,000 chetverts in 1873 to 16,206,000 in 1891.

It is needless to enter at large into a discussion of the lessened cost of wheat production from the year 1873 to 1891. Modern appliances, both in preparing the ground, the seeding, harvesting, and thrashing, have been perfected, simplified, and cheapened so that they have come into general use. The occupation has practically changed from one of drudgery to that of mechanical skill.

The following table is taken from the Monthly Crop Report for December, 1895, United States Department of Agriculture, and the figures are for the month of December each year:

Production, value, price, and exports of wheat since 1880.

Year.	Total area of crop.	Total production.	Total value of crop.	Average value per bushel.	Average yield per acre.	Average value per acre.
	Acres.	*Bushels.*		*Cents.*	*Bushels.*	
1880	37,986,717	498,549,868	$474,201,850	95.1	13.1	$12.48
1881	37,709,020	383,280,090	456,880,427	119.2	10.2	12.12
1882	37,067,194	504,185,470	444,602,125	88.2	13.6	11.99
1883	36,455,593	421,086,160	383,649,272	91.1	11.6	10.52
1884	39,475,885	512,765,000	330,862,260	64.5	13	8.38
1885	34,189,246	357,112,000	275,320,390	77.1	10.4	8.05
1886	36,806,184	457,218,000	314,226,020	68.7	12.4	8.54
1887	37,641,783	456,329,000	310,612,960	68.1	12.1	8.25
1888	37,336,138	415,868,000	385,248,030	92.6	11.1	10.32
1889	38,123,859	490,560,000	342,491,707	69.8	12.9	8.98
1890	36,087,154	399,262,000	334,773,678	83.8	11.1	9.28
1891	39,916,897	611,780,000	513,472,711	83.9	15.3	12.86
1892	38,554,430	515,949,000	322,111,881	62.4	13.4	8.35
1893	34,629,418	396,131,725	213,171,381	53.8	11.4	6.16
1894	34,882,436	460,267,416	225,902,025	49.1	13.2	6.48
1895	34,047,332	467,102,947	237,938,998	50.9	13.7	6.90

An inspection of the foregoing table discloses the fact that the most prosperous year for the wheat raisers of the country in the sixteen years enumerated was the last crop marketed under a Republican Administration, that for 1891, when the average value per acre was $12.86. The paralysis that struck the country in November, 1892, before that crop was marketed, by the announcement of the election of Grover Cleveland and a Democratic Congress, wrought its work most speedily and the producers of wheat were the first to feel its effect. The conditions of 1891 can be brought back, as they surely will be, under a Republican President and Congress that an impatient but patriotic people will restore to power in the coming election. False economic policies, first threatened and then carried out in the Wilson law, had more to do in depressing the price of wheat and of all prices than the demonetization act of 1873.

COMPARATIVE PRICES OF FARM PRODUCTS IN 1878 AND 1891.

From a table prepared by the Statistician of the United States Department of Agriculture on February 4, 1896, for use in this discussion, giving the average prices of the following-named agricultural products for the month of December each year from 1873 to 1895, I extract the following for the years 1878 and 1891. The

reason for taking the year 1878 is that in the following month we resumed specie payment and prior thereto we were on a paper basis. I have heretofore stated why the year 1891 is selected. From an examination of the table it is made plain that the prices of these articles had not fallen, and instead of being lower they were actually higher. The average price of the products named was $0.509 in 1878, and $0.546 in 1891.

Products.		1878.	1891.
Wheat	per bushel	$0.777	$0.839
Corn	do	.318	.406
Rye	do	.526	.774
Oats	do	.246	.315
Barley	do	.580	.540
Buckwheat	do	.527	.579
Potatoes	do	.589	.371
Hay	per ton	7.21	8.39

Another misstatement has been persistently made, and that is, that under the free coinage of silver in India the price of wheat remained uniform. By the courtesy of my friend from North Dakota [Mr. JOHNSON], whose ability and research added so much to this part of the discussion, I will embody the table used by him in his remarks upon this branch of the subject. The figures were compiled by the United States Department of Agriculture, taken from the official publication of the Indian Government from 1873 to 1893, and are reliable. The prices given are in gold.

Average price of wheat per bushel in India reduced to equivalents in United States gold coin.

1873	$1.05	1880	$1.14	1887	$0.90
1874	.92	1881	.86	1888	.85
1875	.86	1882	.86	1889	.80
1876	.89	1883	.88	1890	.76
1877	1.24	1884	.80	1891	.90
1878	1.47	1885	.76	1892	.89
1879	1.48	1886	.79	1893	.68

It will be observed that prices fluctuated there as in our own country, and they have gradually fallen. The abnormally high price prevailing from 1877 to 1880 is explained by the existence of the great famine, and practically there was little or no wheat produced or for sale.

FREIGHT RATES AS AFFECTING PRICE OF WHEAT IN 1871 AND 1891.

The important item of freight rates is usually lost sight of in the measure of the fall of prices. To no article scarcely has it a stronger application than to wheat in comparing the relative prices between 1873 and 1891. Freight rates are now less than half what they were in 1873. The average freight rates in 1873 were nearly 2 cents per ton per mile, while in 1891 they were less than nine-tenths of 1 cent. This reduction means in itself a vast sum saved in the aggregate to all the consumers of the country when the extent and magnitude of our internal commerce is considered. It might be well to make its application to the matter now in hand. The subject has already been presented, and I assume the risk of repeating.

The New York Produce Exchange shows the average export price of wheat to the London market for the year 1871 was $1.367. I take that year for the purpose of comparison with the year 1891 for the reasons heretofore stated. The average export price for the latter year was $1.094. This statement taken by itself would show a higher price for the former year of $0.273 per bushel. An examination, however, of the Statistical Abstract for 1895, page 330, shows the average freight rates, including transfer charges, for the carriage of 1 bushel of wheat from Chicago to New York in 1871 was 0.258 cents and in 1891 0.101 cents, or 0.157 cents less for the latter year. The difference in the efficient price at Chicago in the two years would then be 0.116 cents in favor of 1871.

But it is shown by the same authority that the average cost of moving 1 ton of freight per mile on the Chicago and Northwestern and the Chicago, Milwaukee and St. Paul, the two great railway systems entering my State, in 1871 was upward of 2.30 cents and in 1891 it was 1.07 cents. Upon this basis, suppose a farmer had shipped his wheat from a point 500 miles northwest from Chicago in these years, he would have saved in freight in 1891 0.181 cents per bushel, which would have been sufficient to make up the difference in the price received in Chicago for his crop of 1891, and it would have netted him 0.065 cents per bushel more than that for the year 1871. The farmer in 1891 secured net to himself as high or a higher price per bushel for his wheat and it had a tremendously greater purchasing power in providing the comforts, the adornments, and the necessities for the home and the farm.

RESULTS IN MINNESOTA AND ILLINOIS, 1862 TO 1894.

A most valuable contribution has recently been made to this subject by Mr. L. G. Powers, chief of the bureau of statistics of Minnesota. It not only demonstrates the enormous reduction in the cost of transportation from 1862 to 1894, but also the fact that the gold price of wheat received by the Minnesota farmer in 1891–1894 was higher than in 1862–1866. In the period 1867–1870 he received only one-third of the price paid in the London market, two-thirds being consumed in transportation and by middlemen. I insert the table prepared by Mr. Powers as a part of my remarks:

Comparative statement of the average gold values for wheat per bushel upon the farms of Minnesota and New York, and the market value in cents of American wheat in London, England, from 1862 to 1894.

Year.	Minnesota.	New York.	London.	Differences.	
				Minnesota and New York.	Minnesota and London.
1862–66	56.5	115		58.5	
1867–70	65.3	138.6	175.6	73.3	110.3
1871–74	73.1	134.1	176.3	61.1	103.2
1875–78	72.7	110.5	149.2	37.8	76.5
1879–82	92.2	132.4	149.6	40.2	47.4
1883–86	64.2	92.4	113.5	28.2	49.3
1887–90	73.4	95.3	106.1	21.9	32.7
1891–94	62.1	83.5		21.4	

It will be observed the average price of wheat advanced in Minnesota after the act of 1873 as well as declined. In what manner will this fact be reconciled with what has been asserted as a uniform and harmonious decline with silver from that date.

Another striking table is also submitted by Mr. Powers in dealing with the farm values of nine crops in the State of Illinois, from the year 1862 to 1894, inclusive. He treats of corn, oats, wheat, rye, barley, buckwheat, potatoes, hay, and tobacco. The values are given in gold. He takes this State as typical of a vast region of which it is the center. In the years named the State raised 354,711,624 tons of the crops named, of the farm value of $4,570,148,391. He gives in detail the average value per ton of the nine crops in the first table, and in the second that of corn, wheat, and oats. The several products are combined in fixed proportion by weight so as to give each its relative importance. It will be observed that the value per ton for the period of 1891–1894 exceeds each of the others in both tables, except that for 1879–1882:

The gold value of all crops combined.	Per ton.
From 1862 to 1866, averaged in gold	$11.98
From 1871 to 1874, currency prices being reduced to gold	13.13
From 1879 to 1882, the period of great scarcity in Europe, in gold	15.59
From 1891 to 1894, in gold	13.19

Dealing with the crops of corn, oats, and wheat as distinct from the other six crops included in the nine, we get the following results:

Average gold value of corn, oats, and wheat.	Per ton.
From 1862 to 1866, in gold	$13.69
From 1871 to 1874, currency prices reduced to gold	14.40
From 1879 to 1882, in gold	17.72
From 1891 to 1894, in gold	14.61

COMPARATIVE POSITION OF FARMER, 1872 AND 1891.

As still further illustrating the better position of the farmer in 1891 as compared with 1872, the year prior to the demonetization of silver, let us examine the prices of the two years of the products of the farm, and also the prices of those articles which the farmer bought in the way of clothing, house furnishings, and for the maintenance of the farm. I take these tables from an address by Mr. Edward Atkinson, to whom I have already referred, before the Manufacturers' Club at Philadelphia, on the 17th of last month. They are based upon the data in the Senate report.

All the leading articles of food which the farmers produce and sell were in 1872 at the index number of 122, a rise of 22 points in paper from the gold unit of 1860. How about the farmers' purchases of that date?

Cloth and clothing stood at	131 in paper money.
Fuel and light at	136 in paper money.
Metal and implements at	117 in paper money.
Lumber and building materials at	153 in paper money.
Drugs and chemicals at	123 in paper money.
House-furnishing goods at	113 in paper money.
Miscellaneous at	121 in paper money.

Now let us go to the gold prices of 1891. The food products of all kinds dealt with by Commissioner Wright brought to the farmers, the meat packers, the millers, etc., 104 in gold, a rise of 4 points as compared to 1860; but with respect to the farmers' purchases witness the change:

Cloths and clothing were reduced in cost to him as compared to 1872	from 131 to 81
Fuel and light	from 136 to 91
Metal and implements	from 117 to 75
Lumber and building materials	from 153 to 122
Drugs and chemicals	from 123 to 86
House-furnishing goods	from 113 to 70
Miscellaneous	from 121 to 95

These tables clearly demonstrate the advanced position of the farmer in the year 1891 over that of 1872. While his products represented the position in price over the unit of 1860 for the year 1872 of 122, yet the necessaries which he bought were greatly advanced. The price of his products stood in the average of comparison with the things he bought of 122 to 127½. In other words, the purchasing power of the farmer's products was not equal to

but less than the things he purchased. In 1891 the condition was reversed. Then the purchasing power of his products stood in the average of comparison as 104 to 88¼ of the things he purchased.

At the same time wages had advanced and labor was fully employed. Although the prices of the manufactured article had been enormously reduced, yet at no time in our history was the manufacturer so prosperous, and no like era ever marked so extensive a development in the manufactories of our country.

FARMING IN IOWA IN 1873.

As illustrating the condition of the farmer in the State of Iowa, a close neighbor of my own, in 1873—that year in which the Republic is now pictured as in the possession of her highest achievements and most wonderful prosperity—let us look at the picture presented by Mr. C. H. Rogers in his address before the Harrison County fair for that year, which is preserved in the annual report of the State Agricultural Society of that State:

Proud of these aspects and of her progress in practical agriculture, still the condition of the laboring man and farmer is far from what is desirable. They have worked, watched, and waited for an adequate reward until weariness has well-nigh turned to hopelessness. Farming has been a financial failure for the past three years. Hard toil has opened up fine farms and brought to the bins the products of unexampled harvests, but the sales have hardly paid expenses and bought cheap clothing until the coming harvest. There is no surplus to improve buildings, purchase thoroughbred stock, and furnish the home with any of the luxuries of art and literature.

In the same report the price of the principal agricultural products at the city of Des Moines, Iowa, for each month of the year 1873 is preserved, and is as follows:

Month.	Wheat.	Rye.	Barley.	Corn.	Oats.	Hay.
January	$0.95	$0.35	$0.40	$0.16	$0.20	$6.00
February	1.10	.35	.45	.17	.20	6.00
March	1.00	.35	.45	.17	.20	6.00
April	1.00	.35	.45	.18	.20	6.00
May	1.10	.45	.45	.22	.22	6.00
June	1.10	.35	.40	.23	.28	6.00
July	.85	.35	.....	.20	.20	6.00
August	.85	.35	.50	.22	.20	5.00
September	.75	.45	.60	.22	.27	5.00
October	.75	.45	.70	.22	.27	5.00
November	.75	.40	.70	.22	.20	5.00
December	.85	.40	.70	.22	.23	5.00

From an examination of the foregoing prices, little satisfaction, it occurs to me, could be derived from them by even the advocate of free coinage. They, however, sustain the truthfulness contained in the words of Mr. Rogers. If the difference in freight rates be considered between that period and the present, from Iowa to the seaboard, and the fall in the price of the manufactured article, that much-vaunted era would seem barren to the possibilities of our imagination comparing it even with the hopelessness of this the fourth year of the second reign of Grover.

SAVING IN TRANSPORTATION IN 1893 OVER RATES IN FORCE IN 1873.

From the Statistical Abstract of the United States for 1894 and 1895 we find the average charges for the carriage of 1 ton of freight for 1 mile upon 18 of the representative railroads of the United States in the year 1874 to be 1.869 cents. The freight rate had fallen in 1893 to 0.801 cent, a difference of 1.068 cents. I can find no data as to charges for 1873. I assume these as the average rates on all the railways. The figures are substantially correct and from the most trustworthy authorities. For the year ending June 30, 1893 (being three-fourths of the last year of Harrison's Administration), there were moved 93,588,111,833 tons of freight on the railroads of this country 1 mile. This sum multiplied by the difference in freight charges between the two years would equal $999,521,034. In other words, this tremendous sum was saved to the consumers as well as the producers of the United States in one year by the lessened difference in the average rates of the years in question. This does not take into consideration transportation by water, which in 1890 stood to railways very nearly in the proportion of 1 to 4. The reduction of freight rates has been even greater in this class of transportation than by railway. If we take this into consideration we have the total amount saved in one year in the item of transportation alone, as between the two years, the vast aggregate of $1,249,411,292.

In sustaining this statement, and even a greater fall in freight rates than I have claimed, I quote from the work of Mr. Schoenhof, which has just been issued, A History of Money and Prices, in which he states:

If I were to bring the freight decline into an average figure, I should say that the charges are, all around, not much more than one-third of what they were about twenty-five years ago.

To assert that such a vast saving to the people of this country annually in this one item would not manifest itself in falling prices is to shut our eyes to a stupendous fact and grope vainly in the shadows to connect it with another cause to which it is but dimly associated—the act of 1873.

EFFECT ON EXISTING CONTRACTS.

Another subject is worthy of consideration, if the proposed legislation shall in any degree alter existing contracts and allow payments to be made in a depreciated currency. The amount due individual depositors from a certain class of corporations is almost fabulous. They rest now upon the existing standard. The responsibility assumed is a grave one, and should not be lightly taken. From the most reliable data, furnished by the Department of Labor, and from the Statistical Abstract for 1895, I take the following:

Deposits in savings banks	$1,844,357,798
Deposits in national banks	1,715,200,000
Deposits in State and private banks	794,235,555
Deposits in loan and trust companies	546,652,657
Deposits in building and loan associations	450,667,594
Amount paid annually in wages (1890)	2,225,000,000
Total	7,576,103,604

Add, in addition to this vast sum, perhaps upward of $5,000,000,000 of liabilities to policy holders in life insurance companies, to say nothing of the pensions and of obligations of trust funds of every character. If silver did not appreciate these institutions would make a profit of 50 per cent, or at any rate whatever the difference in the ratio of the two metals might be.

APPRECIATION OF GOLD.

Another argument that is used with great force by the opposition is the assumption that gold has enormously appreciated. This is stating in another form that prices have fallen as measured by gold. If I have at all made myself clear, it is to demonstrate the proposition that there has been a fall in the prices of those articles which are the product of manufacture. This fact is demonstrated by the tables to which I have referred. It is a condition of hopefulness rather than discouragement or despair. Measured by the price of these articles, and of all commodities combined, the same is true, but not to so great a degree. But measuring gold with wages, or by their purchasing power, the supremest of all tests, gold between 1860 and 1890 fell 58 per cent in the one case to 72 per cent in the other. Measuring it also during the same period by the food products and the great agricultural staples, it has not appreciated, but on the contrary has fallen.

Mr. Chairman, during the eventful years of national development from 1873 to the present, human ingenuity has never been so active, and never has it been so potent in developing mechanical appliances. Its results are everywhere made manifest, not only in the means of production and manufacture, but in the distribution of all productions. Electricity, with its multiplicity of appliances, both in lighting and as a motive power, belongs to this era. The labor-saving devices that have been applied in all lines of manufacture are manifold, and as a result the American workman has been enabled to compete with the world in his products, under Republican legislation, at the highest rate of wages ever received by labor at any place on the civilized globe. The saving in transportation within this period, as I have shown, has amounted to much more than one-half. The number of patents issued by the Government during the twenty-two years succeeding 1873 has increased more than 300 per cent over the twenty-two years preceding that date. This fact in itself is significant of the actual results attained.

THE EXPERIENCE OF FRANCE.

Reference in this discussion is always made to the experience of France. It is persistently asserted that, as a result following her action in establishing in 1803 the mint ratio at 15½ to 1, France alone sustained the commercial ratio of the world up until 1873 at her legal ratio. The proposition is then stated: If France alone could do this for silver and maintain the ratio, can not this Government, with its exhaustless wealth, its infinite resources, its productive and potential possibilities, safely assume a like responsibility, and that France during the years referred to was as a pygmy in comparison with our present power and ability. The answer I would make to the proposition is, there is no proof to sustain the allegation. France sought to do what our own Government attempted in 1792, to fix as the legal ratio what was the commercial ratio recognized by the nations of the world.

An examination of the following table, from the Report of the Director of the Mint for 1895, discloses the fact that the commercial ratio was no more uniform or steady for the seventy years succeeding 1803 than for the one hundred and sixteen years prior to the enactment of the French law. Even if it were admitted that the action of France aided in sustaining the ratio, and this I am free to do, yet during her experience she had the cooperation and direct support of the great commercial world except England, but did not even have her hostility. France adopted it as its commercial ratio when it had been stable for over a century. While the proposition here is for this Government to adopt a legal ratio, not equal to, but 100 per cent above, the commercial ratio, assuming that the United States by its fiat alone can bear the burden, to which there is no direct proof that France carried little or any more than her ordinary responsibility with the other

powers of Europe as well as the United States during the same period:

Commercial ratio of silver to gold for each year since 1687.

[NOTE.—From 1687 to 1832 the ratios are taken from the tables of Dr. A. Soetbeer; from 1833 to 1878 from Pixley and Abell's tables; and from 1878 to 1892 from daily cablegrams from London to the Bureau of the Mint.]

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1687	14.94	1729	14.92	1771	14.66	1813	16.25	1854	15.33
1688	14.94	1730	14.81	1772	14.52	1814	15.04	1855	15.38
1689	15.02	1731	14.94	1773	14.62	1815	15.26	1856	15.38

It is apparent from observation that a period of thirty years, from 1820 to 1850, the commercial ratio was below the mint ratio of France, and at no time were the two ratios equivalent. I cite the following from the report of the French monetary commission of 1867, as to the concurrent circulation of the two metals in that country:

It is well known by all that this ratio (of 1803), by the simple reason of its being fixed, could not remain correct. There was quickly a premium on gold, and silver remained almost alone in circulation until near 1850. The discovery of the mines of California and Australia suddenly changed this situation by throwing into the European market a very considerable quantity of gold. There was a premium on silver to the extent of 8 per mille, and it disappeared almost completely from circulation, yielding place to gold.

RESULTS SINCE DEMONETIZATION.

If the demonetization of silver has wrought the grave wrongs our friends allege, and they assert it is the duty of this Government alone to assume the very serious and hazardous responsibility of the free coinage of silver, surely the burden is upon them to demonstrate its absolute safety to the labor, industrial, and commercial interests of the country. Do not the results of the past twenty years refute their contention? From the commencement of this unparalleled era let us recite a few of the achievements up to the election of Grover Cleveland in November, 1892. With his Administration, as Republicans, we bear no responsibility, for it wantonly reversed the policies of the Government that brought such unexampled prosperity and made possible such wonderful accomplishments.

My contention relates to a period and to conditions existing anterior to the election of Mr. Cleveland and a Democratic Congress in 1892. I make little or no comparisons with conditions or prices existing since that time. I admit the depressed and unusual conditions now existing, that have most injuriously affected the producers of all commodities, the farmer, the laborer, and the manufacturer. The disastrous policy of this Administration has lessened the price of all articles of production, has driven labor into enforced idleness, has unsettled all values, and discouraged enterprise of whatever character. These abnormal conditions, I hold, are the result of unwise legislation, and independent of the money question. They may be corrected and the favorable conditions existing under the last Republican Administration can be restored by wise and proper legislation.

Commencing with 1873, in twenty years we reduced the national debt $1,230,000,000, and the annual interest charge over $91,000,000. From 1870 to 1890 we increased our national wealth from $30.000,000,000 to $65,000,000,000. In addition to paying the national debt and adding so vastly to our wealth, individuals had deposited over $2,000,000,000 in savings banks and building and loan associations, largely acquired during this period. The amount paid in wages to the 3,750,000 employees in our manufactories in 1890 was $2,225,000,000, and the value of the product aggregated $9,372,000,000, exceeding by 125 per cent that of any other Government in the world. In the like time the manufacture of pig iron increased 200 per cent, railroad mileage over 150 per cent, the passenger traffic 500 per cent, and the number of freight tons moved nearly 400 per cent.

Such magnificent results could not have been accomplished under adverse conditions. The record of the world nowhere shows a parallel. This history can not be rewritten, or these facts obliterated. They are there to remain, and they can not be erased by acrimonious denunciation. During the whole period, up to and including the Administration of President Harrison, no government had been so blest by Providence in all that went to make up a great, free, and prosperous people. If the statements of our economists and most eminent statisticians are to be given credence, as deduced from the last census by the General Government, the wealth of the nation at no time since its foundation was so generally distributed amongst the people as in the year 1890. No people under any government, now or heretofore, was so well housed, fed, or clothed as the average American citizen in the year 1892.

Mr. Chairman, I glory in these mighty achievements of my country and in the policies of administration that have made these accomplishments possible. I take pride that in this golden era of the Republic it was led under the genius of Americanism by the great party of the people that lead it in triumph through peace as in war to its high and manifest destiny.

CHANGED CONDITIONS SINCE ELECTION OF 1892.

How changed the conditions prevailing since the election of the present Administration! It was elected upon an issue that proposed a reversal of the economic policies that had brought to the nation these marvelous results. Since then our energies have been stifled, hope and courage have almost fled, and instead of the chorus of plenty, Want's gaunt hand has pressed close upon many of our people. Prostrate industries, idle wheels, smokeless furnaces, palsied capital, idle labor, unsought production have cried in vain for help, and the only answer of "triumphant Democracy" was the Wilson bill, with its "perfidy and dishonor," that wrecked our prosperity and ruined our industries. The hope of the nation is in the Republican party, whose policies have energized every industry, given life and strength to every production, stimulated labor and capital to their highest endeavors, and brought happiness and plenty to every home. All these will surely call back to power this great party in November next, for upon it are centered the hope and the well-being of the nation.

Under Republican legislation the largest use of silver has been made possible. It has been its policy to maintain the whole volume of our currency in circulation and to sustain the parity of each kind with the best. In this it has succeeded. All kinds of money circulate on an equality, and each in our business transactions possesses equal purchasing and debt-paying power. With an abundant revenue that Republican legislation always provided the redemption fund was protected and we had the most extended use of silver without fear or apprehension to the gold reserve. This can be done under the protective policy that will again be inaugurated as soon as the party is in full possession of the executive and legislative departments of the Government.

A reversal of that policy by the present Administration has necessitated the borrowing in times of peace of $262,000,000 to maintain the gold reserve and the ordinary expenses of Government. Under Republican legislation, for thirteen years succeeding July 1, 1879, the total withdrawal of gold from the Treasury only amounted to $43,310,896. But under Democratic threats and free-trade legislation, from July 1, 1892, to May 20, 1896, the withdrawals of gold amount to upward of $447,000,000, and over $351,000,000 of that amount has been exported to foreign countries to make good the balances against us in our trade relations. Under such a disastrous policy how is it possible, with the most favored conditions, to sustain our financial relations under any system we may see fit to inaugurate?

We need ample protection to defend our home market as well as our labor.

REPUBLICAN VICTORY WILL RESTORE PROSPERITY.

Under the Republican system our export trade was sustained and it gave us a balance in our favor. Reinaugurate it, and our present disturbances will soon be adjusted and our financial perplexities will largely, if not altogether, right themselves. With a Republican victory in November the conditions that existed in the early part of 1892 may be restored, confidence return, and that splendid era of Republican prosperity again bless the country.

The Republican party has demonstrated its capacity in administering the affairs of the Government under its legislation for

nearly thirty years. It marks the greatest industrial achievements in the history of the world. I believe the grave problems involved in the present discussion will be solved by it in the interests of the whole people.

A stable currency should be maintained, and its volume should be enlarged to keep pace with our increasing population. There must and should be a measure of value, just alike to debtor as well as to creditor. There should be neither an appreciating nor a depreciating dollar. As far as legislation can control it even and exact justice should be the sole aim. An "honest dollar" means one that is equally so to rich and poor, to the employer and to the employee, to the producer as well as to the consumer, to the borrower as well as to the lender—one that possesses as nearly as may be the same relative purchasing power it had within a reasonable limit in the past and no greater, and one that will liquidate a just obligation in the future fairly and honorably without appreciation or depreciation to the wrong or injustice of either party.

It occurs to me the present issue should be disposed of upon its own merits. It is the assertion of a false doctrine for members of the same party to involve with it the great principle of protection that has done so much to ennoble labor and develop our industrial life. In the end no great cause can be promoted by such a course, nor will the American people accept for it as an explanation that, under existing conditions, just objections may be made against the revenue bill passed by this House. Disguise the position as it may be, in my judgment the Republicans of the nation will resent it as an unjust and arbitrary assertion and unworthy the forum of fair and honorable discussion.

REPUBLICAN PARTY FAVORS BIMETALLISM.

All Republicans confessedly must stand upon the national platform of 1892 until the party otherwise announces itself. The party then declared for bimetallism and the use of both gold and silver as standard money, and that the purchasing and debt-paying power of every dollar should be equal. All Republicans practically are bimetallists, and they must be such if they adhere to the declared principles of the party. They differ, however, widely as to how that desired object shall be accomplished. The advocates of free coinage assert that by the sole legislative act of this Government admitting silver to our mints at the ratio of 16 to 1 true bimetallism will be attained. Those who do not share this view believe such a course would at once drive gold out of circulation, contract our currency, reduce us to a silver basis, and instead of bimetallism we would have silver monometallism.

They also believe that money has a world-wide relation and that a nation in and for itself can not act independently without having regard to its commercial relations with the potential governments of the world. Law may control domestic transactions, but it is largely impotent outside the limits of its own sovereignty. They further believe that concurrent action may be brought about by the leading powers, so that this undertaking may be jointly assumed and silver again restored to its rightful place. Such has been and I believe is the position of the great body of the party to-day.

The Republican party has always been generous and not arbitrary. It believes in the largest liberty and trusts that honest differences may be reconciled. It, however, believes in the rightful rule of the majority and that no arbitrary confederation within its membership should seek to strike down or withhold its assent to cherished principles of the party's faith in order to coerce the employment of their particular method by which silver is to be restored, which method was recently here repudiated by the great majority of the representatives of the party, and, I believe, will be by the party itself, if recent expressions in the State conventions are any guide.

THE ISSUE IS THE USE OF GOLD AND SILVER AGAINST SILVER MONOMETALLISM.

Let the issue be fairly and candidly made, so that it alike may be understood on the farm, in the shop, and in the counting room. To my mind the issue is not between the gold standard and bimetallism, as the advocates of free coinage would state it. It might, rather, with accuracy be said, that it is a contest on the one hand between gold and the largest use of silver ever employed in the world's history and silver monometallism on the other. The real issue, however, is the method to be employed by which real and genuine bimetallism may be secured. Shall it be by this Government alone assuming the responsibility and the unlimited coinage of silver at our mints, or by intelligently and consistently seeking the cooperation of other great powers to that end, and in the meantime avowedly adhering to our present standard?

To my mind the agitation of free and unlimited coinage of silver by this Government alone is harmful in the highest degree to the industrial and commercial interests of the country; is destructive of confidence where capital is looking to new enterprises and more extended employment. Upon the issue thus made, I oppose it. I am in favor of existing standards until changed by international agreement. I favor earnest and honest cooperation to that end, and that this Government should take the initiative. Each dollar that bears the stamp of the Government, whether of silver, gold, or paper, must possess equal purchasing and debt-paying power. Our national credit must be maintained at home as well as abroad, and must be kept as untarnished as our honor. Good faith demands that every obligation must be sacredly kept, and paid in the same currency or its equivalent as that upon which the original transaction was based. I believe the overwhelming judgment of the country favors this course, which, to my mind, is the one of safety as well as national honor.

Contested Election Case—Mitchell vs. Walsh.

SPEECH

OF

HON. JAMES G. MAGUIRE,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 2, 1896.

The House having under consideration the following resolutions—

"*Resolved*, That James J. Walsh was not elected a Representative to the Fifty-fourth Congress from the Eighth Congressional district of New York and is not entitled to his seat.

"*Resolved*, That John Murray Mitchell was elected a Representative to the Fifty-fourth Congress from the Eighth Congressional district of New York and is entitled to his seat"—

Mr. MAGUIRE said:

Mr. SPEAKER: In the majority report in this case there are express findings of fact, which we say are absolutely unsupported by the evidence. There is a finding that Tammany Hall was a beneficial organization and not a political organization in its inception. I say there is no evidence in the case to show that. They say that Tammany Hall constituted, in the election of 1894, a conspiracy for the purchase of votes for the Democratic ticket and for the contestee. I say there is not a word of evidence to show that. They say that Tammany Hall appointed captains for the several election districts, and leaders—naming them—for the several assembly districts. I say there is no evidence of that. The majority, in its report, names certain men as Tammany captains: In the twenty-fifth district, Thomas Collins; in the thirtieth district, James P. Divver; in the thirty-fifth, John O'Rourke; in the thirty-sixth, Mike Callahan; and in the forty-fourth, Thomas Dineen.

I told the gentleman from Kansas [Mr. LONG] on Friday last that I should call upon him to furnish the evidence in support of these findings, and he has failed to do it. I call upon him now, in the remainder of his time, which he has reserved, to show the truth of these findings by any evidence in the case. There is no such evidence. He refers to a printed book, purporting to have been printed by somebody in New York, and purporting to contain a list of Tammany members and officers. So far as I know he relies upon that book alone to prove these facts. Is that evidence? Is that the kind of evidence on which the majority of this committee, acting judicially, are willing to find facts? Is that the kind of evidence on which the majority of this House are to be asked to unseat a member of the House who is returned elected? Certainly no judicial tribunal worthy of the name ever acted on such evidence to render judgment in any cause. There is no evidence in the case that these men were ever appointed by Tammany Hall for any purpose, or that they acted for Tammany Hall in any capacity on election day. There is not a word of evidence to support these findings as to any of these districts in question.

Their next finding is as follows:

The work of bribing the voters in each district was intrusted to a Tammany captain, who carried on his operations near the voting booth.

I say there is absolutely no evidence to support that finding. There is no evidence that Tammany Hall appointed captains for that or for any other purpose, or that these men represented Tammany Hall in any way whatever. What is the evidence by which the majority of the committee seek to support this finding? They set forth in their report the best evidence they have been able to find to sustain these positions. The first testimony which they cite is that of John Sanford.

If gentlemen will turn to page 4 of the majority report they will find his testimony there quoted. He testifies that on election day he took two or three men to a man whom he supposed was a Tammany worker in the twenty-fifth election district, but he admits that he did not know the man, and he nowhere testifies that that man ever was appointed by Tammany Hall, or that he represented Tammany Hall, or the Democratic party, or Mr. Walsh, the contestee, in any capacity whatever. Let me say further there is not a word of evidence to show that any man was asked to vote for Mr. Walsh or that any man was paid upon the understanding or suggestion that he should vote for Mr. Walsh. There is no evidence directly connecting Mr. Walsh with the matter at all, and,

as Mr. Walsh himself has said here, there is no evidence that he was connected with Tammany Hall at the time of the election, and no evidence in the case to show that he ever was connected with it, unless this House is willing to take as evidence a printed document identified by a witness as a list of Tammany Hall officers and members, but of which he knows nothing except that it purports to give a list of such officers and members.

There is no testimony of anybody and no evidence of any kind, except the fact that some person has printed a book which contains certain names—among them the name of Mr. Walsh as a vice-president of Tammany Hall. In fact, he was not a vice-president of Tammany Hall at the time of the election. But I do not care to go outside of the record to discuss this case. If this case is to be decided judicially, it must be decided upon the evidence in the record. If it is not to be decided judicially upon the evidence in the record, then the contestee is in the hands of his political enemies, to be dealt with according to their prejudices. To treat this book as evidence is to ignore the rules of evidence. I say that this printed document, without any evidence to show that a word contained in it is true, or that these men were really selected or appointed to represent Tammany Hall in any capacity, without a word to show that they acted for Tammany Hall, is utterly worthless, and vitiates the finding that is based upon it. John Sanford, whose testimony the majority cite in support of these findings, certainly did not show by his testimony that there was a Tammany captain in the twenty-fifth district representing Tammany Hall for the purpose of bribing voters or for any other purpose. He was asked this question concerning the conduct of this alleged Tammany captain, this man whom Sanford supposed to be a Tammany worker, but whom he did not know:

Q. Did he (referring to this alleged Tammany worker) say anything to them about whether they would receive anything for voting?
The WITNESS. He did not, that I know of.
Q. Did you see this Tammany man give them money?
A. No, sir; I did not see that worker, but I saw another man told to give them money give them a silver dollar."

Who was the other man? It nowhere appears who he was or what he was, or who "told" him to give money. The witness further testified that he was not sure that this occurred at the twenty-fifth election district; that he "kind of thought" it was the twenty-fifth district, but never took much notice of it.

The testimony of the next witness, Patrick J. Lynch, is equally irrelevant and worthless. He testified that some man, whom he does not know and can not describe, gave him 50 cents for registering on a date which he does not remember; that the same party who paid him 50 cents for registering paid him for voting on election day. He testifies that at the time of registering nothing was said to him about voting either the Republican or the Democratic ticket; that as he was going from the lodging house to the polling place he saw the same man; that the man called to him, "Come here, I want to see you all," referring to the witness and his three companions. He testifies that this man handed him a Democratic ticket and a paster; that he did not look at the paster, but recognized the ticket as a Democratic ticket; that the man said to him, "I will see you all right," and showed him how to vote the ballot. When the witness had learned to vote the ballot the man said, "All right," and put the paster on the ballot.

Mind you, this witness testifies that he does not know what the paster was, that he did not notice what it was, that he recognized the ballot as a Democratic ballot, but did not know what the paster was, but that he voted the paster and not the Democratic ticket. He testified that the man named $2 as the price of a vote and gave him a bill which he supposed to be a two-dollar bill, but afterwards discovered to be only $1, and that he asked the man for the odd dollar, but never got it. [Laughter.] He testifies that he could not tell the name of the man who gave him the Democratic ticket and the paster; he testifies that he voted; but he does not testify for whom he voted for Representative in Congress or for any other office, and he says he did not recognize the paster that he voted.

Here I will call attention to the fact that nearly all of these witnesses testify to being asked to vote by men whom they did not know, or men whose connection with Tammany Hall or with the Democratic party they knew nothing of and do not state in their testimony. They testify generally that they were asked to vote the Democratic ticket, but the evidence here shows that Mr. Walsh's name was not on any ticket which was denominated the "Democratic ticket" on that day.

Mr. QUIGG. Did not that same witness testify that he saw this same Democratic worker pay——

Mr. MAGUIRE (interposing). Democratic worker! How does it appear that the man was a Democratic worker? That is an assumption, and that is the fatal weakness of this testimony.

Mr. QUIGG. Well, that he saw the same person who had given him a Democratic ticket and a paster and asked him to vote and paid him a dollar and owes him a dollar still [laughter]—did not that witness testify that he saw that same man buy 18 or 20 other votes?

Mr. MAGUIRE. No; he does not. He testifies that other men got money and told him about it—that they got money from some man, whom he nowhere names and whom he in no manner connects with the contestee, or with any organization or party to which the contestee belonged. Nor does he show that either himself or any other person voted for the contestee, or voted any ticket upon which the contestee's name appeared.

Mr. QUIGG. The gentleman surely does not contend——

Mr. PRINCE rose.

Mr. MAGUIRE. I yield to the gentleman from Illinois [Mr. PRINCE], because he has the record in his hand, and I hope he will do what no other member of the committee has yet done—show from the record some evidence to support the charge of bribery.

Mr. PRINCE. Did I understand the gentleman from California to say that John Sanford did not say that he himself saw this worker pay money to other workers?

Mr. MAGUIRE. John Sanford did not say he saw that worker pay money to other workers. He said he saw another man who was directed to pay money to other voters; he does not say who directed him to do it, nor in what capacity, nor of what politics was either the man who gave the direction or the man who was directed to pay the money.

Mr. PRINCE. What does the gentleman say in regard to this extract from the evidence?

Q. How many do you think you saw outside of these three men that received money from that man or men around there?
A. Oh, I suppose 15 or 20; I do not know.
Q. Fifteen or 20, at the least?
A. Yes, sir; I suppose so.
No cross-examination.

What does the gentleman say to that?

Mr. MAGUIRE. I say that it is absolutely irrelevant. The witness does not say and does not know from whom he saw them get the money, or for what purpose they got it. He so testifies. That is no evidence whatever of bribery in the interest of the contestee—not in the least.

Mr. QUIGG. May I now ask the gentleman a question?

Mr. MAGUIRE. Yes, sir.

Mr. QUIGG. The gentleman from California does not wish to be understood as alleging that there was any difference whatever between the Democratic ticket in the city of New York at the last general election—that is, in 1894—and the Tammany Hall ticket, does he?

Mr. MAGUIRE. I do, most positively. The evidence shows it as clearly as it is possible for evidence to show anything. The contestant introduced the Democratic State ballot, which does not contain the name of the contestee. It is the official ballot. The ballot on which the contestee's name appeared was the Tammany Hall ballot, officially designated by that name, and that name only, and introduced by the contestant in evidence.

Mr. QUIGG. Does the gentleman when he speaks of the Democratic State ticket mean the ticket containing the names of men who were to be voted for as State officers?

Mr. MAGUIRE. As State officers, including Representatives in Congress. And I refer to the evidence offered by the contestant to support that statement.

There is not a scintilla of evidence—even hearsay—and you have nothing else; there is not a particle even of hearsay evidence to show that Mr. Walsh received any vote of any man who was bribed, or in any way otherwise influenced, unless it be inferentially concluded from such evidence (worthless as it is) that he must have received the votes of those who voted the Democratic ticket because his name was on that ticket. I say his name was not on the official "Democratic" ticket, nor upon any ticket denominated "Democratic." I say that testimony that a man was bribed to vote the Democratic ticket, when it appears from the evidence that the contestee's name was not on any ticket denominated Democratic—was not on the official ballot designated as Democratic—can not possibly give rise to the inference that he received any advantage from any such bribery by whomsoever committed. That is what I say on that point. It is only by that false and unwarranted inference that contestee can be found to have received any bribed votes.

Mr. TAYLER. Will the gentleman yield a moment?

Mr. MAGUIRE. Yes, sir.

Mr. TAYLER. Does not the contestee admit that he was indorsed by the State Democracy and by the Empire State Democracy?

Mr. MAGUIRE. The contestee must have his rights determined by the evidence in the record, and not by any quizzing on the floor.

Mr. TAYLER. I mean does he not admit it by his formal stipulation and assent incorporated in the record?

Mr. MAGUIRE. That his name was on the ticket?

Mr. TAYLER. That he was the candidate of the Empire State Democracy.

Mr. MAGUIRE. I admit that, of course, but his name was not on their ticket.

Mr. TAYLER. But if he was the candidate of all organizations known by the name of Democratic as well as of the Tammany organization would he not be voted for upon the Democratic ticket?

Mr. MAGUIRE. No; not necessarily. The Democratic ticket (official) was printed without his name and those who voted that ticket did not vote for him unless they wrote his name in.

Mr. TAYLER. Does he not admit that Tammany Hall was a regular Democratic organization?

Mr. MAGUIRE. I do not admit anything that is not in the record. There is no such showing. I am not here to admit anything. I do not believe that to be the proper way to try an election case on this floor. The evidence of both parties is in the record, and it is not for members arguing the case to admit or deny anything outside of the record.

Mr. TAYLER. But my colleague on the committee, the gentleman from California, I regret to say, seems to be more remarkable for what he does not know about this record than for what he does know.

Mr. MAGUIRE. That is my opinion of the majority of the committee. Their judgment does not seem to have been directed by the evidence in the record. As for myself, I have carefully examined the evidence and base my judgment upon it alone.

Mr. TAYLER. Is not that admission in specific form in the record—that Tammany Hall is the regular Democratic organization of the city of New York?

Mr. MAGUIRE. Such an admission, if in the record, is unimportant. That would not show or tend to show that a witness who testifies that he voted the "Democratic ticket," or that he had seen others vote the "Democratic ticket," meant that he had voted or had seen others vote the "Tammany Hall ticket," when it conclusively appears by other evidence that there was a ticket denominated and officially designated the "Democratic ticket," voted regularly at that election.

Contestee's name was not on the "Democratic ticket," but was on the "Tammany Hall ticket." Yet, in order to find that any person was bribed to vote for contestee, you are driven to the absurdity of contending that such person voted the "Tammany Hall ticket," although the witnesses testify that those persons voted the "Democratic" ticket.

Now, I say this: I do not admit and will not discuss anything outside of the record; the record shows or contains an admission that Mr. Walsh was indorsed by the State Democracy. But it appears further that his name was not on the ticket. It does appear that Edward J. Dunphy was their nominee. It also appears that shortly before the election he declined the nomination and Mr. Walsh was indorsed by the State Democracy, but it seems the indorsement was not in time to get his name on the ticket.

Mr. WALSH. That is a mistake; it was in time.

Mr. MAGUIRE. Well, at all events, the name does not appear on the ticket. It is immaterial whether it was in time or not.

I think, Mr. Speaker, the trouble is, the fact that he was indorsed by the State Democracy does not show that he received the vote of any man who voted that ticket, or the ticket of that party, unless it is expressly testified that his name was on the ticket. The voting of that ballot does not give rise to a presumption that his name was voted.

Mr. TAYLER. The gentleman from California does not want to do any injustice or to create a misapprehension?

Mr. MAGUIRE. Certainly not.

Mr. TAYLER. The gentleman understands, no doubt, that the title "State Democracy" is a mere title, and that it does not relate to the area over which the State Democracy spread itself——

Mr. MAGUIRE. I know of nothing of that kind in the record.

Mr. TAYLER. That is what I thought.

Mr. MAGUIRE. I know of no such evidence in the record at all.

Mr. TAYLER. Very well; then I have nothing further to say.

Mr. MAGUIRE. I believe the gentleman from Kansas desired to ask me a question.

Mr. LONG. From the record as made up in this case, what does the gentleman understand to have been the regular Democratic organization in this particular Congressional district?

Mr. MAGUIRE. I am not discussing regular Democratic organizations now.

Mr. LONG. From the record——

Mr. MAGUIRE (continuing). Nobody testifies that he voted the ticket of a regular Democratic organization. Some witnesses do testify that they were hired to vote the Democratic ticket—hired by somebody, they do not know whom, and whose connection with the Democratic party they do not understand or know anything about. Now, the question to determine is how far that testimony has any connection whatever with this contestee in any manner, when the witness simply declares that he voted the Democratic ticket, and does not say for whom he voted, does not say that he voted for Mr. Walsh, and does not in any way connect Mr. Walsh with his vote.

Mr. LONG. Now, will the gentleman answer my question?

Mr. MAGUIRE. What question?

Mr. LONG. As to the regular Democratic organization in this Congressional district. What was it called?

Mr. MAGUIRE. I know that there were three tickets there purporting to be regular in their way. One was called the Tammany Hall ticket, another the State Democracy, and the other the Empire State Democracy.

Mr. LONG. I want to know whether the gentleman repudiates this admission, found on page 133 of the record:

The contestee concedes that the regular Democratic organization is commonly called Tammany Hall.

Mr. MAGUIRE. That is all right.

Mr. LONG. You admit that?

Mr. MAGUIRE. I do not question it. But how does that show that a man who says he voted the Democratic ticket voted for Mr. Walsh, when it appeared conclusively by the official ballots that his name was not on any ticket so designated?

Mr. LONG. Was his name on the Tammany Hall ticket?

Mr. MAGUIRE. Yes, sir.

Mr. LONG. The Tammany Hall organization and the Democratic organization were identical, or rather the Democratic organization in this district, the regular one, was known as Tammany Hall.

Mr. MAGUIRE. I am not going to decide a dispute between the State Democracy and the Tammany Hall Democracy, as to which was the regular organization. It is quite immaterial. The question here relates to tickets, not to party organizations.

Mr. LONG. I am not speaking of the State Democracy. You admit that Mr. Walsh's name was on the Tammany Hall ticket, and the record shows that the regular Democratic organization was called Tammany Hall?

Mr. MAGUIRE. Yes, sir.

Mr. QUIGG. I wish we might get some of the Democratic members of the House to make the same distinction about the organization that the gentleman does.

Mr. SULZER. It will be made.

Mr. MAGUIRE. There is no evidence that anybody who claimed to have voted the Democratic ticket voted for Walsh. The evidence concerning the hiring of anybody to vote the Democratic ticket is no showing whatever that the man who did the hiring was in any way connected with Tammany Hall.

The gentleman made some considerable point on the fact that two of these districts are large lodging-house districts, and that from 20 lodging houses in New York 800 men voted.

Mr. LONG. I did not make that statement.

Mr. MAGUIRE. Then the gentleman stated that 800 were registered. Is that it?

Mr. LONG. I made that statement.

Mr. MAGUIRE. And he contends that it is extraordinary that 800 men should be registered from 20 lodging houses in the city of New York.

Mr. LONG. I did not state that it was extraordinary in the city of New York for anything like that to occur.

Mr. MAGUIRE. The testimony shows that these are lodging houses for poor men; that they are lodging houses for the classes paying from 15 to 50 cents for lodging. I do not know whether the record shows it or not——

Mr. FAIRCHILD. For how many nights?

Mr. MAGUIRE. The evidence is that many of them have lived there for many years. It does not appear anywhere that any of them had not been living there long enough to vote; and with lodging houses in that section of New York City, seven-story houses in which rooms or lodgings are rented at from 15 to 50 cents per night, it must appear manifestly that unless 20 lodging houses contained an average of 800 regular lodgers it would be impossible for the landlords or proprietors to pay the rent and carry on the houses. I see nothing extraordinary in the fact of such registration or of that number of voters from the lodging houses.

But unless the alleged wrongs or frauds or bribery are in some way connected with the contestee or with the men who were supporting the ticket on which his name appears, all evidence concerning false registration and bribery must fail so far as this case is concerned.

So much for the testimony of Patrick Lynch. He proves nothing. The next witness is William L. Wilson. His statement is that on the election day in question he lived in the house called the Bismarck, No. 9 Mulberry street; that he voted from that number; that he knows Dan O'Rourke; that O'Rourke is the Tammany captain in that district; that he saw O'Rourke around the polls on election day; that in the presence of ten or eleven men, of whom the witness was one, the witness asked O'Rourke, "What was into it?" and he said, "Two hundred." In answer to a question he said that by two hundred O'Rourke meant $2.

How he knew what O'Rourke meant does not appear. Then the witness testifies that O'Rourke asked him, "Where are you from?" The witness stated where he was from, and O'Rourke answered,

"I am not buying any votes out of the Bismarck." The witness further testifies: "I went right away then. When he said he wasn't buying anybody out of the Bismarck I went away. I seen I couldn't get nothing." He testifies that there was another young man assisting O'Rourke, but that he didn't know who he was. He further testifies that O'Rourke said to the ten or eleven men who were standing around, "There was two hundred in it. Go ahead. Push it along." He further testified that he knew the men who were standing around when Dan O'Rourke said there was two hundred in it; that they all lived in the Bismarck. He afterwards modified that statement by saying that five of them lived in the Bismarck, and that the others registered out of the Globe, on Park Row.

He was asked to give the name of any one of these men who were standing around at the time that O'Rourke made this very important statement, and although five of the men were living with him at the Bismarck, he testified that he did not know the name of any of them, because "they all have nicknames, such as Jack, Bill, John, or something else." The witness further testifies that he voted on that day, but was not paid anything for his vote.

Mr. LONG. May I ask the gentleman a question?

Mr. MAGUIRE. Wait a minute. To the question, "Did you see anyone paid for their votes on election day?" he answered, "No, sir." He testified afterwards that he knew of his own knowledge that several men were paid for their votes, but that he could not tell the right name of any of the men.

Mr. LONG. Now will the gentleman permit me to ask a question?

Mr. MAGUIRE. Yes.

Mr. LONG. Does the gentleman believe, in the light of that testimony, that these men lived at those lodging houses for years, when they did not know each other's names?

Mr. MAGUIRE. I do not see anything in this testimony inconsistent with it. This witness was simply lying. That is all there is about that, and the rest of his testimony clearly shows it. He was not with five other men from the Bismarck at that time.

Mr. TAYLER. Does the testimony of that witness show that Dan O'Rourke was a Tammany captain?

Mr. MAGUIRE. No; I think not.

Mr. TAYLER. Does he not say so, or is he a liar?

Mr. MAGUIRE. He shows no knowledge of it.

Mr. TAYLER. He is asked:

Do you know John O'Rourke?
A. Yes, sir.
Q. Is he the Democratic captain of that district?
A. Yes, sir.

Mr. MAGUIRE. Yes.

Mr. TAYLER. Now, one other question. Did Dan O'Rourke ever deny that witness' testimony?

Mr. MAGUIRE. As to what?

Mr. TAYLER. As to anything.

Mr. MAGUIRE. I think not.

Mr. TAYLER. That he was a Tammany captain, or that he had paid witnesses or parties to vote.

Mr. MAGUIRE. I think not. There is no testimony here that he paid voters to vote for anybody, or at all. The evidence is that he said he would not buy the votes of Wilson and the others who offered their votes for sale to him.

Mr. LONG. Will the gentleman in that connection also refer to the evidence on page 151 of the record, where the reason is given why O'Rourke would not buy anybody out of the Bismarck, somebody else having been designated to look after that house?

Mr. MAGUIRE. I will come to that later.

Mr. LONG. Very well; I hope the gentleman will.

Mr. QUIGG. They do not duplicate, in this system.

Mr. MAGUIRE. The witness further testified that one of the men——

Mr. LONG. I understand the gentleman will refer to that later.

Mr. MAGUIRE. I will refer to that later. The witness further testifies that one of the men was named Wolf, and that he lived at No. 9 Mulberry street, in the Bismarck; that "some other man" paid Wolf for his vote; that he could not tell who the man was; that he didn't see the money paid to Wolf; that the way he knew that Wolf was paid for his vote was that Wolf gave him (the witness) a drink out of the money; that he could not tell whether Wolf was telling the truth to him about getting the money or not. When asked the following question: "What did he (Wolf) tell you?" he answered: "He says 'Come on and have a drink; I have got a quarter.' I says 'What did you get it for?' and he says 'For my vote.'"

Q. And that is all you know about it?
A. Yes, sir.
Q. And that is all you know about anything being paid on election day for their votes?
A. Yes, sir. (Page 153.)

The witness further testifies that, prior to the election, he lived at the Bismarck four or five years continuously, and voted out of there three or four times. The testimony of William L. Wilson, from beginning to end, is that of an unscrupulous, common blackguard, who tried to sell his vote to Dan O'Rourke, who, he says, was a Tammany captain in the thirty-fifth election district, and whose vote O'Rourke refused to buy, and, after vainly attempting to sell his vote, he finally voted without pay at half past 3 o'clock in the afternoon.

The next witness whose testimony is cited in the report of the majority is John Reilly. His statement was made before William A. Hoar, before whom the statement of the last witness was also made. And here I may as well state the views of both the majority and the minority concerning the position of William A. Hoar, who acted as a notary public in the taking of this testimony. Mr. Hoar at the time of the taking of the testimony was not a notary public and was not authorized under any law to administer an oath or to certify to the testimony in a contested election case. Mr. Hoar had been a notary for Kings County, N. Y., in which he had resided. For the purpose of taking this testimony, or shortly before the taking of this testimony, he removed from Kings County to the city of New York, thereby vacating his office under the law of New York. He was selected by the contestant as the notary before whom these witnesses should be examined. He had no authority to administer oaths, and no prosecution for perjury could be instituted or maintained against any witness who testified before Mr. Hoar because of the falsity of any testimony there given. The testimony of Wilson and of Lynch, and I think the testimony of Sanford, though I have not time to ascertain, was all taken before this unauthorized notary.

Mr. LONG. What is the statement of the gentleman from California on that point?

Mr. MAGUIRE. It is that the testimony of most, if not all, of the witnesses of whose testimony I have spoken was taken before William A. Hoar, who was not a notary authorized under the law to take testimony.

Mr. LONG. Certainly the gentleman does not wish to make that statement to this House.

Mr. MAGUIRE. Yes, sir; I do.

Mr. LONG. Do you claim that the testimony of John Sanford was taken before Mr. Hoar under such conditions?

Mr. MAGUIRE. I said that I was not certain about the testimony of Sanford, but that is my recollection.

Mr. LONG. Was not that testimony taken before Mr. Hoar after his appointment as a notary for the county of New York?

Mr. MAGUIRE. I have not before me the date of the taking of that testimony, nor have I the date of Mr. Hoar's appointment. I find, however, that the testimony of Sanford was taken before William A. Hoar.

Mr. LONG. You do not claim that the witnesses in the thirtieth district, Lynch, for instance, testified before Mr. Hoar?

Mr. MAGUIRE. I have been speaking of the witnesses concerning the five districts.

Mr. LONG. He is one of them. Does the gentleman say that the testimony of Hermin, in the thirty-sixth, was taken before Mr. Hoar?

Mr. MAGUIRE. I have not charged my memory with it. The minority report states what testimony was taken before Mr. Hoar.

Mr. LONG. I am speaking of the facts.

Mr. MAGUIRE. Patrick Lynch's testimony was taken before Mr. Hoar—no; I do not mean Lynch, I mean Reilly. The testimony of Sanford, of Wilson, of Reilly, of Hermin, and of McDonald was taken before him.

Mr. LONG. You stated that the testimony of Lynch was taken before Mr. Hoar.

Mr. MAGUIRE. No, sir; I said that I was mistaken about Lynch. I meant Reilly's testimony.

The next witness whose testimony is cited by the majority in support of its finding is Frank Hermin. His statement was taken before Mr. Hoar, who, as I have said, was not authorized to administer an oath, and this testimony is therefore without the sanction of an oath. Hermin testified that he resided at the Grand Windsor Lodging House, No. 9, Chatham square, that he registered at the last election at the request of the night clerk of the lodging house, that the night clerk of the lodging house promised to give him $3 for registering, but did not give him anything. I read from his testimony:

Q. Did you see the night clerk on election day?
A. Yes, sir; I seen him in the morning, between 11 and 12. I can't tell what time positively, because I was about half drunk when I met him. I did not intend to vote at all, but he said, "Go and vote; you are good for the money."
Q. Did he tell you the ticket to vote?
A. The Democratic ticket.
Q. Did he tell you to see anybody on election day?
A. Yes, sir; and I got $2 from a man in Mike Callahan's, right inside, in the back room, and he had a roll of bills there.

This witness further testified that Mike Callahan's was a respectable house and saloon, and that the night clerk did not pay him the money.

Q. Who paid it to you?
A. Oh, I suppose some assistant in Mike Callahan's, it must be.
Q. Who was the night clerk?

Now, Mr. Speaker, what connection did the night clerk have with the contestee? There is nothing in the case to show that he had any connection either with contestee or with Tammany Hall. Again, what ticket did the night clerk ask the witness to vote? The Democratic ticket, the witness says. My recollection is——

Mr. QUIGG. I appeal to the gentleman to continue the reading of Hermin's testimony. The rest of it is extremely significant.

Mr. MAGUIRE. I will continue the reading of Hermin's testimony, and in that testimony I will refer the gentleman——

Mr. QUIGG. The gentleman in what he was reading just now stopped at the answer, "Oh, some assistant in Mike Callahan's." What immediately follows is very significant, I think.

Mr. MAGUIRE. What is the gentleman reading from—from the brief?

Mr. QUIGG. From the brief.

Mr. MAGUIRE. The part of the evidence to which the gentleman refers is not before me now, but I will read it from the record if the gentleman will give me the page.

Mr. TAYLER. It is on page 193—about the middle of the page.

Mr. MAGUIRE. I will first refer the gentleman to pages 549, 550, and 551—the testimony of Frank Hermin. I have already read his testimony as to his being hired to vote the Democratic ticket, as to his having voted the Democratic ticket, and as to his having gone into a saloon owned by a man named Mike Callahan and receiving a dollar from somebody who he presumed was an assistant of Mike Callahan. He testifies on page 549 and the following pages how he came to give that testimony, and that it was false; and he testifies to how he came to be a witness in the case:

I was picked up by a man named Nathan. Asked me to come and have a drink. We had several drinks, and he brought me down and said, "If you come down here you will make all kinds of money. Come down to 44 Pine street—to Rawson's office, attorney for John Murray Mitchell." Had several drinks before I went there. Half drunk when I got there. I had a bottle of beer in the office of Mr. Rawson. * * * Nathan said that I could make $10 to $50 and a suit of clothes out of it before the thing got through.

Nathan was one of the clerks in the office of Mr. Rawson, the attorney for John Murray Mitchell; and the man to whom these propositions were made is one of the principal witnesses of Mr. Mitchell, produced to show bribery in one of the districts, and whose testimony is cited and quoted by the majority of the committee in its showing of evidence supposed to be sufficient to overturn the election of Mr. Walsh, as certified to this House, and to justify the House in unseating him. The witness continues:

Nathan paid for my lodging that night. We had several drinks together; went to bed pretty well drunk. Saw him next morning. Had drinks with him. He brought me down to Rawson's office. He called me one side and asked me, "Don't you want to go up to New London?" Saw Nathan following day. Took me down to Rawson's office. Said when he left, "I guess I will take care of you again to-night." He showed me a two-dollar bill and a one. Saw him next morning. Went again to Rawson's office. Had several drinks on the way down. I had a bottle of whisky in my pocket when I got to Rawson's office. Nathan bought it for me at No. 9 Bowery, and when I went into the office I was pretty well full; and in that condition I gave my testimony. After that I went to New London; four men with me—McDonald, Bernstein, Paddy Ryan, and another. Saw Mr. Mitchell when I came down. He treated me to a couple of whiskies and one cigar—three rounds. I received $1 that night from Mr. Cochran, a witness in this case. The following Sunday Cochran gave three of us a half dollar apiece to come down the following Wednesday. Went down the following Wednesday; Bernstein gave me half a dollar. I had a couple of drinks before I signed my testimony—Bernstein and I. At New London I stopped at the Hoffman House with a man named Ryan—Lynch, Bernstein, McDonald, and myself. We were all pretty well druuk up there.

These men named by Hermin are the principal witnesses of the contestant, by whose testimony concerning alleged conversations that they had with voters whom they did not know, and with alleged Democratic workers whom they did not know, and could not name and could not describe, the majority of the committee undertake to show fraud and bribery in these several districts. Here is more of Hermin's testimony:

I saw plenty of beer in Mr. Rawson's office. We had all we wanted to drink at New London. I did not pay a cent for it; Mr. Rawson's agents paid for it.

Mr. QUIGG. From what page is the gentleman reading?

Mr. MAGUIRE. I am reading a condensation of the evidence. It runs over pages 549, 550, and 551. I have not time to read in full the questions and answers, or I would gladly do so.

Mr. LONG. Will the gentleman allow me a question?

Mr. MAGUIRE. Yes, sir.

Mr. LONG. Did the contestee introduce any evidence to controvert or refute the statement of Mr. Hermin?

Mr. MAGUIRE. Why, sir, Mr. Hermin testified that he did not know whether he voted the Democratic or the Republican ticket on election day; and he did not know that he voted at all. What need was there of contradicting Hermin? And let me say to the gentleman from Kansas that the record introduced by the contestant shows that Hermin did not vote at all on election day.

Now, sir, the testimony of all the witnesses whose testimony is cited and quoted in the majority report in support of the findings of the committee is of that character throughout. Most of it was taken before Mr. Hoar, who was not authorized to administer oaths, a fact which the contestant must have known when he selected him to take the testimony of these thrice-perjured and unworthy witnesses, who according to their own testimony were of the basest character, ready to sell votes and testimony for the merest trifle.

Mr. QUIGG. I want to call the gentleman's attention to the record on page 565, giving the testimony of Hermin subsequently to the incidents about which the gentleman has been reading. He read from this part of the record a while ago but stopped short at the statement about the witness going into a back room at Mike Callahan's. I want to call the gentleman's attention to these questions and answers, beginning near the top of page 565:

Q. "Did the night clerk pay you the money? No, sir." Is that correct?
A. Correct.
Q. "Who paid it to you?—A. Some assistant in Mike Callahan's." Is that correct?
A. That is right.
Q. "Did this night clerk turn you over to that man?—A. Yes; he said, "This man is all right"; in fact, he said two of us were all right."
A. That is right.
Q. "Did you give that man any money?—A. Yes, sir."
A. That is right, sir.
Q. "How much?—A. He gave me two one-dollar bills."
A. That is right, sir.
Q. "Did you say you voted on that day?—A. Yes, sir."

And he corroborates this whole testimony.

Mr. MAGUIRE. The record shows that he did not vote. He testified once that he did not vote, that he did not know whether he voted at all or not, and did not know what ticket he voted.

Mr. QUIGG. This is a statement of his evidence, and he pronounces it correct.

Mr. MAGUIRE. He states in the first instance that somebody—a night clerk in some lodging house—hired him to vote—to vote what?

Mr. TAYLER. To vote the Democratic ticket.

Mr. MAGUIRE. Not the Tammany Hall ticket, but the Democratic ticket. Now the fact is, he did not vote any ticket at all, and the record shows it.

Mr. QUIGG. Does not the gentleman know that in the Democratic State convention in New York all the contestants were turned out and Tammany Hall alone seated?

Mr. MAGUIRE. I know nothing that is not in the evidence in this case. That is the only knowledge with which we have to deal. I have not gone outside to find facts concerning this case, or to learn the current history of politics in New York, from the reports of either Democratic or Republican politicians.

Mr. QUIGG. I hope some of the Tammany members will say that their party is not the Democratic party. I am listening for that admission.

Mr. MAGUIRE. Unless it is in the record, you will not be gratified with such an admission, so far as I am concerned. I am discussing this case from the record—the only standpoint from which this House can consider the case, if it is to be considered judicially, and if it is not to be so considered we may as well submit in silence to your prejudgment; for you have the power to do wrong.

Now, Mr. Speaker, I have not attempted to go through the testimony of each witness; there is not time; but I say that all the testimony on behalf of the contestant is just as vague, just as inconclusive, just as incomplete, as that which I have analyzed and cited to the House. Most of the testimony concerning alleged bribery is by witnesses who say that "they learned" that men were bribed by talking with the men afterwards in the saloons, and hearing them say that "they had received money," and stating the amount they had received. But nowhere is there any testimony showing that they stated, even in these conversations, that they had voted for Mr. Walsh, or voted any ticket on which his name appeared, or that anybody who had been instrumental in securing the votes mentioned for Mr. Walsh had heard the witnesses say that they had voted for him.

Now contestant, as to some of the people who are alleged to have committed these frauds—these election frauds in the interest of contestee, and against the contestant—ought to show something of that kind; for upon no other theory can the contestee be unseated and the contestant seated.

These men who testify to having sold their votes on election day, at from one to two dollars apiece, are shown by their own testimony, and that of their associates, to have been gathered up by four or five employees of the contestant's attorney, given money, and board, and lodging, and drink, and some of them clothing, right along for a considerable period before they testified and were herded at Harlem, or in the town of New London, by the agents and representatives of the contestant's attorney; given money enough and food and drink, and other things of value to them, to a certainty to procure such wretches to testify to anything that they might be asked to testify to. And yet, after all, they do not give anything but hearsay evidence, evidence of the very poorest kind. They do not even name the men who told them that they had been bribed. They deny remembering the names in almost every case, and one of the witnesses who mentioned the name of four men that he claims had been bribed to vote the Democratic ticket within his knowledge, named three men who it was ascertained did not vote at the election at all.

That is the character of testimony upon which you are asked to unseat Mr. Walsh.

The SPEAKER pro tempore (Mr. GROSVENOR). The time of the gentleman from California has expired.

Mr. MAGUIRE. I just desire to say, Mr. Speaker—I had not expected the gavel to fall so soon—that if there is a lawyer on the Republican side who can take the majority report and the testimony and, examining them judicially, say that there is evidence sufficient to justify any court in this land in upholding any of the findings of the majority of the committee, I shall be exceedingly surprised. I venture to assert that if this House, on the evidence that is before it in this case, shall unseat Mr. Walsh, no crime that Tammany Hall ever committed would be would be worse than that act. I venture to say, further, that if any court in this land would declare judicially that Mr. Walsh is not entitled to a seat, and that Mr. Mitchell is, on that evidence, the judge would be subject to impeachment, and that the very House that will accept such evidence as sufficient in a political case to support this great wrong would impeach the judge who rendered such a decision, no matter to what party he belonged.

Pay the Honest Claims of Private Citizens.

SPEECH

OF

HON. JOSEPH H. WALKER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1896.

The House having under consideration the bill making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1896—

Mr. WALKER of Massachusetts said:

Mr. SPEAKER: I do not know personally a man, woman, or child that will be benefited by one dollar of the French spoliation claims or the Bowman Act claims that were awarded from the Court of Claims in the vetoed bill. Neither do I know that there would a single dollar go into the district I have the honor to represent. I am interested in this purely from a sense of justice.

There is, however, a claim for $66,970 on the Calendar of this House as justly due to the heirs of J. C. Howe and to Sullivan Forehand and others, my constituents and neighbors, from the United States Government as any sum ever due from any member of this House for the food that has nourished his wife and children or the clothes that cover their backs or the shelter that has covered their heads. Not only did the officers of the Government rob these people of their property, but they compelled them to spend good money in prosecuting their cause through the courts. This will take a very large part of this $66,000, if they ever get it. This good money, spent in costs by these people, and the accumulated interest thereon, will eat up the whole sum, if not soon paid.

For sixteen years have they been pleading for justice. Thus the Government, appropriating their property in the most unjust manner in 1868, after the war had closed, refused them any compensation and compelled them to pursue their cause through the

This claim has been unanimously approved and reported to the Senate in three successive Congresses; it has passed the Senate twice and is now on our Calendar and only fails to pass the House because I am not allowed to bring it before the House.

This is the way justice is meted out to our citizens. This is no exceptional case. Bills for hundreds of just such claims are on the Calendars. A few of our citizens who were robbed by the strong arm of their own Government, which many of them fought to support in the days of its trial, were allowed a chance to pass their bills in the Republican Fifty-first Congress, practically none of them in the Democratic Fifty-second and Fifty-third Congresses, and now, in this Republican Fifty-fourth Congress, scarcely one is allowed to come before this House in the regular way. Such outrageous treatment of citizens of the United States by their own Government is justly condemned. The cheek of every man ought to blush in shame and indignation at the action of Congress, Democratic and Republican alike, and still more that the Chief Executive of the nation, in the pride of his power, should lend himself to this bad cause in the perpetuation of the spoliation of the helpless ones he has sworn to succor and defend. This is what governments are instituted for among men, and this is what ours has failed to do.

In the words of another:

I tremble for my country when I remember that God is just.

All history, sacred and profane, justifies the declaration of Holy Writ that "Righteousness exalteth a nation, but sin is a reproach of any people." And again, "He that oppresseth the poor to increase riches, and he that giveth to the rich, shall surely come to want."

No Congress has excelled this House in inviting the judgment of God in robbing the poor, in denying them their just dues, if it sustains this veto of the spoliation claims and the claims awarded our citizens under the Bowman Act, established in the Court of Claims; and also in giving to the rich, at the same time, by appropriating $70,000,000 for rivers and harbors. This is taking the bread out of the children's mouths to heap up riches.

Why this injustice? Why are the just dues of our people put off year by year and from generation to generation? Perish the thought that it is because there are votes in such a course. Perish the thought that men are willing to hold their places in this House at the price of blood, but it still remains that cheap glory may be gotten by a parade of economy in saving money to the public Treasury in refusing to appropriate the money to pay an honest debt. Only one vote, at the most, is thus to be lost, while a score of votes may be gained by getting an appropriation to spend thousands, and even millions, of dollars yearly in one's "deestrict." It can not be that this in any way accounts for the appropriation of $70,000,000 a year for rivers and harbors, and when $1,500,000 can not be gotten out of the House to pay honest debts to our citizens accumulated in the period of thirty years. What miserable subterfuges are resorted to in justifying members in such a course!

"Some of these 700 claims are unjust and ought not to be paid," forsooth! Shame on such pettifoggery. Have there ever been 700 claims decided by any court and jury, in the most carefully tried and hotly contested cases, where some of the verdicts were not contrary to abstract justice? Are not courts fallible? And shall we refuse to enforce any of the judgments of any of our courts because, forsooth, there may be some of them in error? I venture to assert that never in any 700 cases tried by any courts can so few erroneous judgments be found as in the 700 awards in the United States Court of Claims that this House proposes to repudiate the payment of. This is the miserable showing of the opposition in this debate.

I had rather hand down as a legacy to my children the memory of the burning words I have spoken in this House in denunciation of such wicked denial of justice as is involved in failure to vote to pay these vetoed claims than to deck them with all the honors the members of this House can ever attain in preaching and voting that economy in expenditure must rest on the tears and blood of thousands who are pleading for their own at our recreant hands.

I know my people, and I think they are like the people of other districts. I know they would resent with scorn any action of their representative that sought any saving of money for any profit to them in any act of injustice to any human being. They demand of me my utmost endeavors to secure justice to every citizen, at any cost in blood or treasure.

Strong words have been said. Yes, and they are required, to fittingly rebuke such injustice. Every one of us knows that a man gets no recognition and none of his rights and no hearing in this House who does not fight for them. This grievous system in legislation can only be corrected by agitation. Every honest man should cry aloud, and spare not. Such things as I am protesting against sow the seeds of socialism, of communism, and even of anarchy. They cause the poor and the weak to forget God in their wrath, in the injustice they suffer.

When shall these things end?

Rivers and Harbors.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 6, 1896.

The House having under consideration the bill (H. R. 7977) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. WHEELER said:

Mr. SPEAKER: I have never opposed a river and harbor bill. I believe that there is no duty so important as for the Government to relieve the people of the burden of taxation which they are compelled to bear for the transportation of their products to the seaboard. God gave us these rivers in their crude state, and it is our duty to prepare them so that they may be navigable and useful for the purposes of commerce and to supply the wants of the people.

The gentleman from Tennessee [Mr. WASHINGTON] said that this bill was fair to all sections of the country. The Tennessee River, the third in importance of the rivers being improved by the country, I regret to say, has not had one-tenth of the appropriation which it usually has to carry on the important work now in progress on that stream. That river drains a section of the country connected closely with what is fast becoming the center of the iron industry of the world, a character of freight of more weight and of more value than any other kind of freightage known to commerce.

ALABAMA'S IRON AND COAL INDUSTRIES.

The enormous increase of coal and iron in Alabama is attracting the attention of the world. The annual average production of Alabama pig iron for the last three years has been 744,858 gross tons. A comparison of these figures with the production of foreign countries shows that Alabama now produces almost as much pig iron as Russia or Austria and Hungary, more than Belgium, almost twice as much as Sweden and Norway, three times as much as Spain, and ten times as much as the combined total production of Canada, Mexico, Africa, Australia, Japan, India, Greece, and Italy; and in a few years it will produce more of this metal than any other country on earth, except Great Britain, and its production will not be equaled by any State in the Union except Pennsylvania.

Alabama's great progress in iron industries is largely due to the exceptional advantages enjoyed by having all the materials for making that metal in great abundance, in close juxtaposition, and so near the surface that they can be assembled and manufactured into iron of a superb quality cheaper than at any other place in the world.

This was the condition as far back as 1890, and since that time the economies adopted have very materially reduced the cost of production.

ALABAMA IRON CHEAPEST IN THE WORLD.

Again, the iron ore, lime rock, and coal are so easily mined that plantation negroes become efficient with a few weeks' experience, and within three months they become good miners of coal. To show the result of these advantages, I give the exact figures of the cost of the principal items in 1891 and 1895:

Cost to ton of pig iron.	1891.	1895.
Ore, coke, and lime rock	$7.795	$4.1025
Wages and salaries	1.777	.9143
Other items	.50	.257
Total	10.072	5.2738

Of course it would not be fair or correct to say that iron can be produced in Alabama at $5.2738 per ton, because we must add the cost of maintenance, relining, and other repairs, interest on capital, and actual value of materials on the ground.

But the great future prosperity of Alabama is doubly assured by the late successful experiments in the manufacture of steel. After years of struggle with this problem, involving disappointments, misfortunes, and losses, we are now producing in one of the Alabama furnaces, from materials in the immediate vicinity, a superior quality of pig suited to the basic open-hearth steel process, holding both sulphur and silicon below the limit prescribed by the best German practice. The daily output at present is but 150 tons, but plans are being perfected for the rapid development of this industry.

Following the successful inauguration of a steel plant behind which is the cheapest fuel and pig iron on the globe will come iron and steel manufactures of every character, and I confidently assert that at no distant period Alabama will become the center of the iron and steel industry of the world.

ALABAMA IRON SOLD IN ENGLAND.

Alabama is now profitably shipping her iron to England in such immense quantities that the London Iron and Coal Trade Review, in referring to the arrival of several cargoes of Alabama iron, says:

England is threatened with an invasion of American pig iron. This is one of the most serious blows to the supremacy of Great Britain as a manufacturing nation.

The reason for our rapid growth in iron industries is that within the limits of the Alabama mineral fields and those immediately adjacent there are more coal, more iron ore, more valuable timber, and more oil than in any other section of the United States, comprising varieties from the finest coking to the best steam, domestic, and gas coals, and including the largest deposit of cannel coal in the world. The iron ores, in quantity, quality, and variety are greater than in any other section, from the high phosphorus basic ore, carrying 3 per cent and more of phosphorus, down to the cranberry Bessemer, carrying less than 0.05 per cent.

ALABAMA'S MINERAL WEALTH.

The wealth of the mineral region of Alabama is by no means confined to its mines of iron and coal. In addition to these productions oil and gas are found in inexhaustible quantities. Building stone of superior quality exists without limit, and quarrying would become a more general industry were it not that other vocations are more inviting.

Gold has been mined for many years in the State, and the late discoveries in the Arbacoochee district gives promise of the development of ore of a very rich character.

Bauxite, or the ore of aluminum, exists in large quantities in the Coosa Valley in Alabama, extending up the valley into Georgia. This valuable mineral has also been found in Arkansas and New Mexico, but up to this time it has not been discovered at any other point in the United States.

The mineral conditions which exist in Alabama are also enjoyed in equal richness and abundance in the adjacent parts of Tennessee and north Georgia, which is designated as the Chattanooga iron district. The vast iron works which have been erected at Chattanooga and vicinity, and Sheffield, Florence, and Decatur, further down on the Tennessee River, must have water transportation for their products. These enterprises were inaugurated under a promise by Congress that the work to open the Tennessee River to navigation would be pressed forward with all possible rapidity, and for the Government to allow this work to drag along with inadequate appropriations is doing the greatest injustice to these enterprising people.

Pensions.

REMARKS
OF
HON. WILLIAM E. ANDREWS,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, June 10, 1896.

Mr. ANDREWS said:

Mr. SPEAKER: I desire to submit for the information of the House the following resolutions and report relating to private pension bills. I ask that the resolutions and report be read in full in my time.

The Clerk read as follows:

Whereas marked confusion and delay have resulted from the want of some uniform rule in the consideration of private pension bills: Therefore

Be it resolved, That it is the sense of the House that all private pension bills should be drawn according to the rates of pension indicated by the general pension laws unless the evidence should clearly show that a higher rate is justly required to relieve actual distress, the question of the soldier's rank being considered wholly immaterial in determining an exceptional rating.

Resolved, That all recommendations from committees should be in harmony with the sentiment of the foregoing resolution.

Mr. ANDREWS, from the Committee on Invalid Pensions, submitted the following report:

"Your Committee on Invalid Pensions, to whom were referred the resolutions (H. Res. 341) relating to private pension bills, have considered the same, and report as follows:

"Said resolutions seek to economize the time and labor of the House in the consideration of private pension bills. Such bills are usually drawn at rates much higher than those indicated by general pension laws, and consequently much time is consumed by committees and by the House in making amendments as to rates. If such bills were drawn according to rates fixed by general pension laws, and each bill were accompanied by a brief of the necessary evidence when it reaches the proper committee, many meritorious bills could be passed in the time frequently consumed by repetitions of opinions relative to exceptional ratings. It is assumed that the members of the House will readily recognize the benefits that could thus be conferred upon many deserving soldiers whose bills ought to be passed immediately.

"If the rates fixed by the general pension laws are not fair and just, a bill removing unjust discriminations should be put upon its passage immediately and enacted into law.

"Thus one discussion would settle the question of rates, and Congress would be relieved of a large volume of business which would be and ought to be transacted through the Pension Bureau. The adoption of the resolutions would give a rule of action to members, committees, and the House in the transaction of business relative to private pension bills; and your committee therefore recommend that said resolutions be agreed to."

Mr. ANDREWS. I introduced these resolutions in the House on the 18th of last May. They were referred to the Committee on Invalid Pensions. They were duly considered by that committee, and I was instructed to report them to the House with the recommendation that they be agreed to. They would have been called up for action if the way had not been obstructed by an unyielding objection to a request for unanimous consent for their consideration.

I think the members of the House realize the necessity for some definite rule of action in such matters.

It would be a protection to members, committees, and the House, and would avoid unjust and unreasonable discriminations.

It is hoped that the objection which has prevented an early consideration of these resolutions will not interfere with their adoption in the early part of the next session.

Silver and Money.

REMARKS
OF
HON. JOS. W BABCOCK,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
Monday, June 8, 1896.

Mr. BABCOCK said:

Mr. SPEAKER: Under the leave which has been granted by the House I desire to make some practical observations on silver and money, and especially on the proposition that the United States should open its mints to the gratuitous and unlimited coinage of silver at the rate of 16 to 1.

And in doing this I can best express my views in a simple and easily understood manner by adopting as my own a conversation on the subject on three evenings between Mr. Smith, a practical business man and careful student of finance; Mr. Jones, an intelligent farmer; Mr. Vance, formerly a Greenbacker, now a Populist and silver man, and Mr. Burns, a common-sense laborer.

THREE EVENINGS WITH SILVER AND MONEY—A TALK OF FOUR NEIGHBORS ABOUT MONEY AND SILVER.

First evening.

These four neighbors chanced to meet one evening at the house of one of their number. As these are times when all good citizens are thinking, studying, and debating this question, they naturally began talking about it.

Mr. Jones opened the conversation by remarking that he had been reading one of the numerous pamphlets written and distributed by an association supported by silver-mine owners, which seeks to have the United States, by itself and alone among the commercial nations of the world, open its mints to the free and unlimited coinage of silver at a ratio of 16 to 1, and he asked Mr. Smith to give his ideas of the proposition.

Mr. SMITH. Well, we have an evening before us; and as I have had considerable experience in business affairs, and have given a good deal of study to money problems and am interested in them, I always like to talk with intelligent, practical men on these subjects, and I find that their experience helps me to a better understanding of such questions. The subject is too big a one to cover in one evening. But I would be willing to come here several evenings until we have gone over the whole subject.

Mr. JONES, Mr. VANCE, and Mr. BURNS (speaking at the same time). That is very kind of you, Mr. Smith; we want to be sure that we have the right understanding of this money question.

THE NATURE AND USES OF MONEY.

Mr. SMITH. Now, the first thing we need to do is to obtain a clear idea of what money is, and what are its uses in modern business, that we may be better able to understand the points at issue. Of course we all know that money is the standard or measure of the values of all products, the financial yardstick, so to speak, and also the tool of exchange, by which I mean it is a substance which, by common consent, is accepted by everybody as equivalent in value to that which is sold. Before this common medium of exchange was adopted the primitive world had to resort exclusively to barter, or a direct exchange of one product for another. This was a very bungling, unsatisfactory method of making exchanges. For instance, "A" had a certain article which he did not need. He had to hunt up some one else—B, for instance—who did not have what A had in surplus and did have have what A was short of.

Mr. JONES. Oh, yes; I remember reading that in very early times this common medium of exchange which we call money was oxen, and in the early Roman period it was sheep; still later iron; then silver, first weighed out to the purchaser and subsequently coined; and then gold. I have read that the precious metals when used as money were not coined at first, but weighed in each transaction. I remember the account in the Bible of Abraham's purchase of a burial ground with a certain weight of silver. On account of the trouble of weighing and dividing the silver or gold in each transaction, convenience naturally suggested that the government of each country should divide the silver or gold bullion into pieces of different weights and stamp one fixed designation upon the various pieces of the same weight and another designation upon the pieces of another weight, which would in effect be a certificate of the weight of each that could be relied upon as accurate. This is what coinage practically is.

Mr. SMITH. That is true. And you will notice that as any people have advanced in civilization the article selected by common consent as this common medium (for law simply recognizes what common consent has already adopted) has been less and less bulky and clumsy. China and India find silver alone adapted to their conditions. Every modern first-class commercial nation can not successfully do its business without gold for the larger transactions and for the settlement of foreign balances as well as for reserves. But in all times property money—that is, money of intrinsic value and therefore money of final redemption—has been some product which possessed value aside from its use as money, because no one who had a valuable product would exchange it for anything else unless it had an equivalent value.

THE FIAT IDEA OF MONEY.

Mr. VANCE. This is where you and we Greenbackers, or Populists, differ. I am willing to sell my labor or any other valuable thing I may have for a bit of almost valueless paper called a greenback, on which is printed the stamp of the Government, with the figures $1, $2, $5, etc., or for a piece of paper issued by a national bank with similar figures, or for a similar bit of paper called a silver certificate. Doesn't this show that whatever the law declares to be money is money, and that nothing can be money which is not thus made by the fiat of the law?

Mr. SMITH. You must remember, Mr. Vance, that the bit of paper called a greenback, which we call credit money, is a promise of the Government to pay the gold or silver coins which we call property money; and the bit of bank paper is a similar promise of the bank which issues it. The silver certificate or the gold certificate is simply a receipt of the Government showing that the number of silver or gold dollars which it calls for has been deposited in the Treasury, and may be drawn from the Treasury any day that the holder of the certificate desires the deposited coin. All of these pieces of paper are used instead of the coin which they represent, for convenience.

During the war of the rebellion we had only paper credit money, which, although declared by law to be dollars, was more or less depreciated below the coin which it purported to represent—the depreciation depending upon the degree of distrust which prevailed at any time as to whether the paper promises would be redeemed in coin or property money. In 1879, when the Government had provided a fund of coin to pay its paper promises as presented, and had announced its purpose to do so, armed as the Treasury was with authority to borrow, confidence was restored, and the notes of the Government were everywhere regarded as equivalent to coin and therefore at par.

Property money, that is, coin containing the full value of bullion indicated by the stamp (and all coin that has the privilege of free and unlimited coinage must be of this character), does not need redemption nor the legal-tender power conferred by law to give it currency at its face value, for the reason that it has the same value as bullion before coinage as after. All that the legal-tender quality can confer is simply the power of discharging debts; but as every new debt will be contracted on a basis of the real value of the money on which it is to be discharged this really adds nothing to its value. A dollar note issued by a bank which does not have the legal-tender quality is of the same value of a greenback dollar with a legal-tender quality.

A FIAT IDEA IN COINAGE.

Mr. VANCE. How does it happen, then, that our silver dollar, which you sometimes call a 50-cent dollar when the market value of silver bullion in it is only 50 cents, is just as good in making purchases as a gold dollar, whose bullion is worth 100 cents in the market?

Mr. SMITH. That is because the Government coins the silver dollar on its own account and for its own profit, and does not allow private owners of bullion to have their bullion coined for their own profit. By limiting the coinage and undertaking indirect redemption of this limited quantity, by receiving them for gold duties or for taxes, the Government, as to the 50 cents in excess of the intrinsic value of the standard silver dollar, maintains them at par with gold precisely as it maintains greenback dollars at par.

In other words, the silver dollar is maintained at par by its practical redemption by the Government, just as our fractional silver coins are maintained, as neither has the intrinsic value which the stamp indicates. France maintains her silver at par with gold in the same way.

Mr. VANCE. But is not money a creature of law, and can not the Government make anything a dollar that it chooses to?

When Mr. Cheek gave his lecture on money before our club, I remember that we all cheered and clapped when he raised his arm and stamped his right foot and declared that law made money, and if the people would only have the right lawmakers we could drive the "goldbugs" to the wall.

Mr. SMITH. You must bear in mind that while the Government can declare anything to be money that it pleases, yet it can not create value in the money. That must be in the substance declared to be money if it is property money; or, if it is credit money, a redeemable promise to pay property money. The Government can declare a clam shell to be money; may declare every shell a dollar; but the purchasing power or value of the dollar will practically be what clam shells are worth, unless the Government, by direct or indirect redemption, undertakes to add to its value.

The name dollar given by law to our metal unit of value may be given to anything, but the value of the thing called a dollar, aside from redemption, depends upon the value of the quantity of the substance of which it is made, plus the charge for coinage. The law, under free coinage, may call 25.8 grains of standard gold (the weight of a gold dollar), or 412½ grains of standard silver (the weight of a silver dollar), or half that weight, a dollar, but the piece called a dollar (when its value is not maintained by redemption) will be of the value of the substance of which it is made.

Mr. JONES. If the idea that the "fiat" of the law or the stamp of the mint creates values—making whatever is declared or stamped as money just the value indicated by the stamp—were true, it seems to me it would be useless to have valuable gold or silver for money when it would do just as well for this valuable stamp to be put on an almost valueless piece of paper.

Mr. SMITH. You are right. If the Government can make 50 cents' worth of silver bullion worth 100 cents by stamping "one dollar" upon it without redemption, then it would be wrong to do this for private owners of silver bullion without charging them an equivalent for the value added to their property by the Government stamp. With such a stamp as this—more wonderful than Aladdin's lamp—the Government would have plenty of revenue without resorting to taxation, and would make everybody rich. All of the schemes for depreciating the currency to give relief in times of business depression are outgrowths of the "fiat" idea of money.

THE RATIO OF COINAGE.

Mr. VANCE. Am I to infer from what you have said that when the Government grants free and unlimited coinage to both silver and gold it can not fix the coinage ratio between the two?

Mr. SMITH. The Government, of course, can fix this ratio by law as it pleases, but unless that ratio is approximately the bullion ratio of the two metals, then the metal which is undervalued by the ratio will not be taken to the mint for coinage, and will be withdrawn from use as money and sold as merchandise, for the reason that it would be worth more as a commodity than as money.

The only metal which would be taken to the mint for coinage would be that overvalued by the ratio, in accordance with the well-known monetary law that where two or more different kinds of legal-tender dollars are authorized only the cheaper dollar will be coined and used. If the cheapest dollar authorized is a depreciated paper dollar (as was the case in this country from 1861 to 1879), then neither silver nor gold will be taken to the mint, and the only dollar used will be the cheapest paper dollar, which will become the practical standard of value, no matter what the law declares to be the unit.

Mr. BURNS. When you say that the piece of coined money called a "dollar" can be worth only what the bullion in it is worth under free coinage, you mean that its purchasing power will only be that.

Mr. SMITH. That is just what I mean. When the dollar which is paid the laborer for his day's work is depreciated, the laborer who thinks he is receiving a "dollar" for his labor really receives as much less as the purchasing power of his money may be. And as prices of what the laborer has to buy always rise faster than the price of his labor, he is the man who is always first cheated by a depreciated dollar.

Mr. BURNS. I know that is so by experience. I very well know that the workingman always gets the most for his labor when the money is of the best quality—every dollar as good as gold. I remember when the greenback was depreciated, and I thought I was getting $3 per day, that it took more days' labor to buy anything than it did in 1892; and I do not propose to be drawn into any scheme to make the laborer's dollars poorer than the banker's.

Mr. JAMES. Then it seems to me that the practical standard or measure of value in any country where there are two or more kinds of full legal-tender dollars authorized by law will always be the least valuable dollar, provided they are of different values—no matter what the law declares to be a unit or standard.

Mr. SMITH. That is so. Between 1792 and 1834, 371¼ grains of pure silver (412½ grains standard silver), and also 24¾ grains of pure (25.8 grains of standard gold) were each a legal dollar or unit (a quarter eagle being the smallest gold coin minted), but as that quantity of gold bullion was worth a little more than the silver in a silver dollar, the silver dollar was the practical standard.

From 1834 to 1861 a gold dollar of 25.8 grains (standard) was the practical standard, for the reason that the gold in a gold dollar cost less than the silver in a silver dollar, and the cheaper full legal-tender dollar will always take the field—the whole field—where there is considerable difference in the value of the two full legal-tender dollars.

From 1861 to 1873 the depreciated greenback dollar was the practical standard of value, notwithstanding the silver dollar was also a legal unit or dollar, because the greenback dollar was the least valuable.

In 1873 the gold dollar was made the legal unit, but the practical standard continued to be the depreciated greenback dollar until the resumption of specie payments in 1879, when the gold dollar again become the practical standard, as it was from 1834 to 1861, and also the legal standard.

THE COINAGE RATIO OF THE FATHERS.

Mr. VANCE. Well, the "fathers" did maintain the ratio of 16 to 1, and secured both silver and gold until silver was demonetized in 1873, and I believe the moment we now remonetize silver we shall find that 16 ounces of silver will be worth everywhere as much as 1 ounce of gold, as they were once.

Mr. JONES. I thought we did not have the ratio of 16 to 1 till 1834.

Mr. VANCE. Oh, yes; the "fathers" in 1792 fixed the ratio at 16 to 1, and we were all right, and should have continued all right if it had not been for "the crime of 1873."

Mr. SMITH. You are mistaken in saying that the "fathers" adopted the ratio of 16 to 1, unless you mean the "fathers" of 1834. The "fathers" who lived at the discovery of America found 11 ounces of silver equal in value to 1 of gold. The "fathers" of 1792 paid no attention to what their "fathers" of 1493 did, strange as it may seem to our "fiat" brethren, but proceeded to establish a coinage ratio of 15 to 1 (not 16 to 1), because they estimated that 15 ounces of silver were equal in value, on the average, to 1 ounce of gold. Subsequently it was found they had made a slight mistake in estimating the bullion ratio of silver and gold—only 2 per cent—which very largely kept gold from the mints; and so the later "fathers," in 1834, changed the ratio to 16 to 1 (to be exact, 15.98 to 1), and even then a slight undervaluation of silver and overvaluation of gold to the extent of only 2 per cent by this ratio resulted in the taking of very little silver to the mints between 1834 and 1861.

You will see that the object in fixing and changing the coinage ratio was to keep that ratio as near as possible to the bullion ratio in order to retain both metals as money, and that the ratio of 16 to 1 was not adopted until 1834, and was continued practically only twenty-seven years, as neither gold nor silver was coined to any extent from 1861 to 1873. The ratio of 16 to 1 was not a fixture. It was simply a temporary adjustment of the coinage ratio to the market ratio of gold and silver bullion in 1834, just as 15 to 1 was an adjustment to the market ratio of 1792 and 11 to 1 an adjustment to the market ratio of 1493.

Mr. VANCE. But if the ratio of 16 to 1 worked from 1834 to 1861, why won't it work now?

Mr. SMITH. Because the relative conditions of gold and silver production and use have greatly changed, and silver, which was then worth $1.30 per ounce, is now worth only half that price. Silver bullion must be worth at least $1.29 per ounce in order to maintain the ratio of 16 to 1 and hold both metals in our coinage. Silver has declined partly because all Europe has closed its mints to its free coinage, but chiefly for the same reason that cotton cloth, steel, kerosene oil, and other things have declined—it can be produced more cheaply than formerly. Forty years ago 3 yards of cotton cloth were equal in value to 1 bushel of corn in Illinois. Now a bushel of corn will buy 8 yards of cotton cloth, because it can be made at less cost. It would be just as sensible for the manufacturers of cotton cloth to demand that the ratio between cloth and corn should now be 3 to 1 because that was the ratio forty years ago as it is for the silver mine-owners to demand that 16 ounces of silver shall be regarded now in coinage as equal in value to 1 ounce of gold because that was the ratio twenty-odd years ago.

Mr. JONES. I can not see why silver bullion should not decline as well as other products, provided the discovery of richer mines and cheaper processes of separating the ore has reduced the cost of production. I was reading from a silver pamphlet a few days ago a complaint that silver is denied the privileges accorded to gold; but, as I understand it, the silver-mine owners resent the suggestion that silver should be coined at its bullion value, as gold is.

Mr. SMITH. That is the fact. They talk about the restoration of silver to its old position, by which they mean not its coinage at its bullion market ratio, as it formerly was, but a ratio that assigns twice the bullion value to silver that it has in the market.

WHAT HAS CAUSED THE DECLINE OF SILVER.

Mr. VANCE. But the silver-mine owners claim that it costs as much to produce silver as it ever did—far more than it has sold for since 1880—and that it is adverse legislation closing the mints to the free coinage of silver which has caused silver to decline.

Mr. SMITH. The simple and conclusive answer to the claim that it costs as much to produce silver as ever, and more than it has sold for since 1880, is that it is not possible to have any article produced in increasing quantities year by year for fifteen years—four times as much as was produced in 1865—when its selling price is uniformly less than its average cost, and it is absurd to contend otherwise. Whenever year after year enough persons

stand ready to produce all the world wants of an article for 75 cents or 85 cents per ounce, that must be accepted as the market value with which we have to deal.

Undoubtedly the general closing of the mints of Europe to the free coinage of silver, by diminishing what would have been the demand if they had been open, has carried the price of silver some lower than it would have otherwise gone. But, however much this action of Europe may have affected silver, there is no way of overcoming it except by inducing these European countries to unite with us in international action. Even if it were true, as the silver extremists claim, that all the fall in silver as compared with gold has been caused by the closing of mints to the free coinage of silver, this would not justify the opening of our mints alone at the ratio proposed, because it is the effect of European adverse legislation (not legislation here) with which we must deal.

Our legislation of 1873, striking the standard silver dollar from the list of coins to be minted, could not have had any influence in lowering the price of silver, because we had not coined silver to any extent for twelve years prior to 1873; while, on the other hand, we began in 1875 to coin subsidiary silver, and in 1878 resumed the coinage of the standard silver dollar, using five times as much silver as money in the twenty years from 1875 to 1895 as we used in the eighty-one years from 1792 to 1873.

Mr. VANCE. Do you not think the legislation of 1873 was instigated by foreign holders of our securities to increase the value of their debts?

Mr. SMITH. Nonsense! When the legislation of 1873 was had the gold in the gold dollar was 3 cents cheaper than the silver in the silver dollar; and if anyone had had in mind the idea of increasing the value of debts by manipulating the coinage he would have proposed to drop the coinage of gold, so as to have only the more valuable silver dollar. The legislation of 1873 was the very natural adaptation of our coinage to the condition which had existed from 1861, during which time silver had been worth more than gold and had disappeared from the country, and was regarded of so little consequence that it attracted no attention. Undoubtedly if there had been no such legislation in 1873 we should have been obliged to have followed the action of France, which stopped the free coinage of the standard silver dollar in 1875.

But to return to the causes of the decline of silver. After making all due allowance for the effect of the closing of European mints in depressing silver—the remedy for which is to be found only in international bimetallism—the chief cause of the decline of silver lies in the abnormal increase of production of silver in the face of a declining price.

INCREASE OF PRODUCTION OF SILVER.

Mr. VANCE. I have heard a great deal about an alleged increase of production of silver since 1873; but I have here a statement of the secretary of a Western silver league, who has published a book called Coin, in reply to a remark of Senator SHERMAN that this increase of production is the chief cause for this fall, which I will read:

> You will find by examining the table of silver production in that while during the first fifty years of this century the world produced 78 per cent more silver (coining value) than gold, that during the last twenty-one years (1873 to 1892) the production of silver (coining value) over gold has been less than 5 per cent.

This is an emphatic declaration that seems to show from official figures that proportionately more silver was produced before 1873 than in the twenty-one years after 1873.

Mr. SMITH. I have these official figures of gold and silver production for ten-year periods from 1800 to 1850 and five-year periods from 1850 to 1875, and from 1875 to 1895, both for the average annual production and the total production for each period, and, omitting the odd numbers and giving simply the round millions, they are as follows:

Average annual and aggregate ten or five years' gold and silver production in millions of dollars.

Period.	Annual.		Total.	
	Gold.	Silver.	Gold.	Silver.
1800–1810	11½	37½	118	371½
1811–1820	7½	22½	76	224½
1821–1830	9½	19	94½	191
1831–1840	13½	24½	134½	248
1841–1850	36½	32½	364	324
1851–1855	132½	36½	662½	184
1856–1860	134	37½	670	188
1861–1865	123	45½	615	228
1866–1870	129½	55½	648	278½
1871–1875	115½	81½	577	409
1876–1880	114½	101½	573	509
1881–1885	99	119	495½	594½
1886–1890	112	150	555	722
1890–1895	150	200	753	1,004

[After examining this statement of Coin, Smith continues:]

Now, this silver publication conveys the impression that these figures prove that Senator SHERMAN'S statement, that the production of silver has proportionately increased in the twenty-one years from 1873 to 1892, inclusive, beyond the production of a similar period before 1873, is the reverse of the fact. You so understand it, do you not?

Mr. VANCE. Of course that is what everybody would suppose to be its assertion.

Mr. SMITH. That, of course, is the impression that the general trend of the pamphlet's reply to Senator SHERMAN was intended to convey. But the cunning fellow who wrote it is careful to so phrase his reply as not to directly assert it, but to leave it implied. After much loose talk he finally ventures to be specific in the paragraph you have read. You and others seem to have swallowed this summary of official figures as a conclusive reply to the Senator, thus showing how easy it is to deceive in monetary discussions.

Senator SHERMAN'S statement was that the production of silver in proportion to that of gold increased in the years between 1873 and 1892 beyond what it was in the twenty-one years preceding. Coin replies that this is the reverse of the fact, and then proceeds to compare the production, not with twenty-one years before that date—as candor, not to say honesty, in the use of statistics demands—but with the fifty years from 1800 to 1850, omitting entirely the twenty-one years immediately before 1873.

Mr. BURNS. Is that so? I should be afraid to put the slightest confidence in a man who would attempt to mislead in that way.

Mr. SMITH. Well, here is the book; read for yourself and see if that is not exactly what he has done. And this is a specimen of the misleading treatment of the subject all the way through.

Mr. BURNS (after reading). It is as you say, although, as I read the page hurriedly, I did not notice the trick. Now, won't you add up the figures and give us the total production of gold and of silver twenty-one years after 1873 and twenty-one years before, giving the coinage value of each, as this pamphlet does?

Mr. SMITH. That is what I have done, and here are the totals for each period: The production of gold twenty-one years before 1873 was $2,510,575,000, and of silver (coining value) $989,265,000, or 150 per cent more of gold than silver. Production of gold twenty-one years after 1873 was $2,157,197,000 and of silver $2,246,519,000, or 5 per cent more of silver than gold.

In other words, while the production of gold was a little less between 1873 and 1892 (inclusive) than it was between 1852 and 1873, the production of silver in the twenty-one years since 1873 has been 125 per cent more than in the twenty-one years before. Yet in the face of this obvious fact, told by the very tables that he refers to, this 16-to-1 silver advocate so manipulates figures by omitting entirely the twenty-one years before 1873 as to seem to show otherwise.

Mr. VANCE (after examining the figures). I must confess that I was misled by the statement I read. Yet it seems that between 1800 and 1840 silver production was even larger in proportion to gold production than between 1873 and 1892.

Mr. SMITH. You must bear in mind that no intelligent comparison can be made of monetary demands and conditions from 1800 to 1840 with the strikingly changed conditions of the last twenty-five years. In the first forty years of this century silver constituted the chief money of Europe and other countries; but in the last forty years, in consequence of the immensely larger transactions, the use of gold has proportionately increased and that of silver has increased much less. This tendency can not be changed by legislation, and it is a factor that must be reckoned with.

It is for this reason that it is absurd to go back to the silver production of 1800 for figures to compare with silver production since 1873, especially when the figures from 1851 to 1873 are before us.

Mr. JONES. What has been the silver production (coinage value) of the world in the past five years as compared with that of the five years before 1870?

Mr. SMITH. The silver production from 1865 to 1870 was, in round numbers, two hundred and seventy-eight millions and the gold production six hundred and forty-eight millions, while from 1890 to 1895 the silver production was one thousand and four millions (almost four times what it was in the first period) and the gold production seven hundred and fifty-three millions. A simple statement of these figures, bearing in mind that between 1865 and 1870 silver was worth nearly $1.35 per ounce, while between 1890 and 1895 it was worth considerably less than $1 per ounce, ought to convince the most prejudiced, not only that there has been an abnormal increase of silver, but also that the cost of production must have largely declined, entirely outside of the influence of the closing of European mints to free coinage of silver.

Mr. VANCE. I must confess that this increase of production of silver, under the circumstances, does seem to indicate that the

discovery of richer mines and new and more economical processes has cheapened silver somewhat; but has not the reduction of demand for silver, caused by closing the mints to free coinage of silver, had a still greater influence in depressing it?

Mr. SMITH. As I have already said, both causes have had their influence; and it is impossible to tell how much is to be ascribed to one cause and how much to the other, although the great increase of production of silver in the face of a constantly falling price indicates that the reduction of cost of production must have been the more important factor.

THE MONEY OF THE WORLD.

There is an impression that because the European mints no longer give free coinage to silver, therefore silver is not used much as money. But, as a matter of fact, Europe still uses an immense quantity of silver as money. Indeed, there is about the same amount of silver as gold used to-day by the whole world as money—about four thousand millions of each, all of which but four hundred millions is full legal tender.

Of this silver one thousand eight hundred and fifteen millions are in India, China, and other Eastern countries that use only silver, leaving about one thousand six hundred millions of full legal-tender silver, with six hundred millions of limited tender silver, and four thousand millions of gold, with two thousand five hundred and thirty-three millions of uncovered credit money for the rest of the world.

The gold and silver and credit paper money of the leading commercial nations, all of which have a gold standard, is thus stated by the Director of the Mint:

	Gold.	Full legal-tender silver.	Limited tender silver.
United States	$625,600,000	$549,700,000	$75,600,000
France	825,000,000	434,300,000	59,900,000
United Kingdom	550,000,000		112,000,000
Germany	625,000,000	105,000,000	110,000,000
Belgium	55,000,000	48,000,000	6,900,000
Norway and Sweden	13,800,000		6,700,000
Denmark	14,200,000		5,400,000
Austria	130,000,000	81,000,000	40,000,000
Total	2,839,600,000	1,218,000,000	414,500,000

You will see that this country has five hundred and forty-nine millions of full legal-tender silver, including the one hundred and thirty millions of silver back of that amount of Treasury notes, in addition to seventy-five millions of subsidiary silver, an aggregate of six hundred and twenty-five millions of silver money—almost exactly the same as we have of gold (one thousand two hundred and fifty millions of gold and silver), whereas in 1860 we had only two hundred and fifty millions of both gold and silver money, of which not over fifty millions was silver, not over fifteen millions of this silver being full legal tender.

Mr. BURNS. I am surprised at these figures from the report of the Director of the Mint, for I had got the impression from statements made by Coin that the world had deprived itself almost entirely of silver as money, whereas it seems that to-day as much silver is being used as money as there is of gold. I suppose, however, that very little silver has been coined in the world the past few years, and that this may have had a specially temporary depressing influence on silver.

Mr. SMITH. I know that this is alleged to be the case; and yet the world has used far more new silver as money the past five years than ever before. The Director of the Mint states in his last report that while up to 1865 less than $28,000,000 of new silver was coined in any one year, yet the silver coinage of the world in 1893 was $135,000,000, of which one hundred and twenty millions was new silver—four times as much as was coined in any one year before the war. In 1893 Mexico coined twenty-eight millions of silver, India thirty-nine millions, Austria eighteen millions, Japan twelve millions, this country eight and three-quarter millions (fifty-four millions annually having been used by us as money for each of the three previous years), Great Britain five millions, and Germany two millions.

Mr. JONES. Evidently those who are asserting that the world is now deprived of half of its money because of what they call "demonetization" don't know what they are talking about.

Mr. SMITH. Many of them do not want to know. The difficulty which we are trying to get the commercial world to unite with us in overcoming is not that silver is not used by the world to as great an extent as gold as money (for it is), but that the leading commercial nations do not coin it as full-value money, which is essential in free and unlimited coinage, but as token money that must be maintained at par directly or indirectly by redemption. Of course silver monometallic countries on a silver basis, like Mexico and China, do coin it as full-value money, but at such a ratio as drives out gold and gives them only silver.

What we are seeking to do is to secure the cooperation of a sufficient number of the leading commercial nations in an international agreement on a coinage ratio that can be maintained with free coinage, and thus give us and these cooperating nations both silver and gold as our final redemption money. Experience has shown that no one country can bring this about alone—certainly not at any such ratio as that proposed by the 16 to 1 silver men.

THE BIMETALLIC THEORY RUN INTO THE GROUND.

Mr. VANCE. I have here a free-coinage book, which states that when there is free coinage of both metals by any one country, like the United States, at any ratio, an unlimited demand is created for silver at the fixed price established by the ratio thus determined, and that this at once makes a price for silver for the whole world. This book says that is conceded.

Mr. SMITH. As Josh Billings quaintly remarked, "It is better not to know so many things than it is to know so many things that ain't so." What you have read in that book is an absurd exaggeration of the bimetallic theory as expounded by its scientific defenders. They never claimed for the compensatory or altering principle of bimetallism any such potency as this.

They simply claimed what is true, that where several leading commercial countries adopt substantially the same coinage ratio for gold and silver, and that ratio when fixed approximates the bullion ratio, then whenever one of the metals begins to rise the demand for the cheaper metal is increased and the demand for the more costly metal is diminished, and this alternating increase and decline in demand tends to maintain the two metals at an equilibrium so long as the condition of production does not materially change, and the potency of this compensatory principle depends upon the commercial strength of the union of countries opening their mints at a common ratio.

Mr. VANCE. But if the United States stands ready to take all the silver that is brought to our mints at $1.29 per ounce (which is the price required to make the coinage ratio 16 to 1) and pay for it in silver dollars coined from the silver bullion, why does that not make a price for the world's silver?

Mr. SMITH. I remarked at the beginning of our discussion that the "fiat" fallacy of money is at the bottom of this free silver, 16 to 1, movement. And Mr. Vance now owns up. You assume that when the Government, under free and unlimited coinage, stamps 50 cents' worth of silver "one dollar" and gives it the legal-tender power, then this "fiat" of law at once adds 50 cents to the value of the silver and makes it worth everywhere 100 cents, as good as a gold dollar, and to an unlimited extent.

Mr. JONES. As I understand it, under free coinage the Government does not buy any silver; it simply takes the silver brought to the mints by private owners and coins it into silver dollars containing 412½ grains of standard silver. Why, then, do you say that the Government by this operation fixes the price of silver at $1.29 per ounce, in the face of the fact that silver can be freely bought in the market for half that price?

Mr. VANCE. Because the owner of the silver receives one silver dollar and twenty-nine hundredths of a silver dollar for each ounce of his silver. So long as any owner of silver can exchange his silver in this manner it seems to me as if the price was fixed at that figure for the whole world.

Mr. SMITH. Don't you see that what the owner receives for each ounce of his silver dollar is what one silver dollar and twenty-nine hundredths of another dollar will bring in the market? And that after a brief time, under free and unlimited coinage, the value of this dollar and a fraction will be simply the value of so much silver bullion?

In other words, free and unlimited coinage of silver don't create an "unlimited" demand, but simply the limited demand for that kind of coin in the country where minted. Neither does it establish a "fixed price"—only the varying price of so much bullion.

You have simply fooled yourself by your talk of an unlimited demand at a fixed price, and all because you have swallowed whole the "fiat" fallacy of the nature of money.

Mr. BURNS. As you remarked a little while ago, it seems to me that if Government can make a piece of silver worth anything it stamps on it, it would be far better not to waste 50 cents' worth of silver in making a dollar, when an almost valueless piece of paper can be made a dollar by having the Government stamp it such. It looks to me as if the old fiat greenbackism was much better than this modified form of silver "fiatism."

Mr. SMITH. You are right. The only influence that free and unlimited coinage of silver can have on the value of the coin and the silver of which it is made is that exerted by the probable increase of demand for silver; but the increased demand arising from the opening of the mints of only one country would be too small to materially affect the price. A union of leading commercial nations on a fixed common ratio, having regard to the bullion ratio, would exert a potent influence not only in somewhat raising the price of silver bullion, but also especially in steadying the relative value of the two metals by the influence of the alternating or compensating influence of bimetallism of which I have spoken.

THE FRENCH EXPERIENCE.

Mr. VANCE. I read in Coin that for over seventy years, from 1800 to 1873, France maintained silver and gold at a market ratio of 15½ to 1 by opening her mints to the free coinage of silver at 15½ to 1. If France alone did this, why can't the United States, which is a more populous and important country than France, by independent action maintain free and unlimited coinage of both metals and keep them together as France did?

Mr. SMITH. There are two answers to the assertion. First, that not only France but all Europe (England excepted) coined silver at approximately the ratio of 15½ to 1 from 1800 to 1870; so that whatever influence was exerted on the piece of silver by governmental action was not exerted by France alone but by nearly all Europe. And secondly, that during these seventy years there was no material change in the conditions and cost of silver production. The average annual production of silver was $37,000,000 from 1800 to 1810, $22,000,000 from 1810 to 1820, $19,000,000 from 1820 to 1830, twenty-four and three-fourths millions from 1830 to 1840, $32,000,000 from 1840 to 1850, $37,000,000 from 1850 to 1860, and $50,000,000 from 1860 to 1870—a change so small as to make stability a necessity; while the increase of production of silver since 1870 has been by leaps—$81,000,000 in 1875, $120,000,000 in 1880, $142,000,000 in 1888, $173,000,000 in 1890, and $196,000,000 in 1892.

Mr. JONES. How long were France and the other countries of the Latin Union (Belgium, Switzerland, Italy, and Greece) able to withstand this early increase of silver production and the closing of the German mints in 1871?

Mr. SMITH. In 1874, when the production of silver had reached only eighty-one millions, all these countries acting together found they could not overcome even the slight deviation of 5 per cent from the ratio of 15½ to 1, and were obliged to suspend the coinage of full legal-tender silver. And not a dollar has been coined for private owners of bullion since.

The experience of France is a most complete demonstration of the impossibility of the United States alone opening its mints to the free and unlimited coinage of silver at 16 to 1 without driving out gold and making us a silver monometallic country.

In reply to an inquiry, M. Ribot, the French minister of finance, said a few months ago in the Chamber of Deputies that while France was anxious to secure bimetallism and was ready to join with other nations to bring it about, yet that neither France nor any other country alone could accomplish this result.

THE EXPERIENCE OF THE UNITED STATES.

Mr. BURNS. How about the experience of the United States?

Mr. SMITH. As I have already said, the experience of the United States has shown the impotency of one country alone in materially affecting the market ratio of gold and silver by adopting a coinage ratio even but slightly different from the bullion ratio. The ratio of 15 to 1 adopted by the United States in 1792 undervalued gold about 2 per cent, and the result was that between 1792 and 1833 less than ten millions of gold were taken to our mints for coinage, while over forty millions of silver were coined. Of the forty millions of specie estimated by Secretary of the Treasury Gallatin to have been in this country in 1833, not even five millions were gold.

In 1834 we changed the ratio to 16 to 1, so as to secure gold as well as silver; but the new ratio undervalued silver about 2 per cent. The result was that even this small divergence from the actual bullion ratio brought less than thirty-five millions of silver to the mints between 1834 and 1854, while two hundred and fifty millions of gold (the cheaper metal) were coined. Indeed, the silver coined went to the melting pot so rapidly that in 1853 Congress was compelled to reduce the weight of subsidiary silver and make them token coins.

And I have already said of the two hundred and fifty millions of specie estimated by the Secretary of the Treasury to have been in this country in 1860 probably not over ten millions was full legal tender.

After such an experience as this it is absurd for anyone to claim that this country alone can maintain bimetallism by free and unlimited coinage of silver at 16 to 1 when the market ratio of bullion is 30 to 1.

Mr. JONES. I think it is clear that the only way we can have both silver and gold as our money under free and unlimited coinage is by making the coinage ratio approximately the same as the ratio of the bullion value of the two metals.

Mr. SMITH. It ought to be apparent to everyone that the Government can not make 16 ounces of silver equal in value to 1 ounce of gold by fixing 16 to 1 as the ratio for free and unlimited coinage of silver and gold, unless approximately 16 ounces of silver will exchange for 1 ounce of gold in the markets of the world. To establish such a ratio, when the market ratio is now about 30 to 1, is practically to say that we intend to have nothing but silver as our money and to make 50 cents' worth of silver the dollar and unit of value, for not one dollar of gold would be coined under such a law, and what gold we have coined would at once cease to be used as money.

THE EXPERIENCE OF MEXICO.

Mr. JONES. What has been the experience of Mexico, which maintains the policy of the equal and unlimited coinage of silver and gold at a ratio of 16½ to 1?

Mr. SMITH. Well, let us look at that country near our own doors which has tried and is trying the policy which is urged upon us ostensibly in the interest of bimetallism.

Mexico has unlimited coinage of both gold and silver at the ratio of 16½ to 1, valuing silver a little less than our 16-to-1 silver advocates propose, with a uniform charge of 4 per cent for coining either metal. And after trying this policy ever since the market value of silver declined, resolutely refusing to join in any "crime of 1873," she has become what? Why, a silver monometallic nation on a silver basis, without any gold in her metallic money. That is what 16½ to 1 silver coinage has done for Mexico, and what 16 to 1 unlimited silver coinage would do for us.

Mr. VANCE. But Mexico is a comparatively small country, and we can not judge what free coinage at 16 to 1 by this country of 70,000,000 people will do by what has taken place there.

Mr. SMITH. Why not? The "fiat" of Mexico is as potent within its limits as the "fiat" of the United States is within ours. Besides, Mexican dollars have an advantage over the silver coins of any other country—they are current in China, which has a population five times as great as the United States. The experiment of Mexico is practically the experiment of more than 400,000,000 people.

Mr. JONES. A gentleman who recently visited Mexico told me that he carried with him to that country some American silver dollars, which, having been coined for the profit of our own Treasury, are maintained at par with gold by indirect redemption by our Government; and that he frequently made a purchase of an article whose price was 50 cents and, on giving to the seller one of our dollars, received the article which he had purchased and a Mexican dollar besides.

Mr. SMITH. Certainly; for every dollar of our money has a purchasing power of 100 cents in Mexico as well as in this country; but every dollar of Mexican money, although called a dollar, has a purchasing power of only 50 cents there or here.

Mr. VANCE. Prices there are higher than here; and that is a good thing.

Mr. SMITH. Yes; prices are higher, just as they would be here if we should cut our dollar into halves and call each half a dollar. But notwithstanding prices are higher, estimated in Mexican dollars, not one article thus elevated in price will exchange for any more of any other product than it would have done before.

Mr. JONES. How is it with imported articles?

Mr. SMITH. Every imported article sells in Mexico for twice as many dollars as before, with an extra charge for brokerage because of the uncertainty of the value of their money.

Mr. JONES. How does it affect articles exported by the Mexicans?

Mr. SMITH. As all her exports are sent to countries on a gold basis, and to pay for them these countries buy silver exchange at a profit, with an added brokerage for the uncertainty of the value of silver, the Mexicans get less for what they export than they would if they were on the same basis as the leading commercial nations.

Mr. BURNS. What has been its effect on labor?

Mr. SMITH. Wages have not risen as much in Mexico as prices have risen. In other words, a depreciated currency has cheated the laborer, as it always does.

But it is getting late, and we must postpone further conversation on this interesting question to some other evening. I can meet here again with you on next Monday evening if you desire to continue the discussion.

Mr. VANCE, Mr. SMITH, and Mr. BURNS (speaking together). By all means, let us continue this talk.

Mr. SMITH. Let it be understood, then, that we will meet here next Monday evening and continue this conversation on silver and money.

Second evening.

It was five minutes earlier than the time set for the reassembling of the four neighbors who had met on a previous evening to talk over the silver and money question when Mr. Smith, Mr. Jones, Mr. Vance, and Mr. Burns took their seats around the little table on which the lamp rested.

Mr. VANCE, leaning back in his chair and holding up in one hand a worn copy of the silver mine-owners' pamphlet called Coin's Financial School, opened the conversation: After thinking over the facts brought out at our previous meeting, I am not disposed to contend that silver has not fallen somewhat, but it seems to me that gold has risen much more than silver has fallen.

Mr. SMITH. Even supposing this to be the fact, that would not change the situation. So long as the market ratio between silver

and gold is 30 to 1 it is absurd to contend that the United States alone can set up a coinage ratio of 16 to 1 and obtain bimetallism, no matter what caused the divergence.

It is the fact of the market ratio with which we must deal, no matter whether it is caused by gold rising or silver falling, or both. Even if it were established that the divergence of the two metals from the old ratio of 16 to 1 was caused entirely by the rise of gold, this would not in any manner change the fact that the adoption of free coinage of silver at 16 to 1 would give us nothing but silver in our coinage.

Mr. VANCE. But has not gold appreciated since 1873?

Mr. SMITH. The opinion of experts like Professor Fawcett is that gold declined (many think 10 or 15 per cent) between 1850 and 1865, in consequence of the increased production, notwithstanding most of the increased production was offset by increased demand; and that it appreciated between 1870 and 1891 just about as much as it declined between 1850 and 1865. The Director of the Mint, as well as Professor Fawcett, thinks that the largely increased production of gold since 1891—already larger than in the palmiest Californian and Australian days—has stopped the appreciation, and that the probabilities are strong that in the near future another decline of gold will set in.

But it must be remembered that by common consent gold varies less in value than any other substance—but a fraction of a cent in any one year—and that for this reason the commercial world makes it the international standard of value.

When gold was declining, between 1850 and 1860, even the "fiat" money men looked very kindly on gold, and were entirely content to have it the practical standard of value.

If it were true that gold has risen and silver remained stationary—which it is not—this fact would furnish an excuse for reducing the weight of the gold dollar, but not the slightest ground for trying to have free coinage at the ratio of 16 to 1. The ratio would still be 30 to 1 if the gold dollar should be reduced one-half and the silver dollar be left as it was.

Mr. BURNS. That is evident, and yet at first view many overlook this fact.

Mr. SMITH. I ask you to notice particularly the large increase of the world's production of gold since 1890, as shown by the figures I read the other evening from the report of the Director of the Mint:

1890	$118,489,000	1894	$170,000,000
1891	130,579,000	1895	203,000,000
1892	146,817,000	1896 (estimated)	250,000,000
1893	157,000,000		

Mr. VANCE. But with the world's production of gold this year estimated at $203,000,000, is not a large proportion of it used in the arts, so as to leave almost none for coinage?

Mr. SMITH. The Director of the Mint estimates the world's annual consumption of gold in the arts at $60,000,000, and Mr. Soetbeer at $90,000,000, and taking the highest estimate the gold remaining for new coinage in 1895 would be $133,000,000 and in 1896 about $160,000,000. Bearing in mind that the precious metals used in coinage are not consumed from year to year, but added to the accumulated stock, this annual increase of $150,000,000 in the world's stock of gold money is noteworthy, especially in view of the fact, as stated by Professor Fawcett, that Great Britain requires only $15,000,000 of new gold for monetary purposes each year.

Mr. VANCE. Coin assumes that gold has appreciated 50 per cent since 1873.

Mr. SMITH. "Assumes" is good. There is not the slightest evidence of anything of the kind.

Mr. VANCE. Coin, if I understand him, claims that prices have declined 50 per cent since 1873, and as gold is the measurer of prices, that this proves that gold has risen 50 per cent.

Mr. SMITH. I shall take occasion before we are through to show you that between 1873 and 1892—and of course the great fall of prices the past years is due to exceptional causes entirely outside of gold or silver—the average decline of prices, as shown by Labor Commissioner Wright's investigations under the direction of the Senate Committee on Finance in 1891-92, was only 29¾ points. And between 1879 (when we resumed specie payments) and 1892 only 4½ points. Of course the prices of 1873 were inflated by a depreciated currency and the effects of the war, from which we did not fully recover till 1878, and are not a fair basis for comparison.

Coin makes his argument entirely on cotton and wheat, which declined more than other products, for reasons of which I will hereafter speak.

Everybody knows that all products into whose production machinery or other labor-saving devices enter are constantly and naturally declining under the stress of competition, and it is simple nonsense to contend that a fall of prices of such articles shows that gold, which measures prices, has appreciated to the extent of the decline of prices.

By taking all articles together—all machine-made articles naturally decline—a fall in prices of only 4½ points between 1879 and 1892 shows that there could have been very little of the decline due to an appreciation of gold.

THE STANDARD OF VALUE.

Mr. JONES. Much is said now about a double standard. It seems to me from what you have said that there can be practically but one standard in any country at the same time.

Mr. SMITH. Strictly speaking, that is true. The term double standard, which seems to me to be an unfortunate term, is used by financial writers as a synonym of bimetallism and simply means that the dollar unit is measured in two money metals adjusted to each other at such a ratio as to be equivalent in value, thus making two equal units but one and the same, therefore really one standard so long as the equality continues. And, of course, their idea is that the equality shall be maintained in fact. So long as the equality of value of the two metals is preserved and both gold and silver circulate concurrently the standard is gold or its equivalent, but both metals are used as money.

But our 16-to-1 silver advocates mean by "double standard" that silver shall be coined at such a ratio to gold that only silver will be minted. This is a "double standard" on paper, but in fact a single silver standard and a single metal (silver) used as money.

It is for this reason that if we should to-day authorize the free and unlimited coinage of silver at 16 to 1 the silver dollar would at once become the practical unit, and thus our unit or standard of value would be suddenly changed from the gold 100-cent dollar to the silver 50-cent dollar, and nothing but silver would be used as money. I think those who advocate this change hardly realize the shock such a sudden change would give to business and what a panic it would create. A railroad collision would be a pastime compared with it. When we changed from a gold to a depreciated paper standard in 1861-1866 it came about so gradually that the change was slowly discounted.

Mr. VANCE. Inasmuch as a silver dollar of 412½ grains of standard silver was the legal unit prior to 1873, why not return to it?

Mr. SMITH. As I have said already, the silver dollar was no more a legal unit between 1792 and 1861 than the gold dollar, and not the practical standard at all after 1884. The practical standard was the gold dollar from 1834 to 1861, and from 1861 to 1879 the depreciated greenback dollar.

The objection to now making 412½ grains of standard silver as a legal unit is that silver is not what it was in 1792, nor even from 1834 to 1861. It has, first, greatly depreciated in consequence of a reduction of cost of production; second, the changed conditions of production have made it much more variable in value and therefore less suitable as a standard than it was a hundred years ago; third, all the leading commercial nations, which a hundred years ago made silver their standard, now make grains of gold their unit or standard of value, so that in fact international prices are everywhere fixed in gold and not in silver.

Mr. VANCE. When gold is made the standard we make our dollar cost twice as much as we do when silver is made the standard.

Mr. SMITH. Not if we coin both metals at their bullion ratio. Of course if we coin silver at its bullion value and gold at twice its bullion value, we should make one dollar twice as valuable as the other. The question as to what any country will make its standard is entirely distinct from the other question as to how many grains it will put in its unit. We can depreciate our dollar unit just as well by making 13.3 grains of standard gold the unit as by making 412½ of standard silver the unit.

If we intend to depreciate the dollar one-half, and at the same time keep both metals in our coinage with free and unlimited coinage, it would be a great deal better to diminish the weight of our gold one-half than to diminish it one-half by establishing free coinage of silver at 16 to 1. In the former case we should have 50-cent dollars of both silver and gold, and in the latter case we should have 50-cent dollars only of silver and no gold.

Mr. JONES. That is a good idea. If we are going into the business of depreciating our dollar so as to pay our debts easier—for I suppose that is the real animus of the 16-to-1 free-silver movement outside of the silver-mine interest—it is better to do it squarely, by reducing the weight of the gold dollar one-half, and then coining the 412½-grain silver dollar alongside of it, as in that case we should have both gold and silver dollars of equal value and real bimetallism. That would be free coinage at a ratio of 30 to 1, whereas free coinage at 16 to 1 would give us nothing but silver.

Mr. SMITH. That is it. Nobody would be deceived by that, although I presume when fully stated the men who want to depreciate the dollar like the deceptive method better.

Mr. BURNS. What could possibly be gained by bimetallism with silver for the unit of value over gold for the unit if it is proposed to coin at such a ratio as will give us both metals as money?

Mr. SMITH. Obviously nothing. There would be a loss, however, in adopting a different metal as the standard of value from that adopted by the controlling element of the commercial world; and, worse than that, we should have so variable a standard of value as to subject us to constant friction and brokerage to compensate for the uncertainty of the future value of silver.

Indeed, there is another view of it which ought to impress the advocates of a cheap dollar. This is that silver has fallen in value, and is undoubtedly too low to-day to encourage its production; and if we should now adopt a silver standard we should soon find our dollar increasing in value. Would it not be funny to see the advocates of a silver basis to-day contending, if silver should rise, that debts contracted under a silver basis were being increased by the rise of silver and advocating the making of copper the unit of value to protect debtors?

INTERNATIONAL BIMETALLISM.

Mr. JONES. It seems to me that nothing is clearer, from the examples you have given, than that the influence on the price of silver of unlimited coinage of both metals by any one country alone is very small, but that when the leading commercial nations unite on a coinage ratio, under free coinage, they together exert a very strong influence, not only in maintaining the relative price of the two metals but also in steadying their value.

Mr. SMITH. You are right. The influence exerted is that of demand for monetary uses. The demand of one country exerts a slight influence, but the demand of the leading commercial nations acting in unison at a fixed ratio is a potent force, although of course even the united demand of the leading commercial nations must have regard to the probable production of each metal at the coinage ratio.

The small influence of the United States alone in maintaining the price of silver is shown by our experience under the Bland silver-purchasing act of 1878 and the amendatory act of 1890. Under the former act we purchased about $27,000,000 worth of silver annually for fifteen years to use as money, and silver continued falling every year. Under the act of 1890 we purchased for three years 54,000,000 ounces of silver annually, over a third of the world's product, and substantially the whole of the American product; and yet, after a brief speculative spurt, the price of silver went on declining, simply because the new demand we had created, promising an increase of price that offered a big profit, stimulated production.

Now, with free and unlimited coinage of silver at 16 to 1 the United States could not coin so much silver in three years as we purchased from 1890 to 1893. How absurd, therefore, it is for anyone to contend that free coinage by this country alone would raise silver from 68 cents to $1.29 per ounce.

On the other hand, the influence exerted by nearly all Europe, as well as the countries of this continent, coining silver and gold at substantially the same ratio prior to 1870, was well shown during the great increase of gold production between 1850 and 1860. To be sure, during that period the increase of gold was offset by a general tendency throughout the world to use more gold and less silver as money—a tendency arising from the greater convenience of the less bulky money as transactions increased in magnitude, and which of course is beyond the reach of law.

Mr. BURNS. I think you have made it clear that international bimetallism is the only practical bimetallism, and that we should steadily seek to bring that about.

Mr. JONES. And so long as we give Europe hope that we propose to sustain silver alone, Europe will look on and let us bear the burden.

Mr. SMITH. That is so. Nothing is exerting so great an influence to prevent the successful reestablishment of bimetallism as the 16-to-1 free-silver agitation in this country, which encourages Europe to think that we will continue to assume the burden alone.

Mr. VANCE. But if no leading commercial nations of Europe will unite with us in international bimetallism, isn't it our duty to try it alone?

Mr. SMITH. I have clearly shown that neither the United States nor any other nation can secure bimetallism alone, certainly not at any such ratio as is proposed, and the silver-mine owners won't permit a ratio equivalent to the bullion ratio. For us to attempt it alone at a ratio of 16 to 1 is simply to drive out gold and have nothing but silver. There would be no serious opposition to coining silver at its bullion value—certainly none beyond the fact that its bullion value would be unstable if European nations did not unite with us.

Mr. VANCE. But we didn't drive out gold after 1878 when we began again to coin silver. On the contrary, our gold increased.

Mr. SMITH. I have already explained that the silver dollars we have coined since 1878 have been coined by the Government for its own profit, and maintained at par with gold by limitation and indirect redemption. Of course such money is equivalent to gold. But silver coined under free and unlimited coinage for private owners of bullion is a very different thing, and depends entirely on the value of the bullion.

I have little doubt that if we hold where we are, sooner or later enough European nations will unite with us to make bimetallism a success.

All authorities in bimetallism, both in this country and Europe (outside of some politicians in this country), hold that bimetallism is possible only by a cooperation of leading commercial nations. President Andrews, Professor Walker, and the late Dana Horton are pronounced in their opposition to the 16-to-1 silver movement, regarding it as sure to bring, not bimetallism, but silver monometallism.

THE ATTITUDE OF THIS COUNTRY AND FRANCE.

Mr. VANCE. Then it seems to me that the alternative this presents is the gold monometallism which we now have, unless we can persuade other countries to unite with us in restoring bimetallism. As between our gold monometallism and silver monometallism I prefer silver monometallism.

Mr. SMITH. You are entirely mistaken in assuming that we now have gold monometallism. Great Britain is a gold monometallic country, because it coins no full legal-tender silver, using only a small quantity of silver for subsidiary coins.

But the United States and France—for both are pursuing the same policy toward silver—are limited bimetallic countries which use a large volume of full legal-tender silver, and are steadily seeking by international action to bring commercial countries into an international agreement on a coinage ratio under free coinage that will insure full bimetallism.

The United States, as I have already stated, uses over six hundred millions of silver as money—as much silver as gold—of which five hundred and forty-nine millions is full legal tender. And France uses a little more than half as much full legal-tender silver as she does gold.

We hear much said about what is styled the "unfriendly attitude" of the United States toward silver, and yet as a matter of fact this country has gone to the very verge of safety, if not beyond, in its efforts to maintain silver as a money metal and meet the wishes of silver-mine owners. After what we have done it is rank injustice to stigmatize any considerable body of our people as "silver haters" or "goldbugs."

Mr. JONES. That is, the situation demands that we shall hold on to the limited bimetallism we now have, which gives us five hundred and forty-nine millions of full legal-tender silver, until we can persuade leading commercial nations to unite with us on an international coinage ratio that can be maintained. And this is just what France is doing.

ABOUT "BASIC" MONEY.

Mr. VANCE. But notwithstanding we as well as France use this large volume of full legal-tender silver, yet, as Coin says, none of this silver is final-redemption money; therefore really as to basic money we have nothing but gold.

Mr. SMITH. You mean by "basic" or final-redemption money property money, which has in itself the full value that it purports to be.

That kind of money must necessarily be gold or silver coined at its actual bullion value—money worth just as much before the piece of metal is coined as after; and the only reason we do not have silver money of that kind is that you and the 16-to-1 silver men who agree with you will not allow it to be coined at its bullion value.

In other words, you insist that it shall be coined at a ratio which prevents it from being "basic" or final redemption-money, and not at its bullion ratio, and then turn around and find fault because our silver is not final-redemption money, i. e., money of full value intrinsically.

Mr. VANCE. But we insist that silver would be final-redemption money if it should have free coinage at 16 to 1.

Mr. SMITH. Yes, final-redemption money for whatever the silver in each dollar is worth, but no more, just as silver bullion is now practically final-redemption money for what it will sell for. Your 16-to-1 plan contemplates that our only "basic" money shall be silver, as gold would be driven out.

No one would welcome any plan that would assure both silver and gold as final-redemption money more heartily than myself. What I object to is the 16-to-1 plan, that would leave us nothing but depreciated silver as "basic" money.

The claim of the 16-to-1 free-silver men that they are "bimetallists" is without any foundation. They are silver monometallists and friends of a silver basis.

Mr. BURNS. I am fully convinced that is the fact.

VOLUME OF CURRENCY.

Mr. VANCE. The remonetization of silver would have a most beneficial effect on prices by increasing the volume of our final-redemption money, for, as Coin says, this volume largely determines prices.

Mr. SMITH. So far as the volume of money in any country affects prices it makes no difference what the character of the money is so long as it is equal in value to gold. Our present volume of silver and paper, and even substitutes for money, like checks and bills of exchange, have the same effect on prices as gold money has. Indeed, it is only money used that affects prices. Money unused don't affect prices.

Mr. VANCE. I think the source of our trouble is want of sufficient money to transact business.

Mr. SMITH. Even if this were so, your 16-to-1 scheme, which would drive out gold, wouldn't give us more money, but much less. Indeed, by injuriously affecting its quality, it would seriously affect our business.

But as a matter of fact we never had so much outstanding money as we have had the past few years (sixteen hundred millions), about twice as much per capita as we had before the war.

The trouble is that on account of distrust, which causes depression of business, only a part of our money is used. A large part is unused. We find money apparently scarce because it is inactive, while in fact the outstanding volume never was so large. You confound inactivity, caused by want of confidence, with scarcity; and your remedy is to so manipulate the currency as to increase the distrust. You might add hundreds of millions to the currency and make matters worse by increasing the distrust.

You must remember that however much money is authorized nobody can get it without paying for it. Even with free coinage of silver at 16 to 1 only the owners of silver bullion can take advantage of it. And they won't give away their dollars, you may rest assured.

BIMETALLISM WITHOUT GOLD.

Mr. VANCE. Let me read from Coin's Financial School:

In this controversy one point should never be lost sight of, and this is that higher prices—bimetallic prices—will come with the remonetization of silver (through free coinage at 16 to 1 by this country alone), even though gold goes to a premium.

Mr. SMITH. Have you stopped to think of the supreme nonsense of the bombastic paragraph you have read from your silver leader? "Though gold goes to a premium" (which would of course take gold out of circulation), he proposes through free coinage of silver at 16 to 1 to have bimetallism. Don't you realize the absurdity of bimetallism without gold?

SILVER AND PRICES OF EXPORTS.

Mr. VANCE. But we claim that giving free coinage to silver at 16 to 1 will enable us to keep our gold. Let me read from Coin:

The way to keep our gold is to remonetize silver. Remonetization will give us higher prices for our exports and will make a balance of trade in our favor large enough to bring us both English gold and silver.

Mr. SMITH. Is it possible you swallow as gospel truth the statement that free and unlimited coinage of silver at 16 to 1—which is what this writer means by remonetization of silver—will increase the prices of our products in England?

Mr. VANCE. Why not, if it would increase the prices here?

Mr. JONES. You seem to think that an increase of prices here caused by cutting our dollar (for that is what 16-to-1 free coinage would do) is a real increase of the exchangeable value of our exported products. As Mr. Smith has said, we do not have any more cloth when we measure it with an 18-inch yardstick than when we measure it with a 36-inch yardstick, notwithstanding we continue to call the half-yards yards.

Mr. BURNS. I know from experience during the times we had a depreciated greenback dollar that prices raised by diminishing the value of the dollar simply delude us and benefit no one except speculators. As I have already said, a depreciated currency always injures the laborer.

Mr. SMITH. What you have said is all true, but I want to call Mr. Vance's attention to the fact that when we sell our exports in English markets the prices are estimated on a gold basis and not on a silver basis. If we should make one dollar 50 cents, and thereby appear to double prices here, that would have no effect on prices in England or other countries in Europe, where prices are estimated in gold; on the contrary, it would diminish the return of the former by imposing a brokerage charge because of the fluctuations of silver.

A SILVER BASIS.

Mr. VANCE. I have here a pamphlet on A Silver Basis, published by the American Bimetallic Association, written by Mr. Hillyer, in which it is said that bimetallism, as we understand it—

Is not the constant contemporaneous circulation of both gold and silver, but that when the silver dollar becomes cheaper than the gold dollar the employment of gold should cease and the entire money service be performed by silver alone.

Mr. JONES. Then the bimetallism which you 16-to-1 free-coinage men expect is that "the employment of gold should cease and the entire money service be performed by silver alone," if under free coinage of silver at 16 to 1 silver should be cheaper than gold?

Mr. VANCE. That is what I understand.

Mr. SMITH. I wish all the 16-to-1 silver men were as frank as you are. We could then squarely meet the question of a "silver basis" which the American Bimetallic Association pamphlet advocates. Isn't it an imposition to call a scheme "bimetallism" which contemplates the use of silver alone as money? Don't you think that the American Bimetallic Association, which indorses this pamphlet by sending it out and placing its imprint upon it, had better change its name to American Monometallic Association, so that its name may agree with its purposes?

Mr. BURNS. I think that would be the honest thing to do.

Mr. VANCE. I am gratified to say that I am in favor of silver monometallism and a silver basis; and I think this pamphlet has clearly shown that it would be better for us to have silver and let our gold slide than to go along as we are.

OUR FOREIGN TRADE AND A SILVER BASIS.

Let me read from this pamphlet the advantages which would come to our foreign trade on the whole. While admitting that the adoption of a silver basis might "increase the fluctuations of the rate of exchange" in our trade with the gold-standard nations of the world, and of course hamper and injure this part of our foreign trade, yet he says their population is only 300,000,000; and what we would lose in our trade with them "would be offset by closer trade relations that would come with the silver-basis countries, whose population is 900,000,000."

Mr. SMITH. Yes, I have heard that plea privately made before; and I am glad the American Bimetallic Association is getting up its courage to avow that a "silver basis" is what they expect and to squarely defend it.

Now let me examine the claim that our foreign trade with silver-basis nations is more important than that with gold-standard nations.

In the first place, this pamphlet includes Russia, Argentina, Brazil, and the Spanish, French, English, and Danish West Indies among the silver-basis countries. The first three are on a depreciated paper basis and the remainder on a gold basis; so that 150,000,000 of population must be deducted from the 900,000,000 assigned to the silver-basis side, leaving 750,000,000 to 350,000,000 on the other side.

Now, as a matter of fact, the 350,000,000 people that are on a gold basis consume of imported products far more than the 750,000,000 on a silver basis. The fact that they are on a silver basis—which, the writer admits, subjects a people to "greater fluctuations in exchange," that is, greater friction and expense—shows that they are not so far advanced, and have a lower standard of living and consume less.

Mr. JONES. Can you give us the aggregate value of our exports to gold-basis and also to silver-basis countries?

Mr. SMITH. I can. I find by the report of the Bureau of Statistics that in 1893, of over one thousand six hundred millions of foreign trade, nearly one thousand three hundred millions, or nearly 90 per cent, was done with countries on a gold basis, of which seven hundred and sixty-five millions was exports and five hundred and thirty millions imports, and only one hundred and seventy millions with countries on a silver basis, of which only fifty-two millions was exports and one hundred and seventeen millions imports, together with one hundred and fourteen millions of foreign trade with countries on a depreciated paper basis.

Mr. BURNS. So it seems the 16-to-1 scheme proposes to hamper our foreign trade with gold-basis nations, whose trade with us is one thousand three hundred millions annually, in order to get the trade of silver-basis nations, who deal with us to the extent of only $170,000,000. Is that the feast to which we are invited by the friends of a silver basis?

Mr. SMITH. That is it. Why, our trade with Great Britain alone, which Coin proposes to exchange for that of China, in 1893 was $614,000,000, of which $421,000,000 was mainly agricultural exports from this country—eight times as much as all the silver-basis countries of the world took.

HOW TO DOUBLE THE VALUE OF PROPERTY.

Mr. VANCE. But let me read again from Coin:

With silver remonetized and gold at a premium, not one-tenth the hardships could result that now afflict us. Why? First, it would double the value of all property; second, only 4 per cent of the business of the people of this nation is carried on with foreign countries. Is it not better to legislate in the interest of 96 per cent of our business than the remaining 4 per cent?

Mr. JONES. How would the free coinage of silver at 16 to 1 "double the value of all property"?

Mr. VANCE. By doubling prices.

Mr. JONES. No man's property would have any higher value after you made 50 cents a dollar than before. Its price estimated in the new dollar unit would be doubled, but it would not exchange for any more of the things he wanted to buy than before.

Any man may sit down and call 50 cents a dollar, and multiply the price of property now worth $1,000 by 2 and call himself worth $2,000, and when he has gone through with this imaginative feat he will just as truly "double the value of his property" by this process as he would by having the Government depreciate the dollar to 50 cents by free coinage of silver at 16 to 1.

Mr. SMITH. Yes; this is the "fiat" idea of money and wealth again. If depreciating the dollar one-half will double the value of all property, why be so modest when by calling a 25-cent piece a dollar we can quadruple "the value of all property"?

Mr. BURNS. By using paper "fiat" money we could increase "the value of all property" a hundredfold.

Mr. SMITH. This fellow Coin, whoever he may be, does not seem to know the difference between value and price. Doubling prices by depreciating the measure does not change value a particle. Cutting the yardstick in the middle and measuring with the 18-inch rule does not give you any more cloth. Value is the exchangeable relation of one product to all other products. Price

is the relation of a product to the standard by which we measure values.

Mr. JONES. But I know from observation that when there is a depression in business it is the easiest thing in the world to make thousands believe any absurd theory relative to the influence of the currency on the situation.

Mr. SMITH. If an inquirer will only exercise a little common sense in the matter, he will set aside the prices from 1893 to 1896 as exceptional for very obvious reasons; and then by comparing the prices of 1840 to 1860 or of 1879 to 1890 with those of 1891 he finds no difficulty in accounting for the 25 per cent average decline of manufactured products by the increased use of labor-saving machinery and the reduction of profit by competition, and for the increase of prices of all agricultural products on the farm or at the market near the farm (except wheat and cotton) by the fact that they are produced mainly by hand labor, and by the increase of wages.

THE FALL OF PRICES.

Mr. Vance (with his finger on the page of Coin, professing to give the average prices of wheat and cotton in New York from 1873 to 1895) asked if it was not well-nigh certain that such a fall of prices must have been caused by an appreciation of our gold unit, in which prices are measured.

Mr. SMITH. Why do you take 1873 as the point of comparison of prices?

Mr. VANCE. Because that was the year silver was demonetized in this country, and this was the beginning of the fall of prices.

Mr. SMITH. As a matter of fact, according to the tables of Labor Commissioner Wright, who made a careful investigation under the direction of the Senate Committee on Finance, prices began to rise soon after the inauguration of the war of the rebellion in 1861, and rose 36½ points up to 1866, and then began to decline, falling 14½ points in the seven years up to 1873, before what you call "the crime of 1873" was perpetrated, and when the law authorized free coinage of silver, and also fell 13½ points in the nine years between 1873 and 1882, when silver was demonetized.

If the "crime of 1873" caused a decline of 13½ points in prices in the nine years after 1873, pray what caused the decline of 14½ points in the seven years before 1873?

Mr. JONES. Does not the fact that prices rapidly rose during our civil war 36½ points and then after 1866 as rapidly declined 14½ points to 1873, when the law allowed free coinage of silver, and 40 points to 1879, when the law did not allow free coinage of silver, clearly show that silver was not the cause of either the rise or the fall? It would be as logical to say that free coinage of silver caused the fall of prices between 1866 and 1873 as that repeal of free coinage caused the fall after 1893.

Mr. SMITH. Certainly. A mere statement of these facts shows that the very natural cause of the rise of prices between 1861 and 1866 was the war, which took 2,000,000 men from the ranks of producers and made them destructive consumers, together with the depreciation of the currency consumers; and that the equally natural cause of the fall (aside from the ordinary causes of decline of prices of machine-made goods) was the return of the disbanded army to productive pursuits and the gradual recuperations and restoration of industries and of the currency to their normal condition between 1866 and 1879.

Mr. BURNS. Evidently the rise of prices during the war and the gradual fall up to 1879 should be entirely set aside in any discussion of the course of prices. A big rise on account of the war was inevitably gradually offset by a corresponding fall during the period of readjustment and recuperation up to about 1879, when we got back to specie payments.

Mr. JONES. How much lower were average prices in 1879 than in 1860?

Mr. SMITH. Only 3½ per cent.

Here is Commissioner Wright's table of average prices of 246 articles and also of wages from 1840 to 1891, the prices of 1860 being represented by the index number 100 as the basis of comparison, and the index number for each year indicating the rise or fall from that basis. I have added the London price of silver per ounce for each of the years named:

Year.	Average prices.	Average wages.	Prices silver per ounce.
1840	116.8	87.7	$1.37
1843	107.5	86.6	1.28¾
1846	106.4	89.3	1.30
1849	98.7	92.5	1.31
1851	103.9	90.4	1.31¾
1856	113.2	99.2	1.34¼
1860	100	100	1.35½
1866	136.3	108.8	1.34
1870	117.3	133.7	1.37¼
1873	122	148.3	1.29⅜
1879	96.6	139.9	1.13
1882	108.5	149.9	1.13¼
1885	93	150.7	1.06
1889	94.2	156.7	.93½
1891	92.2	160.7	.98¼

Mr. BURNS. What was the average decline of prices between 1879 and 1891?

Mr. SMITH. Only 4½ points. That makes the fall of prices between 1860 and 1891 average only 7¾ per cent. The average fall of prices of manufactured articles was about 25 per cent—some articles, like steel rails and wire nails and kerosene oil, falling 80 per cent, and others only 10 or 15 per cent. But agricultural products on the whole advanced in price 2 per cent between 1860 and 1891. The only two agricultural products that fell in price were cotton and wheat. Other agricultural products rose from 8 to 15 per cent.

Mr. BURNS. Why do the 16-to-1 silver men always take only wheat and cotton when they are talking to farmers about the fall in prices?

Mr. SMITH. For the obvious reason that if they took any other farm products they would have no stock in trade.

Mr. JONES. When they refer to wheat don't they usually take New York prices, so as to be able to make the decline on account of reduction of cost of transportation, said to be at least 25 cents since 1868, appear to be the farmer's loss?

Mr. SMITH. Certainly; that is one of the tricks of these agitators. And they also take cotton because, in consequence of the utilization within a recent period of the former waste product of cotton seed, the real cost of production of cotton has been much reduced.

But I notice that it is getting late, and we must close for to-night. I have discussed somewhat the question of prices in connection with silver, and as these and payment of debts are the great stock in trade of the 16-to-1 free-silver advocates, I desire to further consider them another evening, if you are willing to come here again next Wednesday evening.

Messrs. JONES, BURNS, and VANCE (speaking together). By all means we will be here.

Third evening.

Just as the minute hand indicated the hour set for the third and last of the series of talks of the four neighbors on the silver and money question, and the last rays of the setting sun gilded the church spire across the street, Mr. Smith, Mr. Jones, Mr. Vance, and Mr. Burns walked up the lane by the little red schoolhouse, in front of which waved the Stars and Stripes, entered the door of the old farm mansion, and took their seats around the old table. As promised at the last meeting, Mr. Smith said he desired to add a few words to what he had said at the last meeting on the question of prices.

PRICES OF FARM PRODUCTS ON THE FARM.

Mr. JONES. Have you the average prices in this country of leading agricultural products on the farm or in the market nearest the farm in recent years?

Mr. SMITH. The report of the Statistician of the Agricultural Department for 1894 gives them for wheat, corn, and oats from 1880. They are as follows:

Year.	Wheat.	Corn.	Oats.	Year.	Wheat.	Corn.	Oats.
1880	$0.95	$0.395	$0.36	1888	$0.925	$0.345	$0.278
1881	1.19	.635	.465	1889	.698	.283	.23
1882	.88	.485	.375	1890	.838	.505	.425
1883	.91	.425	.328	1891	.84	.405	.315
1884	.645	.358	.278	1892	.625	.395	.318
1885	.77	.328	.285	1893	.538	.365	.295
1886	.688	.365	.298	1894	.49	.458	.325
1887	.68	.445	.305				

The average price of wheat on the farms of the country between 1879 and 1889, it will be seen was 84.5 cents, and between 1889 and 1891, inclusive, 81.5 cents; but between 1892 and 1894 it was only 58 cents. There was very little change in the average price on the farm until 1892, 1893, and 1894—since the exceptional depression of business and reduction of consumption. One-fourth less wheat per inhabitant was consumed in 1894 than was consumed in 1892. This shows what has had a potent influence in depressing wheat and other farm products in the past three years. The average farm price of corn, which is the most important farm crop in this country, between 1879 and 1889 was 39.3 cents, and it was 42.4 cents between 1889 and 1894; the average price of oats, first period, 31 cents; second period, 33 cents. And the value of our oat crop in 1894 was about the same as that of our wheat crop.

I have also the export prices at New York of bacon, lard, pork, beef, butter, and eggs, from the report of the Bureau of Statistics, which shows that all of these articles were higher on the average in the seven years from 1885 to 1892 than in the seven previous years.

Mr. JONES. You have given the average price of wheat on the farms, which of course includes the price on the farms of the East. Now, have you the average price of wheat in different years in Chicago, which gives us a better idea of the movement of the price of wheat at the West? The price in the New York

market, given in "Coin," is obviously misleading, because in that fall of prices is included the decline of cost of transportation of wheat from Chicago to the seaboard, which has been 25 cents since 1868. This obviously is not the loss of the farmer or anybody else, for wheat could have fallen 25 cents since 1870 and still the Western farmer would get the same.

Mr. SMITH. I am glad you called my attention to this. Here is the average price of wheat in Chicago for the years named:

Year.	Range.	Price.	Year.	Range.	Price.
1860	$0.66 to $1.13	$0.9C	1877	$1.01 to $1.26	$1.30
1861	.55 to 1.25	.87	1878	.77 to 1.14	.90
1862	.65 to .92½	.80	1879	.81 to 1.33	1.05
1863	.80 to 1.12½	.90	1880	.86 to 1.32	1.08
1864	1.07 to 2.26	1.50	1881	.95 to 1.43	1.16
1865	.85 to 1.55	1.20	1882	.91 to 1.40	1.14
1866	.77 to 2.03	1.30	1883	.90 to 1.13	1.00
1867	1.55 to 2.85	2.00	1884	.69 to .96	.82
1868	1.04 to 2.20	1.60	1885	.73½ to .91½	.80
1869	.76½ to 1.46	1.10	1886	.69½ to .84½	.77
1870	.73½ to 1.31	1.02	1887	.66½ to .94½	.80
1871	.99½ to 1.32	1.10	1888	.71 to 2.00	1.10
1872	1.01 to 1.61	1.30	1889	.75 to 1.08	.90
1873	.89 to 1.46	1.12	1890	.94 to 1.08	.90
1874	.81 to 1.28	1.00	1891	.85 to 1.16	1.00
1875	.83 to 1.30	1.05	1892	.69 to .92	.80
1876	.83 to 1.26	1.02	1893	.54½ to .88	.72

You will observe that the prices of wheat in 1860, 1861, 1862, and 1863 were substantially the same as the prices from 1884 to 1891. Of course the prices from 1864 to 1872 are the inflated prices due to the effects of war, from which we did not recover fully till 1879. The prices of wheat and cotton since 1892 have been abnormally depressed by the impairment of the consuming power of the people by causes that did not exist between 1879 and 1892. Wheat was higher in 1877, 1879, 1880, 1881, 1882, 1883, 1888, and 1891, after the so-called crime of 1873, than it was in any year from 1860 to 1863 or any year prior to 1848.

It is noticeable also that the price of wheat is subject to great fluctuations, dependent on the supposed shortage or excess of supply in the whole world.

Mr. JONES. Then, outside of wheat and cotton, which seem to have been exceptions to the rule for the reasons you have stated, farm products in recent years, up to 1892 at least, show no decline on the farm, the apparent decline in great markets removed from the farm being mainly due to reduction of cost of transportation, which is a gain to the consumer and not a loss to the producer.

Mr. SMITH. That is the fact. Of course, if prices have been diminished by the material appreciation of gold, all prices would have been uniformly affected.

COTTON AND WHEAT.

Mr. JONES. I can understand why cotton has fallen because of the utilization of cotton seed and the enormous increase of production, although, of course, it has not fallen so much as the agitators try to make out by taking the exceptionally big price during the reconstruction period. But why is it that wheat has fallen, while corn has maintained its price?

Mr. SMITH. There are two reasons why wheat has fallen: First, it is the one agricultural product in whose production new machinery and cultivation on a large scale have recently entered; and secondly, it has had within a few years the increased competition of the wheat fields of South America and India, developed by the construction of railroads by the British Government.

Mr. VANCE. Yes; and it is largely because England can buy silver at a discount and purchase as much wheat as ever in India with an ounce of silver that we find Indian competition so destructive.

Mr. SMITH. And you propose to overcome this by having the United States alone adopt the silver basis of India, so that England can buy wheat of our farmers by paying them in depreciated silver instead of gold, as she now pays us. This is a remedy for low prices which England, from selfish considerations, would be glad to see us adopt.

Mr. BURNS. Is it not singular that England finds men who are shouting fiercely against her ready to go in for a policy that will enable her to come the same silver scoop on our farmers that they say she is using on the India farmers?

Mr. SMITH. Before I pass from prices of farm products I want to give you figures of comparative prices of farm products in Maine in 1858 and 1892, furnished me by a Maine gentleman. It seems from these figures, which I will not stop to read, that the average prices of farm products in Maine (little wheat and no cotton being raised in that State) were 28 per cent higher in 1892 than in 1858. The gentleman further informs me that this increase of average prices was mainly due to the increased introduction of manufacturing enterprises, which have furnished a home market for the products of the farm and saved the loss of cost of transportation.

Mr. JONES. I suggest that if our Western farmers would study such facts as these, and pay less attention to 16 to 1 silver schemers, we should find a practical remedy for hard times.

Mr. SMITH. It should be borne in mind that there was very little difference in the average price of wheat and cotton for fifteen years before 1860 and the fifteen years from 1878 to 1892, inclusive. Cotton was 10⅝ cents per pound in the former period and 10⅜ cents in the latter period. Cotton was only 5½ cents in New York in April, 1843. Wheat in Chicago averaged 92 cents in the former period and 98 cents in the latter period. The average price of wheat in Chicago from 1840 to 1846 was only 67 cents. It is since 1891 that the abnormally low prices of cotton and wheat have prevailed, and it is certain we shall have a higher range of prices as business recuperates.

ABOUT WOOL.

Mr. VANCE. There is wool, which has declined 11 cents per pound within two years. How do you account for that except on the ground that gold, which measures its price, has appreciated? This is one of the articles to which Coin refers.

Mr. SMITH. The world's price of wool is made by the great wool-producing countries of South America, Australia, and South Africa, where land costs almost nothing, labor is cheap, and the flocks do not have to be housed or fed. As their product has increased, produced at reduced cost, the world's price has naturally declined.

We imposed a duty of 11 cents per pound on clothing wool to protect our farmers and encourage woolgrowing here. The election of 1892 decided, among other things, that this duty should be abolished, and as soon as this became known the price began to fall in anticipation of the removal of duty, as woolen goods are made many months before they go into consumption. Thus even before the duty was actually removed in August, 1894, the price here had settled down into a free-trade basis, and for this reason was 11 cents lower than before the election of 1892, and is now sold here at the world's price.

I may mention the fact that wool in London is no lower now than in 1892, a fact which shows that, so far as the price of wool indicates, gold can not have appreciated since that time on the basis of your own arguments.

PRICES OF SILVER.

Mr. JONES. I notice that the present silver agitation finds its support in the abnormal fall of prices in the past two years in consequence of the paralysis of industries caused largely by the anticipation at first and subsequently the realization of disturbing tariff changes. By skillfully charging this exceptional decline to "the crime of 1873" the agitators have made many unthinking persons believe that it is really so.

Mr. SMITH. That's so. Strange as it may seem, thousands have swallowed the charge that the so-called demonetization of silver in 1873 caused the exceptional fall of prices in the past two years, without stopping to ask themselves how it happened that there was so little fall in prices between 1873 and 1892, when this cause was operating just the same as in the past two years. By general consent the most prosperous period of this country was between 1879 and 1892.

Mr. BURNS. Here is a picture in Coin presenting a contrast between what he calls the prosperous "bimetallic" times of 1872 and the depression of the past two years.

Mr. SMITH. That's amusing, because in 1872–73 we had no "metallism" whatever—not a dollar of either silver or gold in our currency.

Besides, Coin has so little regard for facts that he forgets that in 1872–73 we were by no means so prosperous as we were from 1879 to 1892, during all of which time what he calls "the crime of 1873" was in force.

Mr. VANCE. Coin says that an ounce of silver will buy as much of anything as ever, and that this shows that it is not silver that has declined, but gold that measures prices.

Mr. SMITH. If it were true that an ounce of silver would buy as much of anything as ever, that would only show that the cost of producing silver had declined the same as the cost of producing articles, and would simply prove that silver is not a stable measure.

But it is not true, except as to articles whose cost of production has declined the same as silver. Except as to cotton and wheat (and only part of the time as to them) an ounce of silver will not buy as much corn, oats, pork, beef, or any other agricultural product as it would have done before 1860. It will buy more steel, kerosene, and other articles whose cost of production has declined 80 per cent, and less of all products whose cost of production has declined less than 50 per cent.

Mr. BURNS. I was reading a silver speech a few days ago in which it was said that silver would buy as much labor as ever in silver-basis countries like Mexico and India.

Mr. SMITH. Very likely that is so, for the reason that when the currency is depreciated wages are the last thing to rise. This is the reason that a depreciated currency always cheats labor first.

Mr. BURNS. This free-silver 16-to-1 feast is evidently one which workingmen should avoid.

DIFFERENT KINDS OF FALLING PRICES.

"What we all understand, I think," said Vance, as he thought of the havoc made in the market by the "bears," "is that falling prices are very injurious to any country, and that they should be got rid of by the right kind of monetary legislation. Don't you look upon falling prices as a great evil?"

Mr. SMITH. That depends upon what causes falling prices.

Falling prices that come naturally from labor-saving machinery and improvements in means of transportation are a blessing and to be sought after, while falling prices caused by a reduction of wages of labor or by a sudden arrest of the industries through distrust of the future and the consequent diminution of the consuming power of the people, as we have had the past two years, are a curse.

Those who are trying to make the people believe that legislation in respect to silver in 1873 has caused the depression of business in the past two years ought to ask themselves how it happened that we had such unexampled prosperity between 1879 and 1892 under this very legislation.

Mr. JONES. I think that we farmers have got the impression that prices have greatly fallen by having had our attention fastened on nothing but wheat and by the exceptionally low prices of everything the past two years.

Mr. SMITH. Undoubtedly. The 16-to-1 silver agitators have seized on the depression of business as a favorable time to agitate. They must hurry up their work, for they will soon be as dead as the Greenbackers were when business revived in 1879. When farmers see wheat and cotton rising, as they already have risen as business revives, they will not be long in discovering that silver had nothing to do with the fall of prices, as it is having nothing to do with their rise.

Mr. JONES. Before we pass from this question of prices, I want to inquire if you can give us any light on the course of prices between 1840 and 1860?

Mr. SMITH. I read to you a few minutes ago Labor Commissioner Wright's statistics as to general prices, from which it appeared that average prices declined 16¾ points between 1840 and 1860, and only 7¾ points between 1860 and 1892. So you will see that while the general trend of prices is downward with everything but hand-labor farm products, on account of labor-saving devices, and while the fall of prices of machine-made products has been greater in the past twenty years than ever before, because of increased inventions and severe competition that has reduced profits, yet average prices on the whole have fallen no more since 1860 than before.

RISE OF PRICES BY DEPRECIATING THE DOLLAR.

Mr. VANCE. Wouldn't the increase of prices that would come from a silver basis increase the prosperity of the country?

Mr. SMITH. Of course you would increase nominal prices by going to a silver basis and thus making 50 cents a dollar, just as measuring cloth with an 18-inch yardstick would give a greater number of such yards, but no more cloth.

What advantage would it be to anyone to call a half dollar a whole dollar and then proceed to adjust prices to the new clipped dollar? Of course it would raise the prices of what we have to buy, just the same as it would raise the price of what we have to sell. Nobody would gain anything by the change. It would take just the same number of bushels of any farm product to buy anything as before.

The disadvantage would be, however, in the unsettling of prices and disturbance of trade at home, and in giving us a different money standard from that of our customers abroad, thus necessitating the payment of a new brokerage by every farmer on export products. And aside from all this there would be the disturbance and expense of a varying silver standard.

WAGES OF LABOR AND INTEREST.

Mr. BURNS. What I should like to know is whether wages have not risen and rates of interest fallen since 1860, and even since 1879?

Mr. JONES. We all know that wages were 60 per cent higher in 1892 than in 1860, and 10 per cent higher in 1892 than in 1873, as stated by Commissioner Wright's tables, and that the rate of interest on loans in any part of this country was at least one-fourth lower in 1892 than in 1860, and even in 1873. These important prices, that of labor and that of use of borrowed capital, don't show an increase, which might be expected if gold, the measurer of wages and interest, had risen to any material extent. Daniel Webster once said that depreciated money always cheated the workingman.

Mr. SMITH. That is sound reasoning, for wages and interest are a much surer test of the value of money than prices of products subject for the most part to the reduction of cost of production by labor-saving devices and methods.

A SILVER BASIS AND DEBTS.

Mr. VANCE. The fact is, the strong reason for a silver basis is that it will relieve us from the great burden of debt which now oppresses the country—a debt which we believe has been doubled by the appreciation of gold under the gold basis. We object to gold because we believe when used alone as full redemption money it is constantly increasing in value.

Mr. SMITH. You have now undoubted y struck the argument on which the free-silver 16-to-1 scheme wins the most of its support outside of the personal interest of silver-mine owners. It appears to be a plan to discharge debts for 50 cents on the dollar, and this of itself is very taking in periods of business depression.

Mr. VANCE. But when debts have been doubled by the appreciation of gold, isn't it a fair thing to pay simply what was borrowed?

Mr. SMITH. I presume the supporters of the scheme to wipe out debts at 50 cents on the dollar have persuaded themselves that they are really not trying to cheat their creditors; but did it ever occur to you that the money which all these debtors borrowed was equal in value to gold when borrowed, and that in the ordinary life of private debts there can not have been much change in the value of the gold dollar?

Mr. JONES. What is the average life of private debts?

Mr. SMITH. Less than a year, and even in the case of loans secured by mortgage only three years. It is doubtful if there are any considerable number of existing private debts ten years old, and but very few five years old.

Mr. JONES. I think you said that even the rise of gold between 1879 and 1891 was not half of 1 per cent per annum, and that since 1892 it is believed there had been no rise. Also that this rise between 1870 and 1891 was about the same as the fall of gold between 1850 and 1865.

Mr. SMITH. That is believed to have been the case. The change in the value of gold in one year is so small that it can not materially affect deferred payments; and it is because it changes so little that by common consent in international trade, where no law can come in, gold is accepted as the standard of value. If there is in some periods a slight appreciation, in succeeding periods there is a corresponding decline. Unquestionably a period of decline of gold is already at hand.

Mr. BURNS. Is there the slightest evidence that gold appreciated 40 or 50 per cent between 1870 and 1892?

Mr. SMITH. Not the slightest. On the contrary, the small decline of average prices from 1879, when we got back to specie payments and normal conditions, to 1892, just before the exceptional business depression set in which temporarily reduced prices abnormally, makes it impossible that the rise of gold could have been, in the thirteen years before 1892, 10 per cent at the outside. So that a debt contracted within three years has probably not appreciated at all.

Mr. JONES. And because of this it is proposed to depreciate the currency 50 per cent?

Mr. SMITH. That is the fact. It is worthy of note that it is claimed gold appreciates under our present so-called system, by which in this country we use as much silver as gold as money; and it is proposed by the 16-to-1 schemers to remedy this by a plan that would eventuate in the use of only silver and drive out our gold, thus greatly contracting our currency.

Mr. VANCE. But does not the run on our Treasury reserve gold the past year show that there is not enough to go round?

Mr. SMITH. Even if that were the case we should only cause a bigger run on what we have by adopting the 16-to-1 scheme, for we couldn't use silver dollars in settling foreign balances. We should have to use silver as bullion then just as we do now. The 16-to-1 scheme would cause foreign investors to withdraw the capital they have here now. Indeed, it was distrust of our ability or intention to pay our foreign debts in gold or its equivalent that caused the run on our gold—a distrust which was made active by the failure to maintain our revenue equal to our expenditure—the failure to maintain our redemption fund.

That the run on our Treasury was not caused by scarcity of gold abroad was clearly shown by the fact that the gold taken from us was simply accumulated and held as idle money in foreign commercial centers.

DEBT PAYING IN WHEAT.

Mr. VANCE. But is it not true that, while a debt of $1,000 contracted in 1891 could have been paid with 1,000 bushels of wheat, last winter it would have required 2,000 bushels of wheat to pay it?

Mr. SMITH. But even suppose that was so—for I notice you select a year when the wheat crop was short and the price the highest and compare it with another year in an exceptional business depression, when the crop was large and the price the lowest—what does that have to do with the payment of a debt to be paid not in wheat but in money?

Supposing wheat should be $1 next year, as it would be if the crop should be short, how would it then be with a debt of $1,000 contracted in 1893, when wheat was 50 cents when the $1,000

would have bought 2,000 bushels? Would you contend that because of this fact the debtor should now give the creditor 2,000 bushels of wheat or its proceeds? You shake your head. But why not, if your argument in the first case is sound?

Mr. JONES. Neither view would be sound, because the money borrowed was not made payable in wheat, but in money. The man who loaned the money was not dealing in wheat futures. If he had been he would then have taken his chances in the future of wheat. He simply lent money equivalent to gold at a low rate, without charging anything for the risk involved in the future price of any product.

Mr. SMITH. Why do you not take corn, oats, pork, beef, lard, butter, or some other farm product to illustrate the position of the borrower? Corn was higher in Chicago in 1892 than in any other year but one since 1879. A debt contracted in 1879 for $1,000 would have required 2,225 bushels of corn to pay it, but in 1892 it could have been paid with 1,800 bushels. Do you think the creditor in 1892 was entitled to have the 425 bushels of corn extra in 1892?

Mr. VANCE. No, I don't.

Mr. SMITH. I agree with you. But why not on your theory?

Mr. JONES. Because it was a loan to be paid in money. And the same principle applies to Vance's wheat hypothesis.

Mr. VANCE. What I contend is that the value of the money has increased.

Mr. SMITH. And you propose to have the prices of wheat and cotton alone determine whether money has appreciated, when the price of other farm products (if such an argument from prices is sound) would prove the reverse.

Mr. VANCE. But you must admit that the farmer who raises wheat does suffer in debt paying just as I have pointed out.

Mr. SMITH. But an intelligent farmer may be relied upon to raise crops that in the long run pay best. One particular crop, especially a crop like wheat, whose price depends on the world's yield, may not pay one year, for various exceptional reasons, and may pay largely another year. This is a good reason for diversification of farm products. No good farmer raises wheat exclusively, especially when he knows by experience that wheat is an export product that goes up and down according to the favorable or unfavorable season, varying from 50 cents to $1.34 in Chicago—$1.02 in 1876, 90 cents in 1878, $1.16 in 1881, 77 cents in 1886, and $1 in 1891.

Mr. BURNS. It seems to me that any attempt to measure money by wheat or cotton would give us a very uncertain standard of value.

Mr. SMITH. Of course it would. And yet the 16-to-1 silver men are relying entirely on the price of wheat and cotton to prove that debts have appreciated.

Mr. JONES. But in view of the fact that both wheat and cotton have risen considerably since the spring of 1895, they must conclude that both gold and debts have greatly depreciated within a few months.

Mr. SMITH. We must remember that all the talk about the advantage or disadvantage to the debtor of a depreciation or appreciation of the dollar is of little consequence, for the reason that every new debt that is contracted will be made not on the basis of the former dollar but of the new depreciated dollar. It is a temporary advantage or disadvantage at the most, and not of the slightest consequence as compared with the value of confidence in the gigantic daily exchanges. The change in the gold dollar in any one year is so slight as to not materially affect either creditors or debtors. The dollar should be so stable as to inspire confidence. But when the value of the dollar unit is suddenly and materially changed by legislation, uncertainty reigns and paralysis seizes upon business.

DEBTS PAID WITH PRODUCTS.

Mr. VANCE. When it is considered that the private and public debts of the people of this country are forty thousand millions, I should like to know how anyone supposes we can pay with the mere pittance of six hundred millions of gold?

Mr. SMITH. That is a wild guess, for I am not aware of any reliable statistics as to our private indebtedness. We simply know our public and corporate indebtedness, and that is but a fraction of the big sum you name.

But whatever the sum may be, it is for value received. Every dollar for which we are indebted was borrowed in gold or its equivalent. More than that, it must be inferred that whatever has been borrowed has been in the main profitably used; so that the borrowing has made us richer.

Mr. VANCE. Our railroad bonds alone held abroad are a gigantic mortgage on the country.

Mr. SMITH. Practically the larger part of the railroad bonds held abroad represent the money which built the roads, and the holders of them are really owners of the roads. It is not expected that anything more than the interest on the bonds will be paid, as this is in reality a dividend to the owners when the roads pay. And instead of being impoverished by the construction of these roads by foreign capital, we have been enriched. The debt is only in name.

Mr. VANCE. But must we not send gold to Europe to pay the annual interest, estimated at two hundred millions, on these foreign investments or bonds? And where is it coming from if we can use only gold? We produce only thirty-five or forty millions of gold annually.

Mr. SMITH. We pay neither interest nor principal of our foreign or domestic indebtedness in gold. We pay in exported products, and one of these products is silver. Last year we exported about $40,000,000 in silver. If silver had free coinage here at 16 to 1 it could not go further in paying indebtedness or for purchases abroad than it does now. Gold is used only to settle the balance of trade.

DEBT PAYING IN LABOR.

Mr. BURNS. We laborers have the idea that after all it is labor (harnessed to capital in the form of labor-saving appliances, etc.) which finally pays debts through the products of labor and capital; and that the vital question is whether since 1873 (or perhaps 1879 would be a fairer basis of comparison) it would have required more labor in 1892 to pay a debt contracted in money in 1873 or in 1879 than it would have required at the time the debt was contracted.

Mr. SMITH. You are right in making the comparison on the basis of the wages of labor, for the reason that the true test is not how many pounds or bushels of any product, but how many days' labor it takes to produce the article used to make deferred payments. The price of an article may be 25 per cent less than a few years before, but if by reason of labor-saving devices it takes 33 per cent less labor to produce the articles, then of course the payment of the debt at the later period is easier than it would have been at the earlier period. Now, I find by Labor Commissioner Wright's tables that wages, estimated in gold, were 148 points in 1873 and 160¼ in 1891, or 12¼ points higher in 1891 than in 1873. In other words, a debt of $1,480 could have been paid with 10 per cent less labor in 1891 than in 1873 and with 15 per cent less labor in 1891 than in 1879.

Mr. BURNS. This does not look much like an increase of the burden of a debt between 1873 and 1891.

OUR FOREIGN DEBTS.

Mr. VANCE. But inasmuch as we are a debtor nation and England a creditor nation, I can see how it is England's advantage to make its debts as large as possible by holding onto gold as the standard of value. But isn't it for our advantage to keep our debts down by paying silver as our standard?

Mr. SMITH. It is true that we have a country of immense natural resources awaiting development, and therefore that we can and do profitably use foreign capital, while England is an old and finished country, with few natural resources that already are not developed, and hence has spare capital. This of course makes it for our interest to borrow in order to make more money.

Now, looking at this situation solely from the standpoint of our own welfare, it is for our advantage to maintain our credit so as to be able to borrow at a low rate of interest. It is because we have maintained our credit and kept our money at par with gold that for years we have been able to borrow abroad at so low a rate of interest, while the silver-basis countries that have a demoralized currency have to pay higher interest and pay in gold, too. In other words, because we are borrowers, it is for our interest to maintain all our currency equal to gold. Rest assured that if we should go to a silver basis we should have to pay dearly for it. England, if she looked at the matter selfishly, would not object to having us cripple ourselves by going to a silver basis.

I notice that China's new loan has been negotiated at 6 per cent, while ours has been negotiated on a basis about half that.

THE WEST AND THE EAST.

Mr. VANCE. The West is overwhelmingly in debt to the East, and this indebtedness is increased by the appreciation of money. The situation is well shown by an illustration in Coin of a cow generously fed by the West while the East gets all the milk.

Mr. JONES. Is it not a little ungenerous, not to say unwise, to reproach the longer-settled East for having confidence enough in us to loan us money to develop the West, especially when we have been able to use the money so profitably? When the West is as old as the East we shall be far richer than the East now is and can return the favor.

Mr. SMITH. That is well said, Mr. Jones. As a matter of fact, even our own mortgages have been generally given for loans of money to pay for our farms, to buy new land, or to construct buildings and improve our facilities for making money. And instead of growing poorer, as Coin would have you believe, the West has increased in wealth faster than even the East. I have here the census figures of the per cent and per inhabitant increase of wealth

of the different sections of country between 1880 and 1890, and let me read them:

Per cent and per inhabitant increase of wealth, 1880–1890.

	Increase wealth.	Increase per capita.
	Per cent.	
North Atlantic division	21	$23
North Central division	60	197
Western division	200	959
South Atlantic division	40	84
South Central division	70	148

Mr. BURNS. That looks very much as if Coin ought to have turned his cow around and placed the head at the East and the milkers at the West.

Mr. JONES. Of course, the fact is that we have been mutually benefited as parts of a common country. The fellow who will try to stir up prejudices and passions between different parts of our common country so as to accomplish his selfish ends is unpatriotic and reckless.

Mr. SMITH. The impression that the West is more deeply in debt than the rest of the country is a mistake. Take the State, country, and municipal debt of the West, and it is by no means as great as that of the East. According to the census of 1890 this debt, per capita, was $26.89 for New England, New York, and Pennsylvania, and only $14.32 for the 12 central Western States, and $22.09 for the States west of the Mississippi. The similar debt of Great Britain is $87.79 per capita.

Mr. JONES. I think that I voice the sentiment of the West when I say that the desire to depreciate the dollar in order to pay debts easier is exceptional. We are able to pay our debts and intend to do so. Whenever we can not we will not ask that the currency be depreciated and business demoralized to help us out, but will rely upon the insolvent laws which each State passes to relieve honest but unfortunate debtors.

NO DISTINCT DEBTOR AND CREDITOR CLASSES.

Mr. SMITH. It is a great mistake to suppose that there is a large, exclusive, distinct debtor class. Most men are both debtors and creditors. The only class that are exclusively creditors is the workingmen. They pay as they go, and their savings make the great mass of deposits in our savings banks.

Bankers make loans to a very small extent of their own money. It is their business to loan the money of depositors. The workingmen of this country have over one thousand seven hundred and fifty-eight millions of deposits in savings banks and a considerable part of the three thousand millions of deposits in all other banks, nearly four thousand seven hundred millions of deposits in all. It is these deposits that furnish the most of the loanable funds with which the business of the country is carried on.

A scheme to depreciate our money by going to a silver basis would rob the workingmen of this country of at least one thousand millions of dollars of their savings and would rob them far more than this of their wages.

Mr. BURNS. I want to say once for all that the workingmen of this country will drop this 16-to-1 silver scheme like a hot potato just as soon as they examine it.

DEPOSITS AND MONEY.

Mr. SMITH. Let me read to you the official statement of deposits in the various kinds of institutions:

In national banks	$1,779,295,862
In State banks	648,573,800
In loan and trust companies	411,650,000
In savings banks	1,758,329,618
In private banks	93,091,148
Total	4,690,890,433

Mr. VANCE. I do not understand how there can be four thousand seven hundred millions of deposits in banks to be loaned when there are only one thousand six hundred millions of money in the country. It seems to me that it would require four thousand seven hundred millions of money to make such deposits.

Mr. SMITH. You evidently have the misconception of the office of money that Coin has when he talks about the impossibility of paying five thousand millions of debt with one thousand six hundred millions of currency. Money is simply a common medium or tool of exchange, but the real wealth exchanged is products. A thousand dollars in money may perform a dozen thousand-dollar exchanges of property or pay a dozen thousand-dollar debts in a single day. The name "currency" means something that runs or circulates from hand to hand. So the money that a workingman deposits to-day is loaned, perhaps, before night, to the manufacturer, who pays it out again to his workingmen to-morrow, when it can be again deposited and reloaned, and so on.

You will see at once that the volume of money or number of tools of exchange required depends very largely upon the facilities for expediting exchanges. Bank checks, bills of exchange, etc., offer substitutes for money more convenient than money itself, and, what is more, have precisely the same effect on prices that coin or any other kind of money would have. Ninety-two per cent of all exchanges are made by means of substitutes for money, and only 6 per cent with money.

No one is wise enough to determine beforehand just how much money our country needs. That can be determined only by business demands. A supply of more than is required lies idle, and there is a loss of interest. More is required at some seasons than at others. The Government, for example, has coined $75,000,000 in half and quarter dollars and dimes, but it is found impossible to keep much more than $60,000,000 in circulation. When more is paid out it returns.

STABILITY AND UNIFORMITY OF STANDARD OF VALUE.

Mr. VANCE. While I can see now that it is impossible for us to get away from the world's standard of value (gold) in international trade, which is only 4 per cent of our entire trade, yet it seems to me that in our domestic trade, which is 96 per cent of our aggregate trade, we could adopt a silver basis with positive advantage.

Mr. SMITH. Does it not occur to you that there would be great confusion, friction, and unnecessary expense in having one standard of value (gold) for our foreign trade and another standard (silver) for our domestic trade?

All our imports, for example, are sold in our domestic markets. If they are bought on one standard and sold on another, there is increased expense and risk to be charged to our consumers, especially if our standard is more variable than the world's standard.

Again, all our exports would be bought here on one standard and sold abroad on another. And rest assured the producers of farm products would have to pay the brokerage incident to different standards of value.

Not only that, but the fact that silver is a fluctuating metal would bring a new element of risk in the fluctuations of exchange which we would have to pay for.

Mr. JONES. Inasmuch as prices are really made in the world's markets on a gold basis, would not the fluctuations of silver make more changeable and uncertain prices in our domestic trade than we have now, and thus introduce a new gambling element into our trade which would work serious injury?

Mr. SMITH. Certainly. The currency of any country is the life-blood of its commercial existence, and the fluctuating character of a currency on a silver basis would work serious evils. The greatest possible stability and the greatest possible uniformity of the standard of value in the leading commercial nations is a necessity. Any country which does not keep in touch with the commercial world as to its standard of value will be surely distanced in its foreign trade and seriously injured in its domestic trade.

It must be remembered that in these days of steam and electricity the whole world is one in a very important respect. There now can be no surplus of money or merchandise anywhere in the world that it is not hurried to fill the shortage. The facility of transfer tends to equalize values and prices throughout the world except so far as tariffs differ. We know every evening what has been going on in every part of the world during the day—the condition of the crops, where there is a surplus and where there is a shortage; and in every great market supply and demand meet and the adjustment of prices takes place, and the universal language in which these prices are expressed in grains of gold.

Mr. BURNS. Do you remember the extent of our domestic trade?

Mr. SMITH. I remember that the transactions through our national banks alone reach one hundred and twenty thousand millions per annum—more than two thousand three hundred millions per week, four hundred millions every secular day, and forty millions every business hour, in all of which the value of the practical standard dollar is the controlling element.

Not a bushel of corn or wheat, not a pound of hay or cotton, not a yard of cloth, not a day's work, is sold or bought into which this value does not enter. Surely legislation which proposes to suddenly disturb this value to the extent of 50 per cent, and especially to give us a fluctuating standard whose value is subject to the same changes as wheat, or cotton, or oil, a standard or measure whose own value must be first estimated, should be advocated with bated breath.

Mr. VANCE. But won't the fact that the depreciation of silver would give us rising prices be of itself a stimulator of trade and prosperity?

Mr. SMITH. We have the experience of past schemes to depreciate the currency to guide us. While temporarily the speculative spirit is stimulated, yet the final result has been to demoralize, disturb, and finally wreck all business enterprises and plunge the country into despair, whenever the currency has been depreciated in peace. A forced depreciation of the currency in war is tided over as long as the war lasts because of war expenditures, but

after that the penalty must be paid. Depreciation and demoralization of the currency has the same effect on national life that excessive drinking does upon the individual life; first the delusions of the initial stages of intoxication, then the debauch, the delirium and the terrible penalties of the violation of eternal laws.

Commercial prosperity can exist only under permanent and settled conditions, at least so nearly permanent that annual changes are reduced to a minimum. By the consensus of all leading commercial nations, grains of gold give the greatest permanency as a standard of value; and while silver is to be used with gold, yet it can be used successfully only under conditions that make the silver dollar equal in value to the gold dollar and maintained at a parity with it.

Nothing promotes distrust, paralyzes trade, discourages investments, closes avenues of employment, and diminishes wages so effectually as a demoralized and depreciating currency.

Mr. JONES. You are right. And hence nothing is clearer than that it is the duty of every good citizen to resist the attempt to have this country adopt alone the free and unlimited coinage of silver at the ratio of 16 to 1, for this means silver monometallism, a silver basis, a depreciated currency, a brief period of intoxication, and then demoralization, business and industrial paralysis, a financial panic, and destruction.

Let the light of experience, shining in the tower of history and warning the present generation of the dangers of the yawning abyss into which a depreciated currency has repeatedly plunged nations, guide the destinies of the Republic.

Mr. BURNS. I would like to ask you, Mr. Smith, if you have any information as to the general condition of agricultural and other laborers in any of these countries which are on a silver basis—Mexico, for instance?

Mr. SMITH. I have here a very interesting document which is called Consular Report No. 67, and published by the Department of State at Washington. In that I find a report by Consul-General Sutton which gives a carefully prepared statement, covering more than 45 pages, by Mexican officials from 21 of the 27 States which compose the Mexican Republic. These replies were made in answer to a circular letter by the consul-general asking information as to—

1. Wages of agricultural laborers.
2. Conditions under which contracts for agricultural labor are made.
3. Supply of laborers.
4. Principal agricultural products, production, and prices.
5. Retail prices of principal articles of consumption, as meat, corn, etc.
6. Prices of neat cattle, horse stock, sheep, and hogs.
7. Private lands for sale, and prices.
8. Possible industries that might be established.

Fifty-five different officials, all of them evidently intelligent and careful students, answered these questions at full length and with great frankness. Here are extracts from some of them:

In the State of Aguas Calientes field laborers receive for a day's work 12½ cents and 2 quarts of shelled corn. Prices of articles of prime necessity are: Corn, 40 cents to 80 cents per bushel; frijol (the bean of the country and the principal food), $1.60 to $3.20 per bushel. What little beef they have sells for 16 cents, mutton for 15 cents, hog meat for 14 cents per pound.

In the State of Chiapas day laborers get 25 cents per day, with an almud (short peck) of shelled corn, the same of beans, and a ration of salt once a week. Laborers by the month get $5 per month and the privilege of building a house and having a small bit of a garden on the hacienda; 14 ounces of beef, 10 ounces of pork, 5 ears of corn, 1 pound of beans, 8 ounces of rice, and 10 ounces of lard, sell at 26 cents each.

In the State of Coahuila, which borders upon Texas and produces a considerable quantity of cotton, the wages are 37½ cents per day, paid in grain or goods, with no money and no allowances. In cotton-picking time, most of them work by the tarea or quantity, and make from 50 cents to 65 cents per day. Meat sells at 12½ cents a pound, shelled corn at 5 cents, and beans at 8 cents per quart, while flour is 8 cents and lard 31 cents per pound.

In Durango the agricultural laborers get from $4 to $6 per month, with the weekly ration of 13 quarts of shelled corn.

In Guanajuato the wages are from 18 cents to 19 cents a day, and this only for the days when the man is employed.

In Hidalgo 18 to 22 cents per day, with an allowance of corn. Flour sells at 6 cents, meat at 10 cents, lard at 30 cents, and Mexican brown sugar (piloncillo) at 6 cents per pound.

In Jalisco, the monthly wages are $5, with 33 quarts of corn, 4 quarts of beans, and 3 ounces of salt every eight days. Day laborers get from 12½ to 18¼ cents, with 13 quarts of corn per week. Meat sells at 10 cents, bread at 12 cents, sugar at 15 cents, and salt at 4 cents per pound.

In the Federal district, where the City of Mexico is located, agricultural laborers get by the day 31 cents and no allowances, and the work is from 6 a. m. to 6 p. m., with one hour in the middle of the day.

In Michocan, over on the Pacific Slope, and which produces sugar, wheat, corn, beans, fruit, and many other tropical crops, labor is 25 cents a day, by the day, and the hours from 6 a. m. to 6 p. m. Meat sells at 12 to 18 cents and lard at 25 cents per pound; beans 18 cents and corn at 6 cents per quart.

In Nuevo Leon, in which is the great city of Monterey, wages are $4 to $8 per month, with an almud of corn every eight days.

Oaxaca, a Pacific coast State, produces coffee, cocoa, sugar, tobacco, corn, beans, and fruit. Wages are 25 cents a day, except in coffee harvest, when they are increased from 50 to 100 per cent. Monthly contracts are from $4 to $7, with an allowance of corn for bread.

This shows pretty clearly how low are wages and how high are all the necessaries of life in Mexico. There are some other things in this report which ought to be studied. Practically one-half of all the agricultural laborers of Mexico, in spite of laws to the contrary and in spite of a general public sentiment against it, are slaves to the glebe. In other words, they all owe their masters a sum of money for trade at the store, advances for funeral expenses, baptisms, sicknesses, etc., ranging from $50 to $500. In Holy Week they may take a paper from their master showing how much they owe him, and if within those eight days they can get any other master to agree to pay that debt they may transfer their allegiance from the old to the new master. Unless they do this—that is, if they attempt to go off one man's property without settling up—they are very likely to be arrested on any one of a long list of minor charges—obtaining money under false pretenses, stealing, getting drunk, disturbing the peace, etc.—and be held practically a prisoner until they get tired and consent to return to work on the old terms. The local judges are always the great landed proprietors or their retainers, and justice in the district is modified to suit their own views. The head of the family works from youth to old age and dies usually owing more when he goes out of the world than when he assumed man's estate in it. Often a son or sons will assume the debt of a father and go on, generation after generation, in this manner. As they get very little money for their work and everything they have to buy is very expensive, their purchasing power is very limited. It is estimated that the average annual expenses by cash purchases—clothing, food, etc.—of the ordinary agricultural laborer and his whole family does not reach the total of $70 per annum.

The clothing of the man consists of a pair of sandals, a pair of cotton drawers rolled above the knees most of the year, a cotton shirt, which is usually hung carefully on the bushes during the day, and an immense sombrero. That of the woman is usually a chemise and a skirt. Some of them have shoes and stockings for everyday wear, but most of them wear sandals or nature's covering, while their attire is completed with a small black shawl. Only a few of the more ambitious have ventured upon that modern innovation—a hat. Bonnets are unknown among them. The children wear the same raiment they brought with them into the world until they get to be from 4 to 7 years of age, when they increase their toilet by one garment.

That is the class of labor, the methods and manner of life of our next-door neighbor, which has to-day and always has had the free and unlimited coinage of silver.

Any person who wishes to make a more detailed study of this subject should write to the Department of State and get a full copy of this very interesting report.

ANOTHER POINT OF VIEW.

Mr. JONES. Now, we as neighbors have talked this matter over pretty thoroughly. Last night I received a letter from a friend of mine in the Northwest, and with that letter he has sent me some figures and facts which I think will be of interest to us all. My friend is a hard-headed farmer. He is conservative and still enterprising; is a good farmer, and last year bought 80 acres more land (running in debt, of course, for a portion of the purchase money), and is pushing along as well as he can in these hard times. His farm is near a town, which was growing rapidly in 1890, 1891, and 1892. They had put up a woolen mill and a paper mill, besides several other manufacturing plants, and as usual in these Western towns, they had borrowed money for all of these enterprises, and had pledged the future with bonds to enable them to open new streets, build sidewalks, put in water, gas, electric lights, and a line of street cars. From a sleepy country village it had grown under the inspiration of the tariff law of 1890 into a brisk town, affording a large market for all the farm products in that vicinity. The Wilson-Gorman bill struck them below the belt; the mills have shut down, and they are in bad shape. This situation of affairs has caused him to study the situation from his point of view, and if you neighbors are sufficiently interested to desire to hear these, we might meet some other evening at the schoolhouse, and invite the other people of the community, and see what he has to say.

Mr. BURNS. That will be a capital idea. This is a big country; we are all interested in this subject, for what helps one portion helps all, and the same causes work out identical effects in every portion of this great country.

Mr. SMITH. Yes, we are all vitally interested in getting at the plain facts of this business, and we can't give it too much study or deliberation. What we want to arrive at is the truth—the plain truth and the whole of the truth.

Mr. VANCE. Well, I have read Coin and a whole lot of literature published by the Mine Owners' Association, and have got some radical ideas, yet I too desire to get at the facts. I have changed my views considerably during the three evenings we have been together, and I must say that while I am not prepared to abandon my original views, I have modified them considerably and become more anxious to keep at this thing until I get down to bed rock.

With this understanding they adjourned until the next Saturday evening.

FROM THE STANDPOINT OF A NORTHWESTERN FARMER.

They were all assembled in the schoolhouse on the Saturday evening appointed, and so lively an interest had all their neighbors in the question to be discussed that the house was packed full.

Among the audience was a fair sprinkling of ladies, some of whom thought they ought to vote as well as the men, and all of them were interested in hearing what some persons in another portion of this country thought about the present condition of affairs.

MR. BROWN'S LETTER.

"MY DEAR JONES: You know I was born down East, but that as a young man I struck out for the West, and have put in twenty years of hard work. I have 80 acres of land, 1 mile from town, all paid for. I have good buildings, teams, tools, and supplies on hand to run me through a year. Last year I bought 80 acres, which joins mine on the south, for $30 an acre. I only had $400 to pay down; leaving $2,000 on which I had to pay 6 per cent interest for three years. I don't suppose I can raise the $2,000 at the end of that time, but I hope—if I have my health and good luck—to reduce it to $1,000, and make a new loan for the balance, clearing that off in two years. I could have done this easily as things were a few years ago, but now, with the load of a two-thousand-dollar debt hanging over me, I shall have to plan carefully to come all right. Some of my neighbors are talking very strongly in favor of the free coinage of silver at 16 to 1, thinking that would make a great change in the condition of affairs. My opinion is, however, that it is not so much a question of free silver as it is of business confidence and a protective tariff. For instance, when I borrowed the $2,000 to buy that 80, the real-estate agent who negotiated the loan for me said that the laws of our State were so full and ample in securing such loans that money was freely offered him from the East for loaning at very low interest."

MR. BROWN'S STATEMENT.

Inclosed with his letter, Mr. Brown sent a paper which he had prepared, which Jones read at length. It excited so much interest and touched upon topics which were so important that it is given in full.

Mr. JONES, after clearing his throat, said: This seems at first to be a conversation between Mr. Richard Poor and Mr. Peter Sail.

The succeeding chapters describe Mr. Poor's discussions with several eminent persons, and the effect of such discussions on the audience.

Mr. Poor seems to be an independent, fairly educated, level-headed laboring man, who has carefully saved some of his earnings, got himself a house and lot, and has several thousand dollars invested. The hard times have hurt him, but they have not brought him to utter want. Mr. Peter Sail is also a hard-working man, but never got so good wages as Poor. His wife had been sick a good deal, and other troubles had hindered his getting ahead so much in the world. In December, 1892, he had his little house and lot paid for and fairly furnished, and $300 in the bank. At the date of this statement his money had long since been gone, he had got in debt for living expenses, and had tramped for work month after month, and only a few weeks before had been obliged to sell their little home to pay their debts, and with a small quantity had moved to a little rented house on the outskirts of the town. He now had absolutely no resources, and had it not been for Mr. Poor, who kindly risked loaning him money—to be repaid if he should ever get work—he and his family would have suffered for the necessaries of life.

THE INDEX OF PROSPERITY.

"The men who depend upon their daily toil for their daily bread," said Poor, "constitute the balance wheel in American commerce. There is no better index of the condition of a people than is indicated by the condition of the laboring men, known as wage earners. They are more adversely affected by depressions and stagnated business than any other of our population. Talk about the amount of money in a country indicating prosperity! There is nothing in that. It is the amount of money that reaches the pocket of the poor that makes a country prosperous. If all the money of the world were dumped upon American soil it would not be beneficial except in so far as it reached the pockets of the poor. It would only be beneficial in so far as it enabled our people to buy more of the necessities and comforts of life. If it should go into the hands of the people who have plenty it would fail to benefit anyone. It would not make a heart happy nor increase the consuming ability of our people. So I say in the broad sense of the term it would not be beneficial."

Poor here took a piece of white paper out of his pocket and with a lead pencil quickly drew two reservoirs, and continuing, said: "This reservoir represents a healthful condition of business. It shows the money in circulation, going from the capitalist to the farmer and wage earner, and from them to the capitalist again. This represents prosperity. The laborer is prosperous because he has work and is getting his part of the money of the country. The farmer is prosperous because, when money is circulating and the wage earners are all employed at good salaries, he has a larger demand for his products; and with an increased demand goes higher prices.

"Now," continued Poor, "this other drawing represents the country when the money is not circulating properly. Money is the blood of the nation. When the blood fails from any cause to circulate in any member of the human body, that member must perish. It can not live.

"Well, now," continued Poor, "the same is true of the members of our nation. The farmers and laborers are the main members upon which our nation to-day stands. In this drawing you will observe the money—the blood—is not circulating among the farmers and wage earners as it should. They can not stand that long. They must soon perish, and with them our nation, unless we can get the circulation revived.

"This money is congested, just as the blood would be in the body if it should cease to circulate in the legs and arms. There is just as much money in the country as ever, but the poor do not get it. When this condition prevails it is common to hear people say money is scarce, and that there is little money in the country, when they really mean that it is not circulating.

"I heard a man say the other day that to increase the amount of money in the country to $50 per capita would bring prosperity. What do you think of that as a means for relief?

"Suppose," said Poor, "all your blood should rush toward your heart and cease to circulate in your limbs. Suppose a doctor would propose to cure you by driving the blood from about the heart and compelling it to circulate throughout the whole system, revivifying every member and particle of the body. Suppose then another doctor would propose to bring relief by injecting into your body more blood. Now, between these two doctors which would you choose as your physician, under the circumstances?

"The one who would make the blood circulate, of course. I would have no assurance that if I employed the other doctor the blood would circulate after he injected it into my body.

"Before talking about increasing the volume of money let us first force into circulation the money we have.

MUST MAKE MONEY CIRCULATE.

"We must manage some way to compel the money to circulate. What I mean by circulation is passing among the masses. Money piled up in the vaults of the rich is not circulating at all. It is hoarded and is doing no one any good. To increase the amount so hoarded does not put any more in circulation. The problem to be solved is not how to increase the amount of money in the country, but how can we give to labor its just rewards and keep in circulation the money we now have. How can we give to the poor their share of our present volume."

HOME VS. FOREIGN LABOR—A CONVERSATION.

Poor went over one afternoon to see how Pete was getting along. He was pleased to find Mrs. Sail improving rapidly. It being a warm day and there being several in the house Poor and Pete went out and sat down on the grass in the shade of a tree. After they were comfortably seated Pete began the conversation by stating that his wife would soon be well again, and he would like to find work, and inquired of Poor about the prospects of finding any.

"I don't know," said Poor, "where you can get any work at present; but I hope the mills will start again soon."

"Poor," said Pete, "I have been thinking of this matter of work ever since I saw you at the bank. I have also been more impressed with the idea that the people are with us, and would help us if they only knew how to go about it. What has been worrying me is what to do. What do we need? What will give us work? What will bring happiness and prosperity to our land? I am free to confess I see no way out. The future to me is dark."

"It is well," said Poor, "for us to inquire what ails us. We are out of employment. That much we know. How can we get it, and what will be the best for the country are the things to be considered."

DO ALL OF THE WORK.

"Pete," continued Poor, "if you were idle a good part of the year, and there were things you needed, would it be better for you to make them during the time you would be idle, or would it pay you to buy them and do nothing part of your time? If you could make the articles as good as any one else, and you would put in your spare hours making them, would you not be worth more at the end of the year by reason of having saved your money and supplied your wants by your own labor?"

"I most certainly would," replied Pete. "I would be worth just as much more as the articles made would have cost."

"Then," said Poor, "if there are articles the people of this country can produce, and there are idle men to produce them, would it not, on the same principle, be to the interest of our country to have our idle men employed supplying the wants of the people and saving the money that would otherwise be sent abroad? Every dollar's worth of goods made in this country adds that much to our national wealth. It adds the same amount to the wealth of the men who produce them. If we had all our idle men employed, just think what an enormous amount of wealth would be added annually to our country. The amount of money sent abroad, if kept here and paid to our own workmen, would increase the wealth of the country to that extent every year. It would also increase the individual wealth of the men who would do the work. The beauty of that increase, Pete, is that it is among the poor. It increases their wealth, and that is the only way I know to increase the wealth of the poor. If you could increase the value of the property of the nation it would only benefit the property owners, and especially the rich; and the poor would get very little advantage from such increase. A law which will give the poor work, though, is especially beneficial to them and adds almost exclusively to their wealth.

CONVICT LABOR.

"Pete, are we out of employment because there is no work?" asked Poor.

"I think so," said Pete.

"Well," said Poor, "let us see if that is correct. There were in 1890 64,349 convict laborers at work in the penitentiaries of the United States manufacturing salable articles. Do you know what that means? The United States Commissioner of Labor, in his second annual report, in 1886, quotes a report of a commission to the legislature of New Jersey on convict labor. 'Every convict,' says that report, 'who makes any salable article does work that a free laborer might do, and therefore competes with the latter.' If every one of those 64,349 convicts does work that a free American might do they make work for just that many less free workmen. There are now about 70,000 convicts at work. If they were all stopped it would make a demand at once for about that number of free workmen. It does not seem right that one who has committed an offense and been put in the penitentiary should be so worked as to deprive a law-abiding man of his means of livelihood. Shut off the competition of convict labor, and there will be work for about 70,000 more free workmen. That would be beneficial, would it not, Pete?"

"Yes," said Pete, "but that would not supply the demand for work at the present time. It would be a good idea, though, to not permit convicts to do any work free labor would get were it not done by the convicts. I most heartily agree with you on convict labor."

THE IMPORTED PAUPER.

"There are tens of thousands of foreign pauper laborers coming to our shores yearly," said Poor. "They seek work in our mills and factories. They take work from that many Americans. Now, Pete, would it be beneficial or detrimental to the American wage earners to have all the work, and stop this constant drain from other countries? If it were stopped, would it make more or less work for our own workmen? If it would make more work it would be beneficial, would it not? If beneficial, why not make an effort to restrict immigration?"

"If we could abolish convict labor," said Pete, "and prohibit foreign pauper immigration, it would give quite an impetus to labor. It would cause an increase in wages, and give to at least a million people additional necessities of life."

IMPORTED GOODS.

"Yes; but hold on; I am not through yet," interposed Poor. "You will agree with me that every dollar's worth of work that can be done by the home workmen should be given to them. The people of the United States require about 6,000,000 wage earners to do their work; that is, make the manufactures, work the mines, build the houses, repair the machinery, and do all the work hired done. There are just about that number of wage earners in the country. Now, if we let 70,000 convicts do such work, and there are tens of thousands of foreign paupers coming here annually, in a few years there would be hundreds of thousands of American workmen in idleness and their families in want. It must always be remembered that every man has about three depending upon him for a living. One hundred thousand idle men means 400,000 people living without the necessities of life which our higher civilization demands. However important the questions of convict labor and foreign immigration may be, they fade into insignificance when compared to a more stupendous wrong which our people are now suffering."

Pete here unconsciously opened his mouth and gazed at Poor as though he were unfolding to him all the wisdom of the universe. Poor noticed how interested Pete had become and was rather amused at the expression on his face. He did not allow that to interrupt him, however, but went on:

"We are employing, to supply the demand of the United States, over a million foreigners who never saw the sun rise on American soil, who never saw America, who never pay one cent of tax to support the Government, and who spend their money for Indian and Russian wheat, for South American and Cuban tobacco, and for Australian wool and sheep. We pay them annually for that work more than $600,000,000."

Pete's mouth opened wider and his eyes seemed larger as Poor said this.

"Yes," said Poor, "we bring into this country annually work done by foreigners amounting to about $600,000,000, and yet there seems to be no concerted action on the part of the labor organizations to check it. The labor organizations will meet and resolute against convict labor, which involves the work of 70,000 men, and will pass unnoticed the importation of foreign labor of more than 1,000,000 men. Every foreigner who makes any salable article for our market which could be made by us takes just that much work from our own wage earners.

"Just think of it! A million foreigners employed by the American people! A million American workmen turned out of employment and their families tasting all the bitter experiences of poverty and the degradation of pauperism and tramping! When these poor wretches cry for relief resolutions are passed condemning convict labor and censuring the money power. Now, what we want is something practical. We want to take some concerted action in our own interest, prevent this large importation of foreign labor, make a demand for our work, put a million of idle men at work, and we will have a labor power controlling the affairs of our nation, and that much-discussed 'money power' will be unknown. When there is plenty of work to do we can dictate terms; when millions of us are idle we have to take such terms as are offered."

"Poor," said Pete, "I have heard a great many tell how to solve our present difficulties, but never before heard anyone suggest a remedy so practical and at the same time so easily secured."

"There is to be a meeting to-night at the Grand Opera House," said Poor, "for the purpose of considering this very question. I hope you will be present."

After bidding Pete good day Poor went home.

THE LECTURE.

The Grand Opera House was filled when the meeting was called to order at 8 o'clock. Several thousand people were present, anxious to advance, if possible, the cause of the working people. Nothing stirs up greater enthusiasm than a discussion designed for the betterment of humanity in general and the poor in particular. This meeting was not a gathering of partisans to discuss party issues, but was a gathering of citizens, regardless of party, to discuss questions calculated to elevate the masses.

After the proper organization of the meeting the chairman introduced Poor as the speaker, who said:

"Mr. Chairman and fellow-workmen: This is my first attempt to talk in public. I do not claim to be an orator, but shall endeavor to say a few words to the point, and try to stir the working people to greater activity in their own interest.

OUT OF EMPLOYMENT.

"Here we are to-night without employment, hunting work, families in need, children out of school growing up in ignorance, and we are doing without all the luxuries and many of the necessities of life. Some of our fellow-workmen and their families are actually at the point of starvation.

"'No work,' did I hear some one say? Is that the reason we are idle? Is that the reason we are here seeking relief? No, that is not the reason. As I was saying this afternoon to my friend, Pete Sail, who I am pleased to see is present, the American people sent to foreign laborers for work over $600,000,000 last year. We had during that year over 1,000,000 foreigners working for us. Now I need a suit of clothes. I must have it, too. I can not make it, so I will have to buy it. If I buy it here I give that much money to the workingmen. If I buy a suit made in Europe I deprive the American workmen of just that amount of work and money necessary to produce it on this side of the Atlantic. Yet that is just what we did last year and are doing this. Why do we do it? Why were 1,000,000 foreigners working for

the United States last year? Why did we send them over $600,000,000 for work? Why are we doing the same thing at the present time? If all the people of this nation had all the work they could do it would be all right; or if they could not do that kind of work, then there would be nothing wrong in sending out of the country to have it done. Were all of our workingmen employed the whole of the year? Were there no Americans who wanted the work? Were there no idle men in the country? If idle, why idle? It was not because there was no work to do, was it? No, that could not be, for at the very time you were idle we were employing this horde of foreign vandals. Why, then, were we employing them when we needed work so badly ourselves? There is but one answer, and that is incontrovertible; it is because the foreigners worked cheaper than the Americans would. There are some Americans who are so unpatriotic, care so little for their fellowmen, worship their money to such an extent they will let our own people suffer and send their money to Europe for the products of labor because it will buy a little more there than here. We must either work as cheaply as the workmen of other countries do, and sell the products of our labor as cheaply as they do, or we must prevent them from selling their labor and its products in our market. I want, in this connection, to ask you wage earners this question: If there were American workmen who were unemployed, and whose families were in need, would it not have been far better to have had them at work and receiving this money that was leaving the country, even though the purchaser would have paid a little more for the products of their labor than he would have had to pay for the products of the labor across the water? Would it not have been just and right to have given them that work at fair wages? [A voice, 'Of course it would!'] My friends, would it not have been to the interest of every wage earner in the country? [A chorus of voices shouted, 'Yes!']

AN ORGANIZATION.

"How many wage earners are there present who will agree to buy nothing made by foreign workmen if it could be made by our own labor? And who will agree to patronize no merchant who buys foreign-made goods that could be made at home? And who will agree to join an organization to prevent the importation of any products of foreign labor to sell in competition with the labor of our own people?"

"We will all agree to that," said a voice.

"I want to see if you will," said Poor. "All of you who are in favor of such an organization please rise to your feet." Every man in the house rose to his feet except Professor W———. "You may be seated," said Poor.

THE BUSINESS MAN'S WAY.

"The reason I am so in earnest," continued Poor, "is that public opinion and local custom are not strongly in favor of the rights of the poor workingman. You notice the business and professional men of any town. They do not like for the people of that town to go to some other place to trade or to procure professional services. One of you wage earners go to a neighboring city and buy some goods because they are cheaper than they are at your home town, and hear how your merchant will censure you and how public opinion will condemn you for not patronizing your home merchants. Then notice the merchants of your town when they buy a stock of goods. Instead of buying goods made by the workingmen of their own town, or even of the United States, they will buy goods made by workingmen in England. They will permit the American and home wage earners to starve. What, then, will public opinion say of the merchants? Will it censure and condemn them for buying the work of Europeans rather than Americans? No; it will commend them for their enterprise in so doing, and the citizens of the town will even encourage them by buying the foreign-made goods.

"Suppose one of you laborers should go to your town merchant and say, 'Mr. Merchant, we can buy everything a great deal cheaper in a neighboring town than we can from you. It would be to your interest for us to go to that town to trade and not buy anything you have for sale.' What would the merchant say to you for presuming him to be such an ignoramus? He would ask you if you took him to be a lunatic or a fool, and would probably apply the toe of his shoe to the seat of your pants by way of emphasis. When that merchant or anybody else tells you workingmen how you would be benefited by letting into this country the products of foreign labor, I know of no better argument for you to use on such persons than the toe of your shoe applied to the seats of their pants with neatness and dispatch.

THE ARGUMENT.

"Persons who will maintain such a preposterous proposition must be beyond the reach of reason and argument.

THE REMEDY.

"'What are we going to do about it,' did I hear you say?" continued Poor. "I will ask you if you want the work? That is the first thing to be determined. If you do not want it for yourself, do you want it for your fellow-men? If you do, it can be very easily secured. Let us form this organization I have mentioned, and work for the levying of a duty on all articles which we can manufacture sufficiently to supply the demand. Let us make that duty high enough to prevent the importation of any such products."

Professor W———, the noted orator, politician, and free-trade advocate, here rose and said: "Mr. Speaker, I would like to ask a question."

"Go ahead," said Poor.

"In what way," said the Professor, "and on what articles would you levy that duty?"

"I would levy it," said Poor, "upon such articles as can be made at home, and would let in free those articles we can not produce."

"Why would it not be better," queried W———, "to reverse that, and let in free of duty those things we can make and put the duty on those we can not?"

THE TWO PRINCIPLES.

"Your question," replied Poor, "involves a discussion of the underlying principles of levying duties on imports. I will show you what effect these two modes of levying duties would have upon the country, and will let these workingmen before me decide which mode they prefer. Tea, coffee, and other articles we can not produce you, Professor W———, would levy a duty upon. That would increase their cost to the consumer, to these workingmen, to the extent of that duty. They would have to pay it if they bought any of those imported goods. That would add to their burdens and increase the price of those necessities of life to the extent of the duty placed upon them. What compensation do you offer, then, for this additional hardship? After you have increased the price of these necessities, what do you do with the products of our labor? Do you make provision so that we may sell the products of our labor at an advance equal to the increased price of those things we have to buy? No, you do the reverse. The things our workingmen can make you let in free. You do this so they can not charge any more for them than the Englishman would sell them for. You say to them, 'We want work done, and unless you will do it as cheaply as the foreigner we will let the foreigner have the contract.' That means a reduction of about half in wages. In other words, you increase the price from about 40 to 60 per cent on all our workmen have to buy, and at the same time decrease the price of what they have to sell about 50 per cent. Then you ask me why the duty should not be levied in that way." [Applause.]

THE RIGHT WAY.

Poor was interrupted by the shuffling of feet and a low talking near the door. He stopped speaking, and looking in the direction of the noise observed Hon. Grover Fogg pressing forward through the dense crowd toward the speaker. When Fogg got near the speaker, some one, recognizing the important individual, got up and gave him a seat. Order being restored, Poor proceeded: "Here is the way I would levy the duty. You workingmen are entitled to all the work you can do. I would put a duty on such work so high that no foreigner could deprive you of a dollar's worth of it. [Applause.] I would make it so high that English workmen could not regulate your wages. After giving to you all this work I would let in free of duty all articles you had to buy. The trouble with your plan, Professor W———, is that it reduces the income of the wage earners about half, and at the same time doubles their burdens. You take the money from the very class of people who can least afford to lose it, and decrease those incomes which affect most adversely the interest and prosperity of the country. It is like taking blood from the human heart. It is taken from the most vital and dangerous place.

THREE OBJECTIONS.

"Your plan, briefly stated, has three very objectionable features." continued Poor.

"First. It would allow hundreds of millions of dollars to be taken directly from our wage earners and paid to the wage earners of other lands for the products of their labor.

"Second. It would only allow our workmen to charge for the work left for them English prices, which would be about half their present wages.

"Third. After taking hundreds of millions of dollars' worth of work from them and reducing their pay half for the remaining work you would add an increased burden by increasing the prices of the articles they can not produce."

PROFITS OF CAPITAL.

"Would not your plan enable the manufacturers to make large profits?" interrupted the Professor, feeling greatly encouraged by the appearance of his chief, Grover Fogg.

The profits of manufacturers was one of W———'s hobbies, and he thought if he could draw Poor out on that line of argument he would be able to get the better of the discussion. Professor W——— is a man of a good deal of conceit anyway, and just required such a man as Poor to let some of it out of him. After

W——— took his seat Poor looked at him and said: "Suppose the manufacturers do make profits I have no objection to that. We should not be deprived of our work and our means of support, and our families pauperized because some one else would make a profit out of our employment. We would prefer to have the American rather than the English capitalists make the profits anyway. Then, the profits of our manufacturers are not as great as their enemies would have people believe. Money is always seeking paying investments. There is plenty of idle capital in the country and plenty of money to loan at 3 and 4 per cent per annum. If there are such large profits in manufacturing, why do not some of these men who make it a rule to condemn all manufacturers put some of their wealth into factories, reduce the price of goods, and become public benefactors? Why do people loan millions of money at such low rates of interest if there is such a bonanza in manufacturing? Profits are no higher in this country than in England, and no higher in protected than in unprotected industries."

The Professor's face turned red and he appeared to be restless. Poor, looking at W———, continued: "Professor, reason is against your position. Some people, though, will not take reason for anything, so I will give you some authority. The first witness I will call to answer your question will be the Hon. William E. Gladstone, of England. In the North American Review for January, 1890, he said: 'No adversary will, I think, venture upon answering this by saying that the profits are larger in protected than in unprotected industries; first, because the best opinions seem to testify that in your protected trades profits are hard pressed by wages—a state of things very likely to occur, because protection, resting on artificial stimulants, tends to disturb and banish all natural adjustment.' Mr. Gladstone further says: 'As result of increased wages in the United States your shipbuilders do a small trade with a large capital instead of doing, as before, a large trade with a relatively small capital.' You will notice Mr. Gladstone admits that wages in protected industries are up pretty well to the selling price of the manufactured article, and leave little to the manufacturer for profits. He argues against a high duty because it increases wages, and a person can not do as much business—that is, buy as much work with a given amount of money—as he could formerly under a low duty. In other words, muscle, bone, blood, and manhood have increased in price until it requires a large amount of money to do a small business. This he complains of.

"Another witness I desire to call is the statistics of the United States, which show that 73 cotton manufactories in the States of Maine, New York, and Massachusetts have been paying dividends of not to exceed 3.69 per cent per annum on the amount actually invested. The factories in other lines have made no greater profits. In fact, there are perhaps 50,000 idle factories in the United States to-day. Is it to be supposed that these factories would be idle if they could be making profits? These thousands of silent factories tell a story about profits which needs no comment."

ENGLISH AND AMERICAN WAGES.

"I maintain," said Professor W———, "that wages are not higher in the United States than in England. It may be that our workingmen make more money during the year than the English do, but it is because they work faster and are paid by the piece. The Englishmen get as much per piece as the Americans do, do they not, Mr. Speaker?"

"This," said Poor, "is the stock argument of persons maintaining your side of this question. I want to show you the falsity of it, so you will never repeat it. It is one of the most ingenious arguments you produce; yet it is no argument. It is simply an assertion. Can the American blacksmith or carpenter do more work than the Englishmen following either of these trades? The English carpenter gets $7.50 per week, the American $15. Can the American engineer, who gets $21 per week, run his engine faster than the Englishman, who gets $10? Can the American laborer, who gets $8 per week, do more work than the Englishman, who gets $4.10? These prices show the relative amount paid for wages in these two countries. The difference indicated in the wages mentioned is maintained through all occupations.

THE SENATE REPORT.

"Perhaps the highest authority in the world on this question," continued Poor, "is the report of a committee of the United States Senate. That committee was composed of persons entertaining different views on the question, and had to assist it some of the ablest statisticians in the world. After a thorough investigation the committee came to the unanimous conclusion that wages in the United States are 77 per cent higher than in England. That is higher authority than your assertion, Mr. W———."

W——— dropped his head and seemed to be in deep meditation.

Poor continued: "But you may not be satisfied yet, Professor, so I will show you conclusively that wages are higher here than abroad.

IMPORTED WAGES.

"We import yearly," said Poor, "several hundred million dollars' worth of foreign work, pay the cost of transporting it from Europe to America, pay from 40 to 60 per cent duty, and yet get it as cheaply as the American workmen will sell their products. Now, if labor is not cheaper in England, how do they pay all this cost to get into our market and still undersell our products?

GLADSTONE SAYS.

"It seems to me," continued Poor, "that I have presented sufficient argument to convince anyone that our wages are higher than the English wages. I desire, though, to put Mr. Gladstone after you again, Professor. He says, 'The American rate of wages is higher than ours, I concede.' Can you, in the face of all this authority, have any doubt which country has the higher rate of wages? I put all this proof against your bare assertion."

Professor W——— did not look up, but continued to gaze on the floor and seemed to long for a hole through which he could drop out of Poor's sight.

GROVER FOGG RISES.

Fogg—the impulsive, self-important, and petulant Fogg—rose to his feet and attempted to assist his bosom friend W——— out of the difficulty he had gotten himself into. Fogg is a lawyer by profession and belongs to that class known as "bulldozers." As long as everything goes Fogg's way he is all right, but is very easy to become discouraged and is likely to leave his friends or clients in the thickest of the battle. He is not much on the fight himself; he prefers a substitute. He never loses an opportunity, though, to inflict his own opinion upon those present. This probably accounts for his great reputation of being such a shrewd man. When Fogg rose perfect silence prevailed throughout the hall. Poor's friends wondered if he could hold his own with Fogg. After standing a few seconds and looking around over the audience, to make sure they all saw him, Fogg said: "May I answer a question you asked a while ago?"

"You have my permission," said Poor.

"You asked this question," said Fogg. "'If we levy a duty upon imported articles we can not produce, and thereby increase the price of them, in what way would we compensate the laboring man for this great burden?' That question was not answered by anyone, and I desire to answer it now. Our workingmen would be fully compensated by giving them all the American products for about half the present prices. That is all the compensation any reasonable man should ask." Fogg looked around at the crowd, walled his eyes up, run his fingers through his long bushy hair, and sat down.

Jim Giles, who sat near him, became so amused at Fogg's actions that he laughed right out.

"That is your answer, is it?" said Poor, smiling.

"Yes, sir," responded Fogg.

A BOON OFFERED.

"That," continued Poor, "is great encouragement. It is indeed a great boon to offer these men the products of their own labor for half the present prices. You, Mr. Fogg, do not understand what these plain workingmen want. They do not want to be pauperized, nor do they want to give the products of their labor away, nor do they want the price of them decreased one-half, or any other amount. You offer them the same thing Professor W——— did. That is, increase the prices of the necessities of life they have to buy and decrease the price of what they have for sale. I guess, Mr. Fogg, your plan is not acceptable to them." [Cries of "No!" "No!"]

Fogg's sensitive, impulsive nature could not very well stand such an outburst of disapproval. He took it as a personal insult to his royal highness, and, taking his hat in his hand, started toward the door. The crowd, though, was so dense he could not get out, so he sat down again.

THEY AGREE ONCE.

"Mr. Poor," said W———, who now felt still more encouraged since Fogg had entered the arena to assist him, "I am opposed to letting foreign paupers or any other foreign workmen come to this country. I am a friend to these working people, and, as I view it, to prohibit foreign immigration is the only way we can give them immediate relief."

"Now," said Poor, "I am real glad you go so far in my direction. But why do you favor keeping out foreign paupers?"

"So as to give the work to our own people," replied Mr. W———, in a somewhat more confident tone.

"A good idea," said Poor. "Now, W———, if a foreigner comes here and works, is he or his labor detrimental to our wage earners?"

"It is his labor, of course," replied W———.

"Then, if they come here," said Poor, "and do not work they will not throw anyone out of employment, will they?"

"No," said the Professor, hesitatingly.

"Suppose again, Mr. W———," continued Poor, "that the products of foreign labor be sold in our market. Before you could

say whether that labor was detrimental to our wage earners you would have to investigate and learn where the work was done. [Great laughter and applause.] If you should find that the foreigners did the work in New York or Chicago it would be a national calamity, but if they worked in England and sent their labor over here in the form of finished products it would be a national blessing. As for my part, Mr. W——, I think the foreigner who works and sells the products of his labor in our market brings as much destitution to our people when he works in London as when he works in New York, and as much when he works in Paris as when he works in Chicago. It makes no difference where the man is, it is the products of his labor we are opposed to having in our country; and it is the products of his labor we desire to keep out. See the fallacy of your position! If a million foreign workmen were on their way to America, you will concede that if landed they would take work from that many of our own people, and spread destitution and financial ruin throughout our land. That same number of men are at work every day across the ocean and selling the products of their labor in our market. You pay no attention to that. You are unconcerned about a million foreigners working for us in other lands, and then express great anxiety about the few thousand who come over here.

"But why, I say, are you in favor of keeping out pauper laborers? If we should import, say, 3,000,000 paupers from European nations who would work for less than half the wages our workmen get, it would make everything cheaper, would it not? That is what you say would be a blessing to the country—cheaper goods. If cheaper goods are so desirable, why not offer an inducement for foreigners to come over here and work? It would be just as detrimental to our working people to have manufactures cheapened by importing foreign goods as it would to import the foreigners and let them make the goods here."

Professor W—— saw that Poor had shown his inconsistent position in advocating restricted immigration, and at the same time letting in unrestricted the labor of foreign workmen. He was very anxious to change the subject.

THE MANUFACTURERS IMPORT PAUPERS.

"Mr. Poor," said W——, rising to his feet and appearing more nervous than before, "do you not know it to be a fact that these manufacturers you are upholding import English laborers to displace our own workmen in their mills and factories?"

"Do you know it?" asked Poor.

"Yes, sir, I do," said Professor W——, emphatically, and at the same time striking the table with his fist.

"Mr. W——," said Poor, "you have now admitted what you awhile ago denied." W—— here dropped his head again as if looking to the floor for some inspiration.

Poor went right on: "You said labor is no cheaper in England than in the United States. You now say these manufacturers import English laborers. That admits that they can get English laborers cheaper, or they would not import them. It also admits that they are not only cheaper per day but cheaper per piece, or else why would the manufacturers want them? Your intimation that I am working in the interest of the manufacturers is not well founded. It is, in fact, not true, except in so far as our interests are identical. The organization I suggest is to prevent these manufacturers from importing cheap laborers and to keep such persons as you from importing the products of cheap labor. I am working for the elevation of the workingmen and for bettering their condition. The fact that my plan would benefit others than wage earners is all the stronger argument in its favor. I have nothing but contempt for these little fellows who go around condemning prosperity, thrift, and the powers of acquisition. I like to see everyone prospering. The fact that some are becoming rich is an encouragement for others to try. Abraham Lincoln, in 1864, said: 'That some may be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let him not who is houseless pull down the house of another, but let him labor diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built.'"

Poor here stated that he would now proceed to organize a club for the protection of the working people. The object of the club was briefly stated in the paper which he asked them to sign. It was as follows:

"We, the undersigned, agree to work for the interest of American labor and American industries in the following ways:

"First. We will buy no goods made in foreign lands if they could be made in America.

"Second. We will patronize no merchant who handles foreign-made goods that could be made by our own people.

"Third. We will vote for no man for office who is not in favor of preventing pauper immigration, and who is not in favor of prohibiting the importation of all products of foreign labor which would compete with the products of American labor."

After Poor read this to the audience he asked all who were in favor of organizing a club on these principles to come forward and sign the paper, thereby enrolling themselves as members. The crowd rushed forward to sign the paper and shake Poor's hand. Every person present except W—— and Fogg signed the paper. The meeting then adjourned. All who heard the lecture pronounced it one of the most practical talks they ever listened to.

When Jones stopped reading there was a very marked sensation among his auditors.

As he sat down Vance rose to his feet and said: "Friends and neighbors, I came here to-night to learn things, not to listen, and while listening, keep thinking up things to answer with. Mr. Jones has thrown a vivid light on some things which I never saw plainly before. He has not got quite through with the statement. I notice there are a few more pages, and if you people will not mind I will read them to you myself."

Old Squire Brown rose and said: "I am glad to hear such frank remarks from neighbor Vance. Sometimes those who hold different ideas will not listen to reason or be convinced. He shows an earnest desire to get at the underlying basic principles. If all our friends will be equally frank and sincere, this campaign will settle for once and all for this generation what we need to have done. Go ahead, Mr. Vance."

UNITED ACTION NEEDED.

This is what Vance read:

"POOR. Each individual interest would be injured if not ruined by free trade. And you go over the country advising the people to strike down each other's industry. You advise the stockmen to destroy the fruit business, the tobacco raisers to destroy the stock business, and the stockmen to destroy the tobacco industry. You go to the agriculturists, as a class, and advise them to destroy the manufacturing industries and reduce the wages of the laboring men. You then go to the nonproducers, the capitalists and moneyed men, the manufacturers and wage earners, and explain to them how much cheaper they could get their food products by removing the duty and letting them in free. You incite the farmers against the wage earners and try to get one to strike down the income and profits of the other. You are always trying to pick a quarrel, and are continually stirring up strife among the various industries of the country. Then you go around to each one separately and pretend to be his friend, and want him to help you tear down everybody else. 'Oh, ye backbiter!' Why do you not be magnanimous and respect the efforts and enterprise of the toiling millions? Why do you not say to the people engaged in each industry that they must do nothing to lessen the profits of their fellow-workmen in other industries? Upon the success of others depends your success. It is only by the producers standing together as a body that they can hold their own against the greed and avarice of the times.

"The man who will advise one part of the producers to work against another part is not only an enemy to the producing element of our country but an enemy to the moral, intellectual, and financial advancement which should characterize this people.

WHEN WAGE EARNERS CAN BUY.

"The wage earners, with their families," continued Poor, "constitute about one-third of our population. They consume about one-third of the farm products. Now, if you reduce their income one-half they would only have half as much money to spend for farm produce. They must then do one of two things; they must buy farm produce cheaper, or they must buy only half as much as heretofore. They can not well live on half as much as they have been accustomed to, but would be compelled to do so unless they could buy it cheaper. Should the farmers refuse to reduce the price of their produce, it would entail hardships and suffering upon the wage earners and their families, which I am sure you do not want to see. The wage earners consume about one-half what the farmers sell. If their incomes are decreased to such an extent that they can buy only half as much farm produce as formerly the farmers would have a large surplus of such products left on their hands. What would the farmers do with that surplus? The wealthy class buy all they need at present, and would buy no more if the farmers had ever so large a surplus. The foreign markets are fully supplied and they could find no market there. Then, on the other hand, if you should sell the wage earners your farm products 50 per cent cheaper than you have been selling them, you would have to sell the wealthy class their part at the same price. Every reduction in wages, you see, must be followed by a corresponding reduction in the price of farm produce.

"Let me illustrate to you how that works. Suppose A, B, and C to be a manufacturer, stockman, and farmer, respectively. B has 10,000 sheep from which he gets 50,000 pounds of wool which he sells A at 20 cents per pound, or $10,000 for all. The increase of the flock we will suppose is worth $20,000 annually, making his total annual income $30,000. Then, to feed his flock will require 10 bushels of corn per head, or 100,000 bushels annually.

C has 2,500 acres of land from which he raises 100,000 bushels of corn. He sells this to B at 20 cents a bushel, or $25,000. C employs 65 laborers on his farm, paying them annually $350 each, or $22,850 to all. Now, we will suppose the manufacturer can buy Australian wool at 10 cents per pound. B must sell his at that price. Then, instead of getting $10,000 for his wool he will only get $5,000. Since wool has depreciated 50 per cent sheep must have depreciated the same. B's income will be reduced to $15,000 instead of $30,000, and he can therefore pay only half as much for corn. The farmer can only get 12½ cents for corn, which would make his annual income $12,500 instead of $25,000. The farmer could not afford to pay the laborers more than half as much as formerly, so their income would be reduced from $22,850 to $11,425. Whenever you reduce the income of any class of people the blight is carried to all business enterprises, and they all share equally in the loss.

WHAT ARE RAW MATERIALS?

"Raw materials," said Poor, "is an indefinite expression. There is very little raw material, in one sense of the term. In fact, nothing is absolutely raw material except the mineral and ore lying in the ground untouched and those things which have not been enhanced in value by labor. Cotton is the finished product of the farm and the raw material of the manufacturer. Cloth is the finished product of the factory and the raw material of the tailor shops. As the term is generally used, I think I understand your meaning. I believe it is generally understood to include all products in the condition to be taken to the factory for fabrication or completion into a useful commodity. With that understanding of the meaning of raw materials, I will say that to admit them free would have the same effect as admitting all articles free. You have heard it said that free raw materials would give more work to our workingmen. If the raw materials were brought in from other countries, the labor of producing them, at least, would be taken from our laborers. Our manufacturers in 1890 used over $5,000,000,000 worth of materials. The factories turned out over $9,000,000,000 worth of finished products. Over half of the cost of our manufactures, then, is for raw materials. These raw materials represent labor, and our workingmen get more for the raw materials than they do for making those materials into the finished products. It requires more men to produce them, too, than it does to make the materials and make the manufactured article. To take the production of raw materials from our people would work a greater injury to labor and affect adversely more people than it would to take from them the fabrication of those materials into the finished articles. The men who are at work producing them are just as deserving of protection as any other part of the people. If you throw out of employment the millions engaged in producing raw materials, they will seek the factories for employment, which will bring about a deficiency of work and a surplus of workers. This would reduce all wages. You can not throw out of employment a large body of wage earners nor reduce their wages without affecting all wage earners adversely. Wages seek a level as naturally as water. You had just as well try to lower the water in one-half of Lake Michigan without lowering it in the other half as to try to lower the wages of one-half of the wage earners without lowering the wages of all, or to try to lessen the income of a large part of the producers without lessening the income of all producers correspondingly.

CUT THINGS IN TWO.

"If you can succeed in persuading the farmers to cut wages in two you can then very easily persuade the wage earners to cut the price of farm products in two. The free trader would stand back and witness such a slaughter no doubt with a feeling of gratification and pleasure.

"Then, again, what would be gained by free raw materials? After paying the money for producing them to peoples of other countries what would we gain and what compensation could we offer to the wage earners of our own country? It is claimed that free raw material would enable us to sell our manufactures in other countries. How it would help us in that direction is one of the unsolved mysteries. It is one of the absurdities peculiar to a free-trade discussion. Suppose, for instance, that we let raw materials in free and our manufacturers can buy them as cheap as the English manufacturer can. Our manufacturer buys some raw material. An English manufacturer buys the same amount. Each buys in the open markets of the world and pays exactly the same price. The Englishman makes of his material a certain kind of manufactures and pays for labor, say, $100,000. The American manufacturer makes exactly the same kind of commodities the Englishman made and pays for labor $177,000. Now, the American commodities have cost $77,000 more than the English commodities. The question that has always puzzled me is how the American manufacturer can send his goods to England or anywhere in the markets of the world and undersell the English manufacturer whose articles cost so much less for labor. This, I say, is one of the unsolved mysteries. There is only one way for our manufacturers to go into the markets of the world and sell their wares and merchandise. That is for them to pay less for labor than the manufacturers of the rest of the world pay. If you workingmen are anxious for your labor to sell in competition with other labor, reduce your wages about 60 per cent and try the experiment awhile to see if you like it. If you do not like it, increase your wages and sell your labor in the American market, and have a law to prevent foreign laborers from underselling you at your own home. See that your own wages are not reduced, and then see that all other laborers are employed at good wages. Then there would be no one to take your place. See that all producers are making profits, then observe the dollars now going abroad turning into the pockets of the needy. See the activity in every branch of business! See the quick, elastic step of our people supplanting the drowsiness and laggard movements of the present! See all the men at work, business revived as never before, money carrying its loads of blessings into every home in the land, making happy hearts and cheerful faces, and showing its favor to the poor and needy instead of the rich and opulent!

QUESTIONS AND ANSWERS.

"Previous to 1873 we had the free and unlimited coinage of gold and silver at the ratio of 16 to 1, did we not?"

"Yes."

"In that last year, 1873, silver was worth 2 cents more on the dollar than gold?"

"That is what it was."

"Why did not the free coinage of the two metals hold them at a parity then if it would now?"

"Are not Mexico, Russia, and Japan free-silver countries?"

"Yes."

"Is not the gold dollar in Mexico worth twice as much as the silver dollar, and is not the gold ruble of Russia worth 77 cents and the silver ruble worth 37 cents; and the gold yen in Japan worth 99.7 cents, while a silver yen is worth only 50 cents?"

"Those are facts."

"Then why is it that in no free-silver country on the face of the globe do they keep their gold and silver money of the same value, but leave it so speculators can manipulate it at pleasure and feast upon the people like vultures?"

"Give it up as a bad problem."

SILVER AND WAGES IN MEXICO.

Poor picked up the Bulletin of the Bureau of American Republics No. 9, 1891, and read as follows:

"One of the greatest evils (referring to Mexico) at the present time is the existence of a scale of wages which defies all power of reduction, which robs the laborers of all the sense of dignity or feeling of association with the rest of their fellow-citizens, and, having reduced them to a condition of abject abasement, deteriorates to like extent their productive power and the measure of their ability. They are content to regard themselves as a plant, or machinery which moves by extraneous aid only, and has no power of volition, and no desire to exercise it if it had. This is the condition prevailing in silver countries. It has, under the guise of increased wages, been gradually sapping the very energy and manhood out of the poor. Wages have been forced up 20 per cent in the number of dollars received, but in the actual purchasing power they have decreased 40 per cent. The laborer would each day take less of the necessities of life to his little fireside, and the condition of his family gradually became more wretched. Every pay day the dollar received was not quite as valuable as at the previous. The money sharks smiled at the way they were stealing from the families of the poor. They paid their workmen as many or more dollars; therefore the laborer should be thankful for the money received."

"Suppose I should hire you to work for me," continued Poor. "I agree to pay you so much per month. I want to make a large profit out of your labor. I get the Government to assist me in my scheme. The Government puts metal of less value in the dollar each month and cheapens the money. I pay you in the cheapened money the same number of dollars I agreed to. You accept it and are satisfied, because it is the number of dollars you agreed to take. You wonder, though, why your wages do not buy any more. The trouble is I have been robbing you through the guise of law and have been assisted in my nefarious scheme by the Government under which you live and for which you would fight and, if necessary, give your life. That country is robbing you by forcing upon you a depreciated money. Would our great Government be a party to such infamy?

"No," continued Poor, "our great Government would do nothing of the kind. It is founded upon justice and right and seeks to protect the weak from the strong. It says to the rich and wealthy: 'I will regulate the value of the money, and I will see that every dollar is just as valuable as every other dollar; and you shall not, under the guise of philanthropy, rob the poor and reduce their

wages without their knowing it. You shall not pretend to be giving them more when the amount you are giving them is in fact worthless.'"

Vance's reading of Poor's remarks had occupied nearly half an hour, and at its close he seated himself with the air of one who has given his neighbors a deal of valuable information. That this opinion was shared by the audience was evidenced by the hearty vote of thanks which was extended to him, to Mr. Jones for bringing the paper, and to their far-away fellow-workman and producer, whose words had come to them that night with the conviction which plain, substantial facts, told in a matter-of-fact way, always bring to the practical mind.

Just before the meeting broke up Vance said (and it is to be hoped that all others of his manner of thinking will give the subject the same careful, painstaking study which he has given it, and that at least a large portion of them may see their way clear to reach a similar conclusion):

Mr. VANCE. I have been on the Populist band wagon for some five years. This is a selfish world, and up to a certain point we are all governed directly by motives of personal expediency. When war comes we have patriotic fervor and impulses, and of course we would all fight and spend our money freely for the maintenance of our common country. But so long as the country is not in immediate danger our acts and votes and our opinions are likely to be shaded in a great degree by what we fancy will be of personal benefit to us.

I owe $1,000 balance of purchase money on my farm—I have been owing it for fifteen years. I had got the idea that the $1,000 balance which was going to Widow Smith, from whom I purchased the place, was worth a good deal more now than when I made the purchase. All that sort of argument has been fully disproven by what we learned during our three evenings, and to-night's experience has simply clinched that opinion.

We have discussed the alleged crime of 1873, and shown fully that it was a plain business proposition, which was fully discussed through five years of Congress and given entire publicity, and accepted as a matter of course as the then present condition, and as not subject to criticism.

In concluding I wish to say to my neighbors, and through them to all others, that whatever is right and just ought to prevail. We are a great nation, and to the peoples beyond the seas our civilization and civil liberty are a beacon, a watchword, and an inspiration to the toiling masses everywhere. Understanding this condition and appreciating our responsibility not only to ourselves but to all mankind, we must place the flag of our country and the honor and credit of our nation at the top of the mast and maintain American liberty, American labor, and American honor untarnished.

Our laws afford the widest liberty and the greatest opportunity for honest toil. We must see to it that our labor and our products are protected, and at the same time we must firmly resolve to steadfastly maintain that the dollar of the workingman, the dollar of the farmer, the dollar of the merchant, and the dollar which comes into the pockets of every man, woman, and child in all this mighty country is as good as the best—and good as the best not only for to-day, but for to-day one year, and five years; that it shall not be subject to discount, but that it shall pass current in every mart and for every purchase and for every payment wherever our flag may wave.

There was loud and hearty applause when Vance, after making what was for him a very long speech, took his seat. For a moment each one was busy talking with his immediate neighbor, approving the general trend of Vance's remarks. A few rose to go; but at that moment they noticed the stocky, sturdy, well-built form of Burns moving toward the area in front of the rostrum, and evidently full of some remarks which he wished to deliver. In a moment he began nervously fingering his hatband and explaining that he was more used to handling tools than pens, and more used to exercising the muscles of his arms and legs than his vocal organs. The following, in substance, is what he said:

Mr. BURNS. I have been studying this whole problem for some months, and have looked at it from the standpoint of the man whose capital resides in the muscles of his arms and legs and back, in a good eyesight, in a reasonably clear head, and in the employment of all these adjutants in making for himself, in any branch of industry, a fair day's work. I feel that I can speak, not only for myself, but for all those who work by the day or the month or the year and whose capital is impaired when we are sick and whose interest ceases to run the day we are out of work. President Lincoln said once that you can fool all the people part of the time and a part of the people all of the time, but that you could not fool all the people all the time.

You remember back in the seventies that we had a greenback craze, and good men went wrong trying to make fiat money enrich everybody—trying, in fact, to hoist themselves over the fence by tugging at their boot straps. Some very good men went off on this greenback craze, but most of them who had plenty of gray matter sooner or later came back. I remember that all of the Democrats egged on the greenback proposition. They pointed it out to the workingmen as a sure way to universal wealth. But greenbackism is dead, dead as a coffin nail. The only trouble, however, is that from its ashes springs up another theory equally pestilent, equally harmful to all the people. From the ashes of greenbackism sprung the Democratic project of free trade in 1892 that was to make everything cheap to the laboring man and bring about the millennium. In 1896 we see the same old enemy—the devil with a different suit of clothes on, his horns covered up, his tail rolled carefully under his coat, and a new quadrennial smile on his face—blandly assuring the workingmen who stand idle with empty dinner pails before closed factories that it is all a mistake; that it was not free trade that did it; and that if it was he now has a new and improved and certain sure cure for this campaign—that is, free silver. I think if we are hoodwinked again we would deserve a modification of that famous remark of Lincoln's. We were fooled in 1892. It is well for us to resolutely set our faces against being fooled again in 1896.

The Democratic party seems to me to assume the guise of that scriptural wicked individual. He clamored for free trade four years ago. Now he points eagerly toward free and unlimited coinage of silver at the ratio of 16 to 1. Possibly four years hence he may come up again smiling and demand a free and untrammeled entrance into his own dominions.

Coin Redemption Fund.

An Honest Dollar Needs no Apology.

REMARKS

OF

HON. DAVID H. MERCER,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. MERCER said:

Mr. SPEAKER: I am opposed to the Senate substitute. So is the country. The eternal, never-ending discussion and agitation of the free coinage of silver question in the American Congress at this time is full of damage to our industries and to our growth. It gives unrest in business circles and makes our credit a football in the marts of the world. How many times must the Senate pass a 16 to 1 proposition before realizing that the country is fully informed as to its opinion on that subject? Unless its zeal in this respect is soon abated, I fear every motion to adjourn will be coupled with a free-coinage amendment. It is talk, talk, talk, and the money thereby wasted would feed and clothe a million. If, instead, it would act, act, act, there would be less demand for an election of Senators by the people. Nothing can be accomplished for free coinage of silver this Congress; then why agitate the question?

The great conventions will soon assemble and the nominees thereof can go before the country on this proposition and allow the people to decide it at the polls. Such a course would be true economy. If the act of 1873 was a mistake—and upon that proposition people may honestly differ—how can we rectify the mistake, if it was a mistake, at this late day by returning to the financial condition existing prior to the passage of that act? Certainly not by passing this substitute; certainly not by reenacting the law which was repealed by the act of 1873. Why? Because conditions—and conditions over which we as a Government have no control—have radically changed. When we passed the act of 1873 many of the leading powers of the world followed us with similar legislation, and a revolution in finance the world over ensued. Would it not be a dangerous experiment for this country to retrace its steps and reestablish a financial system which existed prior to 1873 without the company of the same influence which joined us in our original course? I think so, sir, and I believe the experiment would be fraught with much danger.

An illustration in mind would not be out of place at this time. A few years ago a conductor on a motor line in the city of Omaha, and, by the way, we have the best system of electric street railways in the world in our city, was injured by a collision of cars,

his right leg being badly crushed. An inexperienced physician who happened to be near took charge of the case and advised amputation. He had just finished the operation when a skillful surgeon arrived. In a moment he saw that a blunder had been committed, and he roundly abused the physician for unnecessarily sacrificing the man's leg; but that did no good. The leg could not be returned to its place. So it is with the act of 1873; if a mistake then, its restoration is an impossibility now, for every change in the financial world since that time is against such a course. I am a bimetallist, a sincere bimetallist, and not a silver monometallist, and I believe that until the great commercial nations of the earth meet in harmony upon a proposition to increase the mintage of silver, America will not be justified in taking such a step alone.

In my opinion, free coinage of silver by this country alone and unaided, in the face of affairs elsewhere, would drive us to a silver basis so rapidly that we could not exchange our property in time to avert bankruptcy. I live west of the Missouri River, and, for one, deny that that stream is the dividing line in America between sound finance and inflation, between the payment of honest obligations and repudiation. Nebraska is the great agricultural State of the Union. Her people rank first in point of intelligence in the country, and although now and then a crevice is made in her stability through which crawls and squeaks a man apparently anxious and willing to discredit her at home and disgrace her abroad, such misfortune is only temporary, for the sober second thought of her broad-minded, patriotic people soon reasserts itself and her reputation for protection, sound money, and stalwart Republicanism is again intact.

There was a time when I could be intimidated by the orator who asserted with so much vehemence that 900,000,000 silver-using people—free-coinage-of-silver people, if you please—were demanding that we join them, both in the practice and demand, and to heed not was to lose their trade and treasure; but since I have had the opportunity to visit China, where reside 400,000,000 of these people, and to touch at India, where we find 300,000,000 more, and knowing from equally reliable authority that the remaining 200,000,000 is made up of people similar in kind to the 700,000,000 referred to, much of the scare has vanished. To cite China's system of finance as a proof of anything but imbecility is an insult to intelligence. China has no system of finance and her money is of as many kinds as Joseph's coat had colors. It is true there is a mint at Canton, and it issues a silver dollar, a dollar of equal fineness and intrinsic value to the Mexican dollar, intrinsically worth more than the American dollar, but in the markets of China, as well as in the markets of the world, only worth an American 50-cent piece, and it is so much discredited at home that it no sooner finds a lodgment in the hands of a native than a hole is punctured through it to test its genuineness.

It is suspicioned at home and discounted abroad, and has so little circulation that it is a stranger to nine-tenths of the Empire. I repeat, China has no monetary system. In each of the nineteen provinces there is a medium of exchange peculiar to the people and customs, and oftentimes the wants and necessities are so limited that the people waive the use of any medium of exchange. In one province we find silver, pure silver, serving as a medium of exchange, and an old pair of scissors does the mintage. Again, bits of opium serve the same purpose, while in a third pelts and hides take the place of money. In the Hankow district, some distance back from the Yangtse River, tea is compressed into small blocks or bricks, especially adapted to the Russian market, and known as brick tea, and this serves as money, while in other parts of China the small brass coin carried down through the ages and known as "cash" is the only coin recognized and receivable as money, and even it fluctuates in value, ranging from 1,300 to 1,800 of them to equal a tael, or $1.25 in Mexican money.

Then, again, thousands of Chinese live like the beasts of the field and fowls of the air, on nature; simply exist and have no more use for coin or commerce than did Adam and Eve in the Garden of Eden. In the seaport cities of China, the large cities, we find banks, generally managed by English capital and after a system common in other commercial centers, save that the currency issued is of uncertain value the minute it leaves the city limits of its place of birth. For example, the great Hongkong-Shanghai Bank, doing business at Hongkong, Amoy, Shanghai, and other cities in China, India, and Japan, issues paper currency—a promise to pay; and although this great banking concern is doing business in several cities, the issue of one bank is discounted by any other to which it may be presented, while its silver currency has only bullion value and is subject to the fluctuations of the London market twice a day. As I traveled from city to city I was exceedingly careful not to draw on my letter of credit for any more money than I needed in the different places visited for fear that I might be oversupplied with a coin or currency which would be subject to excessive discounts at the next abiding place. If such be free coinage of silver I will have none of it.

What is true of China applies to India and other countries similarly situated. In Japan we find a monetary system, a system national in character, but so full of uncertainties that one is reminded of the wildcat banking days of America. Values in money and property fluctuate daily, and prices on the London market govern all kinds of trade. Japan is the England of the Orient in many respects, and she will not much longer be satisfied with a financial system unstable, uncertain, and insecure while advancing so rapidly in science, manufactures, and the arts. She will soon demonetize silver. Some of her leading statesmen advocate the step to-day, and when this occurs she will command the trade of the Orient and threaten that to the East and West, even unto the circling of the globe. In so doing she is simply repeating history—that in the ratio which a country keeps pace with the commerce and growth of the great progressive powers, in the same ratio she approaches the demonetization of silver to such an extent that bimetallism and not silver monometallism prevails.

Japan has already begun her attack upon high wages and well-paid labor, and whether she is on a silver or gold basis there will be little difference in the injury inflicted upon the commerce and industries of Europe and America. The productions of Oriental labor, under the superior guardianship of ambitious Japan, are in the markets of the world to stay, and the competition will increase in violence with the lapse of time, unless some restrictions are originated and enforced. The result of the war between China and Japan has only enlarged this field of danger, for the latter country intends introducing modern methods among the Chinese, and as a race they can vie with the Japanese in any contention the moment their supreme egotism is destroyed.

Already Great Britain, France, and Germany have felt the effect of this influence in their Oriental trade, and I prophesy here and now that England will soon be compelled to both preach and practice protection on that account.

Japan is smaller in area than California, but her population numbers 43,000,000 of the busiest people on earth. Men, women, and children, from early morn until late at night, incessantly work, work, work, and they can imitate any device contrived by human hands. Most of them labor for 10 cents a day and save money. The difference in exchange does not give them an advantage over America, which could be remedied by financial legislation here or elsewhere. The only cure is a high protective tariff and restricted immigration. To-day China and Japan take our gold in exchange for commodities and deliver it to England. In 1895 this farce was carried to such an extent that the balance of trade between America and these countries was in their favor over $40,000,000. Protection and reciprocity is the only remedy for this unfortunate financial tangle.

This leads me to the true solution of our present financial evil, sir, and that is that the money question in America will take care of itself if we will only settle the tariff question along strong protective lines. Prior to the election of 1892 we heard nothing about a diminishing reserve. In those days confidence was abroad in the land and capital and labor were freely employed. The reserve received no thought, it created no fear, for this country was so governed as to make its receipts equal and exceed its expenditures. Our Republican policy attracted gold and built up a trade whereby the balances were in our favor. Had the American people not wandered after strange gods in 1892 we would still be enjoying the good times of the Harrison Administration. We have learned a valuable lesson, one not to be forgotten during the next generation at least.

We now realize that protection protects and free trade disorganizes, and the sooner we return to Republican men and measures the sooner will this great country recover from the sad plight into which it has been plunged by a party which is full of wisdom in defeat but full of blunders in victory. The advent of Democracy meant death to protection, and when such a calamity became an assured fact confidence was shaken, capital retreated behind bank vaults and into sundry hiding places, and business languished—aye, became paralyzed and bankrupt. All this did not result because there was not money enough in the country for business purposes. The free-coinage advocate always assigns this as one of the reasons why the mints should be opened to the free and unlimited coinage of silver at the ratio of 16 to 1, and perhaps with some effect prior to the remarkable expose of its fraudulency a few days ago, when almost $600,000,000 in gold was offered for $100,000,000 in bonds, and most of it by the patriotic American people.

This outburst of American confidence in American institutions and American credit has not only astounded and surprised the financial world, but it makes us the cynosure of the bankers and investors of the civilized globe. Let us hope that it is the first sign of a returning confidence which always holds sway under Republican Administrations, and that it sounds the death knell to financial heresies in this Republic. I hear it said that we do not have sufficient money in the country to transact our business. Why, sir, it is not so much a question of the amount of money as it is a question of quality and circulation. I glory in the fact

that our currency is as stable as the Rock of Ages—worth an hundred cents on every dollar, and nothing calls it from its hiding place so quickly as an intimation that the country will soon be in the control of the Republican party, a party of bookkeeping and business. Restore confidence and money will circulate; restore confidence and business will revive; restore confidence and prosperity will once more reign over a contented and happy people. Free coinage of silver by America alone will not restore confidence, neither will it restore silver to that ideal realm so often pictured by the enthusiast. Such a step means silver monometallism, and silver monometallism means Mexicanization. God forbid that we should come to that.

If we were living the life of the American Indian prior to the time he was discovered by Columbus, our law of coinage as well as our law of commerce would not concern us. We would have no use for either. But we have outlived that condition in life. We are a great commercial nation, rich in everything under the sun, and we seek a business intercourse with all nations, all people. We desire that we shall not be second to any power on the face of the globe in business, in civilization, in peace, or in war. We want our currency to be the peer, at least, of any which circulates, and if there is to be a "best," we claim that distinction. Free coinage of silver may do for China, but it will never gain a foothold in America under present conditions. Without it, we will soon lead England in finance, and America will be the clearing house of the world; with it, and we will furnish an apology with each 50-cent dollar.

In conclusion, allow me to say that the American people, irrespective of party, are a patriotic, God-fearing people, anxious to do right, and full of confidence in the public servant empowered to represent them. If that servant proves honest, conscientious, and courageous in the discharge of his duties, he will receive the commendation and good will of his constituency, although at times he seems to run counter to its opinions and beliefs. The gentleman from Missouri [Mr. HALL] gave utterance to information that has been of common knowledge on the floor of this House for some time, that there are members of the Senate and House who are at heart and head opposed to free coinage of silver, but through fear of a frowning constituency subvert their own views and the best interests of the public by voicing and voting in such a manner as to be most pleasing to a suffrage they are supposed to represent.

The Senate has not met the expectations of the country in returning to us a substitute hardly germane to the proposition sent it from the House. If that body desires to inflict upon this country such a law, let it boldly and manfully pass an original bill to that effect and not use it as a rider upon every conceivable bill that may stand a chance of passage. The Senate well knew that this House would not agree to the substitute; it knew that President Cleveland would veto such a measure if passed to him, yet in spite of such knowledge the country must be agitated and convulsed by needless attempts at the impossible.

I shudder at the consequences of a deadlock, fraught with so much danger. I see in it no legislation of benefit to the masses. The President insists upon free trade and the single gold standard; the Senate has no ear, no voice, no vote for any measure not looking toward the free coinage of silver at the ratio of 16 to 1, while the House of Representatives, with its large Republican majority fresh from the people, asserts itself in favor of saving the country from bankruptcy and against silver monometallism. The situation is indeed a grave one. A deficiency of many millions still stares us in the face, and no sign of its removal. The House has expressed a desire and intention to remedy the evil in part by passing a revenue bill which even its enemies admit would yield the Government $40,000,000 annually; yet because it does not also provide for the free and unlimited coinage of silver it is spurned and spit upon by the Senate, through a majority made up of Populists, Democrats, and erring Republicans.

I believe the people of America desire that we should expunge from the statute books the Wilson bill and restore in its place a Republican tariff measure, rich in protection, and then crown it with reciprocity; that we should take some steps toward securing an international monetary congress in the interest of silver; pass a bankruptcy bill, for this Administration has made such legislation a necessity; give to the country such remedial legislation as its urgent necessities demand; improve our immigration laws; enunciate as a Republican measure a vigorous foreign policy; pass the general appropriation bills, and then notify the President, the Senate, and the country that we are ready to adjourn. Upon such a record the Republican party could go to the country with the hope of receiving the glad tidings: "Well done, thou good and faithful servant."

The only hope for such a consummation is a Republican victory, complete and overwhelming, in November. The responsibility now rests with the people. If they do their full duty, I have some hopes of a national salvation; if they shirk, the slough of despond and misery will only increase in area.

Deficiencies Caused by the McKinley Bill—McKinley Bill Framed by the Interested Manufacturers Who Wrote the Schedules—Republican Change on Currency and War on Bimetallism—What this Congress Did Not Do—Prodigality of this Congress.

SPEECH
OF
HON. BENTON McMILLIN,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, June 9, 1896.

Mr. McMILLIN said:

Mr. SPEAKER: From the time that the masses of the people in 1890 rose up and condemned the McKinley bill, the country has been tortured with the claims of its advocates that it was an all-wise and all-sufficient revenue measure. It was not only condemned in the Congressional elections of 1890 but also in the Presidential election of 1892. As the result of these two adverse decisions of the people it was repealed.

It had not only raised the duties on the necessaries of life in many instances to more than 100 per cent, but under the pretense of inaugurating reciprocity it surrendered the Congressional power of levying taxes to the President of the United States. Under the extraordinary powers conferred by this bill upon him the President could impose taxes to-day, release them next month, and reimpose them the month following.

Another extraordinary provision of the bill was that whereby millions of dollars were to be paid in bounties out of public taxes. Taxes were to be raised by contributions from the masses of the people and in turn paid to the beneficiaries designated by the statute under the bounty law. Thus money was taken from one citizen by taxation to be paid to another. The producers of sugar did not want this. They urged that it should not be done. They asked only that they be permitted to be placed under the same law that governed manufacturers of other things. They sent able representatives here to plead against this discrimination alleged to be in their favor, but all in vain. The sugar duty was repealed over their protest and bounty provided in its stead. The advocates of the McKinley bill, both before and since the repeal of that measure, claimed that it afforded ample revenue to meet the expenses of the Government. Nothing could be further from the truth. Yet we have heard it iterated and reiterated during this Congress.

DEFICIENCIES CAUSED BY THE M'KINLEY BILL.

Let us see what the facts are concerning the revenues raised from the McKinley bill and the deficiencies produced by it. I use a statement of Secretary Carlisle and figures taken from the records of the Treasury Department:

[Extract from letter addressed by the Secretary of the Treasury to Hon. William R. Morrison, October 2, 1894.]

* * * * * * *

The records of the Department show that during the fiscal year 1888 the receipts were $111,341,273 in excess of the expenditures; during 1889, $87,761,080; during 1890, $85,040,271; during 1891, the year after the passage of the McKinley bill, $26,838,541; in 1892, $9,914,453; in 1893, $2,341,674, and in the year 1894, during the whole of which the McKinley bill was in full force, the expenditures exceeded the receipts to the amount of $69,803,260, notwithstanding the expenditures were $16,752,676 less than in the preceding year. You will thus observe that the receipts in excess of expenditures diminished annually under the operation of the McKinley tariff act, until finally a large deficiency was the result.

The statement of Mr. McKinley that I had used the gold reserve to meet the daily expenses of the Government is incorrect.

I inclose herewith a printed document containing the statements made by me before the Committee on the Judiciary of the House of Representatives in January last, from which it will be seen (see page 13) that United States notes and Treasury notes of 1890 had been redeemed in gold to the amount of $58,641,866 in excess of the reserve fund raised by the sale of bonds. These redemptions were made with gold received from all the various sources of revenue. The total amount of United States notes and Treasury notes of 1890 redeemed in gold up to the present date is $249,808,494, while the whole reserve fund provided for by law was $100,000,000 in the first instance, and the proceeds of the bonds sold in February last, amounting to $58,560,000. Instead, therefore, of using the lawful reserve to defray ordinary expenditures, we have in fact largely used the ordinary receipts for the purpose of redemption—the purpose for which the reserve itself was intended.

On the 1st day of March, 1889, the beginning of President Harrison's Administration, the funds in the Treasury actually available, exclusive of the $100,000,000 reserve, were as follows:

Agency account	$64,502,445.02
Net balance in the Treasury	165,846,471.10
Total	230,348,916.12

On the 1st day of March, 1893, the beginning of the present Administration, the funds in the Treasury actually available, exclusive of the $100,000,000 reserve, were as follows:

Agency account	$38,365,832.90
Net balance in the Treasury	24,084,742.28
Total	62,450,575.18

This statement is made in accordance with the form now in use, and exhibits the actual condition of the Treasury at the dates mentioned, including all available assets of every kind.

In addition to the ordinary receipts of the Government, there was, as you know, covered into the Treasury during the Administration of President

Harrison $54,207,075.75, which was held in trust as a fund for the redemption of national-bank notes. This proceeding was authorized by the act of July 14, 1890, commonly known as the Sherman Act.

The item denominated "agency account" is that portion of the miscellaneous cash in the Treasury held for certain liabilities appearing on the books of the Treasury but not represented by demand certificates or Treasury notes of 1890 outstanding.

From the 1st day of March, 1885, the beginning of Mr. Cleveland's first Administration, to March 1, 1889, the public debt was reduced $341,448,449.20, and from March 1, 1889, to March 1, 1893, the reduction was $236,527,666.10.

It is true, as you suggest, that for some time previous to the close of the last Administration warrants upon requisitions were held up to a very considerable extent in order to avoid a reduction of the balance on hand, but the amount of these requisitions can not now be ascertained without devoting a great deal of time and investigation to the subject. I think, however, they amount to several million dollars.

It will thus be seen that the deficiency created under the McKinley law amounted the last year of its operation to $69,803,260; that in the first year of its operation whilst it yielded about $26,000,000 surplus it dwindled to less than $10,000,000 the second year, and to less than $2,500,000 the third year, and that for the four years of its operation it fell beneath the requirements of the Government over $30,000,000. The deficiency from it the last year of its operation was more than $69,000,000, notwithstanding the fact that there was a saving that year under Democratic economy of over $16,000,000 as compared with the preceding year. And for the last three years of its operations its aggregate deficiencies were over $57,000,000.

The bill that succeeded it is not responsible for the deficiencies that have characterized the revenues of the Government since its adoption. In fact, that measure, known as the Wilson bill, made ample provision for the revenue necessary to run the Government under the economies inaugurated by a Democratic Congress. It provided an income tax, which, with the other provisions of the bill, would have yielded all the revenues necessary; but the Supreme Court of the United States overrode its own decisions of nearly a hundred years and declared the income-tax feature unconstitutional. This remarkable result was reached through the extraordinary change of heart in one member of the court, who had decided on a previous hearing the law to be constitutional. This decision not only overrode the old decisions on the subject, but overrode the decisions made under the income-tax laws of the sixties, through which over $340,000,000 had been collected, the Supreme Court holding that income-tax law constitutional, which was in every essential particular similar to the one passed by the last Congress and overridden by the court. So that the failure of the revenues of last year and this is in consequence of perverted judicial decisions and not because of the failure of Congress to impose taxes or provide revenue.

M'KINLEY BILL FRAMED BY THE INTERESTED MANUFACTURERS, WHO WROTE THE SCHEDULES.

Availing myself of the leave given by resolution of Congress, I shall comment on the action of the convention which nominated Mr. McKinley for President and insert in the RECORD a history of how the McKinley bill was framed. These facts were called to the attention of the country both by the distinguished gentleman from Georgia, Hon. H. G. TURNER, and by the Hon. William L. Wilson, now Postmaster-General, then a member of this House, in a speech he made on the bill providing for free wool. He showed very ably and conclusively that the distinguished gentleman who presented the bill was not the "author," but merely the "compiler" of the McKinley bill. In fact, in presenting the bill to the House, on the conference report on September 27, 1890, Mr. McKinley said, in commenting on the wool schedule:

This schedule has the hearty approval of the National Woolgrowers Association, and of the several State associations throughout the country.

Immediately following this he also said:

And, Mr. Speaker, that is entirely true also of the tobacco schedule.

One of the greatest schedules embraced in our tariff laws is the metal schedule. During the period the bill was being framed Mr. James M. Swank, secretary of the American Iron and Steel Association, was in Washington and about the committee room. He made the following report as secretary to the president of that association:

During the long period in which this measure (the McKinley bill) received the consideration of Congress, the views of this association concerning the proper framing of the metal schedule of the new tariff law were frequently solicited and were promptly given.

He adds:

The schedule as adopted is the most harmonious and completely protective of all the metals schedules.

It would be very strange if it were not so, when the men interested in having high protection were permitted to frame the schedules wholly in their own interests, and without any regard to the public revenues or the public weal and without any restraint from the committee.

On page 290 of the hearings before the Committee on Ways and Means, Fifty-first Congress, which were the hearings that preceded the McKinley bill and held on it, Mr. William Whitman, president of the National Association of Wool Manufacturers, said he "had framed two clauses" prescribing the taxes on women's and children's dress goods. These clauses were incorporated as framed by Mr. Whitman in section 374 and section 375 of the McKinley Act. Is it any wonder that almost the highest rates of duty imposed by the McKinley Act were those on women's and children's dress goods? I cite the following from the speech of Mr. Wilson delivered in the House in 1892 on other schedules, concerning the action of the committee in allowing the outsiders to write what duties they wanted in the tariff law:

At page 281 of the hearings Mr. Isaac N. Heidelberger, in behalf of the wholesale clothing manufacturers, submitted a memorandum of their demands, and that memorandum, so far as it related to woolen clothing, is substantially embodied in paragraph 396 of the act.

The makers of firearms appeared at page 1255 with the sections they wished "incorporated and made a part of the tariff schedule of duties," and those sections appear in their own words as paragraphs 169 and 170 of the act, with a single trifling change.

Again, at page 92 of the hearings may be found the demands of the tinplate makers—that they were going to be—proffered by their trusted counselor, my friend from Michigan [Mr. BURROWS], and although thousands and tens of thousands of consumers and laborers protested against these demands, Mr. Cronemeyer's wishes are exactly embodied in paragraph 143 of the McKinley bill.

At page 79 of these hearings Mr. Charles S. Landers, representing the makers of table cutlery, presented the corrections and amendments which they wished in the Senate clause, and at paragraph 167 of the act his memorandum appears in the very words in which he wrote it.

On page 65 of the hearings Mr. W. F. Rockwell makes known the demands of the makers of pocket cutlery, and these demands literally reappear in paragraph 165 of the bill.

Now I understand, for the first time in my life, how a "consistent, logical, complete" protective tariff is framed, "with the different parts properly and justly related." Our friends upon the other side merely leave the blanks on the committee table, and look at the ceiling or stroll around the Capitol while the parties who desire to tax the people come and fill in the blanks according to the suggestions of their own greed or selfishness.

Other instances equally flagrant and outrageous could be adduced showing that the McKinley law was not made by Mr. McKinley, but was compiled by him at the dictation of the parties interested in the high tariff duties. The job was not only done by them, but so bunglingly done that the track of the different manufacturers can be traced through the Ways and Means Committee room, through the hearings, and into the very statutes where their exorbitant demands were made law. So shameless a surrender and perversion of the taxing power was never exhibited before, and it is hoped will never be again. This fact is recognized of all men so thoroughly that even the Republican convention that nominates Mr. McKinley dare not indorse his bill. What hope is there for the Republic, what prospect of faithful government, if interested parties are permitted to make the tax statutes of the United States, not in accordance with the needs of the Treasury, but in accordance with the greed dictated by their interests?

REPUBLICAN CHANGE ON CURRENCY AND WAR ON BIMETALLISM.

It is gratifying to note that the Republican party has at last quit trying to deceive people as to its views on financial questions and comes squarely out for gold monometallism. It has at last said what it felt for years—that it is for the single gold standard. It has raised the black flag against the white metal.

On June 21, 1888, when General Harrison was nominated for President, the platform on which they placed him not only declared for silver as money but blamed the Democratic Administration for an alleged effort to demonetize silver. Mr. McKinley, if my memory serves me correctly, was chairman of the platform committee. Here is the platform adopted:

BIMETALLISM.

The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver.

What a revolution it must have taken to sweep him from this to the gold platform on which he now stands!

In 1892, in national convention, it adopted the following platform, which is given with its heading:

FREE AND SAFE COINAGE OF GOLD AND SILVER.

The American people from tradition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with such restrictions and under such provisions to be determined by legislation as will secure the maintenance of the parity of the two metals so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal.

At the convention just adjourned at St. Louis, which nominated McKinley, the following platform was adopted:

We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are, therefore, opposed to the free coinage of silver except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote, and until such agreement can be obtained the existing gold standard must be preserved. All our silver and paper currency must be maintained at parity with gold, and we favor all measures designed to maintain inviolably the obligations of the United States and all our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth.

Sir, President Harrison was elected on the platform of 1888 denouncing demonetization. Mr. McKinley was elected to Congress on it, but instead of observing the platform on which they were elected they made the longest stride toward demonetization made in this country since 1873, by passing what is known as the Sherman Act of 1890, which repealed the Bland Act, stopped the compulsory coinage of silver, thereby converting silver into a mere commodity, and providing for the issue of paper redeemable in gold

and silver, not on coined silver, but on uncoined silver bullion stored in the Treasury.

Observe, if you please, the evolution of the Republican party from its platform of 1888, denouncing demonetization, to its platform of 1892, proclaiming for "free and safe coinage of gold and silver," "with such restrictions and under such provisions to be determined by legislation," etc., to the platform of 1896, which proclaims not for silver restoration, not for bimetallism, merely with statutory safeguards, but for the single gold standard. This platform also makes another fearful surrender. The platform of 1892 reserved to the United States to "determine by legislation" what safeguards should be thrown around coinage; but the platform of 1896 goes beyond all this, surrenders all claim of legislative control over the matter, and pledges the people of the United States to stand by the single gold standard until England and the other "leading commercial nations of the world" give their consent that we shall have it. They declare unalterable opposition to free coinage unless they can get an "international agreement with the leading commercial nations of the world," and declare:

Until such agreement can be obtained the existing gold standard must be preserved.

It will not be denied by any that outside of the United States Great Britain is the "leading commercial nation of the world." We are, therefore, hereby pledged never to move until she will move with us. Does any sane man expect her to move with us in this direction? He who does has read her history in vain. She demonetized silver eighty years ago. She has never made an agreement since looking to its restoration, and if the American people indorse this platform it is notice to her that she need not cooperate with us. And there this important matter ends forever! All she need do is hold out, and this platform pledges our opposition to coinage.

When will she give her consent?

When did she give their rights to our fathers? Not until eight years of heroic suffering and bloodshedding by our ancestors.

A fourth of a century after we had achieved our independence she searched our ships and seized our seamen. When we protested, did she desist? Not until she had invaded this very city, and burned its Capitol and Executive Mansion. Not until we had sent Jackson to New Orleans to drive back her invading veterans and capture the trained soldiers of the Peninsula. Not until we dispatched Perry to the Great Lakes to send back from their waters, red with the blood of our fathers, the immortal, soul-stirring message, "We have met the enemy, and they are ours."

When did our people ever before bow to England in anything? When we were only 3,000,000 strong we wrested the colonies from her grasp! When we were only 8,000,000 strong we broke the shackles by which she bound all sailors on the high seas! When only 10,000,000 strong, under what is known as the "Monroe doctrine," we made the map of North and South America and defied not only England, but all the balance of the world, to set a hostile foot on these shores! When we organized our Government, though we spoke the same language, we changed our money denominations from pounds, shillings, and pence to dollars, dimes, and cents in order to be fiscally free as well as physically free from England.

Yet after all of this glorious fighting we are asked to hold up our hands and let her shackle us now. Republicans make the surrender; Democracy declines to do it. Gentlemen who think this is possible mistake the spirit of the American people. When we changed the money denominations from pounds, shillings, and pence to dollars, dimes, and cents; when we determined to issue the greenback currency that has been a part of our circulation for a third of a century, did we ask England, France, or Germany to allow it? When we passed the Bland Act in 1878, under which we have coined hundreds of millions of money, did we go and get first the consent of "the leading commercial nations"? Not a bit of it. It is true that Mr. Hayes vetoed that measure in an effort to try to get us to obtain such consent, but his veto was overridden as it deserved to be.

When do gentlemen suppose we will be able to obtain the consent of England to an international agreement for free coinage? The present administration in England has said that it could not be given. Its predecessors for eighty years have said the same; and if you went to them begging this "international agreement" they would say to you, as Gladstone has substantially said in the past: "The world owes us enormous amounts of money. It is in the form of stocks and bonds and mortgages. To return to bimetallism diminishes the value of these debts; therefore we can not agree with you." That is what they have always said in the past. I concede that international agreement is much to be desired, but at the same time I realize that it is not obtainable with England, and when the Republican party through its platform pledges the American people, in substance, not to move until England gives her consent, it seals the doom of international agreement forever! Nothing has come from these conferences in the past. Day after day we have sent our dove across the waste of waters, but night after night it has returned weary winged and leafless.

FIRST SURRENDER TO ENGLAND.

Sir, I beg those who are infatuated with the idea that we can get England to join us in restoring silver, and that she is essential to the success of bimetallism, to remember that England demonetized silver in 1816, and has maintained the single gold standard since. Silver was at a premium in England when she did it. She was not essential to bimetallism then; she is not now. Our statesmen then did not consult her wishes nor pander to her rapacity. When she demonetized silver Thomas Jefferson, author of the Declaration of Independence, still lived. John Adams was yet alive. Madison, the father of the Constitution, lived. Monroe, who was soon to promulgate the Monroe doctrine, dictating to the whole world as to territorial acquisition, lived. Jackson, fresh from the victory at New Orleans, still lived. But in them also lived the spirit of 1776. Who of these immortal patriots ever intimated that England should dictate or influence our financial policy, and that we should demonetize silver because England had? When did one of them say that England should control us in finance? Never. Still the world moved on and the young Republic prospered. Then we numbered only about 10,000,000 people; now we number 70,000,000. Then we were comparatively a small factor in the world's progress and autonomy; now we are the greatest factor in it, equaling any three of the greatest powers. I would to God that the spirit of 1776 were in the Americans of 1896!

This Government has now existed for one hundred and seventeen years. This is more than one-fourth as long as Rome was free. During the whole period this is the first time that any party, in national convention, whether Whig, Federal, Democratic, Prohibition, Populist, or Republican, ever proclaimed in its platform for gold monometallism. The people will condemn this new departure from the money of the Constitution.

WHAT THIS CONGRESS DID NOT DO.

The Republican party obtained control of the House by inveighing against the Democratic party of the last Congress—especially charging it with doing nothing to relieve the country.

After getting the House by two-thirds majority, and organizing the Senate—appointing Republicans as chairmen of committees in the Senate—what has this Congress done to relieve the country? Nothing! Absolutely nothing! It has shown itself utterly inefficient. From lack of courage or other cause, it failed to try to solve many problems waiting solution at its hands.

They claim that the revenues were insufficient to meet the expenses of the Government. Did they send any revenue measure to the President to supply this deficiency? None!

In their platform of 1892 they inveighed against trusts and combines. What measure did they send to the President to restrain them? None!

And now they abandon the plank in their platform against trusts.

The debts due from the Pacific roads subsidized by the Government amount to more than $150,000,000 and are falling due. Some of the roads are in the hands of receivers, and consequently now have to be operated through the Federal court. What measure did they send to the President or pass through either House looking to the settlement of these claims or the collection of these debts? None!

Their platform complains because the Democratic party repealed a so-called reciprocity law which authorized the President to impose taxes without consulting Congress or the people. What measure did they pass through Congress looking to a restoration of these reciprocity provisions? None!

Their platform says:

The Nicaragua Canal should be built, owned, and operated by the United States.

What bill did they pass through the House or through the Senate authorizing this construction? None!

The platform contains a provision favorable to the independence of Cuba. Yet neither the Senate nor the House, with whom rests the power to declare war, sent any bills to the President or tried to send any for a declaration of the independence of Cuba.

They proclaim in the platform in favor of excluding from entrance to the United States those who can neither read nor write. What measure did they send to the President providing for this or even looking in this direction? None!

There was a very important measure pending in Congress providing for the settlement by arbitration of the disputes wherein labor was involved. It was introduced and urged by Hon. Mr. ERDMAN of Pennsylvania. Organized labor of the country strove to have some such measure passed, but in vain. The Presidential election was pending, and it was left to smolder.

Another bill was pending providing for the appointment of a commission of three men from the different walks of life—labor, commerce, etc.—to consider the grave questions arising there and report and recommend legislation from time to time to Congress. A similar commission exists in many countries, and is considered an advanced step for labor. If I am correctly informed, those engaged in advancing the best interests of labor throughout the country urge its passage. Was sucha measure sent to the

President for the approval of the executive branch of the Government in order that it might become a law? No. Not one law was passed to help the laborer.

This Congress considered it more important to break the record of early adjournments than to make a record passing the needed legislation. So the appropriation bills were rushed through Congress that Congress might rush away from the Capitol, leaving its legitimate work undone and the interests of the country neglected.

Under the rules of the House, Friday of each week is given to the consideration of private bills. Thousands of them were introduced and hundreds of them were reported by the committees, and by the Court of Claims. Yet every Friday except one or two in the entire session—I mean the day sessions—was taken from the Private Calendar, devoted to other uses, and these claims left unpaid and unconsidered.

This Congress pretended to favor a bankrupt law, but adjourned without final action on the bankrupt bill.

The copyright bill pending in Congress was an important one, and there was every reason why it should have been acted upon. Yet, in hot haste to get away, it was laid aside by Congress.

The Territories of Arizona and New Mexico are justly clamoring for admission to the Union as States. Democracy has favored their admission and does now. But they are supposed to be too strongly tinctured with Democracy. They have ample population to entitle them to admission. Every principle of "home rule" and "local self-government" dictated that they should be permitted to enter the sisterhood of States. Notwithstanding the merits of their case, they were refused Statehood, and now stand knocking in vain at the doors of a closed Congress for admission to the Union.

There are other measures clamored for by our Republican friends which they made no effort to advance. It will not do to say that they did not have time to consider these things. They adjourned and fled from their duties at an earlier date than any other Congress has for a third of a century. It will not do for the House to say that the Senate would not act because the House passed a resolution urging the Senate to join them in the adjournment on the 18th of May.

This Congress was afraid of itself and fled from the Capitol the earliest day possible; and in the light of its achievements well might the country be afraid of it.

PRODIGALITY OF THIS CONGRESS.

There is one thing in which it stands preeminent. It is the most extravagant Congress that ever assembled in time of peace since independence was achieved. The following and supplement table, taken from the speech of Hon. J. D. SAYERS on the appropriations of this Congress, proves the truth of what I say:

In conclusion, Mr. Speaker, it will be seen from the tables herewith that the appropriations made by the past three Congresses and at the present session have been as follows:

Fifty-first Congress, both sessions	$1,035,680,109.94
Fifty-second Congress, both sessions	1,027,104,547.92
Fifty-third Congress, three sessions	989,239,205.69
Fifty-fourth Congress, first session	515,759,820.49

Mr. Speaker, to show the expenditures of the Government more clearly, I add the following tables of receipts and expenditures, which will show the expenditures by administrations:

RECEIPTS AND EXPENDITURES FROM MARCH 1, 1885, TO JUNE 1, 1896.

Receipts, exclusive of postal.

From March 1, 1885, to March 1, 1889	$1,451,660,246.74
From March, 1, 1889, to March 1, 1893	1,539,723,590.58
From March 1, 1893, to June 1, 1896	1,036,104,413.98

Expenditures, exclusive of postal and principal of debt.

From March 1, 1885, to March 1, 1889	$1,085,600,326.04
From March 1, 1889, to March 1, 1893	1,364,286,307.22
From March 1, 1893, to June 1, 1896	1,174,364,983.26

When the Fifty-first Congress adjourned with an expenditure of half a billion dollars for one year and a billion in two years the country stood aghast at the enormous and unwarranted expenditures. But this Congress has broken the record. The expenditures of it all told amount to $7 for every man, woman, and child in America.

When we remember that the appropriations of the second session of the Fifty-first Congress were nearly $50,000,000 more than those for the first session, and consider that that will probably be the situation again with this Congress, it is appalling to contemplate the extravagance of the Fifty-fourth Congress. About two-thirds of all the money in the United States has to go through the hands of the Federal taxgatherer, according to the new schedule of expenditures adopted by this Congress every two years. With increases of expenditures it is proposed by this new platform and new departure to restrict the currency. I warn gentlemen against tempting too far the patience of an overburdened people.

SUPPLEMENT.

TABLE B.—*Appropriations made by the Fifty-first, Fifty-second, and Fifty-third Congresses, and first session of the Fifty-fourth Congress, fiscal years 1891 to 1897, inclusive.*

Title.	Fifty-first Congress.		Fifty-second Congress.		Fifty-third Congress.		Fifty-fourth Congress.
	First session, 1891.	Second session, 1892.	First session, 1893.	Second session, 1894.	Extra and first regular sessions, 1895.	Third session, 1896.	First session, 1897.
Agriculture	$1,799,100.00	$3,028,153.50	$3,232,995.50	$3,323,500.00	$3,223,623.06	$3,303,750.00	$3,255,532.00

Total Fifty-first, Fifty-second, and Fifty-third Congresses	1,035,680,109.94		1,027,104,547.92		989,239,205.69		

a Deficiencies included as follows: 1891, on account of 1890, $25,321,907.25; 1892, on account of 1891, $29,335,598.34; 1893, on account of 1892, $7,674,332; 1894, on account of 1893, $14,149,724.85.

b This amount includes $1,362,059.16 actual expenditures under indefinite appropriations for pay and bounty claims.

c This amount includes $978,188.74 actual expenditures under indefinite appropriations for pay and bounty claims.

d This amount includes $15,227,000 for refund of direct taxes in addition to the specific sum of $500,000 appropriated for that purpose.

e This is the amount originally submitted to Congress by the Secretary of the Treasury as estimated to be necessary under permanent specific and permanent indefinite appropriations, except that to the amount thus submitted for 1891, $101,628,453, there are added expenditures under permanent appropriations made by the Fifty-first Congress subsequent to said estimate, as follows: Salaries diplomatic and consular service, $27,758.79; redemption national-bank notes, $23,553,298.50; expenses of Treasury notes, $218,362.60; coinage of silver bullion, $210,893.14; rebate tobacco tax, $770,082.39; and repayments to importers and for debentures and drawbacks, customs service, $4,915,285.28; in all, $29,695,678.70.

f This sum is exclusive of $1,660,000 for second installment on account of purchase of Cherokee Outlet, which has been paid under "permanent annual appropriations," but is not included in the estimates thereunder for 1897. A like sum was included in the Indian appropriation act passed at the last session of the last Congress.

g No river and harbor act was passed during the last session, but the sundry civil act of that session carried $11,287,115 for river and harbor works under contract, while the sundry civil act of this session appropriates only $3,284,597 for such works.

h This does not include $3,000,000 estimated to be necessary under indefinite appropriation made in river and harbor act of this session to purchase property of Monongahela Navigation Company.

i This sum includes $5,238,289.08 to pay sugar bounty under legislation enacted by the Fifty-first Congress.

j This sum includes $1,496,679.56 for objects that are in no sense deficiencies; $3,614,133.77 to pay judgments of the courts and audited accounts certified by the accounting officers for 1893 and prior fiscal years; in all, $5,110,813.33.

k Estimated.

Free Coinage of Silver.

SPEECH

OF

HON. JAMES G. MAGUIRE,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 13, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. MAGUIRE said:

Mr. CHAIRMAN: I have no idea that I shall be able to aid materially in the solution of the problem now before Congress. Indeed, there seems to be an irreconcilable conflict of opinion between the legislative and executive departments of our Government, if not between the two Houses, upon all questions of coinage and finance, which renders it impossible during the life of the present Congress to have any plan adopted which may be expected to extricate our country from her present great and acknowledged difficulty. The whole question must, then, be submitted anew to the country at the coming election, and these arguments are intended rather to influence the thought of the country than to produce any immediate effect upon this House.

I have listened attentively to the arguments of the learned and experienced Representatives who have spoken on the bond bill passed by the House, and on the free-silver bill returned by the Senate as a substitute for it, and I have read much of the literature with which the country has been flooded during the last three years, in an effort to find a really scientific solution of the problem. I have no faith in the settlement of any such question upon lines of mere present expediency. What may, in your judgment, be expedient to-day may, under new and unforeseen conditions, work injustice or hardship to-morrow. It must be possible to find some scientific solution of the question. There must be some natural law governing the relation of money to the trade in which it is employed, which, if discovered and applied, will be better and more satisfactory in its results than any system that has yet been devised. I believe that men come together in communities by the force of natural laws which make them gregarious; that there is a natural law of social order; a natural law governing the relations of men to each other and to their natural environment, extending even to the domain of trade, with all its intricate and manifold combinations, which, if discovered and applied, must be best, as all natural laws, in every department of universal life and action, are better than any laws of human contrivance which can be substituted for them.

An examination of the questions of coinage and currency from this standpoint necessarily excludes from consideration all mere sentimentality in favor of any particular metal or commodity as a medium or as a media of exchange, and excludes from consideration likewise the interests of special classes, It excludes from consideration the interests of gold-mine owners and silver-mine owners, and deals with the medium of exchange as a means of satisfying a want arising out of the operations of trade alone.

Money and all other media of exchange must ever be subordinate to the trade of the people, which they are intended merely to facilitate, but never to control or limit or hamper in any way. All talk about the sacredness of gold and silver as money metals is childish. They have no sacredness that can be rationally recognized. Indeed, they are less to be regarded than the commodities comprising food, clothing, and shelter for the human race, the exchange of which they are used to facilitate. Neither does it aid in the least in the solution of the problem to discuss the motives of past Congresses or of Representatives or Senators in such Congresses in the passage of the laws that now govern our system of coinage. It is absolutely immaterial to the present discussion whether the act of 1873 was honestly or dishonestly passed. That act may have been passed in perfect honesty, or its passage may have been secured by the grossest fraud and suppression of truth, misleading the Senators and Representatives who voted for it, but it was constitutionally passed and approved. It is the law of the land, subject to amendment or repeal, just as other laws are subject to amendment and repeal, but not otherwise. There is no power within the Constitution that can in the slightest degree modify the law because of the fraud that may have been practiced in procuring its enactment. It is the law and it controls our system of coinage equally, whether honestly or dishonestly passed, whether its enactment was criminal or virtuous. We are confronted with the law as it is, and the question with us is simply, Is the system of coinage thereby established the best that, with the lights before us, can be established? If it is, it should be upheld, even though its enactment was procured by fraud. If it is not the best system, then it should be changed, or wiped out altogether, if necessary, even though its passage were prompted by the very best of motives.

Nor will I attempt to discuss the much-agitated question as to the exact period at which the gold standard now in vogue was really adopted by legal enactment. It does not seriously matter whether it was adopted in 1835 or in 1853 or in 1873 or at a later period. The important fact is that we have now a single gold standard for the coinage of our country, all other metals being coined at a fixed ratio with respect to gold, and the parity with gold at that ratio being guaranteed by the Government. All money other than gold is thus made token money. I have no doubt that by the passage of the act of 1873, and perhaps by the later acts, great injustice was done to the debtor class as it then stood for the benefit of the creditor class as it then stood. But in the mutations that have inevitably taken place since 1873 the individuals comprising the debtor and creditor classes no longer occupy the same relations to each other that they then did, and any attempt now to rectify the injustice of 1873 by passing another law for the benefit of the debtor class and to the corresponding disadvantage of the creditor class as they now stand would be wholly ineffectual to accomplish justice in more than a very slight degree. We should therefore look not to the wrongs of the past but to the needs of the future in establishing the best possible system of coinage and finance for the future.

Does the present system work well? Is it satisfactory? Does it meet the demands of trade fully and promptly without hardship or injustice to the people of our country in general? It seems to me that it does not. None are entirely satisfied with it.

The demand for money of all kinds arises out of the operation of the laws of trade; the kinds and the volume of money which may be used to satisfy that demand are fixed and determined arbitrarily by a political system which is not in touch with the independent system of trade. Our laws as they now stand limit the trade of the country, and by similar manipulation elsewhere the trade of all the leading countries of the civilized world is limited to gold as the money of ultimate redemption. The gold supply of the world is limited and is generally believed to be inadequate for the service which is thus by law imposed upon it. I believe that it manifestly appears that the gold supply of the world is inadequate, but I do not care to discuss that phase of the question, because, in the view which I shall take of it, that question is not properly to be determined by Congress or by the political organizations of any country, but must properly be left to the laws of trade under which alone the supply of media of exchange to meet the demand created by the operation of those laws can be harmoniously and satisfactorily adjusted at all times. I therefore believe that even the question as to the sufficiency or insufficiency of the volume of our money to meet the demands of trade may be properly eliminated from the discussion of the question of coinage unless we have already finally and irrevocably determined that the volume and the kinds of money to be used in trade must be fixed and determined by the lawmaking powers of our Government. It seems to me that so long as those questions are retained for practical decision as part of the jurisdiction of our political system the supply of money of the kinds needed will never be made to harmonize with the demands of trade. It is enough, then, from my standpoint, for present purposes to recognize the apparent inadequacy of the gold supply to perform the money function devolved upon it by law without endeavoring to determine by investigation whether the inadequacy of that supply be real or only apparent. Its consequences we may well consider, for the greatest difficulty which our Government is now facing, not excepting the dangers of foreign wars, is the difficulty of meeting the demand for gold made upon it by commerce under our existing laws.

During the last two years and a half this Government has been obliged to issue bonds to the amount of $262,000,000 in order to obtain the gold necessary to maintain the parity now artificially established by law between gold and silver upon the gold basis. Yet this enormous bond issue has not in the least changed the conditions which gave rise to the demand for it. There is not the slightest assurance that the very same obligations of the Government upon which this enormous amount of gold has been drawn out during the last two years and a half may not all be again presented to the Treasurer of the United States to be again redeemed in gold during the ensuing year. The means in private hands by which the Treasury may be drained of its gold and compelled to replenish its gold reserve to meet further demands are just as complete to-day as they were at the beginning of the period of which I have spoken. The present system is an endless chain running between the United States Treasury and the great banking center of the country, by means of which all kinds of token money—which means all money other than gold—are carried into the Treasury of the United States and back again to the banking institutions,

carrying with them an unending and undiminishing stream of gold and bonds.

The primary demand is for gold, and the basis of that demand is the obligation of the Government to maintain the parity between gold and silver; but the only means which the Government has of obtaining gold to satisfy this obligation is by the issuance of interest-bearing bonds. If this be so now it will be necessarily so in the future and for all time in the future, so long as the present system shall continue. In what other way can gold be obtained to meet this ever-present and ever-increasing demand for it? No other way has been discovered by the Administration, and I doubt if any other way can be suggested even by those who insist upon the continuance of the system, unless it be to pay immediately an immense premium for gold.

It has been suggested that the need of the Government for gold to maintain the parity—for that is the real purpose, although the nominal purpose is to meet the gold obligations of the Government represented by the greenbacks—may be met by requiring a fixed percentage of all duties and other taxes to be paid in gold. That clearly would not help the matter, because the Treasury would be required to supply the gold with which to make such payments. It is quite immaterial whether the Government be required to find and furnish gold for the payment of international balances and the like, or to find and furnish gold for the payment of a part of the duties and taxes which it collects. The gold required by the commerce of the country for all purposes must, under existing laws, be furnished by the Government of the United States, if the enforced parity is to be maintained upon the present gold basis.

It has been suggested that increased tariff taxes creating a full supply of revenue would cure the evil. Manifestly that could have no such effect, because even if the revenues derived from all sources by taxation were sufficient, or even far more than sufficient, to meet all of the obligations of the Government, yet that more than sufficient revenue would not bring gold into the Treasury to meet the demand for gold arising out of the operation of our present coinage and currency laws, and, as I have stated, even if that revenue were required to be paid partly or even wholly in gold, the gold drain upon the Treasury would not be relieved thereby, but the Treasury would simply be obliged to find and furnish the gold required for the payment of the duties and other taxes. Of course, it is conceivable that with a full revenue derived from taxes all greenbacks and other demand obligations of the Government redeemed would be held in the Treasury and not put into circulation again, thus, by one redemption, cutting off each gold obligation of the Government and preventing its renewed use for the purpose of extracting gold from the Treasury. But what would then become of the circulating medium of the country? Suppose that that course had been pursued from the time of the passage of the act of 1890, what would be the result? Simply an accumulation of a surplus of nearly four hundred millions of redeemed greenbacks and other notes of the Government and a contraction of the circulating currency of the country to the extent of $400,000,000, thus producing a commercial difficulty far more serious than the present embarrassment of the Government by rendering the money of exchange still more inadequate to the demands of trade.

What next? The Treasurer of the United States, under the direction of the Secretary of the Treasury, may refuse to pay any of the remaining paper obligations of the Government in gold. The act of 1890 authorized him to pay all obligations of the Government in gold or silver, at his option. But what would be the result of the exercise of that option in favor of paying silver? Why, according to the opinions of both the President and the Secretary of the Treasury, it would necessarily and immediately place the whole currency of the country upon a silver basis, in spite of the act of 1873 making gold the standard. Assuming that they are right in this judgment, the very moment that the Government of the United States refuses at its Treasury to make its obligations, no matter in what coin they are ultimately redeemable, equal to gold, by paying gold for them, they must immediately, in accordance with the laws of trade, take their places in exchange according to the relative commodity values of the coins in which they are redeemable. The law requiring the maintenance of the parity between gold and silver by the Government is an interruption of the laws of trade, continuing to operate just as long as the terms of the law are practically carried out, but no longer. I have said that this is the judgment of the Administration itself, but I wish to add that I agree with that judgment.

Now, it seems to me that there are but two possible ultimate results before this country. We must go on without limit, either as to time or amount, procuring gold by the issuance of interest-bearing bonds, year after year, until our bonds shall become absolutely unsalable, when the scheme will end in the ignominy of national bankruptcy, or we must find safety in a return to a silver basis.

We have, in my opinion, no alternative in the matter of returning to a silver basis. The nation can not long bear the strain of maintaining the present system. Our alternative, therefore, is merely as to the method of returning. We may return to a silver basis by legislation, in the enactment of which we may provide equitably for such existing obligations as ought to be paid in gold or its equivalent, or, failing of legislation to that end, we must return to the silver basis through the channel of national bankruptcy.

COST OF MAINTAINING GOLD STANDARD.

It costs the people of this country now $100,000,000 per annum to maintain the gold standard, and I do not see how, under the construction given to the currency laws of our country by the Treasury Department, we are ever to escape that burden or to make it less. I do not forget that for every dollar in gold that we give out we receive a dollar in the paper currency of the country which we can pay out at its nominal value. But we are paying a fearful premium for gold. We procure gold by the issuance of thirty-year bonds, bearing interest at the rate, approximately, of 3½ per cent per annum, amounting in thirty years to 100 per cent upon the amount borrowed. Now, the payment of interest by the Government of the United States is not like the payment of interest by a private individual or corporation upon money to be used productively. The private borrower of money puts it to uses that will yield interest equal to or in excess of the interest which he pays. Not so with the Government. The Government receives no compensating interest, because it does not use the money borrowed productively. The interest paid by the Government is a dead loss, which must be borne wholly by the people, and in this case 100 per cent upon every dollar of gold borrowed to maintain the parity is a mere gratuity paid by the Government, for which it receives no return whatever in any form. But the people must, within thirty years after each bond issue, pay the principal of the sum borrowed, with an equal amount added to the principal in the form of interest. How long will the people continue to bear this burden? How long can they continue to bear it? It seems to me that the question of abandoning the gold standard is not a debatable one, unless the advocates of the gold standard can first show that a time will come in the near future when it will not cost the people $100,000,000 per annum as an absolute dead waste of public money to maintain it.

Mr. BOATNER. Mr. Chairman, if it will not interrupt my friend from California, I should like him to explain, if his premises be correct, what has maintained and what is now maintaining the silver circulation at a parity with gold?

Mr. MAGUIRE. It is the promise of the Government of the United States to bear the expense of maintaining the parity between gold and silver coin and between gold and all other forms of currency at the established ratio; to receive silver and other forms of currency in payment of Government dues on a parity with gold, and giving to silver and other forms of currency, either with or without limit, the legal-tender character. It is the equality and the certainty of redemption on a gold basis that accomplishes that purpose now; but it is fearfully expensive to the people, and the expense of maintaining it must increase rather than diminish in the future. Silver, being demonetized, is degraded and reduced in value throughout the world because the limitation put upon the use of silver makes the demand for it less than the supply offered; and this condition under the well-known and universal law of supply and demand reduces its market price far below what it would be if the demand were permitted to be normal.

Mr. BOATNER, Will the gentleman permit another question?

Mr. MAGUIRE. With pleasure, sir.

Mr. BOATNER. If the propositions just stated by my friend be true, I would like to ask him to state what maintained the equality of the circulation issued under the Bland Act prior to the act of 1890? That circulation was issued at a time when there was no such pledge as that of which the gentleman speaks and no such promise on the part of the Government.

Mr. MAGUIRE. I presume that between the time of the passage of the Bland-Allison Act and the passage of the act of 1890 the demand for silver and for coin obligations of the Government to be used as money was greater than the supply, and that in spite of the fact that gold was made the sole money of ultimate redemption silver was more in demand for use than gold was for redemption. If the gentleman from Louisiana [Mr. BOATNER] means by his questions to suggest that it is not necessary to pay any of the outstanding paper obligations of this Government in gold in order to maintain the parity between gold and silver on the present gold basis, then I say to him that his opinion is based upon a supposed condition of fact the proof of which must be a fearful condemnation of the financial policy of both the present and the next preceding Administrations, for the people of this country have been called upon to bear the enormous burden of paying gold for greenbacks, notwithstanding the option of the Secretary of the Treasury under the law to pay them in either gold or silver, upon the theory that that course is necessary to the

preservation of the nation's honor and credit. The theory upon which they have been construed to be gold obligations is that, the Government having promised to maintain the parity between gold and silver, the honor of the nation would be impaired and blemished by a failure or refusal to pay them in gold, because such failure would immediately destroy the parity and reduce the country to a silver basis.

I have sought to proceed in the discussion of this question upon the theory that the principal supporters of the gold standard, and particularly those who have charge of the administration of the nation's finances under that system, understand and correctly state their reasons for exercising their option in favor of paying gold instead of silver upon these obligations of the Government.

Now, if the theory of the Secretary of the Treasury and also of the President of the United States, as expressed in his message to Congress in December last, be correct, this country, notwithstanding the law making gold the standard, must go to a silver basis whenever the Government fails to pay gold for any obligation of the Government or for any other money or currency. If that be so, and it seems to me reasonably probable at least, then the retirement of the greenbacks and the other $112,000,000 of so-called gold demand notes of the Government will not relieve us in the least of the burden of maintaining the parity between gold and silver and will not in the least reduce the necessity for selling interest-bearing bonds to procure gold for that purpose. If the greenbacks were all retired and $100,000,000 in silver certificates were presented to the Secretary of the Treasury and gold demanded for them, the Treasurer of the United States would be bound to give gold for them or the parity would fail, because the owner of the silver certificates, being obliged to get the gold from some source and being unable to get it at the Treasury of the United States, would go into the market and pay a premium for it. That premium would represent the extent of the failure of the parity. So that there is really no prospect under the present system of any diminution of the necessity for procuring gold by the sale of the interest-bearing bonds in order to maintain the parity.

Remember that while silver would unquestionably be increased in value by the opening of our mints, or of any mints, to its free and unlimited coinage, the commodity value of the silver would not be increased through going to a silver basis by reason of the failure of the Government to maintain the parity, because the coinage of silver would still be limited and the demand for silver left unchanged. So much for the burden assumed by the Government in maintaining the gold standard.

ONLY ONE STANDARD.

"But," say the gold men, "the unit of value must be in one kind of money only. You can not have two standards of value—one in gold and one in silver, and gold is the standard of value in all of the leading nations of the world." Both of these propositions are true; but it is equally true that the adoption of gold as the standard of value in the leading nations of the earth is not even a good argument in favor of our adopting it, and does not in the least tend to show that gold is a better standard of value than silver. If we must have but one standard of value, and I concede that, then I assert that every argument that should weigh in the selection of the standard is in favor of silver and against gold.

A word further about the systems of currency established in the older nations. Bear in mind that in those countries the people have never been consulted about the standard of value or the system of finance. The governments of those countries rely entirely upon the so-called expert financiers, the great bankers and money lenders, whose experience in banking and money lending is supposed to be the safest guide in all matters relating to coinage and currency, whereas in truth they are not experts in the use of money as media of exchange at all, and are expert only from the standpoint of the lender of money, who naturally imagines that the kind of currency which gives most advantages to the creditor class is the best money of ultimate redemption. From his point of view, naturally, if a metal money is to be selected as the standard of value and the money of ultimate redemption it should be the metal which can be most readily monopolized and manipulated by the wealthy, though numerically small, creditor class.

We have not attempted any scientific solution of the money question, but have basely copied our system from the monarchies of Europe, and we are now told that that system must be best for this country because the governments of those countries have adopted it.

MONEY IS DOMESTIC, NOT INTERNATIONAL.

But—

Say the gold monometallists—

unless we coin gold as our exclusive money of ultimate redemption we can not trade on equal terms with the leading nations, because they will not sell except for gold, and they will accept nothing but gold in payment of our trade balances to them.

I will not discuss the first of these propositions. I venture to predict that we shall not suffer by reason of their refusal to sell to us. The silver-standard countries of the world already produce nearly everything that we can not produce for ourselves.

As to foreign balances, we do not pay them in gold coin, but in gold by weight, and in the payment of such balances uncoined bar gold is generally at a premium over coined gold.

There is no such thing as an international money, nor can there be except by an international agreement, such as that of the Latin Union, and I very much doubt the practicability and the value of such an agreement.

Money is essentially a matter of domestic concern to the people of each country, and in establishing a money system for this country it is quite immaterial what system any other nation may have adopted. There is no more reason or sense in waiting for an international agreement on the subject of money than there would be in waiting for an international agreement on the subject of taxation or education or universal suffrage.

International bimetallism is a fraud put forward by the gold men as a temporary expedient, and is repudiated by them whenever, in moments of exuberance, they feel above the need of its help.

CHARACTER OF EXISTING DEBTS IMMATERIAL.

Silver was selected as the standard of value in this country at the suggestion of Thomas Jefferson more than one hundred years ago. The silver dollar continued to be the unit of value until 1873, when it was superseded by the gold unit, certainly not because of any general fault found with the silver standard nor because of any demand made among the people for the change, but probably, even without the knowledge of a majority of the representatives in the Congress adopting it, suggested by the large creditor classes in order to enhance the value of the public and private securities and claims which they held. After the passage of that act all demands to repeal it were met with arguments that could not be urged in favor of its passage originally and that do not support the theory that gold is a better standard of value than silver. It was urged and is still urged that all debts, public and private, contracted after the passage of the act of 1873 were contracted with reference to the law making gold the standard, and are therefore gold debts; that to change the standard would be an injustice to those who had contracted under the law with the expectation that they would be paid in gold according to that law, that it would be dishonorable by changing the standard to interfere with their vested rights. That contention might be answered by the suggestion that the act of 1873 was equally unjust to debtors, and that both debtors and creditors must take their chances upon changes in public laws, the indirect effect, but not the primary purpose, of which is to increase or diminish the values or burdens of individual obligations. In so far as existing debts are morally gold debts, they should be paid in gold or its equivalent. If under free coinage silver will become commercially equivalent to gold at the ratio of 16 to 1, all will be well, but the contingency that it may not do so should be provided for with respect to obligations that are morally payable in gold. But I will not discuss that phase of the question. Our system of coinage should not be controlled in any way by the fact that we owe obligations which ought to be paid either in gold or in silver. It is absurd to contend that we should forever maintain a bad system of currency in this country, because no matter at what time you propose a change in the system you are hampered by the fact that there are public and private debts which have been contracted under existing law and which ought not to be either increased or diminished in value by a change in the law. It can not be conceded that the people of this country are forever bound hand and foot to a vicious system of currency by the existence of that condition. We should be as free to-day to change our system of currency from bad to better or from worst to best, if we can find the best, as we would be if nobody owed a dollar, and we must assert that freedom in the matter of changing our currency system.

SILVER MONEY ESSENTIAL—GOLD MONEY NOT ESSENTIAL.

The uses to which gold is put in effecting the exchanges of the world involve very little demand for coined gold. Indeed, the gold coinage of our country might be absolutely and permanently stopped without materially hampering trade in any part of the United States. It is not the medium through which exchanges are effected by the use of money passing at the time of the exchange.

Not so with silver. If the use of silver as money were prohibited, half the exchanges of the country in value and nineteen-twentieths of the exchanges of the country in number would be thrown into the utmost confusion and continually embarrassed until the restoration of silver to use as money. Silver is the medium of the small exchanges that are made by the use of money passing at the time of the sale or purchase. No satisfactory substitute for silver as money has ever been found. It is essentially the money of the people, and as every dollar's worth of the commodities comprising the wholesale trade of this country must finally be sold in

comparatively small quantities to ultimate consumers who pay their small prices and bills in silver, which is the only money suited to small exchanges, it must be apparent that at least half in value of the exchanges of the country are made by the use of silver and can not be satisfactorily made in any other way or by the use of any other medium.

SUPERABUNDANCE OF SILVER.

It is highly important that our unit and standard of value shall be in the essential money of our domestic exchanges. It is absolutely indispensable that there be no necessity for calculating discounts or premiums on that money. Every unit of that money should be at all times exactly equal to the legal unit of value. Silver, as I have shown, is the essential money of our domestic exchanges. Gold, while very useful, is not essential. It is merely a convenient supplement to our silver coinage.

But—

Say the gold-standard advocates—

silver has become superabundant. Not more than half the present supply of silver could be used as money in all the countries of the world, even if its coinage were free and unlimited. This oversupply of silver has so far reduced its market value as to make it cumbersome as money.

I will not discuss the supply of silver relatively to the possible demand for it as money. I will assume that at least half of it must find employment in the arts. This condition, so far from being an argument for the demonetization of silver, is a very strong argument in favor of making it the standard, as against a metal the supply of which is confessedly far short of the demand for it. The supply of gold is so far below the demand for it that it is always safe to monopolize it, and to manipulate its price in the market, to the infinite enrichment of the monopolists and to the corresponding injury of the masses of the people. The superabundance of silver over the possible demand for it as money would serve as a perpetual bulwark against its monopoly and manipulation. It would never be safe to attempt its monopoly. If an attempt should be made to monopolize coined silver the surplus used in the arts would flow into the mints to meet the deficiency. To monopolize silver bullion would necessitate the payment of a price high enough to draw it away from the arts, with the certainty of being obliged ultimately to sell it for use in the arts.

The average cost of producing silver, which is considerably above its present market price, is the best possible guaranty against its further depreciation under any circumstances, and is the best possible assurance of its considerable appreciation in market value whenever the present law-created, abnormal condition shall be removed.

Under free coinage, which we all understand in common speech to mean unlimited as well as free coinage, the possible fluctuations in the market price of silver would be confined to the very narrow margin between the cost of producing it and its value for use in the arts.

These rigid limits of fluctuation would secure to us the steadiest standard of value conceivable.

Would the cheapness of silver make it cumbersome as standard money? I think not. Silver bears practically the same relation of value to-day to the staple commodities of commerce that it bore for the eighty-one years during which it was the standard of value. It can not be more cumbersome now than it was during that period.

Remember that the price of silver has fallen only with reference to the price of gold, not with reference to the prices of other commodities; and that apparent fall may have been occasioned either by the depreciation of silver and of the other commodities or by the appreciation of gold.

But if silver should be found cumbersome as money, a system of silver certificates, representing deposits of silver at the mints or subtreasuries of the United States, would overcome that difficulty. It will not be denied that a one-thousand-dollar silver certificate is less cumbersome than a twenty-dollar gold piece.

THE RATIO.

But—

Say our opponents—

gold and silver can not be used together at the ratio of 16 to 1 unless the Government guarantees the parity at that ratio.

My answer is that it is not a proper function of government to guarantee the parity between metal moneys.

The function of government ends with the free and unlimited coinage of such metals as the people desire to use as media of exchange at such ratios as are likely to make them proportionately equal to each other in use, leaving their actual relation to be governed by the laws of trade. I am certainly opposed to taxing the people $100,000,000 a year to maintain the parity, as we are doing now.

I am in favor of restoring the free and unlimited coinage of gold and silver at the ratio of 16 to 1, first, because our last experiment in the free and unlimited coinage of both metals showed that to be the true ratio at that time, and we can not ascertain either that there has been a change or the extent of the change without restoring the system of coinage then existing; secondly, because all of our gold and silver money now in use has been coined at that ratio, and it would be a great and expensive folly to recoin either our gold or our silver money at a new ratio until, by actual experiment, we ascertain whether or not the restoration of the free and unlimited coinage of both metals will restore the commercial parity which existed between them up to the time of the demonetization of silver. If gold should go to a premium, it will do no particular harm. In fact, gold is now at a tremendous premium, and the people, through their National Treasury, are paying it.

Free Trade or Protection.

REMARKS
OF
HON. CHESTER I. LONG,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 10, 1896.

Mr. LONG said:

Mr. SPEAKER: In these days of business depression, when those who are responsible for the Wilson-Gorman tariff law are endeavoring to change the issue of the coming campaign, and thus avoid their responsibility for its failure, it is well to remember that the result of this step toward free trade is the same as other resorts to this policy in the past.

Free trade may be better for Great Britain, but our experience has clearly demonstrated that it is not better for this country. We have prospered under protective tariffs, and we have always had panics and business disasters when we have tried free trade.

No clearer exposition of the principles of protection can be found than the following reply of James G. Blaine to William E. Gladstone in the North American Review:

There can be no doubt that Mr. Gladstone is the most distinguished representative of the free-trade school of political economists. His addresses in Parliament on his celebrated budget, when chancellor of the exchequer in 1853, were declared by Lord John Russell "to contain the ablest exposition of the true principles of finance ever delivered by an English statesman." His illustrious character, his great ability, and his financial experience point to him as the leading defender of free trade applied to the industrial system of Great Britain.

Mr. Gladstone apologizes for his apparent interference with our affairs. He may be assured that apology is superfluous. Americans of all classes hold him in honor, free traders will rejoice in so eminent an advocate, and protectionists, always the representatives of liberality and progress, will be glad to learn his opinions upon a question of such transcendent importance to the past, the present, and the future of the Republic.

Perhaps the most remarkable feature in the argument of Mr. Gladstone, as indeed of every English free trader except John Stuart Mill, is the universality of application which he demands for his theory. In urging its adoption he makes no distinction between countries; he takes no account of geographical position, whether a nation be in the Eastern or the Western Hemisphere, whether it be north or south of the Equator; he pays no heed to climate, or product, or degree of advancement; none to topography, whether the country be as level as the delta of the Nile or as mountainous as the Republic of Bolivia; none to pursuits and employments, whether in the agricultural, manufacturing, or commercial field; none to the wealth or poverty of a people; none to population, whether it be crowded or sparse; none to area, whether it be as limited as a German principality or as extended as a Continental empire. Free trade he believes advantageous for England; therefore, without the allowance of any modifying condition, great or small, the English economist declares it to be advantageous for the United States, for Brazil, for Australia; in short, for all countries with which England can establish trade relations. It would be difficult, if not impossible, for Mr. Gladstone to find any principle of administration or any measure of finance so exactly fitted to the varying needs of all countries as he assumes the policy of free trade to be. Surely it is not unfair to maintain that, deducing his results from observation and experience in his own country, he may fall into error and fail to appreciate the financial workings of other countries geographically remote and of vastly greater area.

The American protectionist, let it not be discourteous to urge, is broader in his views than the English free trader. No intelligent protectionist in the United States pretends that every country would alike realize advantage from the adoption of the protective system. Human government is not a machine, and even machines can not be so perfectly adjusted as to work with equal effectiveness at all times and under all conditions. Great Britain and the United States certainly resemble one another in more ways than either can be said to resemble any other nation in the world; yet, when we compare the two on the question at issue, the differences are so marked that we almost lose sight of the resemblance. One is an insular monarchy with class government; the other a continental Republic with popular government. One has a large population to the square mile; the other has a small population to the square mile. One was old in a rich and complex civilization before the establishment of the other was even foreseen. One had become the wealthiest nation of the world while the other was yet in the toils and doubts of a frontier life and a primitive civilization. One had extensive manufactures for almost every field of human need, with the civilized world for its market, while the population of the other was still forced to divide its energies between the hard calling of the sea and the still harder calling of a rude and scantily remunerative agriculture.

The physical differences between the two countries are far more striking than the political and social differences. They are, indeed, almost incalculable. Great Britain is an island less than 90,000 square miles in extent. It lies in the far north. Its southernmost point is nearly 30 degrees of latitude above the Tropics. Its northernmost point is but 9 degrees below the Arctic Circle. Within its area the exchange of natural products is necessarily limited. Its life depends upon its connection with other countries. Its prosperity rests

upon its commerce with the world. On the other hand, a single State of the Union is nearly three times as large as Great Britain. Several other States are each quite equal to it in area. The whole Union is well-nigh forty times as large. Alaska excepted, the northernmost point of the Union is but 60 miles south of the southernmost point of Great Britain, and the southernmost point of the Union is but little more than 100 miles from the Tropics. Its natural products are more varied, more numerous, and of more valuable character than those of all Europe. To quote one of Mr. Gladstone's phrases, we constitute "not so much a country in ourselves as a world." He tells us that we carry on "the business of domestic exchanges on a scale such as mankind has never seen." Our foreign commerce, very large in itself, is only as 1 to 25 compared to our internal trade. And yet Mr. Gladstone thinks that a policy which is essential to an island in the northern ocean should be adopted as a policy of a country which even to his own vision is "a world within itself."

With these fundamental points of difference between the two countries, I assume that varied financial and industrial systems, wrought by the experience of each, would be the natural and logical result. Hence I do not join issue with Mr. Gladstone on both of his propositions. He defends free trade in Great Britain. He assails protection in the United States. The first proposition I neither deny nor affirm. Were I to assume that protection is in all countries and under all circumstances the wisest policy, I should be guilty of an error similar to that which I think Mr. Gladstone commits. It might be difficult to prove that free trade is not the wisest financial policy for Great Britain. So far from guarding herself against material imported from other countries, her industrial system would wither and die if foreign products were withheld for even a brief period. She is in an especial degree dependent upon the products of other nations. Moreover, she does not feel bound to pay heed to the rate of wages which her labor may receive. That, like the fabrics which her labor creates, must take its chance in the markets of the world.

On many points and in many respects it was far different with Great Britain a hundred years ago. She did not then feel assured that she could bear the competition of continental nations. She was, therefore, aggressively, even cruelly, protective. She manufactured for herself and for her network of colonies reaching around the globe. Into those colonies no other nation could carry anything. There was no scale of duty upon which other nations could enter a colonial port. What the colonies needed outside of British products could be furnished to them only in British ships. This was not protection! It was prohibition, absolute and remorseless, and it was continued even to the day when Mr. Gladstone entered upon his long and splendid career in Parliament. It was not broken, though in some respects it was relaxed, until in the fullness of time British energy had carried the wealth and the skill of the Kingdom to the point where no competition could be feared.

During the last thirty years of her protective system, and especially during the twenty years from 1826 to 1846, Great Britain increased her material wealth beyond all precedent in the commercial history of the world. Her development of steam power gave to every British workman the arms of Briareus, and the inventive power of her mechanicians increased the amount, the variety, and the value of her fabrics beyond all anticipation. Every year of that period witnessed the addition of millions upon millions of sterling to the reserve capital of the Kingdom; every year witnessed a great addition to the effective machinery whose aggregate power was already the wonder of the world. The onward march of her manufacturing industries, the steady and rapid development of her mercantile marine, absorbed the matchless enterprise and energy of the Kingdom. Finally, with a vast capital accumulated, with a low rate of interest established, and with a manufacturing power unequaled, the British merchants were ready to underbid all rivals in seeking for the trade of the world.

At that moment Great Britain had reason to feel supremely content. She found under her own flag, on the shores of every ocean, a host of consumers whom no man might number. She had Canada, Australia, and India with open ports and free markets for all her fabrics; and, more than all these combined, she found the United States suddenly and seriously lowering her tariff and effectively abolishing protection at the very moment England was declaring for free trade. The traffic of the world seemed prospectively in her control. Could this condition of trade have continued no estimate of the growth of England's wealth would be possible. Practically it would have had no limit Could she have retained her control of the markets of the United States as she held it for the four years preceding the outbreak of the civil war, the American people would have grown commercially dependent upon her in a greater degree than is Canada or Australia to-day.

But England was dealing with an intelligence equal to her own. The American people had, by repeated experience, learned that the periods of depression in home manufactures were those in which England most prospered in her commercial relations with the United States, and that these periods of depression had, with a single exception, easily explained, followed the enactment by Congress of a free-trade tariff* as certainly as effect follows cause. One of the most suggestive experiments of that kind had its origin in the tariff to which I have just referred, passed in 1846 in apparent harmony with England's newly declared financial policy. At that moment a Southern President (Mr. Polk) and a Southern Secretary of the Treasury (Mr. Robert J. Walker) were far more interested in expanding the area of slave territory than in advancing home manufactures, and were especially eager to make commercial exchanges with Europe on the somewhat difficult basis of cotton at high prices and returning fabrics at low prices.

Under ordinary circumstances the free-trade tariff of 1846 would have promptly fallen under popular reprobation and been doomed to speedy repeal. But it had a singular history and for a time was generally acquiesced in, even attaining in many sections a certain degree of popularity. Never did any other tariff meet with so many and so great aids of an adventitious character to sustain it as did this enactment of 1846. Our war with Mexico began just as the duties were lowered, and the consequence was the disbursement of more than $100,000,000 in a way that reached all localities and favorably affected all interests. This was a great sum of money for that period, and for the years 1846, 1847, and 1848 it considerably more than doubled the ordinary outlay of the Government. In the middle of this period the Irish famine occurred and called for an immense export of breadstuffs at high prices. The discovery of gold in California the succeeding year flushed the channels of business as never before by rapidly enlarging the circulation of coin in all parts of the country. Before this outpouring of gold had ceased the three great nations of Europe, as precedence was reckoned at that time—England, France, and Russia—entered upon the Crimean war. The export of manufactures from England and France was checked; the breadstuffs of Russia were blockaded and could not reach the markets of the world. An extraordinary stimulus was thus given to all forms of trade in the United States. For ten years—1846 to 1856—these adventitious aids came in regular succession and exerted their powerful influence upon the prosperity of the country.

The withdrawal or termination of these influences, by a treaty of peace in Europe and by the surcease of gold from California, placed the tariff of 1846 where a real test of its merits or its demerits could be made. It was everywhere asked with apprehension and anxiety: Will this free-trade tariff now develop and sustain the business of the country as firmly and securely as it has been developed and sustained by protection? The answer was made in the ensuing year by a widespread financial panic, which involved the ruin of thousands, including proportionately as many in the South as in the North, leaving the country disordered and distressed in all the avenues of trade. The disastrous results of this tariff upon the permanent industries of the country are described in President Buchanan's well-remembered message, communicated to Congress after the panic: "With unsurpassed plenty in all the elements of national wealth, our manufacturers have suspended, our public works are retarded, our private enterprises of different kinds are abandoned, and thousands of useful laborers are thrown out of employment and reduced to want." This testimony as to the result of a free-trade tariff is all the more forcible from the fact that Mr. Buchanan, as a member of President Polk's Cabinet, had consented to the abandonment of protection, which in his earlier career he had earnestly supported.

If these disasters of 1857, flowing from the free-trade tariff, could have been regarded as exceptional, if they had been without parallel or precedent, they might not have had so deadly a significance. But the American people had twice before passed through a similar experience. On the eve of the war of 1812 Congress guarded the national strength by enacting a highly protective tariff. By its own terms this tariff must end with the war. When the new tariff was to be formed a popular cry arose against "war duties," though the country had prospered under them despite the exhausting effect of the struggle with Great Britain. But the prayer of the people was answered, and the war duties were dropped from the tariff of 1816. The business of the country was speedily prostrated. The people were soon reduced to as great distress as in that melancholy period between the close of the Revolutionary war and the organization of the National Government—1783 to 1789. Colonel Benton's vivid description of the period of depression following the reduction of duties comprises in a few lines a whole chapter of the history of free trade in the United States:

"No price for property; no sales except those of the sheriff and the marshal; no purchasers at execution sales except the creditor or some hoarder of money; no employment for industry; no demand for labor; no sale for the products of the farm; no sound of the hammer except that of the auctioneer knocking down property. Distress was the universal cry of the people; relief the universal demand."

Relief came at last with the enactment of the protective tariff of 1824, to the support of which leading men of both parties patriotically united for the common good. That act, supplemented by the act of 1828, brought genuine prosperity to the country. The credit of passing the two protective acts was not due to one party alone. It was the work of the great men of both parties. Mr. Clay and General Jackson, Mr. Webster and Mr. Van Buren, Gen. William Henry Harrison and Richard M. Johnson, Silas Wright and Louis McLane, voted for one or the other of these acts, and several of them voted for both. The cooperation of these eminent men is a great historic tribute to the necessity and value of protection. Plenty and prosperity followed as if by magic the legislation to which they gave their support. We have their concurrent testimony that the seven years preceding the enactment of the protective tariff of 1824 were the most discouraging which the young Republic in its brief life had encountered, and that the seven years which followed its enactment were beyond precedent the most prosperous and happy.

Sectional jealousy and partisan zeal could not endure the great development of manufactures in the North and East which followed the apparently firm establishment of the protective policy. The free-trade leaders of the South believed—at least they persuaded others to believe—that the manufacturing States were prospering at the expense of the planting States. Under the lead of Calhoun, South Carolina rebelled, and President Jackson, who had so strikingly shown his faith in the policy of protection, was not able to resist the excitement and resentment which the free traders had created in the cotton States. He stood between hostile policies, represented by his two bitterest personal enemies—Clay for protection, Calhoun for free trade. To support Clay would ruin Jackson politically in the South. He could not sustain Calhoun, for, aside from his opposition to free trade, he had cause for hating him personally. He believed, moreover, that Calhoun was at heart untrue to the Union, and to the Union Jackson was as devoted as Clay. Out of this strange complication came, not unnaturally, the sacrifice of the protective tariff of 1824–1828 and the substitution of the compromise tariff of 1833, which established an ad valorem duty of 20 per cent on all imports and reduced the excess over that by a 10 per cent annual sliding scale for the ensuing ten years. Like all compromises, it gave complete satisfaction to neither party, but it was received with general acquiescence from the belief that it was the best practicable solution of the impending difficulties. The impending difficulties were two. One was the portentous movement which involved the possibility of dissolving the Union; the other was the demand for a free-trade tariff as the only measure that could appease the Southern nullifiers. Disunion and free trade from that time became associated in the public mind—a source of apprehension in the North, a source of political power in the South. Calhoun was the master spirit who had given the original impulse both to disunion and free trade. Each in turn strengthened the other in the South, and both perished together in the war of the rebellion.

For a time satisfaction was felt with the tariff adjustment of 1833, because it was regarded as at least a temporary reconciliation between two sections of the Union. Before the sliding scale was ruinously advanced there was great stimulus to manufacturing and to trade, which finally assumed the form of dangerous speculation. The years of 1834, 1835, and 1836 were distinguished for all manner of business hazard, and before the fourth year opened the 30 per cent reduction (three years of 10 per cent each) on the scale of duties was beginning to influence trade unfavorably. The apprehension of evil soon became general, public confidence was shaken, the panic of 1837 ensued, and business reversals were rapid, general and devastating.

The trouble increased through 1838, 1839, and 1840 and the party in power, held responsible for the financial disasters, fell under popular condemnation. Mr. Van Buren was defeated, and the elder General Harrison was elevated to the Presidency by an exceptionally large majority of the electoral votes. There was no relief to the people until the protective tariff of 1842 was enacted; and then the beneficent experience of 1824 was repeated on even a more extensive scale. Prosperity, wide and general, was at once restored. But the reinstatement of the Democratic party to power, two years later, by the election of Mr. Polk to the Presidency, followed by a perverse violation of public pledges on the part of men in important places of administration, led to the repeal of the protective act and the substitution of the tariff of 1846, to which I have already adverted, and whose effects upon the country I have briefly outlined.

Measuring, therefore, from 1812, when a protective tariff was enacted to give strength and stability to the Government in the approaching war with Great Britain, to 1861, when a protective tariff was enacted to give strength and stability to the Government in the impending revolt of the Southern States, we have fifty years of suggestive experience in the history of the Republic. During this long period free-trade tariffs were thrice followed by industrial stagnation, by financial embarrassment, by distress among all classes dependent for subsistence upon their own labor. Thrice were these

*The phrase "free-trade tariff" involves a contradiction of terms. It is used to designate that form of duty which is levied with no intention to protect domestic manufactures.

burdens removed by the enactment of a protective tariff. Thrice the protective tariff promptly led to industrial activity, to financial ease, to prosperity among the people. And this happy condition lasted in each case, with no diminution of its beneficent influence, until illegitimate political combinations, having their origin in personal and sectional aims, precipitated another era of free trade. A perfectly impartial man, unswerved by the excitement which this question engenders in popular discussion, might safely be asked if the half century's experience, with its three trials of both systems, did not establish the wisdom of protection in the United States. If the inductive method of reasoning may be trusted, we certainly have a logical basis of conclusion in the facts here detailed.

And by what other mode of reasoning can we safely proceed in this field of controversy? The great method of Bacon was by "rigid and pure observation; aided by experiment and fructified by induction." Let us investigate "from effects to causes, and not from causes to effects." Surely it is by a long series of experiments, and by that test only, that any country can establish an industrial system that will best aid in developing its hidden wealth and establishing its permanent prosperity. And each country must act intelligently for itself. Questions of trade can no more be regulated by an exact science than crops can be produced with accurate forecast. The unknown quantities are so many that a problem in trade or agriculture can never have an absolute answer in advance. But Mr. Gladstone, with an apparent confidence in results as unshaken as though he were dealing with the science of numbers, proceeds to demonstrate the advantage of free trade. He is positively certain in advance of the answer which experiment will give, and the inference is that nothing is to be gained by awaiting the experiment. Mr. Gladstone may argue for Great Britain as he will, but for the United States we must insist on being guided by facts and not by theories; we must insist on adhering to the teachings of experiments which "have been carried forward by careful generalization to well-grounded conclusions."

As an offset to the charge that free-trade tariffs have always ended in panics and long periods of financial distress, the advocates of free trade point to the fact that a financial panic of great severity fell upon the country in 1873, when the protective tariff of 1861 was in full force, and that, therefore, panic and distress follow periods of protection as well as periods of free trade. It is true that a financial panic occurred in 1873, and its existence would blunt the force of my argument if there were not an imperatively truthful way of accounting for it as a distinct result from entirely distinct causes. The panic of 1873 was widely different in its true origin from those which I have been exposing. The civil war, which closed in 1865, had sacrificed on both sides a vast amount of property. Reckoning the money directly expended, the value of property destroyed, and the production arrested and prevented, the total is estimated to be nine thousand millions of dollars. The producers of the country had been seriously diminished in number. A half million men had been killed. A million more had been disabled in various degrees. Help was needed in the honorable form of pensions, and the aggregate required for this purpose exceeded all anticipation and has annually absorbed an immense proportion of the national income. The public debt that must be funded reached nearly three thousand millions, demanding at the beginning more than $150,000,000 for annual interest. A great proportion of the debt, when funding was complete, was held in Europe, calling for an enormous export of gold or its equivalent to meet the interest.

Beside these burdens upon the people, the country was on a basis of paper money, and all gold payments added a heavy premium to the weight of the obligation. The situation was without parallel. The speculative mania which always accompanies war had swollen private obligations to a perilous extent, and the important question arose of restoring coin payment. On the one hand it was contended that to enforce the measure would create a panic by the shrinkage of prices which would follow, and on the other hand it was urged with equal zeal that to postpone it longer would increase the general distrust among the people as to the real condition of the country, and thus add to the severity of the panic if one should be precipitated.

Notwithstanding the evil prophecies on both sides, the panic did not come until eight and a half years after the firing of the last gun in the civil war. Nor did it come until after two great calamities in the years immediately preceding had caused the expenditure of more than two hundred millions of dollars, suddenly withdrawn from the ordinary channels of business. The rapid and extensive rebuilding in Chicago and Boston after the destructive fires of 1871 and 1872 had a closer connection with the panic of 1873 than is commonly thought. Still further, the six years' depression, from 1873 to 1879, involved individual suffering rather than general distress. The country as a whole never advanced in wealth more rapidly than during that period. The entire experience strengthened the belief that the war for the Union could not have been maintained upon a free-trade basis, and that the panic of 1873 only proved the strength of the safeguard which protection supplies to a people surrounded by such multiform embarrassments as were the people of the United States during the few years immediately following the war. And, strongest of all points, the financial distress was relieved and prosperity restored under protection, whereas the ruinous effects of panics under free trade have never been removed except by a resort to protection.

Does Mr. Gladstone maintain that I am confusing post hoc with propter hoc in these statements? He must show, then, that the United States during the war could have collected a great internal revenue on domestic manufactures and products, when under the system of free trade similar fabrics would daily have reached New York from Europe to be sold at prices far below what the American manufacturer, with the heavy excise then levied, could afford to set upon his goods. And if the Government could collect little from the customs under free trade and nothing from internal products, whence could have been derived the taxes to provide for the payment of interest on public loans, and what would have become of the public credit? Moreover, with free trade, which Mr. Gladstone holds to be always and under all circumstances wiser than protection, we should have been compelled to pay gold coin for European fabrics, while at home and during the tremendous strain of the war legal-tender paper was the universal currency. In other words, when the life of the country depended upon the Government's ability to make its own notes perform the function of money, the free traders' policy would have demanded daily gold for daily bread.

The free trader can not offset the force of the argument by claiming that the laws regulating revenue and trade are, like municipal laws, silent during the shock of arms, because the five closing years—indeed, almost six years—of the decade in which the rebellion occurred were passed in peace, and during those years the ravages of war were in a large degree repaired and new wealth rapidly acquired. But I shall not give to Mr. Gladstone or to the American free trader the advantage of seeming to rest the defense of protection upon its marvelous value during the exhaustive period of war. Viewing the country from 1861 to 1889—full twenty-eight years—the longest undisturbed period in which either protection or free trade has been tried in this country—I ask Mr. Gladstone if a parallel can be found to the material advancement of the United States.

Mr. Gladstone admits the wonderful increase of wealth acquired under a protective tariff, but he avers that the results would have been larger under free trade. That, of course, is a speculative opinion, and is entitled to respect according to the knowledge and experience of the man who utters it. Every statement of Mr. Gladstone carries weight, but in this case his opinion runs directly counter to the fifty years of financial experience through which this country has passed with alternate trials of the two systems. Moreover, it is fair to say that Mr. Gladstone does not in his utterance represent European judgment. He speaks only for the free-trade party of Great Britain and their followers on this side of the ocean. The most eminent statesman on the Continent of Europe holds opinions on this subject directly the reverse of those held by the most eminent statesman of Great Britain. We feel assured in America that, so far as the question of protection may be affected, either favorably or adversely, by the weight of individual judgment, we may safely leave Mr. Gladstone to be answered by Prince Bismarck.

But better than the opinion of Mr. Gladstone, better than the opinion of Prince Bismarck, are the simple facts of the case of open record in both countries. A brief rehearsal of these facts, with the pertinent comparison which they suggest, will give the best answer to Mr. Gladstone's assumption that the United States would have made more rapid progress under a system of free trade. I take the official figures of the census in the United States, and for the United Kingdom I quote from Mr. Giffen, who is commended by Mr. Gladstone as the best authority in England:

In 1860 the population of the United States was, in round numbers, 31,000,000. At the same time the population of the United Kingdom was, in round numbers, 29,000,000. The wealth of the United States at that time was fourteen thousand millions of dollars; the wealth of the United Kingdom was twenty-nine thousand millions of dollars. The United Kingdom had, therefore, nearly the same population, but more than double the wealth of the United States, with machinery for manufacturing fourfold greater than that of the United States. At the end of twenty years (1880) it appeared that the United States had added nearly thirty thousand millions of dollars to her wealth, while the United Kingdom had added nearly fifteen thousand millions, or about one-half.

During this period of twenty years the United States had incurred the enormous loss of nine thousand millions of dollars by internal war, while the United Kingdom was at peace, enjoyed exceptional prosperity, and made a far greater gain than in any other twenty years of her history—a gain which during four years was in large part due to the calamity that had fallen upon the United States. The United Kingdom had added 6,000,000 to her population during the period of twenty years, while the addition to the United States exceeded 18,000,000.

By the compound ratio of population and wealth in each country, even without making allowance for the great loss incurred by the civil war, it is plainly shown by the statistics here presented that the degree of progress in the United States under protection far exceeded that of the United Kingdom under free trade for the period named. In 1860 the average wealth per capita of the United Kingdom was $1,000, while in the United States it was but $450. In 1880 the United Kingdom had increased her per capita wealth to $1,230, while the United States had increased her per capita wealth to $870. The United Kingdom had in twenty years increased her per capita wealth 23 per cent, while the United States had increased her per capita wealth more than 93 per cent. If allowance should be made for war losses, the ratio of gain in the United States would far exceed 100 per cent. Upon these results, what ground has Mr. Gladstone for his assertion?

With great confidence Mr. Gladstone proposes to carry the war for free trade into the enemy's country. Perhaps the enemy, who are only modest protectionists, may embarrass the march of his logic with a few pertinent questions, or at least abate the rate of speed which he proposes for his triumphant movement. I shall not give counter theories. I shall only cite established facts, and allow the facts to establish their own theories:

1. John Edgar Thompson, late president of the Pennsylvania Railroad Company, purchased 100 tons of steel rails in 1862 at a price (freight paid to New York, duty of 45 per cent unpaid) of $103.44, gold coin. (By way of illustrating Mr. Gladstone's claim to superior quality of manufactures under free trade, the railroad company states that many of the rails broke during the first winter's trial.) In 1864 English rails had fallen to $68 per ton in New York, the freight paid and the duty unpaid. English manufacturers held the market for the ensuing six years, though the sales at the high prices were limited. In 1870 Congress laid a specific duty of $28 per ton on steel rails. From that time the home market has been held by our own manufacturers, with a steady annual fall in price as the facilities of production increased, until the past summer and autumn, when steel rails were selling in Pittsburg, Chicago, and London at substantially the same prices. Does any free trader on either side of the ocean honestly believe that American rails could ever have been furnished as cheaply as English rails except by the sturdy competition which the highly protective duty of 1870 enabled the American manufacturers to maintain against the foreign manufacturers in the first place, and among American manufacturers themselves in the second place? It is not asserted that during the nineteen years since the heavy duty was first established (except during the past few months) American rails have been as cheap in America as English rails have been in England, but it is asserted with perfect confidence that, steadily and invariably, American railroad companies have bought cheaper rails at home than they would have been able to buy in England if the protective duty had not stimulated the manufacture of steel rails in the United States, and if the resulting competition had not directly operated upon the English market.*

*In 1870 only 30,000 tons of steel rail were manufactured in the United States. But the product under the increased duty of that year rapidly increased. The relative number of tons produced in England and the United States for a period of twelve years is shown as follows:

For the same period, 1877–1888, inclusive, the following table will show the number of tons of steel ingots produced in the two countries respectively:

Years.	England.	United States.	Years.	England.	United States.
1877	508,400	385,865	1877	750,006	500,524
1878	622,390	491,427	1878	807,527	653,773
1879	520,231	610,682	1879	834,511	829,439
1880	732,910	852,196	1880	1,044,382	1,074,202
1881	1,023,740	1,187,770	1881	1,441,719	1,374,247
1882	1,235,785	1,284,067	1882	1,673,649	1,514,687
1883	1,097,174	1,148,709	1883	1,553,380	1,477,345
1884	784,968	993,983	1884	1,299,676	1,375,531
1885	705,583	959,471	1885	1,304,127	1,519,430
1886	730,343	1,574,703	1886	1,570,520	2,269,190
1887	1,021,847	2,101,904	1887	2,089,403	2,936,033
1888	979,083	1,386,277	1888	2,032,794	2,511,161
Total in 12 years	9,963,454	12,980,054	Total in 12 years	16,401,688	18,035,622

Under the protective duty of 1870 the United States soon manufactured annually a much larger quantity of steel than Great Britain, and reduced the price from $100 per ton in gold to less than $35 per ton in gold.

2. English steel for locomotive tires imported in 1865, duty paid, was 34 cents per pound in gold. The American competition, under a heavy protective duty, had by 1872 reduced the price to 13 cents per pound, duty paid. At the present time (1889) American steel for locomotive tires, of as good quality as the English steel formerly imported, is furnished at 4½ cents per pound and delivered free of cost at the point where the locomotives are manufactured. The lowering of price was not a voluntary act on the part of the English manufacturer. It was the direct result of American competition under a protective duty—a competition that could not have been successfully inaugurated under free trade.

3. In the year 1860, the last under a free-trade policy, the population of 31,000,000 in the United States bought carpets to the amount of $12,000,000. Nearly half of the total amount was imported. In 1888, with a population estimated at 63,000,000, the aggregate amount paid for carpets was nearly $60,000,000, and of this large sum less than $1,000,000 was paid for foreign carpets, and about half a million for Oriental rugs. Does any free-trader in England believe that the United States without a protective tariff could have attained such control of its own carpet manufacture and trade? It will not be unnoticed, in this connection, that under a protective tariff, the population, by reason of better wages, was enabled to buy a far greater proportion of carpets than under free trade. Nor must it escape observation that carpets are now furnished to the American buyer under a protective tariff much cheaper than when a nonprotective tariff allowed Europe to send so large a proportion of the total amount used in the United States.

These illustrations might be indefinitely multiplied. In woolens, in cottons, in leather fabrics, in glass, in products of lead, of brass, of copper; indeed, in the whole round of manufactures, it will be found that protection has brought down the price from the rate charged by the importers before protection had built up the competing manufacture in America. For many articles we pay less than is paid in Europe. If we pay higher for other things than is paid across the sea to-day, figures plainly indicate that we pay less than we should have been compelled to pay if the protective system had not been adopted; and I beg Mr. Gladstone's attention to the fact that the American people have much more wherewith to pay than they ever had or could have under free trade.*

Mr. Gladstone boldly contends that "keeping capital at home by protection is dear production, and is a delusion from top to bottom." I take direct issue with him on that proposition. Between 1870 and the present time considerably more than 100,000 miles of railroad have been built in the United States. The steel rail and other metal connected therewith involved so vast a sum of money that it could not have been raised to send out of the country in gold coin. The total cost could not have been less than $500,000,000. We had a large interest to pay abroad on the public debt, and for nine years after 1870 gold was at a premium in the United States. During those years nearly 40,000 miles of railway were constructed, and to import English rail and pay for it with gold bought at a large premium would have been impossible. A very large proportion of the railway enterprises would of necessity have been abandoned if the export of gold to pay for the rails had been the condition precedent to their construction. But the manufacture of steel rails at home gave an immense stimulus to business. Tens of thousands of men were paid good wages, and great investments and great enrichments followed the line of the new road and opened to the American people large fields for enterprise not theretofore accessible.

I might ask Mr. Gladstone what he would have done with the labor of the thousands of men engaged in manufacturing rail, if it had been judged practicable to buy the rail in England? Fortunately he has given his answer in advance of the question, for he tells us that "in America we produce more cloth and more iron at high prices, instead of more cereals and more cotton at low prices." The grain growers of the West and the cotton growers of the South will observe that Mr. Gladstone holds out to them a cheerful prospect! They "should produce more cereals and more cotton at low prices"! Mr. Gladstone sees that the protective system steadily tends to keep up the price of "cereals and cotton," and he asks that manufactures of "cloth and iron" be abandoned, so that we may raise "more cereals and more cotton at low prices." Mr. Gladstone evidently considers the present prices of cereals and cotton as "high prices."

Protectionists owe many thanks to Mr. Gladstone for his outspoken mode of dealing with this question of free trade. He gives us his conclusions without qualification and without disguise. The American free trader is not so sincere. He is ever presenting half truths and holding back the other half, thus creating false impressions and leading to false conclusions. But Mr. Gladstone is entirely frank. He tells the laborers on protected articles that they would be better engaged in "raising more cereals and more cotton at low prices." Where does Mr. Gladstone suggest a market for the additional grain and cotton to be raised by American mechanics becoming farmers and increasing the production of those great staples? The foreign market is filled with a competing grain supply to such a degree that already the price of wheat is unduly lowered to the Western farmer. The farmer needs a still larger home consumption of his grain while Mr. Gladstone thinks he needs a still larger home production. The legitimate involvement of Mr. Gladstone's argument is that all mechanical and manufacturing enterprises in America producing articles of higher price than the same produced in Europe should be abandoned, and the laborers so engaged should be turned to the production of "more cereals and more cotton at low prices"! The Western farmer's instinct is wiser than Mr. Gladstone's philosophy. The farmer knows that the larger the home market the better are his prices, and that as the home market is narrowed his prices fall.

Mr. Gladstone's pregnant suggestion really exhibits the thought that lies deep in the British mind; that the mechanic arts and the manufacturing processes should be left to Great Britain, and the production of raw material should be left to America. It is the old colonial idea of the last century, when the establishment of manufactures on this side of the ocean was regarded with jealousy by British statesmen and British merchants. Some years before the Revolutionary struggle began Parliament had declared that "the erecting of manufactories in the colonies tends to lessen their dependence on Great Britain." A few years later the British Board of Trade reported to Parliament that "manufactures in the American colonies interfere with profits made by British merchants." The same body petitioned Parliament that "some measures should be provided to prevent the manufacturing of woolen and linen goods in the colonies." Finally Parliament declared that "colonial manufacturing was prejudicial to the trade and manufactures of Great Britain." These outrageous sentiments (the colonists characterized them much more severely) were cherished in the time of the glorious Georges, in the era of Walpole and the elder Pitt.

I do not mean to imply that Mr. Gladstone's words carry with them an approval, even retrospectively, of this course toward the colonies, but there is a remarkable similarity to the old policy in the fundamental idea that causes him in 1889 to suggest that Americans produce "too much cloth and too much iron," and should turn their labor to "low-priced cereals and low-priced cotton." Are we not justified in concluding that Mr. Gladstone's theory of free trade, in all its generalizations and specifications, is fitted exactly to the condition of Great Britain, and that British hostility to American protection finds its deep foundation in the fact—to quote the old phrases—that "it is prejudicial to the trade and manufactures of Great Britain," that "it lessens our dependence upon Great Britain," and that "it interferes with profits made by British merchants"?

Mr. Gladstone makes another statement of great frankness and of great value. Comparing the pursuits in the United States which require no protection with those that are protected, he says: "No adversary will, I think, venture upon saying that the profits are larger in protected than in unprotected industries." This is very true, and Mr. Gladstone may be surprised to hear that the constant objection made by American free traders against the "protected industries," as he terms them, is that the profits derived from them are illegitimately large. Mr. Gladstone sees clearly that as a rule this is not true, and he at once discerns the reason. He says "the best opinions seem to testify that in your protected trades profits are hard pressed by wages." The free traders of America try by every cunning device to hide this fact. Its admission is fatal to their cause. Not one free-trade organ or leader among them all dares to take his position beside Mr. Gladstone and plainly tell the truth to the American laborer. Not one free-trade organ or leader dares frankly to say to the great body of American workmen that the destruction of protection inevitably and largely reduces their daily wages. I thank Mr. Gladstone for this testimony, at once accurate and acute. It is fair to presume that he intends it to be applied to the unprotected manufacturer in England and to the protected manufacturer in America, both producing the same article. His logic gives, and I have no doubt truly, as large profit to the manufacturer of England, selling at a low price, as to the manufacturer of America, selling at a high price—the difference consisting wholly in the superior wages paid to the American mechanic.

There is another important effect of protective duties which Mr. Gladstone does not include in his frank admission. He sees that the laborers in what he calls the "protected industries" secure high pay, especially as compared with the European school of wages. He perhaps does not see that the effect is to raise the wages of all persons in the United States engaged in what Mr. Gladstone calls the "unprotected industries." Printers, bricklayers, carpenters, and all others of that class are paid as high wages as those of any other trade or calling, but if the wages of all those in the protected classes were suddenly struck down to the English standard, the others must follow. A million men can not be kept at work for half the pay that another million men are receiving in the same country. Both classes must go up or must go down together.

Mr. Gladstone makes another contention, in which, from the American point of view, he leaves out of sight a controlling factor, and hence refers an effect to the wrong cause. Regarding the advance of wages in England he says: "Wages which have been partially and relatively higher under protection have become both generally and absolutely higher, and greatly higher, under free trade." I do not doubt the fact, but I venture to suggest that such advance in wages as there has been in England is referable to another and a palpable cause—namely, the higher wages in the United

* In spite of these facts, President Cleveland made the following statements, which I quote from his free-trade message to Congress in December, 1887:

"Our present tariff laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty, by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty. So it happens that, while comparatively a few use the imported articles, millions of our people who never use and never saw any of the foreign product, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles."

I recall this quotation primarily for two reasons: First, Mr. Cleveland stands without a rival at the head of the free-trade party in the United States, and it is instructive to see how exactly he adopts the line of argument used by the English free trader. Second, it is a valuable admission from the head of the free-trade party when he affirms that "comparatively a few of our people use imported articles," and that there are "millions of our people who never use and never saw any of the foreign products." In what words could the complete success of the protective policy in the United States be more fitly expressed?

But when Mr. Cleveland asserted that our people pay for our domestic fabrics "nearly or quite the same enhanced price which the duty adds to the imported articles" he evidently spoke without investigating facts and accepted as true one of those fallacious statements which have been used in the interest of foreign importers to deceive the people. Mr. Cleveland's argument would have been strengthened if he had given a few examples—nay, if he had given one example—to sustain his charge. As he omitted all illustrations of his position, I venture to select a few which apparently establish the exact reverse of Mr. Cleveland's statement:

India-rubber goods are protected by a duty of 25 per cent; but instead of those goods being 25 per cent higher in price than the foreign goods, they are, in fact, cheaper. They undersell the English article in Canada and successfully compete with Canada's goods, which are protected by a duty of 20 per cent.

Patent leather is subject to a duty of 20 per cent; but patent leather is not, therefore, 20 per cent higher in the United States than elsewhere. On the contrary, it is cheaper. Five years ago the city government of London advertised for bids for a large amount of patent leather to be used in connection with the uniforms of the police. There were bids from several countries, but the lowest bid was offered by a manufacturer of Newark, N. J. He secured the contract and furnished the goods at a fair profit.

Steel rails are selling in London for £7 per ton. The duty is $15 per ton. The price, therefore, in the United States ought to be, according to Mr. Cleveland's doctrine, $50 per ton. But, in fact, the price is but $35 per ton, and during the last summer and autumn was as low as $25 per ton, and large sales were made at $30 per ton.

Boots and shoes are subject to 30 per cent duty. According to Mr. Cleveland they should be 30 per cent higher than the foreign article. As a matter of fact they are cheaper. American boots and shoes hold the Canadian market against the European manufacture.

Examples of this kind could be shown on almost the whole tariff list where an American manufacture is firmly established. In fact, the whole history of protection has vindicated what Alexander Hamilton said of it when he was at the head of the Treasury: "The internal competition which takes place soon does away with everything like monopoly, and by degrees reduces the price of the article to the minimum of a reasonable profit on the capital employed. This accords with the reason of the thing and with experience." Mr. Hamilton thus effectually answers both Mr. Gladstone and Mr. Cleveland.

States, which have constantly tempted British mechanics to emigrate, and which would have tempted many more if the inducement of an advance in wages at home had not been interposed. Especially have wages been high and tempting in the United States since 1861, when the country became firmly protective by the enactment of the Morrill tariff. It will be found, I think, that the advance of wages in England corresponds precisely in time, though not in degree, with the advance in the United States, and the advance in both cases was directly due to the firm establishment of protection in this country as a national policy. But it must not be forgotten that American wages are still from 70 per cent to 100 per cent higher than British wages. If a policy of free trade should be adopted in the United States, the reduction of wages which would follow here would promptly lead to a reduction in England. The operatives of Manchester, Leeds, and Sheffield recognize this fact as clearly as do the proprietors who pay the advanced wages, and more clearly than do certain political economists who think the world of commerce and manufactures can be unerringly directed by a theory evolved in a closet without sufficient data, and applied to an inexact science.

The zeal of Mr. Gladstone for free trade reaches its highest point in the declaration that "all protection is morally as well as economically bad." He is right in making this his strongest ground of opposition, if protection is a question of morals. But his assertion leaves him in an attitude of personal inconsistency. There is protection on sea as well as on land. Indeed, the most palpable and effective form of protection is in the direct payment of public money to a line of steamers that could not be maintained without that form of aid. I do not say that such aid is unwise protection; least of all do I say it is immoral. On the contrary, I think it has often proved the highest commercial wisdom, without in the least infringing upon the domain of morals. Mr. Gladstone, however, commits himself to the principle that "all protection is morally bad." If this has been his belief ever since he became an advocate of free trade, his conscience must have received many and severe wounds as session after session, while chancellor of the exchequer, he carried through Parliament a bounty—may I not say a direct protection?—of £180,000 to a line of steamers running between England and the United States; a protection that began six years before free trade was proclaimed in English manufactures and continued nearly twenty years after. In the whole period of twenty-five years an aggregate of many millions of dollars was paid out to protect the English line against all competition.

It may be urged that this sum was paid for carrying the Anglo-American mails, but that argument will not avail a free trader, because steamers of other nationalities stood ready to carry the mails at a far cheaper rate. Nay, a few years ago, possibly when Mr. Gladstone was premier of England, public bids were asked to carry the Anglo-Indian mails. A French line offered a lower bid than any English line, but the English Government disregarded the French bid and gave the contract to the Peninsular and Oriental Line, owned by a well-known English company. Still later, the German Lloyd Company contracted to carry the Anglo-American mails cheaper than any English line offered, and the German company actually began to perform the duty. But Englishmen did not want that kind of free trade, and they broke the contract with the German line and again gave protection to the English ships. Does not this justify the opinion that the English policy of free trade is urged where England can hold the field against rivals, and that when competition leaves her behind she repudiates free trade and substitutes the most pronounced form of protection?

Does Mr. Gladstone's estimate of the immorality of protection apply only to protection on land, or is supremacy on the sea so important to British interests that it is better to throw morals to the wind and resort to whatever degree of protection may be necessary to secure the lead to English ships? The doctrine of improving harbors in the United States by the National Government was for many years severely contested, the strict-construction party maintaining that it must be confined to harbors on the seacoast at points where foreign commerce reaches the country. During one of the many discussions over this narrow construction an Ohio member of Congress declared that he "could not think much of a Constitution that would not stand being dipped in fresh water as well as salt." I fear that Mr. Gladstone's code of morals on this question of protection will not secure much respect in other countries so long as it spoils in salt water.

It will not escape Mr. Gladstone's keen observation that British interests in navigation flourish with less rivalry and have increased in greater proportion than any other of the great interests of the United Kingdom. I ask his candid admission that it is the one interest which England has protected steadily and determinedly, regardless of consistency and regardless of expense. Nor will Mr. Gladstone fail to note that navigation is the weakest of the great interests in the United States, because it is the one which the National Government has constantly refused to protect. If since the civil war the United States had spent in protecting her shipping merely the annual interest on the great sum which England has expended to protect her ocean traffic, American fleets would now be rivaling the fleets of England, as they rivaled them before the war, on every sea where the prospect of commercial gain invites the American flag.

The failure of the United States to encourage and establish commercial lines of American ships is in strange contrast with the zealous efforts made to extend lines of railway inside the country, even to the point of anticipating the real needs of many sections. If all the advances to railway companies, together with the outright gifts by towns, cities, counties, States, and nation be added together, the money value would not fall short of a thousand millions of dollars. No effort seems too great for our people when the interior of the country is to be connected with the seaboard. But when the suggestion is made to connect our seaboard with commercial cities of other countries by lines of steamships the public mind is at once disturbed by the cry of "Subsidy!" We really feel as much afraid of protection at sea as Mr. Gladstone is of protection on land. The positions of the American Congress and the English Parliament on this subject are precisely reversed. England has never been affrighted by the word "subsidy," and while we have stood still in impotent fear she has taken possession of the seas by the judicious and even the lavish interposition of pecuniary aid. I have already said that the interest on the amount which England has paid for this object since she began it with great energy, fifty years ago, would give all the stimulus needed for the rapid expansion of our commerce. Let it be added that if the Government of the United States will for twenty years to come give merely the interest upon the interest, at the rate of 5 per cent on the amount which has been a free gift to railroads, every steam line needed on the Atlantic, the Pacific, and the Gulf will spring into existence within two years from the passage of the act. It is but a few years since Congress twice refused to give even $125,000 per annum to secure an admirable line of steamers from New York to the four largest ports of Brazil. And the sum of $125,000 is but the interest upon the interest of the interest, at 5 per cent, of the gross amount freely given to the construction of railroads within the Union. Is it any wonder that we have lost all prestige on the sea?

The opposition to the policy of extending our foreign commerce by aiding steamship lines with a small sum, just as we have aided internal commerce on railroads with a vast sum, originates with the American free trader. Mr. Gladstone can not fail to see how advantageous the success of this free-trade effort in the United States must prove to Great Britain. The steady argument of the free trader is that, if the steamship lines were established, we could not increase our trade because we produce under our protective tariff nothing that can compete in neutral markets with articles of the like kind from England. How, then, can the free trader explain the fact that a long list of articles manufactured in the United States find ready and large sale in Canada? The Canadian tariff is the same upon English and American goods. Transportation from England to Quebec or Montreal is cheaper than from the manufacturing centers of the United States to the same points. The difference is not great, but it is in favor of the English shipper across the seas, and not of the American shipper by railway. It is for the free trader to explain why, if the cost of transportation be made the same, the United States can not compete with England in every country in South America in all the articles of which we sell a larger amount in Canada than England does. I append a note naming the American articles sold in Canada, and the free trader, if candid, will admit that the list is one which is constantly and rapidly increasing.*

Giving heed to the cry of the professional free trader in America, Mr. Gladstone feels sure that, though the protected manufacturers in the United States may flourish and prosper, they do so at the expense of the farmer, who is in every conceivable form, according to the free-trade dictum, the helpless victim of protection. Both Mr. Gladstone and the American free trader have, then, the duty of explaining why the agricultural States of the West have grown in wealth during the long period of protection at a more rapid rate than the manufacturing States of the East. The statement of the free trader can be conclusively answered by referring to the census of the United States for the year 1860, and also for the year 1880:

In 1860 eight manufacturing States of the East (the six of New England, together with New York and Pennsylvania) returned an aggregate wealth of $5,123,000,000. Twenty years afterwards, by the census of 1880, the same States returned an aggregate wealth of $16,228,000,000. The rate of increase for the twenty years was slightly more than 216 per cent.

Let us see how the agricultural States fared during this period. By the census of 1860 eight agricultural States of the West (Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Nebraska, and Wisconsin) returned an aggregate wealth of $2,271,000,000. Twenty years afterwards, by the census of 1880 (protection all the while in full force), these same States returned an aggregate wealth of $11,268,000,000. The rate of increase for the twenty years was 396 per cent, or 180 per cent greater than the increase in the eight manufacturing States of the East.

The case will be equally striking if we take the fifteen Southern States that were slaveholding in 1860. By the census of that year the aggregate return of their property was $6,792,000,000. But $2,000,000,000 was slave property. Deducting that, the total property amounted to $4,792,000,000. Their aggregate return of wealth by the census of 1880 was $8,633,000,000. The rate of increase for the twenty years was 80 per cent. Consider that during this period eleven States of the South were impoverished by civil war to an extent far greater than any country has been despoiled in the wars of modern Europe. Consider that the labor system on which previous wealth had been acquired in the South was entirely broken up. And yet at the end of twenty years the Southern States had repaired all their enormous losses and possessed nearly double the wealth they had ever known before. Do not these figures incontestably show that the agricultural sections of the country, West and South, have prospered even beyond the manufacturing sections, East and North? And all this not merely with protection, but because of protection!

As Mr. Gladstone considers protection immoral, he defines its specific offense as "robbery. "To have been fully equal to the American standard of free-trade vituperation, Mr. Gladstone should have denounced our manufacturers as "robber barons." This is the current phrase with a class who are perhaps more noisy than numerous. The intention of the phrase is to create popular prejudice against American manufacturers as growing rich at the expense of the people. This accusation is so persistently repeated that its authors evidently regard it as important to their cause. It may perhaps surprise Mr. Gladstone to be told that out of the fifty largest fortunes in the United States—those that have arrested public attention within the last ten years—certainly not more than one has been derived from protected manufacturing; and this was amassed by a gentleman of the same Scotch blood with Mr. Gladstone himself. The forty-nine other fortunes were acquired from railway and telegraph investments, from real-estate investments, from the import and sale of foreign goods, from banking, from speculations in the stock market, from fortunate mining investments, from patented inventions, and more than one from proprietary medicines.

It is safe to go even farther and state that in the one hundred largest fortunes that have been viewed as such in the past ten years not five have been derived from the profits of protected manufactures. The origin will be found in the fields of investment already referred to. Moreover, the fear of the evil effect of large fortunes is exaggerated. Fortunes rapidly change. With us wealth seldom lasts beyond two generations. There is but one family in the United States recognized as possessing large wealth for four consecutive generations. When Mr. Jefferson struck the blow that broke down the right of primogeniture and destroyed the privilege of entail, he swept away the only ground upon which wealth can be secured to one family for a long period. The increase in the number of heirs in successive generations, the rightful assertion of equality among children of the same parents, the ready destruction of wills that depart too far from this principle of right, and, above all, the uncertainty and the accidents of investment, scatter fortunes to the wind and give to them all the uncertainty that betides human existence.

In no event can the growth of large fortunes be laid to the charge of the protective policy. Protection has proved a distributor of great sums of money, not an agency for amassing it in the hands of a few. The records of our savings banks and building associations can be appealed to in support of this statement. The benefit of protection goes first and last to the men who earn their bread in the sweat of their faces. The auspicious and momentous result is that never before in the history of the world has comfort been enjoyed, education acquired, and independence secured by so large a proportion of the total population as in the United States of America.

---

*The following articles of American manufacture are sold in Canada more largely than like articles of English manufacture:

Brass goods, copper goods, cordage, ginghams, bottles, flasks, india-rubber goods, printing ink, ingrain carpets, wood manufactures, twines, tinware, ship rigging, wall paper, writing paper, envelopes, blank books, strawboard paper, boots and shoes, leather and skins, sole leather, leather goods, patent leather, figured oilcloths, grain drills, harrows, harvesters, hoes, forks, mowing machines, scythes, spades, shovels, builders' and cabinetmakers' hardware, house-furnishing hardware, nails, firearms, sewing machines, screws, stoves, axes, jewelry (sterling and plated), silverware, lamps, locomotives, hatchets, hammers, saws, mechanics' tools, organs, pianos, "notions," plain house furniture, especially hotel furniture.

Contested Election Case—Murray vs. Elliott.

SPEECH

OF

HON. WILLIAM A. JONES,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 3, 1896.

The House having under consideration the following resolutions:

"*Resolved*, That William Elliott was not elected and is not entitled to a seat in the Fifty-fourth Congress from the First Congressional district of South Carolina.

"*Resolved*, That George W. Murray was elected and is entitled to a seat in the Fifty-fourth Congress from the First Congressional district of South Carolina"—

Mr. JONES said:

Mr. SPEAKER: The duty has been devolved upon me of presenting the side of the sitting member in this contested election case. I regret exceedingly that in a case of its importance, a case which necessitates the examination of so much testimony as this, one in which is involved the right of a member to a seat in this House, it should happen that I alone of the members of the committee that examined this case can appear for the contestee. My associate upon the committee, Judge DE ARMOND, who is justly regarded by this House as a fair-minded man and a lawyer of exceptional ability, and who had intended to take part in this discussion, has been suddenly called to the bedside of a dying brother in the State of Iowa. I much regret that he can not be here to give to the House the benefit of his well-considered views upon this case.

I can not expect, Mr. Speaker, in the time that is to be occupied in the discussion of this case, to present the side of the minority as fully as it should be done. I may state in the outset that I regret exceedingly what I am sure every fair-minded man in this House must regret as much as I do, that although there is an elaborate report by the majority of the committee, that report makes no reference to the testimony, of which the record is full, that was taken on the part of the contestee. Nor did my friend from Indiana [Mr. OVERSTREET] deign so much as to refer to that testimony in the speech which he has just concluded. It would seem that if the report had been intended to shed any light upon the case, rather than make out a case upon paper for the contestant, it should at least have contained some comment upon the evidence produced by the contestee if no part of that evidence was quoted. But in this respect the gentleman who has just addressed the House has been no fairer than his report. He has occupied more than an hour and a half of your time, and he has studiously avoided even a reference to the fact that the record contained a line of any other testimony than that produced by the contestant. I submit that this House, which must pass upon this case, had a right to expect fairer treatment at the hands of the gentleman who has just addressed it. So far as the House knows from anything that it may have learned from either the report of the majority or the speech of my friend, the contestee permitted his case to go by default. How far from the truth this is I hope to be able to show.

Now, Mr. Speaker, reference has been made to the fact that the district from which this contest comes is known as the black district of the State of South Carolina. It has been said that there was a majority of 20,000 negro voters in this district. It has also been said that the larger portion of this district was once comprised within what was formerly known as the Seventh district—a district not a stranger to Congress, since there had been three contests from that district in the past. These statements were made with the evident design and purpose of prejudicing the case of the contestee, when, as a matter of fact, that part of the district from which this contest comes, where it is pretended that there was not a fair and honest election, was never a part of the old Seventh district.

The city of Charleston, where it is claimed there was no honest and fair election, was never a part of the Seventh district, and the contests which have been dragged into this case for no other purpose than to create prejudice against the contestee had no relation to any election ever held in Charleston. Whilst it may be true, although there is no evidence of that fact, that there are 20,000 negro majority in this district, it is also true that of that majority 18,000 reside in the counties outside of Charleston. There are less than 2,000 negro majority in the city of Charleston, and yet the committee throw out the entire vote of 20 precincts in Charleston on no better ground than the preponderance of negro voters over white voters, and find no fault with the election in the counties where that preponderance is far greater.

In the county of Beaufort, in this district, where there are 9 negro voters to 1 white voter, after the most searching examination as to the manner in which the registration was held and the voting done, my learned friend is obliged to abandon that county and to fall back upon the city of Charleston. where there were less than 1½ colored voters to 1 white voter.

In the county of Georgetown, to which particular reference has been made, and upon every single election board in which there was a Republican representative, there are 3 colored men to 1 white man who is entitled to vote, and it is conceded that the election there was a fair one. If the gentleman's reasoning be sound he should apply it to the 5 counties outside of Charleston, and instead of giving the contestant, Murray, the paltry majority of 434 he should give him at least 10,000. If this case is to be decided upon the theory that most of the negroes of voting age voted, and that they all voted for Murray, then he should be given at least 10,000 majority. If Colonel Elliott had received the negro vote in the counties where there were such immense negro majorities in the same proportion that the uncontradicted evidence shows he did in Charleston, his majority would have been something like 10,000 in the district.

I merely mention these facts in order to impress upon the House that it will not do to decide this case upon the bare fact that there were more negroes of voting age in Charleston than there were white voters. For if you do that, and you pursue the same course as to the remainder of the district, you will have a very different result from that arrived at by the committee.

Mr. HARDY. Will the gentleman allow me to ask him a question? He states that if the vote had been cast properly Colonel Elliott would have a majority of 10,000 in the district. Is that your statement?

Mr. JONES. No; I did not say that. I said that, according to the reasoning employed in this report, he should have.

Mr. HARDY. How could Colonel Elliott get a majority of 10,000 in the district, when there were only 9,563 votes cast in the district—3,913 for Murray and 5,650 for Elliott?

Mr. JONES. I will state to the gentleman how he could get it.

Mr. HARDY. I know how he got what he did get——

Mr. JONES. Had he received the same proportion of negro votes in the counties that he is shown by the evidence to have received in Charleston his majority would have been very much larger than it was.

Mr. HARDY. The colored men were prevented from registering because they were colored men and Republicans, and those who did register were prevented from voting.

Mr. JONES. I am now discussing the theory of the majority. I shall discuss the facts as they exist presently. The majority have entirely ignored the facts. One of the charges made is that in the city of Charleston there was not a fair registration, and that if there had been a fair registration Murray would have been elected. It is not contended that a single vote was counted for the contestee that he was not honestly entitled to. Nor is it contended that there was a single vote cast for the contestant that the managers of the election did not honestly count for him. The contention is that there were in that city six or eight thousand colored voters, and that by reason of the operation of the South Carolina election law, and the improper conduct of the officers of registration, those colored voters were not permitted to register.

The evidence of the contestant does not sustain this charge, and the record is full of testimony taken on the part of the contestee that utterly disproves it. The negroes of Charleston were not united in the support of Murray. The evidence of the contestant shows that many of them remained away from the polls, and that Colonel Elliott received the support of at least half of them, and that that half comprised the more respectable element. The committee say in their report that with the exception of some dissatisfaction on the part of a barbers' association in the city of Charleston it is not shown that there was any dissatisfaction or disaffection as to the contestant in that city. There was widespread and deep-seated disaffection among the colored people of this district as to the contestant. The record is full of the testimony of the most reputable colored people in the city of Charleston, of colored men who are not members of the barbers' association referred to, which clearly establishes that there was widespread dissatisfaction on the part of the negro voters of Charleston with Murray.

Let me tell the House why this dissatisfaction existed. The convention which nominated the contestant, as shown by the record in this case, was composed of 30 delegates. Eighteen of those delegates were sent from the city of Charleston and the county of Beaufort, and every one of them was unseated by the contestant and his friends. How this was done I am unable to explain, but it is in evidence and uncontradicted that it was done. The entire delegation from the city of Charleston, which had been chosen at a primary, and which was opposed to Murray, was unseated and driven from the convention by the contestant, who now claims that with the exception of a barbers' association in Charleston the colored voters of that city were united in his support. One of the most intelligent of the contestant's witnesses testified that

ex-Congressmen Smalls and Miller, as well as the chairman of the Republican party in Beaufort County, where all three of them resided, were delegates to the nominating convention. They were all unseated in the interest of Murray, who was not even a resident of the district which he wished to represent in Congress.

After having procured the nomination by such means it is not surprising that the men who had received this treatment refused to support Murray or to regard him as their candidate. But the majority of the committee say the dissatisfaction only extended to a barbers' association. Let us see whether that be true or not. Here is the testimony of H. G. Thomas:

Q. State whether you are a member of the Republican or Democratic party.
A. I am a Republican.
Q. How long have you been a member of the Republican party?
A. From its organization in the State after the reconstruction.
Q. State whether or not you have been prominent in politics during that time.
A. I have been.
Q. Did you vote for the Republican candidate for Congress, George W. Murray, on the 6th day of November last?
A. I did not.
Q. Give your reasons for not voting for him.
A. I did not regard Mr. Murray as the regular legal candidate of the Republican party, and did not regard him as a citizen of the district.
Q. Do you know whether Mr. Murray is a citizen of Charleston?
A. To my own knowledge I do not know, but he is not generally regarded as a citizen of Charleston and of this district.
Q. State, if you know, whether the colored people of Charleston took much interest in his election.
A. A large number did, mostly of persons who could not vote at a general election, not being qualified, and a large number of persons who is regarded as the rabble element of the community.
Q. State whether the intelligent colored people of the city of Charleston supported him.
A. As a rule they did not, but some of them did.

The contestant, as a matter of fact, was at the time of the election a citizen of the Seventh Congressional district and actually then representing that district upon the floor of this House. He did not reside in the First district when the election took place, but lived in Sumter County, in the Seventh district, and was representing that district in the Fifty-third Congress. The colored people of Charleston were opposed to him because he was not a resident of their city; and because, moreover, he had obtained his pretended nomination by fraudulently unseating every single delegate from the city of Charleston as well as those from the county of Beaufort. Is not, I ask, that a sufficient ground for the dissatisfaction that existed in the city of Charleston as to this contestant? Every one of the prominent colored politicians of this district, so far as I have been able to discover, was actively and earnestly opposed to his election.

Mr. OVERSTREET. Will the gentleman yield for a moment? I will ask you if it is not a fact that one of these witnesses testified that Murray lived in the same precinct with him, and that he voted with him on election day at his precinct?

Mr. JONES. If the gentleman so asserts, I will accept his statement. I do not remember any such testimony. Some one witness out of the hundreds who testified may have said something of that kind, but the testimony is absolutely overwhelming to the effect that Murray was a resident of the Seventh Congressional district; that he lived at Sumter, in that district, and that he was actually representing that district upon this floor when the election took place. It does not matter what any one witness may have said. There are the proven facts. It is well known by members here that he was at the time of the election actually representing the Seventh district upon this floor, and it is to be presumed that he resided in the district he represented.

But we are not left to presumptions. The record is full of the testimony of reputable witnesses that the contestant did not reside in Charleston or in the first district, of which it is and was a part. The negroes of that city did not look upon him as a resident, and the more intelligent ones in that city and district refused to support and did not support him. Gentlemen on that side of the House may adopt theories and indulge presumptions based upon the fact that there are more colored than white voters in Charleston, and those theories and presumptions may satisfy their consciences; but the stubborn fact remains that the negroes of Charleston, as shown by the evidence of colored men, were in a great measure opposed to Murray and refused to support him.

Here is the testimony of one W. A. Thomas. He testifies that he is a Republican and that he has never been a member of any other political party.

Q. Did you or not vote for Congressman on the 6th day of November last?
A. Yes.
Q. For whom did you vote?
A. For Colonel Elliott.
Q. Why did you not vote for the Republican candidate?
A. Because I objected to him.
Q. Why did you object to him?
A. Because at the time he was not considered a resident of the district he wanted to represent; and, furthermore, he was not my choice of candidate, and a generally understood antipathy that he had for a man that was not a black man, the color question being brought into the campaign.

The record shows that the colored question figured in this election in a somewhat unusual and novel way. It was generally understood that the contestant had an antipathy for a colored man whose skin was merely brown or yellow. He is himself a black man, and because he hated brown people, those of that color, it seems, would not support him.

Mr. OVERSTREET. Mr. Speaker, I desire to call attention to the evidence to which I referred awhile ago, as the gentleman did not seem familiar with it, the testimony of W. D. P. Arnan, on page 303 of the record. He says:

I was acting as chairman of managers at the Federal poll, Ward 9, first precinct, on 6th November last.

He was asked:

Q. Was Congressman Murray there that day?
A. Yes, sir; on three or four occasions; he voted there; he spoke to me; he knew me, and he said, "We have had a very quiet election, everything has passed off quietly"; and, in fact, he met me almost every day for three or four days after the election and spoke to me about it; he was living in the neighborhood was the reason that I saw him so often.
Q. Are you positively sure that Mr. Murray voted there that day?
A. I am positively sure.

That is the evidence that I spoke of as showing that Mr. Murray was a resident of the district and voted in the city at that election.

Mr. JONES. My friend reads that bit of testimony, which he says is the testimony of one of the contestee's witnesses. I congratulate him upon the fact that I have at last induced him to refer to some of the evidence which the contestee has introduced into this case.

Mr. OVERSTREET. Did I not refer to the testimony of Robson, one of the witnesses of the contestee?

Mr. JONES. In your report you do not refer to him or his testimony. But the witness whose testimony you have read was not testifying as to Murray's residence. He merely remarked incidentally that he lived in his neighborhood. He was there, I know, looking after his canvass, and that is all the witness meant to say. Here, Mr. Speaker, is the testimony of another witness, J. J. Young. He was examined upon this very point. He was asked the direct question as to whether Murray was or was not regarded as a resident of the First district. Here is his testimony:

Q. Are you a colored or white man?
A. I am a colored man.
Q. Are you a Republican or Democrat?
A. I am a Republican.
Q. How long have you been a Republican?
A. Ever since I have been allowed to vote in South Carolina and have been a citizen of this State. I have been here since 1850.
Q. State whether or not you have taken an active part in politics during all these years.
A. I have taken an active part in all elections, having been a manager and supervisor at various times.
Q. Have you ever held any official position under the Republican party of this State?
A. I have held the position of deputy coroner, have been port warden, light-house keeper, and also bailiff at the United States court.
Q. Do you hold any office in the colored regiment of the State?
A. Yes, sir; I am colonel commanding the Second Regiment of the National Guard.
Q. State whether you voted for Murray at the Federal poll on the 6th day of November last.
A. I did not vote at the Federal poll either for Mr. Murray or Mr. Elliott.
Q. Are you a registered voter of the city of Charleston?
A. Yes, sir [and shows his registration certificate].
Q. State whether you have always been a registered voter.
A. Yes; since 1882.
Q. Have you ever had any trouble in getting your certificate?
A. No, sir.
Q. Does any intelligent and respectable colored man have any trouble in getting a registration certificate?
A. I can't say that. I have never had any trouble in getting mine.
Q. Were the better class of the colored people of the city of Charleston—I mean the intelligent colored people—in favor of Mr. Murray?
A. I don't think they were.
Q. Was Mr. Murray considered the regular Republican candidate by the colored people of this city?
A. By a large majority of us he was not.
Q. Did they consider him a resident of this district?
(Objected to as leading.)
A. No, sir: I did not, and a great many others did not.

This is the testimony of an intelligent colored man, the commander of a regiment of the National Guard, a man who has filled four important trusts under a Republican Administration, and he declares under oath that the contestant was not the choice of a large majority of the colored Republicans in the city of Charleston, and was not regarded by them as a resident of the district. I will also read the testimony of D. L. Adams, a Republican, the chairman of the Congressional Republican committee in that district. This man whose testimony I am now about to read was not only a colored man and a Republican but he was the chairman of the Congressional Republican committee of the district. Surely his testimony should be accepted by my Republican friends over there.

Q. Are you a Republican or a Democrat?
A. I am a Republican.
Q. How long have you been a Republican?
A. Always have been.
Q. State whether you hold any position of prominence in the Republican party.
A. Up to the last election I was Congressional chairman of the Republican party, and also I am still Congressional chairman until the matter is settled. I mean there were two conventions in the city of Charleston and the matter has got to be settled by the State executive committee.

Q. For how many years have you been active and prominent in politics?
A. Some twenty-five years.
Q. And you have been a Republican during all this time?
A. Yes, sir.
Q. State whether you voted at the Congressional election on the 6th day of November last.
A. Yes, I did; but for neither of the candidates; I voted a blank ballot.
Q. Why did you not vote for Mr. Murray?
A. Because he was not my choice and I said I would not vote for him, and that is why I did not.
Q. Did you consider him the regular candidate of the Republican party?
A. No; I did not.
Q. Why did you not?
A. Because he was not nominated by the regular convention.
Q. Who was nominated by the regular convention?
A. Smalls was.
Q. Were the members of the regular convention unanimously in favor of Mr. Smalls, and in opposition to Mr. Murray?
A. No, sir.
Q. Were a great many of them?
A. A majority was in favor of Mr. Smalls and he got the majority of votes.
Q. Was not this the case with them at the election?
A. I can't say, for I took no part in the election.
Q. State whether or not you generally take a great deal of interest in the elections.
A. This is the first one where a Republican candidate was running and I did not take any interest in it.
Q. Do you consider Mr. Murray a resident of this district?
A. No; I never have.
Q. Do you know where his home and his family are?
A. I don't know now, but I knew up to that time that it was in Sumter County.
Q. Is that in the First or Seventh Congressional district?
A. Sumter County is in the Seventh.

I am not aware, Mr. Speaker, that any of the witnesses whose names and testimony I have read belong to the barbers' association to which we are told the dissatisfaction with Mr. Murray was confined. Here is the testimony of still another witness, Hastings Gantt. He testifies that he was a representative in the State house of representatives for fourteen years. This is what he says in part:

Q. Whom did you support for Congress from this district at the last election—November 6, 1894?
A. I voted for Colonel Elliott.
Q. Do you mean William Elliott, the contestee in this cause?
A. I don't know what meaning; I know I voted for him for Congress.
Q. Did you vote for William Elliott, of Beaufort, S. C., who was one of the candidates for Congress?
A. Yes.
Q. Did you give him your support for Congress at the last election?
A. The time was so short that I could not give him the proper support that I should.
Q. Did you give him the best support you could in the time?
A. Yes; I did.
Q. Are you a Democrat or a Republican?
A. Republican.
Q. Why did you support William Elliott and oppose George W. Murray, when Murray was the Republican candidate?
A. I supported Mr. Elliott because he got upon the stand and explained to the people at that meeting that he was the one that used every effort to establish the navy station in this district. That's one. The next particular one is that he succeeded in passing a law giving the former owners of these lands their money, and let we, the people, keep the land, who have got it. I say, when he has done that much for us, knowing, as I do, that the land could be taken from us, I say I could not do otherwise than vote for him for Congress, with thanks to him for doing it. And the candidate against him was not in this district, and it was known that he lived in another district.
Q. Were you in the legislature fourteen years as a Republican?
A. Yes.
Q. Do you know if other Republicans on St. Helena Island also supported Col. William Elliott for Congress?
A. Yes; there are other Republicans who supported him.
Q. Do you know if a number of Republicans supported him on this island?
A. I know a good deal more supported him this time than in the past.

The testimony of this witness is very long, and I can not take the time to read it all, but he shows that there was great dissatisfaction among the Republican colored men with the candidacy of the contestant. I have here also the testimony of York Smalls, another colored man who does not belong to the Barbers' Association. He testifies that large numbers of colored people were so dissatisfied with the way the nomination was secured by a candidate who was not a resident of the district that they would not support him and that many of them voted for the contestee. I will not take up the time of the House by reading it.

Then here is the testimony of Oliver Middleton, another colored man, a colored farmer living in Beaufort County. He was asked:

Q. Who did you support the last election day for Congress?
A. I supported Col. William Elliott for Congress.
Q. Did a large number, to your knowledge, support Col. William Elliott at this precinct?
A. Yes; the biggest he ever got here yet.
Q. Were they Republicans or Democrats that supported him?
A. Republicans.
Q. Are you a member of the Grand Army of the Republic?
A. Yes; old soldier.
Q. Please state the regiment and company to which you belonged during the late war.
A. Company H, Twenty-first.
Q. Twenty-first Volunteers or Regulars?
A. Twenty-first Volunteers.
Q. To what camp of the Grand Army of the Republic do you belong?
A. Hunter Post, No. 9, at Beaufort.
Q. Mention, if you know of any, what prominent Republicans supported Col. William Elliott, the contestee, on this island.
A. I can tell you there is William Capers, York Small, Robert Middleton, Senate Meyers, and a good deal of them boys—Simon Mitchell, Sancho Mitchell, Abel Pope, July Middleton, Julius Middleton; a good deal more, but I can't remember all now.
Q. Why did they vote against and work against George W. Murray when he was the Republican candidate?
A. Because all the boys were started out to vote for General Small; after General Small was defraud then all the boys turned and said they will give Colonel Elliott their vote.

But, Mr. Speaker, if I can produce the testimony of probably the leading colored man in the city of Charleston, a Republican now and always, a man who was put upon the stand by the contestant himself for the purpose of showing that he was the choice of the colored Republicans of Charleston and that he had received their united support, but who testified to just the contrary, I think I can justly claim that I have made out my case upon this point at least.

I read now from the testimony of W. H. Robertson, who swears that he is a cabinetmaker and upholsterer, colonel of the First Regiment of National Guard of South Carolina, and acting brigadier-general of the First Brigade, National Guard, of that State. He voted for Murray, and his testimony must be accepted by him, since he is his own witness.

I ask the careful attention of the House to the testimony of this man as I now read it:

Q. Give your name, occupation, and state whether or not you hold any official position; and if so, state what it is.
A. W. H. Robertson; cabinetmaker and upholsterer; I am colonel of the First Regiment National Guard of South Carolina, and now acting brigadier-general of the First Brigade National Guard of South Carolina.
Q. Are you a registered voter of the city of Charleston?
A. I am.
Q. How long have you been connected as an officer of the National Guard of South Carolina?
A. From its formation, in 1869.
Q. Are you acquainted generally with the intelligent and business colored people of the city of Charleston?
A. I am.
Q. Have or not your relations with them been of such character as to know the political feeling that exists among them?
A. To a great extent.
Q. Whom did they support at the last election for Congress between William Elliott and George W. Murray?
A. Both of them.
Q. I mean whom did the majority support?
A. I am not able to say.
Q. Whom did you support?
A. George W. Murray.
Q. There were, dnring the canvass, two factions of the Republican party in the city of Charleston, were there not?
(Objected to as leading.)
A. Yes.
Q. How, or in what manner, was a settlement between the two factions made?
A. By the national executive committee.

This man is one of the leading colored men of South Carolina. He was once chairman of the waterworks committee of Charleston. But I will read the remainder of his testimony:

Q. General, as a matter of fact, you hold as high a position of honor in the military circles as any colored man in the State, do you not?
A. I do.
Q. Have you not always held a position of honor and been well thought of and respected by the citizens of Charleston generally?
A. I have; I've held the position of alderman of this city and supervisor of High School of Charleston for two years.
Q. The High School of Charleston is a white school, is it not?
A. Yes; and was elected to the city council of Charleston, and was chairman of the committee on waterworks of the city.
Q. And have always been a Republican?
A. Always.
Q. Do you know R. C. Brown, colored attorney in this city?
A. I do.
Q. What official position does he hold in the Republican party at this time?
A. Congressional chairman of this district.
Q. Is he not also well thought of here?
A. To the best of my knowledge.
Q. Was he not bitterly opposed to Mr. Murray?
A. He was.
Q. Do you know J. H. Legaré?
A. I do.
Q. Is he not also well thought of by the colored people, and a leading and intelligent colored man?
A. He is; he is adjutant of my regiment.
Q. Was he not also bitterly opposed to Mr. Murray?
A. He so expressed himself to me.
Q. Did he not even vote for Mr. Elliott?
A. Not to my knowledge.
Q. Do you know D. L. Adams?
A. I do.
Q. Is he not a leader among the colored people, and does he not hold a high office in the Republican party?
A. He does.
Q. Then a great many of the leading intelligent colored Republicans were opposed to Mr. Murray?
A. They were divided upon that head.
Q. You finally got your certificate, did you not?
A. I did.
Q. You saw no fraud yourself while at the registration office, did you?
A. I saw none.
Q. And you could not say whether a majority of the colored people were in favor of or opposed to Mr. Murray?
A. They were equally divided, to the best of my knowledge.

Now, Mr. Speaker, there were about 8,000 colored voters in Charleston, and there were some 6,000 white voters in that city, and this contestant's witness placed on the stand by him to disapprove the charge that the colored people were divided at this election, testifies to the best of his belief and from a thorough

knowledge of the colored people of that city, that they were equally divided in their support of Murray and Elliott. Suppose you give, on this testimony, one-half of the colored voters of that city to Elliott. If you do you will increase his majority largely over that given him by the election boards. The gentleman who so ably, astutely, and adroitly opened the case for the contestant did not deign to refer to this testimony. He dismissed the subject by saying that there was no disaffection of any consequence on the part of the colored people of this district toward the contestant; that what little there was was confined to a colored barber's association. I have dwelt upon this somewhat in order to illustrate the unfairness with which the majority have treated the testimony in this case.

I have read to the House the whole testimony of the colored commander of the colored brigade of South Carolina, one who has been chairman of the city waterworks committee of Charleston, one who has always been a Republican, and who voted for Murray, and who was put on the stand by Murray.

Mr. OVERSTREET. Will the gentleman permit me?

Mr. JONES. Certainly.

Mr. OVERSTREET. Be kind enough to explain what kind of a division it was in the colored vote of Charleston when Murray was given but 397 out of a total vote of 6,000.

Mr. JONES. I will, with pleasure. I have shown already that a number of the very men who testify did not vote for either party to this contest. The testimony in the record shows that the colored voters in the main kept away from the polls and refused to vote, because they had no candidate. Of the comparatively few who voted, many voted for Colonel Elliott. There was not half of the white vote of Charleston cast at this election, because it was not supposed that Colonel Elliott had any serious opposition. But why do you adopt one rule in the city of Charleston and a different one in the counties? If you are going to take the census and count for Murray all the colored people of voting age in Charleston, why do you not count all in Beaufort for him? There the preponderance of colored people is as 9 to 1, and there the colored people remained away from the polls just as they did in Charleston, and for less reason. You utterly failed to secure any testimony in that county upon which to throw out its vote, and you have had to abandon the contest there. You have none that is reliable as to Charleston, but you say the testimony as to the manner of holding the election there justifies your action, and when it is shown that the testimony amounts to worse than nothing, you fall back upon the census and stolidly maintain that a negro always votes the Republican ticket, even when he swears that he does not. But how absurd is this contention when it is shown by your own witness that the colored vote was equally divided, and it can not be shown that a single white vote was cast for the contestant.

Mr. OVERSTREET. If he got 2,800 white votes, what became of the colored votes, as he only received 2,811 votes in all in Charleston?

Mr. JONES. He got all the white votes cast. If he got as many colored votes as Murray received, then only about 2,400 of the 6,000 whites voted, for all who went to the polls voted for Elliott. The white voters turned out badly as well as the blacks.

Mr. HARDY. Will the gentleman permit a question?

Mr. JONES. Well, my time is limited, as the gentleman knows, and his questions are usually very long.

Mr. HARDY. I wish to ask this question: In the county of Charleston there are said to be 8,000 colored voters and 6,000 white voters. Mr. Elliott received 2,811 votes. Presumably these were white votes, and maybe some of his colored friends, but out of 8,000 colored votes only 397 were cast for Murray. Now, what became of the 7,603 colored voters who did not vote at all? Did you disfranchise them by your nefarious and unconstitutional registration law, so that they were not permitted to vote at all?

Mr. JONES. How does the gentleman account for the fact that in the large negro county of Georgetown, where you admit the election was fair, Murray received only about 700 votes? The colored voters remained at home in Georgetown, Beaufort, and other counties, and they did the same thing in Charleston.

Mr. HARDY. Eleven hundred.

Mr. JONES. Exactly 743 votes were cast for Murray in the county of Georgetown.

Mr. HARDY. I can answer the gentleman's question.

Mr. JONES. I decline to be further interrupted.

Mr. HARDY. The gentleman has propounded a question, and I want to answer it.

Mr. JONES. I decline to be interrupted.

Mr. HARDY. Will you not allow me to answer your own question?

Mr. JONES. I will not be interrupted. I am not going to allow the gentleman to make another speech in my time. He has done enough of that already.

Mr. HARDY. I simply wanted to answer your question.

Mr. JONES. The point I make is this: The majority have singled out the city of Charleston, where there are very few more colored people than there are whites and where the colored vote was larger in proportion than it was in the country districts, and have assumed, without evidence upon which to base the assumption, that because Elliott received more votes in Charleston than his negro contestant did, there was something wrong about the election. I say the same reasoning ought to apply more strongly to the country districts, with the vote of which you can find no fault. Complaint is only made against Charleston, where there is a far less preponderance of colored voters than is to be found in the counties that were formerly in the Seventh district—counties from which contests, as you say, have come in the past. Think of this! There are 9 blacks to 1 white in Beaufort County. You took testimony there, and after the most searching investigation you abandoned the charges of fraud which had been made against the officers of election in that county and ask this House to believe that the loyalty of the colored voter to the Republican party is confined to Charleston, where, comparatively, they are not so numerous as in other parts of the First district.

You do this because you are driven to this course in order to take away the seat of a Democrat who was fairly elected and give it to a negro who was not elected. Upon your theory Murray should have been given by you 2,000 majority in Charleston, and 18,000 in the remainder of the district, but instead of this you content yourself with figuring out for him a bare majority of 434.

He is entitled to 2,000 in Charleston if he is entitled to the 217 that are given him there; and if you are going to proceed upon the theory that every man is a Republican whose skin is black—if, in spite of the fact that a colored voter swears on the Holy Evangelists that he did not vote the Republican ticket, you are going to hold that he did vote it—you ought to give the contestant 20,000 majority, and not cut down his majority to 437, as you have done. If you are going to count some of the colored voters for Murray merely because they are colored men, then you should have enough regard for consistency and decency to count all of them for him. There is just as much reason for counting all as there is for counting any part of them.

The report of the committee states that the chief ground of contest is the "alleged fraudulent conduct of the supervisors of registration, whereby many voters were deprived of their right to register, and the fraudulent and intentional mistakes in the registration certificates, which occasioned the rejection of the ballots." Now mark you, the report states this as the chief ground on which this contest is based. Yet when my friend from Indiana discussed the testimony bearing upon the registration he used these significant words:

When I refer to this testimony, it is not to place this case upon that testimony.

Well may he make this admission! To throw out twenty precincts upon such testimony as is to be found in this record would be to commit the grossest outrage ever perpetrated by blind partisanship.

There are 25 witnesses who testify as to the manner in which the registration was conducted—1¼ to a precinct. They are all ignorant, and most of them are without occupation. There is not one of them whose testimony is not rebutted by from one to three witnesses of character, good standing, and intelligence. Many of them make contradictory statements, and some of them are shown to be the associates of thieves and gamblers. One of them is shown by overwhelming testimony to have deliberately and knowingly perjured himself. Against that testimony the contestee has set the testimony of men of high character and standing in that community, men whose testimony has not been attacked or impeached, and, I take it, it can not be.

Those witnesses in the main do not testify to the time that they offered to register. They do not testify as to the circumstances under which they were rejected. It does not appear even from their testimony whether they were properly or improperly rejected. And as to every single one of these witnesses, as I have said, the contestee has introduced testimony absolutely refuting their statements.

I will read the testimony of one of the witnesses relied upon by the gentleman from Indiana. I submit that if this witness were uncontradicted his testimony would afford no excuse for throwing out the entire poll at the precinct at which he desired to vote. I will read all of his testimony in chief:

Q. Give your name, age, and residence.
A. Alexander McNeill; aged 39 years; reside at No. 63 King street.
Q. State where you were on the 6th day of November last?
A. At Federal poll, Ward 5, precinct 2.
Q. At what time did you arrive and how long did you remain at that poll?
A. I got there between 3.30 and 4 o'clock and remained until the poll closed.
Q. Did you vote there that day?
A. No, sir; they would not allow me.
Q. Did you have a registration certificate?
A. Yes, sir.
Q. The registration certificate that you had, did you try to have it changed?
A. I did, every Monday in the month until they finished and closed the office.
Q. Did you see the supervisor at any of the times you went there?
A. Yes, sir; and when it came on late the police would drive us away.

That is the testimony of one of the witnesses referred to and

relied upon by my friend. This witness states that he had a registration certificate. The law of South Carolina provides that where a man changes his residence, although he may have a certificate, he must surrender that certificate and be registered again. He does not state that he had not changed his residence. He simply states that he went there and they would not allow him to vote. But I appeal to the lawyers in this House to say, even if this witness was improperly denied the right to vote, whether the whole poll at his precinct should be thrown out and hundreds of legal voters disfranchised on that account? The most that this House can do if it be thought that this man was improperly denied the right to vote and that he would have voted for the contestant had he been allowed to vote, is to count his vote for the contestant. There can be found no warrant either in law or justice for the course which is advocated by the majority of the committee. To throw out this and other precincts upon such testimony as this, even were it admitted to be true, would be the greatest of outrages.

I may as well say now and here as later that if every voter who claims to have been refused the right to vote, or that it is claimed by anybody was not permitted for any cause to vote, were to have his vote counted by this House for the contestant, he would then lack more than a thousand votes of enough to elect him. Unless the number of voters whose rights have been denied is large enough to materially affect the result, such denial can not vitiate the election. That is the well-established doctrine upon this subject; so that if we concede that the managers of the election improperly refused those who are shown to have offered to vote, or who would have offered but for the knowledge that they would be refused, it would not vitiate the election. The majority of the committee would have counted the votes of such persons as this witness quick enough had there been enough of them in all to elect the contestant. There were not enough, and so they concluded that since he must be given a seat in this House the only way to do it was to throw out a sufficient number of polls to accomplish the result desired.

At Haut Gap precinct, in Berkeley County, there was no regular poll opened on the day of the election. The managers appointed did not appear. To remedy this the negroes appointed three of their number managers of election and caused a poll to be opened. At this improvised election there were 217 votes cast for Murray and none for Elliott. The entire committee are of the opinion that these votes should be counted, and they go to make up the 434 majority which the majority of the committee give Murray. Without these votes, which I concede to belong fairly to the contestant, his majority, as the majority of the committee have figured it out, would be only 217.

Mr. Speaker, it is but proper that I should add that it was no fault of the contestee that the election managers did not open a poll at Haut Gap precinct. The contestant, as the record shows, made every possible effort to have the polls opened at all the precincts in the district and especially at this precinct. In the speech made by the chairman of this committee [Mr. MCCALL of Massachusetts] in the Johnson *vs.* Stokes case a few days ago—a case that also came here from South Carolina—that gentleman said—I read from the CONGRESSIONAL RECORD:

> Furthermore, Mr. Speaker, there is nothing in the record, no evidence any where, that there was any special wrongdoing in connection with the election on the part of the contestee or on the part of any of the sitting members in these South Carolina contests. In one district, certainly, where they had not for years opened certain polls, where the black voters are greatly in the majority, the contestee, Mr. Elliott, before the election was held came out and urged that all the polls be opened, and it was against his protest that the polls were closed on that day.

Mr. Speaker, in the other cases from South Carolina that have been before this House, all of which were considered by the Elections Committee of which I am a member, the registration laws and the method of executing those laws played a much more important part than they do in the case now under consideration. Gentlemen should not permit any impressions that may have been made upon their minds concerning the registration of voters in South Carolina to prejudice them in this case. On the 24th day of December, 1890, the legislature of South Carolina provided for a new registration of voters in the city of Charleston. All persons registered prior to that date in the city of Charleston were required to register in order to be able to vote at any election. Before the passage of this act, which only applied to Charleston, it had been held throughout the State of South Carolina that all persons old enough and entitled to register in the year 1882, and who did not then register, were not thereafter entitled to vote. It was this construction of the registration law of South Carolina which gave rise to so much complaint, and it was to remove this just cause of complaint that the legislature passed the act I have just alluded to. Why it was not made applicable to the entire State I do not know.

The SPEAKER. The time of the gentleman has expired.

Mr. BELL of Texas. Mr. Speaker, I ask to be recognized, and I yield to my colleague such portion of the time I am allowed as he may desire.

Mr. JONES. Mr. Speaker, under the act of December, 1890, a new registration took place in the city of Charleston. Three gentlemen of high character, of social and business standing and reputation, were appointed to hold this registration. I am informed, and it is so stated in one of the briefs filed by counsel, that they were all bank presidents. They sat continuously for three months in the city of Charleston in the year 1891. They moved the place of registration from point to point in order that every man, white and black, in the city and entitled to register might have an opportunity to do so.

The record shows that there were at least 4,721 colored voters registered in Charleston on the day of the election. In other words, there were registered more than 4,000, more colored voters in Charleston than the contestant received votes.

Mr. OVERSTREET. From what source does the gentleman get that information?

Mr. JONES. I get it from this source: It appears from the record that the certificate of one of the voters who actually voted was numbered 11213. As there were only 6,492 white persons of voting age in Charleston, and presuming for the sake of this argument that all of them were registered, the difference between that number and 11,213 is 4,721. There must have been at least 4,721 colored people registered, and there were doubtless many more.

Mr. OVERSTREET. And that list of registration certificates would include the certificates issued by all the supervisors after 1890?

Mr. JONES. All of them, I think, after 1890.

Mr. OVERSTREET. All of them after 1882?

Mr. JONES. No, sir; not at all; because the law provided that every one of the old certificates should be surrendered, and that no man could vote in the city of Charleston unless he had a certificate issued after that date. The holder of certificate No. 11213 registered after the year 1890, or else he would not have been allowed to vote.

Mr. OVERSTREET. Now, then, were there not certificates by Cantwell alone and by George W. Williams alone, and when you compute the number, you must compute those issued by all the various registration commissioners?

Mr. JONES. My reply to that is that the certificate of which I have spoken was issued by the board of commissioners. The board sat prior to the appointment of Cantwell and Williams.

Mr. OVERSTREET. Another question——

Mr. JONES. But does that answer you sufficiently?

Mr. OVERSTREET. No, sir. Is it not a fact that when a certificate issued under the law of 1882 was surrendered under the new registration law, the supervisors, when a new one was issued in its stead, took the same number as the old certificate?

Mr. JONES. No, sir; there is not a line in this record to that effect, and I am informed by gentlemen familiar with the operation of this registration law that it is not true. It appears from the evidence in the record that the board of commissioners registered the bulk of those entitled to vote in Charleston during the early days of the three months that they sat, and that for days before they closed their books no one appeared to be registered.

Mr. OVERSTREET. Is it not true that the Charleston News and Courier, the morning after the election, stated that there were not 3,500 registration certificates issued by the new board?

Mr. JONES. I do not know whether that is true or not. I never heard it before.

Mr. OVERSTREET. Well, I know it is true.

Mr. JONES. I do not know and I do not care what the Charleston News and Courier, or the Boston Journal, or the New York Herald, or the Washington Post, or any other paper said about it.

Mr. OVERSTREET. Is not the Charleston News and Courier the leading Democratic paper of South Carolina?

Mr. JONES. I do not know whether it is or not, and if it were it would have no bearing upon this case.

Mr. OVERSTREET. You are deficient in political information. [Laughter.]

Mr. JONES. There is not a single word in this record to the effect that the News and Courier published anything on the subject, and if my friend from Indiana, able lawyer as he is, wants the House to try this case upon what he says appeared in the Charleston News and Courier, but which is not in the record, I can only express my surprise. When the gentleman has to fall back upon newspaper rumors to sustain his case he must feel that his cause is indeed a desperate one. If the News and Courier ever published anything in regard to the registration law of South Carolina it does not appear in the record, and I shall not travel outside of that.

But, Mr. Speaker, I will read some of the testimony in the record bearing upon this subject, and I will read from that given by one of the contestant's own witnesses.

The record which I hold in my hand contains a thousand pages. How many colored men testify in this record in the interest of the contestant I am unable to say, but this I do say: There is not a single witness for the contestant who assails the fairness of the

registration in the city of Charleston made under the act of 1890. There is not a witness who testifies for the contestant who has dared to say that the registration conducted by the board of commissioners in Charleston was not fairly and honestly conducted.

I call my friend's attention now to the testimony of one of his own witnesses, H. W. Purvis. This witness testifies as strongly as any witness in this case in favor of the contestant, and he is certainly one of the most, if not the most, intelligent of all his witnesses. He says of himself:

I have lived in Charleston County about seventeen years; I was a member of the legislature in 1868-1870; was special agent of Treasurer Department; adjutant-general of South Carolina for four years; was inspector of customs in 1877; deputy United States revenue collector and inspector of customs in 1880-1884; clerk in internal-revenue office, 1891.

That man ought to be a pretty good Republican, ought he not? We did not put him upon the stand. He is a witness for the contestant. Here is what he testifies to, and I want to call special attention to it. There is a part of this testimony that some of my friends from South Carolina will probably repudiate, but that portion of it which applies to Charleston no man testifying in this case has undertaken to assail or contradict. He was asked this question:

During the four years previous to the last election, what have you seen at the supervisor of registration's office?

He answered:

From the enactment of the law in 1882 up to the appointment of the commission of George W. Williams, Smalls, and O'Neil in 1890, who were appointed under an act to revise the registration in Charleston County, the whole system of registration, as far as the colored citizens are concerned, has been a shameful apology for registration, which I think any honest man would bear me out in saying. Under the commission I believe everybody was fairly dealt with, and none were refused who were entitled to register.

It will be observed that the witness states that from 1882 up to 1890 the whole system in South Carolina had been a shameful apology for registration; but when he comes to registration under the commission he says:

Under the commission I believe everybody was fairly dealt with and none were refused who were entitled to register.

Mr. Speaker, the gentleman from Indiana in the speech which he has just made assails the fairness of the registration made in Charleston, but not one of his witnesses has done so directly. Some ignorant negroes testify that they were refused registration certificates, but they do not tell the circumstances under which the refusals were made, and even their testimony—vague and indefinite as it is—is contradicted in every material particular.

I have shown out of the mouth of the most intelligent witness for the contestant that the registration was absolutely fair, and that no man who had a right to register was refused registration. In addition to that, it is clear that there were over 4,000 more colored people registered in Charleston than voted for the contestant. The only way by which this registration is attempted to be assailed is by showing that in 20 precincts a total of 25 people were not allowed to vote because they either did not have certificates or their certificates were improperly made out. All that can possibly be claimed is that those men would have voted for Murray had they been permitted to vote. Give their votes to Murray and give him every other vote of every negro who claims that for any cause whatever he was not permitted to vote for the contestant, and you can not elect him by 1,000 votes. Do not outrage justice and decency by throwing out the entire vote at 20 precincts and disfranchising 2,400 legal voters. To do this is to pay too dear a price for one seat in Congress, even if it is to be given to a negro contestant, when you already have an enormous majority of 150.

My friend from Indiana referred to the testimony of Alexander McNeill, Scipio Brown, Edward Grant, and James Carter. Even if these witnesses were uncontradicted, they prove nothing. They do not state when they got their certificates, and if they got them prior to 1891 they had no right to vote and were properly rejected. But as I have already shown all that could possibly be claimed is that the votes of these witnesses should be counted for the contestant.

There is no testimony showing improper conduct on the part of the managers of the election in Charleston. It is only claimed that 6 votes more than were actually received by the contestee were counted for him and I will speak of those later on.

What is true of the testimony of the witnesses referred to by the gentleman from Indiana is true of all who testified for the contestant. The testimony of everyone of them is rebutted. The contestee has by no means allowed this case to go by default against him; but in many instances where the contestant has offered the testimony of but one colored man the contestee has met that testimony with the testimony of as many as three intelligent and honorable white men. The report of the committee studiously and purposely avoids any mention of this testimony.

The majority of the committee cite testimony as if that testimony stood uncontradicted, and ask this House to judge this case upon that evidence. The Fifty-first Congress has been the subject of much bitter criticism for the manner in which it disposed of contested election cases. I have taken the pains to examine those cases, and I say without fear of contradiction that there was not a case decided by the Fifty-first Congress where its action was so open to just criticism as will be the action of this House if it adopts the report of the majority of the committee.

In this connection there is one matter that may as well be referred to now. Justice to the contestee as well as justice to this House requires that I mention it. It is that whilst my friend from Indiana has referred to his report as the report of the committee, and he may be right in thus speaking of it, he knows the difficulty he experienced in getting it out of the committee. He knows also, as I know, that when the vote was taken on this case in committee, however members may vote now, the resolution unseating the contestee was adopted by a bare majority of one vote. He also well knows that two of the Republican members of the committee have up to this moment refrained from expressing in committee any opinion upon the case. If either of them thinks the contestant ought to be seated I am unaware of that fact.

I have consumed much time in discussing the charges against the manner in which the registration was conducted. The charge is also made that no Republicans represented the Republican party on the election boards in the city of Charleston. That is true. The election law of the State of South Carolina does not provide for party representation on these boards, and the party in control in the city of Charleston did not put any colored people on the boards. The managers, or rather the commissioners of election, have testified that the Republicans did not make application for representation in time to enable them to put Republicans on the various boards, had they desired to do so.

But, Mr. Speaker, however that may be, is this House to be asked to declare the election held in certain precincts in Charleston void upon this ground? No man of ordinary intelligence and fairness will make any such contention. It must, however, be clear to everybody that if the election is to be vitiated in any precinct for this reason it must be set aside in every one where the same conditions existed. There can be no denying this proposition.

It is urged as another objection to the manner in which the election was held in Charleston that there were Democratic challengers present at the various polling places. This is true, and it is equally true that there were representatives of the contestant present at all of the precincts, whether called challengers or not.

Mr. OVERSTREET. Will the gentleman be kind enough to point out from the record where that statement appears?

Mr. JONES. I will.

Mr. OVERSTREET. Do you undertake to say that there were representatives of the contestant in all of the precincts in this election at Charleston?

Mr. JONES. I will undertake to show that in every single one such was the case.

Mr. OVERSTREET. Does the gentleman not know that there was not a representative of the contestant allowed in a single precinct in Charleston save one?

Mr. JONES. What do you mean by "in" the precincts?

Mr. OVERSTREET. I mean allowed in the polls, where the Democratic challenger was allowed to go.

Mr. JONES. The gentleman now presents an entirely different proposition. I say the contestant had representatives at the polls in all of these precincts. I do not say that they were actually within the rail.

Mr. OVERSTREET. Of course he had all of his voters at the polls.

Mr. JONES. He had men there to represent his interests. Many of them have testified that they had lists prepared in advance. They stood as the contestant's representatives at the polls, and asked to be permitted to witness the count as his representatives. The record shows this. But, Mr. Speaker, suppose the record did not show it; suppose the contestant had no representatives at the various polls, what is more common, I ask, than the presence of challengers at the polls? I undertake to say that not one-tenth of the States in this Union have passed laws specifically providing for the presence of challengers at the polls. And yet there is scarcely a State in the Union, or any precinct, where they are not permitted. Unless it can be shown that the presence of these challengers resulted in injury to the contestant the bare fact that there were challengers can not be made the excuse for throwing out the vote of 20 precincts.

Mr. HARDY. Will you yield to me for a question?

Mr. JONES. I will yield for a question, but not for another speech.

Mr. HARDY. Only a question, and a pertinent one. I would ask the gentleman if he claims or contends that the election in this district of South Carolina was honest and fair and resulted honestly in the election of Colonel Elliott?

Mr. JONES. I will say in reply to that question that I believe

that Colonel Elliott is as fairly, as honestly, and as legally entitled to his seat on this floor as any man in this House.

Mr. HARDY. Now, I wish to follow that up by another question. That was simply preliminary. I will ask the gentleman, as a member of the Committee on Elections, if he did not sign the report in the contested election case of Johnston *vs.* Stokes, to the effect that Mr. Stokes was legally elected as a member of this House and was entitled to the seat; and that when it came to a vote if he did not vote the other way, declaring that there was no legal election in the district in question and declaring the seat vacant?

Mr. JONES. I am glad the gentleman has asked me that question. I will answer it by saying that when it became evident to me, and those who thought as I did, that the Republican majority in this House intended to repudiate a report permitting a Democrat to retain the seat to which I believed him honestly elected, and to give that seat to a Republican who was not, in the opinion of a Republican committee, entitled to it, I, with other Democrats and many Republicans, voted to declare the seat vacant. I did what every sensible man would have done under the circumstances—I voted to declare the seat vacant to prevent your side of the House from perpetrating a greater wrong.

Mr. HARDY. They must have been Mugwumps.

Mr. JONES. They were Republicans, with as good standing as yourself in the Republican party, and they are your equals if not your superiors in every respect. [Applause.] Gentlemen came to us on this side and gave us to understand that there was no hope of having the House decide that Stokes should retain his seat. They said, "There are gentlemen on our side who do not believe that Johnston was elected, but if you force them to say that either he or Stokes is entitled to the seat they will vote for Johnston, but they are willing to vote if the opportunity is given them that there was no election." In deference to that statement we consented to vote that there was no election. Being in the minority we accepted the situation. I will say further in this connection, if the gentleman will pardon me, that this contested election case comes from South Carolina. This Republican House has, in the case of Johnston *vs.* Stokes, very recently decided the election laws of South Carolina to be unconstitutional.

Mr. HARDY. If it is unconstitutional in that district is it not unconstitutional in all?

Mr. JONES. That is just the point. This Republican House has decided that no valid election could be held in the Seventh district of South Carolina because the election laws of South Carolina are unconstitutional. How, then, can you say that the contestant in this case is elected, when the election was held under the very laws that you have only a day or two since declared to be unconstitutional? In the Johnston-Stokes case you solemnly declared that no valid election could be held under the election laws of South Carolina.

Mr. HARDY. Does the gentleman want this House to vote that there was no election in the district represented by Colonel Elliott?

Mr. JONES. I want this House to do what is right and just. I have already said that I believe Colonel Elliott to have been fairly and honestly elected. The Democrats are but a small minority in this body. They have no power to decide these cases, and so are not responsible for any decision that may be made. But if you gentlemen want to be consistent; if you want to observe the oaths that you took when you came here; if you want to do what is honest and right; if you still believe that the law of South Carolina is unconstitutional, as you held it be two days ago, and that no valid election can be held under it, you will do violence to your oaths and you will destroy every semblance of consistency by putting a man in this House who, even were he elected, was elected under the very law which you have repudiated.

Mr. OVERSTREET. Will the gentleman undertake to say that because a law is unconstitutional, therefore no election was held?

Mr. JONES. I never said anything of the sort. I contend that this law is not unconstitutional to such an extent as would render this election null and void, but I say that the House of Representatives, in which the Republican party has a majority of 150, has solemnly declared that the law was unconstitutional, and that no valid election could be held under it.

Mr. OVERSTREET. The gentleman voted that way, did he not?

Mr. JONES. I did, for the reasons I have given.

Mr. OVERSTREET. Will the gentleman be kind enough to state to us who the gentlemen were who made that bargain with him in the Johnston-Stokes case?

Mr. JONES. I insist, Mr. Speaker, that the gentleman has no right to speak of the representations made gentlemen on this side of the House by gentlemen on his side as a bargain.

Mr. OVERSTREET. You stated that they had made an agreement.

Mr. JONES. I think the gentleman is reflecting upon his colleagues when he makes this insinuation. I have already informed him why the Democrats joined with a number of his Republican associates in voting the seat from the Seventh district of South Carolina vacant. It was the only choice left us. The representations made us, and upon which we unhesitatingly acted, came from some of the leading, most intelligent, and most honorable men on your side of the House, and believing them to be the honest opinions of honest and fair-minded men, we accepted them as such and acted upon them. We accepted the friendly suggestions made to us, not because we had any doubt about the election of Mr. Stokes, but because we became satisfied if we did not do so enough Republicans would follow your leadership to give a seat in this House to a man who the most intelligent Republicans upon the Elections Committee of which the gentleman is a member believed had no shadow of right to it.

Mr. OVERSTREET. Now, will the gentleman answer my question? When that proposition was made to the representatives upon your side of the House, it was agreed to by you, was it not?

Mr. JONES. The gentleman may call it what he pleases. It was simply the statement of a fact which was apparent to most people. The votes that were taken convinced me, as they did everybody else, that whatever the action of the House might be Stokes would not be permitted to retain his seat. I was myself informed by a member from the State of New York, who was in no wise connected with the case, that, whilst he had voted that Johnston was not entitled to the seat, he should not vote that Stokes was. Statements like these induced the friends of Stokes to vote to declare the seat vacant.

Now, if you want to call that a bargain, if you want to reflect upon your Republican colleagues on the committee, you are welcome to get all the glory and honor and satisfaction out of it that you can get.

Mr. OVERSTREET. The gentleman knows that I have asked him three different times if they carried out the agreement, and he knows he has failed in each instance to reply to my inquiry.

Mr. JONES. I say to the gentleman that so far as I am personally concerned I voted as the record shows I voted, and I did so because I became convinced that under his leadership a man was about to be seated in this House who had no title to a seat here. [Loud applause on the Democratic side.] I voted to send the election back rather than have you perpetrate that outrage, and I am pleased to be able to say that a large number of the leading Republicans on your side, including the distinguished chairman of the Committee on Ways and Means, voted as I did.

Mr. OVERSTREET. The gentleman does me an unusual honor. I still want to ask him whether or not when that statement of facts was given to him the agreement was carried out by the men who made the agreement. I give you one more opportunity to answer that question.

Mr. JONES. And I answer the gentleman by saying that no agreement was made with me or with anybody else so far as I know. Enough Republicans voted with the Democrats to prevent the consummation of what we regarded as an attempt to commit an outrage. I presume they voted that way because they were not willing to become parties to a political outrage. I believe they acted from the purest and the best motives.

Mr. OVERSTREET. Just one more question. The gentleman has said that I was reflecting upon the members of this side of the Chamber. I simply want to inquire if it is not a fact that the men who supported that proposition, who were members on this side of the Chamber, voted as they already had voted, and made no change from the position which they had assumed when the entire Democratic side abandoned its position.

Mr. JONES. That absolutely is not true.

Mr. OVERSTREET. With the exception of the members of the committee.

Mr. JONES. No vote was ever taken to test the right of Stokes to retain his seat. It never got that far. The reports from Elections Committee No. 3 show that three Democrats and two Republicans found that Stokes was entitled to retain his seat. I was one of those Democrats. One Republican held that there was no election, and three, yourself among the number, filed a minority report setting forth that Johnston was elected. Two of the Republican members of the committee voted throughout as I did.

You say you did not intend to reflect upon the Republican members of the committee or other members on your side of the House, but you still insist that there was some bargain or agreement. It takes at least two parties to make an agreement; and if any corrupt agreement was entered into in the Johnston-Stokes case all who were parties to it must have been equally culpable. I have said I knew of no bargain or agreement. I deny that there was any. But I still maintain that if you seat the contestant in the case we are supposed to be now considering you will not only perpetrate a great wrong but you will stultify yourselves at the same time.

I have heard that the contestant had to be seated because he was a black man.

Mr. WALKER of Virginia. I would like to know whom you heard that from?

Mr. JONES. From everybody.

Mr. WALKER of Virginia. Name one.

Mr. JONES. The statement has been made all over this House, and everybody understands that such is the case.

Mr. WALKER of Virginia. I would like you to name one member who said that the contestant should be seated because he was a colored man.

Mr. JONES. I will say to the gentleman that numbers of members upon his side of the House have said it. It is not necessary to give names. If members desire their names published, they are here, some of them, within the sound of my voice, and they can speak for themselves. But this, Mr. Speaker, bears somewhat upon this question. This little clipping is from the Washington Post. I will read it for the benefit of my friend from Virginia.

Mr. WALKER of Virginia. I have read it.

Mr. OVERSTREET. Is that in the record?

Mr. JONES. I will give the House the benefit of it.

A delegation of colored ministers from city churches called at the rooms of Election Committee No. 3 of the House yesterday to urge action in the contest to which George W. Murray, of South Carolina, is a party. The ministers were Rev. J. T. Clark, Rev. Daniel Morris, Rev. Alexander Wilbanks, Rev. J. Anderson Taylor, Rev. H. C. Robinson, Rev. Walter H. Brooks, Rev. A. Creditt, Rev. I. B. Bryant, and Rev. Robert Johnson. Col. Perry Carson, at whose suggestion the visit was made, accompanied the ministers. They were received by Chairman McCALL, of the committee, and stated that they were interested in having Mr. Murray seated because the colored people, not only in the District but in the whole United States, were without a representative in Congress.

Mr. HARDY. If the Lord is for him, who can be against him? [Great laughter.]

Mr. JONES (continuing the reading):

Mr. McCALL replied that the case was upon the House Calendar and would be reached as soon as possible.

[Renewed laughter.]

Now, Mr. Speaker, I also saw in the Washington Post of either this or yesterday morning that a great mass meeting of colored people had just been held somewhere in this city or near this city; that among the speakers who addressed the meeting was the contestant here, and that at the conclusion of the meeting, which was intended to boom Senator ALLISON, I believe, and was gotten up by Perry Carson and his admirers, a resolution was offered and unanimously passed appointing a committee of 10 persons to call upon the leading Republicans of this House to demand, with Perry Carson at their head, that this contestant be given the seat which he seeks—be given it upon the distinct ground that he is a negro and because the negro race has no representative in Congress. I hardly think my colleague will deny that he has heard the same statements that I have heard.

Mr. WALKER of Virginia. I have never heard any such thing anywhere from anybody.

Mr. JONES. I do not know why my friend has not heard them.

Mr. WALKER of Virginia. I have been where honest people are. [Laughter.]

Mr. JONES. I am glad to know it, and I hope the gentleman does not mean to insinuate that the people who made the statements were not honest.

Mr. WALKER of Virginia. No. The gentleman seemed to wonder where I had been that I had not heard such statements, and I thought I would tell him. [Laughter.]

Mr. JONES. I hope he does not mean to make any such insinuation as that, for it is a fact known of all men that great pressure has been brought to bear upon this House to put this negro in; that it has been stated far and wide that it "would not do" for a House with the great Republican majority that this has to adjourn without putting at least one colored man in a seat upon this floor. If this contestant is seated it will be done in deference to this sentiment and in obedience to this demand. There is no evidence in this record that will justify the throwing out of twenty of the precincts in the city of Charleston. To throw them out will be to commit one of the blackest crimes against the right of suffrage that was ever enacted by any civilized body of men.

I doubt seriously, Mr. Speaker, if there is a single Republican member of this House who would be willing to say that he had not been approached by the contestant or by some other colored man in his interest. Gentlemen, this case is now in your hands. Three of the four contested election cases from South Carolina have been disposed of. This is the last. I have examined the testimony in this case as carefully as it was possible for me to do. My connection with it is now at an end. My Democratic colleagues upon the committee agree with me that there has never been a case before our committee where any claimant to a seat in this House has shown a better right to that seat than Colonel Elliott has shown.

Mr. McCALL of Tennessee. Will the gentleman yield for a question?

Mr. JONES. Yes, sir.

Mr. McCALL of Tennessee. Is this the case in which one witness states that at the election in Charleston "Ben Harrison," "Bill McKinley," "Matt Quay," and "Tom Reed" were refused the privilege of voting? [Laughter.]

Mr. JONES. No; this is not that case. Nor is this the other noted case from South Carolina in which a colored man was contesting who was a minister of the gospel, and who, in reply to the question, "What is your profession?" answered, "I am a minister of the gospel, a class-leader, and an extortionist." [Laughter.] This is neither of those cases. But in this case numbers of witnesses have testified for the contestant whose reputations for honesty and truthfulness would not begin to compare to those of the witnesses to whom the gentleman from Tennessee and myself have called attention in the other cases from South Carolina. And it is upon the testimony of such men, contradicted and discredited in nearly every single instance by the testimony of reputable witnesses, bear it in mind, that this House is asked to seat the contestant in this case.

Not only are the contestant's witnesses contradicted by those placed upon the stand by the contestee, but the testimony of many of them is shown to be false by that of other witnesses who testify for the contestant. In many instances they contradict themselves. The contestant's witnesses in most cases, like his supporters, belonged to the "rabble element" of the colored population.

If the evidence in this record establishes anything it proves beyond all question that the colored people of Charleston were bitterly opposed to the contestant; that he was not regarded by a large portion of them as their candidate or as a resident of the district; that many of those who voted at all voted for Colonel Elliott. It also shows that there is no ground for the pretense that colored voters were illegally refused registration, and that the charge that the managers of the election acted fraudulently is without any foundation upon which to rest. Mr. Speaker, time will not permit me to examine in detail the evidence relating to the charge that the votes of 6 persons who, it is alleged, did not vote at the Congressional election were actually counted for the contestee.

These 6 alleged illegal votes were all cast, if cast at all, at three precincts in the city of Charleston. There is no sufficient proof in this record to show that any of the persons whose names appear upon the poll lists as having voted did not vote. But should it be thought that I could be mistaken in regard to this, then I say to you to throw out the entire poll at each of these precincts. Illegal voting can only affect the polls where that voting is done. If the results at these polls are entirely eliminated from the case it will not materially reduce the majority of the contestee. The only way by which his election can be defeated is to do as the committee have recommended in their report to be done—throw out the entire vote of 20 precincts in Charleston, where the election was fairly conducted and where there was a new registration law which was fairly and honestly administered. No other plan can be devised which will elect the contestant, and therefore this plan must be followed, be the consequences what they may.

Now, gentlemen, if it is so important to you politically to have a representative of the negro race upon this floor that you can afford to disregard every rule of evidence and of law to secure that end, then I suppose that you will seat this contestant. If the political exigencies are such as to require you to commit this great wrong, I suppose it must be done. If you have so quickly forgotten your action in another case from South Carolina, in which you declared that the election laws of that State were unconstitutional and that no valid election could be held under them, and you care nothing for either law or consistency, you have the power to rob Colonel Elliott of his seat and you can exercise that power.

If you single out these 20 precincts in Charleston and throw them out upon such testimony as is to be found in this record you will commit such an outrage upon justice, right, and decency as I undertake to say no House of Representatives in the history of this Government was ever before guilty of.

I am fully aware that I have not presented this case before you in such a manner as I would have liked to have done. It is not possible to review in two hours testimony covering a thousand closely printed pages. At least, however, I have given the House to understand that the testimony cited by the committee and relied upon by them to sustain their action is contradicted by other testimony in the record; in my judgment, and I believe in the judgment of every fair-minded man who has read it, not only contradicted, but absolutely and completely destroyed. The majority in this House may prefer to accept the testimony of ignorant and discredited negro witnesses to that of intelligent white witnesses of character and high standing. I can not and I will not do violence to my conscience and my sense of right by adopting any such course.

[Here the hammer fell.]

[Mr. JONES took his seat amid loud applause on the Democratic side.]

Cuba.

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 4, 1896.

The House having under consideration the report of the conference committee in reference to Cuban belligerency—

Mr. WHEELER said:

Mr. SPEAKER: In order to be a great nation and a great people we must so conduct our affairs as to be worthy of the respect of the world. Of all the civilized nations, although we are the youngest, we are the first in wealth, progress, population, and all other material elements which accompany greatness and power. But with all these we can not command the respect of the world unless by every act we show not only that we are willing but that we are determined to maintain our convictions, enforce our policies, and be true to the principles upon which this Government is based. [Applause.] Unless the world believes we are ready and willing, able and determined, to sustain our convictions, our policies, and our principles by force and by the sword, we must lose the prestige we have so long enjoyed and drop from the high place of the first nation of the earth.

We are a nation born with the spirit of the love of liberty, and every breeze that wafts o'er the mild waters of the Gulf of Mexico wafts with it appeals from a suffering people who have laid down their lives, their fortune, and their sacred honor for the cause for which our forefathers laid down their lives, their fortunes, and their sacred honor; that is, the sacred cause of liberty. [Applause.] The question we are called upon to vote on is, Does war exist in the beautiful Isle of Cuba? That war most cruel and bloody now exists in that isle there can be no question. All that is asked is that we give belligerent rights to that struggling people; that we, as a great nation, believe that they may hoist the flag of liberty, that they may have the rights accorded to any patriotic people struggling for the boon of liberty.

What was our condition, Mr. Speaker, in 1775, when our forefathers left the plow and the shop, seized their trusty rifles, and offered their lives in the cause of liberty? Look back at our heroic fathers who fought at Lexington and Concord and Bunker Hill. They were a band of patriots who joined together to struggle against oppression, and they won. [Applause.] Until France recognized their belligerency they were not recognized by any people on earth as belligerents. They were defeated at Lexington, driven from Concord, defeated at Bunker Hill, driven from Boston, driven down to Long Island and defeated there. What a contrast in this respect between our forefathers and the victorious bands of Cuba! If our fathers were entitled to be recognized as belligerents, tenfold more are those struggling patriots of Cuba entitled to recognition and to liberty. They to-day have larger armies than our fathers had during their whole seven years' war for freedom. And yet, Mr. Speaker, people here say that the Cubans are not entitled to that recognition which would enable them to hoist their flag and would deprive the Spanish tyrants of their cruel claim that they have a legal right to shoot them down as banditti. I for one, Mr. Speaker, believe in a different policy from any that has ever been announced by the American people. The Monroe doctrine was well enough when we had only 10,000,000 people, but now this nation, the greatest nation on earth, should lay down a policy which would be respected if not followed by every nation, and a part of that policy should be that every people struggling for liberty should receive at least our sympathy and, if possible, our aid. [Applause.]

Mr. Speaker, I believe that a nation like Spain, which at one time controlled two-thirds of this continent and has been driven step by step till now she has only that beautiful island upon which to wreak her oppression—I believe that the sooner such a nation is driven from that island, lying as it does within two hours' sail of the coast of the United States, the sooner Cuba becomes free and independent or a member of this great Commonwealth, the sooner will the cause of civilization and of Christianity receive the vindication to which it is entitled. Mr. Speaker, these people are struggling in the cause of liberty. Every animated thing loves liberty. The eagle soaring to the starry heights, looking down upon the mountains where he dwells, loves liberty. [Applause.] The fierce Numidian lion, the monarch of the forest where he dwells, loves nothing as he loves liberty. The gallant 300 Spartans who lie buried at Thermopylæ gave up their lives in the cause of liberty. [Applause.]

The patriots of all ages who led the onslaught in battle gave up their lives in the cause of liberty. [Applause.] And, Mr. Speaker, when a band of people who for more than a year have maintained a government within 60 miles of our shores, driving, as they have driven, their oppressors to the very edge of the sea, confining them, as they have confined them, within two or three cities—when such a people achieve such results, how does it become us to ask whether they have a navy? How does it become us to ask whether they have a government located in a certain place? Why, sir, in the war of 1812, did we have a government with a fixed habitation? No, Mr. Speaker. Although we had been a nation for more than thirty years, yet during that struggle the President and his Cabinet were flying from one place to another, driven from the seat of Government, our Capitol burned, a hostile force within 30 feet of where I am now speaking. And yet, sir, we now, in the face of this past history of our own, contend that these struggling Cubans can not be recognized even as having belligerent rights until they have a fixed capital, a fixed congress to enact laws, and all those features which belong to a well-established government. Mr. Speaker, to expect such a condition of things in Cuba at this time is not reasonable. [Applause.]

The SPEAKER. The time of the gentleman has expired.

The "Fiat" Delusion and 16 to 1 Free Silver.

SPEECH
OF
HON. NELSON DINGLEY, JR.,
OF MAINE,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 11, 1896.

Mr. DINGLEY said:

Mr. SPEAKER: The natural tendency of the mind to judge from outward appearances rather than internal conditions opens up in monetary questions a wide field not only for honest yet dangerous misconceptions but also for more mischievous perversions.

It is unfortunate that monetary questions should ever be the football of partisan politics or the objects of passion and prejudice, for they are so purely scientific and exact, so completely controlled by irrevocable natural laws determined by the experience of ages, that any attempt to settle them by appeals to passion and prejudice are as much out of place as the solution of a problem of Euclid by polling a ward caucus.

In times of business depression and industrial paralysis, when men in financial straits are catching at rhetorical straws, when the diminishing purchasing and consuming power of the people is narrowing the demand for products and thereby abnormally reducing prices, the opportunities for crossroads financiers with infallible monetary remedies for every financial misfortune are so multiplied that we might expect to find in financial almanacs, under the head of "Business depression," as we are accustomed to find under the weather forecast of the "Old Farmers' Almanac" the warning words, "Look out for a storm"—in this case a storm of financial quacks—"about this time!"

At such times money, however abundant, is inactive, and inactivity is readily confounded with scarcity. What is really a result is mistaken for a cause. And scarcity of money having been erroneously assumed to be the cause of industrial stagnation, the same surface view as readily jumps to the conclusion that the stamp of the Government gives value to money, and therefore all that is needed to set the wheels of industry in motion is for the Government to stamp irredeemable paper or overvalued coin, and by some mysterious process which overlooks the fact that nobody can obtain money without giving an equivalent value in exchange, convert scarcity into plenty and industrial paralysis into commercial prosperity.

A deeper insight into economic and monetary principles would make it clear that distrust of the industrial and business future, no matter how brought about, is the cause of the dislocation of the intricate machinery of modern production and distribution, whose retarded motion or paralysis has no longer use for the volume of money which it circulated in periods of activity; and that any increase in such times even of good money—by which I mean coin of an intrinsic value equivalent everywhere to the stamp placed upon it, or promises to pay such coin redeemable on demand in such coin—is futile; while issues of bad money, whether in the shape of overvalued coin or irredeemable paper, only increase the distrust and intensify the inactivity which is confounded with scarcity.

THE "FIAT" THEORY OF MONEY.

The fundamental fallacy of the schemes to give prosperity to everybody by monetary legislation, which have obtained so much popularity at different times, lies in the assumption that money,

which is the common medium of exchange and standard or measure of value, is anything that the Government sees fit to stamp as such, regardless of its intrinsic or redeemable value, the law giving it the full value indicated by the stamp, instead of a substance possessing value in itself and accepted as such by common consent, whose coinage by Government is simply the certificate that the weight and fineness of the coins are such as to give them the value indicated by the stamp; paper or credit money, so called, being simply promises to pay such coined money on demand.

The "fiat" fallacy has its origin in the fact that governments successfully circulate token or underweight coins of less intrinsic or bullion value than the stamp indicates, just as all governments circulate the limited amount of fractional silver token coins required for daily use, and as the United States is now circulating overvalued standard silver dollars and France overvalued 5-franc pieces, by rigidly limiting the amount, so that the acceptance of such overvalued coins at the stamped value for customs duties and taxes payable in gold or its equivalent serves as a practical redemption of them at par by the Government that coins them on its own account and for its own profit, the token coins so minted being practically pledges of the Government to thus redeem them at par to whatever extent the stamped value exceeds the bullion value, as the greenback is an express pledge of the Government to pay its full stamped value.

Those who are accustomed to look on the surface of monetary operations easily jumped to the conclusion that it is the Government stamp, and not practical Government redemption, which has made 50 cents' worth of silver or a piece of almost valueless paper as good as a gold dollar; and that all that is needed to instantaneously lift all the world's present and prospective silver bullion from its present market price of 68 cents per ounce to $1.29 per ounce is for this Government alone to authorize the private owners of the same to take their bullion to the mints and have each 412½ grains nine-tenths fine coined and stamped, free of charge, into 100-cent dollars.

Why, with such a wonderful stamp in the possession of the Government, a stamp possessed of more magical power than Aladdin's lamp, any faithful representative of the people's interests on this floor should propose to give the private owners of silver bullion the profit that would accrue from its operation in doubling the value of the one hundred million dollars' worth of silver produced annually in the world, when the whole people ought to have it; or why anyone should favor the wasting of 50 cents' worth of silver in making a dollar when a piece of paper worth 1 mill can be converted into a dollar and multiplied by hundreds of millions by simply starting a printing press, is a conundrum which I should be glad to have answered.

All will remember the potency, during the palmy days of the Greenback party, of the conundrum, "If greenbacks are good enough to pay the soldier, why are they not good enough to pay the bondholder?"

But this "fiat" conundrum disappeared from the stump as soon as the people came to clearly see that the interest-bearing obligations of the Government," called "bonds," and the noninterest-bearing notes, called "greenbacks," are both promises to pay coin, any creditor of the Government having been at liberty to choose either when we had no money of final payment to give either soldier or other creditor, and that neither promise will be finally paid until the holder of it is paid in coin. Individuals may discharge their liabilities by tendering to their creditors the notes of the Government, but the Government itself which issues its notes can not make final payment of its own promises by tendering new notes. Mr. Wilkins Micawber and our "fiat" money advocates have the exclusive patent on this method of getting out of debt.

FREE COINAGE OF SILVER AT 16 TO 1.

Mr. Speaker, with these preliminary observations as to the nature and uses of money and the character and sources of certain fallacies respecting monetary legislation, I now address myself specifically to the proposition which has been so zealously advocated by many gentlemen in this Hall during the present session, and which is being pushed with such energy throughout the country—that this country alone shall immediately open its mints to the free and unlimited coinage of silver at the ratio of 16 to 1, notwithstanding the bullion ratio of silver in the markets of the world is such that 30 ounces of silver (instead of 16) are required to be equal in value to 1 ounce of gold.

It would greatly simplify the discussion if such free coinage as is proposed were advocated on uniform and consistent grounds. But when I find not only different supporters of this policy, but also the same advocate in different parts of his argument, contending in one breath that silver has declined in consequence of hostile legislation, and in another breath that silver has been stable and unchanged; another affirming in his introduction that what he seeks is the equality of both gold and silver in the circulating medium, and in his peroration denouncing gold as the money of the rich, the enemy of the country in time of need, the tool of the foreign shylocks at all times, and eulogizing silver as the money of the poor, the friend of the Republic, and the open sesame to prosperity; and still another declaring in one part of his argument that free coinage of silver at 16 to 1 by this country alone will make every silver dollar as good as gold, and in another part affirming that such coinage will raise prices and make it easier to pay debts, its advocates seem to me to be very much in the don't-care-ativeness state of mind of the showman who, to the inquiry of the curious spectator as to which was the tiger and which the lady, spitefully responded with a far-away look: "Madam, you pays your money and you takes your choice."

Notwithstanding most of the arguments for such free coinage of silver ultimately reach silver monometallism as their logical and inevitable goal, yet this proposed policy obtains popular acceptance mainly on the assumption that it will secure both gold and silver as our redemption money by making the coins of both metals intrinsically equal in value; and this fact makes it necessary for even those who seek the silver standard and silver monometallism of Mexico to claim that they are bimetallists because they propose free and unlimited coinage of both metals.

WILL FREE COINAGE 16 TO 1 GIVE US BIMETALLISM.

The first inquiry, therefore, Mr. Speaker, of every friend of bimetallism—and I account myself one—should be whether, with a bullion ratio of silver to gold of 30 to 1 in the markets of the world, this country alone can open its mints to the free and unlimited coinage of silver at the ratio of 16 to 1 and retain gold in its coinage.

For surely if it can not, if the practical effect of such free coinage as this will be to drive out gold and give us silver alone as our metallic money, and bring us to a silver standard, as I affirm it inevitably would, then I believe the great body of the people of this country who are inclined to look on the scheme with more or less favor, because they have been led to assume that it would give us both gold and silver as our metallic money, would set their faces against it as mischief and only mischief.

MUST DOUBLE PRICE OF WORLD'S SILVER.

In considering this vital inquiry it should be first of all borne in mind that it is conceded on all sides that under free and unlimited coinage of silver, after the brief period required to materially enlarge the coinage, during which the owners of silver bullion will secure the profit, there can be no difference in value between a coined silver dollar and an equal weight of silver bullion. This is shown not only by the logic of the situation under free coinage, which gives the holder of bullion anywhere the right to send it to our mints and have it coined and returned to him free of expense, but also by the fact that under the free and unlimited coinage of gold 25.8 grains of gold nine-tenths fine coined into a dollar is worth no more after coinage than before. Therefore, it necessarily follows that in order to make coined silver dollars under free and unlimited coinage at the ratio of 16 to 1 worth 100 cents (which is what they must be worth in order to be at a parity with gold) not only the silver in each dollar but all the silver in the world must be lifted in value from 68 cents (the present price) to $1.29 per ounce, which is the equivalent of gold at the ratio of 16 ounces of silver to 1 ounce of gold. For if it does not do this, but on the contrary leaves 16 ounces of silver less valuable than 1 ounce of gold, then the silver dollars coined will be less valuable than the gold dollars. When this comes to pass, then, under the operation of an irrevocable monetary law, known as Gresham's law, the cheaper silver dollar alone will be used as money and only silver taken to the mints, while gold bullion and the gold coins withdrawn from circulation will be sold for export or for use in the arts.

The only way in which both gold and silver coins can be retained in any country as money under free and unlimited coinage is by having the coinage ratio approximately the actual bullion ratio in the market.

THE "FIXED PRICE" THEORY.

It is argued, however, by the friends of free coinage of silver at 16 to 1—and I quote from a free-silver publication everywhere circulated—that the opening of the mints of this country alone to such coinage will create an unlimited demand for silver bullion at the fixed price of $1.29 per ounce (which is the price required in order to sustain the ratio of 16 to 1 of gold), and that this unlimited demand at a fixed price meeting a limited supply will make that the price of silver everywhere, and thus that the condition of successful free coinage which I have referred to as indispensable, viz, an equality of the coinage with the bullion ratio, will be secured.

The statement of this curious theory, on which all arguments for free coinage at the ratio of 16 to 1 rest, shows how easy it is to mislead in monetary discussions. Indeed, this theory is only an ingenious variation of the "fiat" fallacy. It rests entirely on the assumption that whatever the Government, under any and all circumstances, stamps as a dollar is therefore necessarily always a dollar as good as gold. The so-called "unlimited demand" for

coinage is simply the limited demand of business for the purchase of coin, for it must be borne in mind that under free and unlimited coinage the Government does not purchase silver any more than it does gold. It simply impresses the dollar stamp or certificate, without charge, on every 412½ grains of silver or 25$\frac{8}{10}$ grains of gold nine-tenths fine brought to the mints, and the owner takes away the dollars so stamped from his gold or silver, and disposes of them as best he can. We know that the owner of the gold dollars gets no more for them than the bullion was worth before coinage. What, therefore, the owner of silver bullion receives from the mints is simply 1$\frac{29}{100}$ of a silver dollar for each ounce he has deposited. What this coined silver will yield the silver-mine owner is entirely dependent on the quantity of gold he can buy with it in the markets of the world. The stamp of the Government will not help him under free and unlimited coinage to get any more for his silver dollar than the bullion in it will bring. The absurd theory of a "fixed price" for silver equal to the stamp under free and unlimited coinage vanishes into the thin air of all "fiat" ideas of money.

INFLUENCE OF FREE COINAGE BY THIS COUNTRY ON PRICE OF SILVER.

The only influence on the price of silver bullion that the opening of the mints of this country alone to its free and unlimited coinage could have would be simply whatever increased demand for silver it would create—not a demand at a "fixed price," as I have already shown, but simply at whatever price would naturally arise from the meeting of the supply with such demand, as this must be the value of the silver dollars coined from the deposited bullion.

Fortunately we are able to approximately measure the influence on the price of silver of the possible demand for coinage by our mints under free coinage. That would be limited, first, by the silver coins that would be purchased and used by the people; and, second, by the capacity of our mints. Now, the capacity of our mints and the ability of our people to absorb silver coinage under free coinage could not for some time be greater, in proportion to population, than the 54,000,000 ounces purchased annually for monetary purposes for three years under the act of 1890, which was substantially the American product of silver, and more than one-third of the product of the world. Yet, while the temporary effect of this increased demand was to slightly increase the price of silver—not for a day, however, anywhere near $1.29 per ounce—yet in a very short time the increased demand so stimulated production that the price went lower than ever before, thus demonstrating conclusively that no possible demand under free coinage by this country alone could have the effect to restore silver to its old price, evidently for the reason that the cost of production had declined and new and richer sources of supply been discovered.

If those who dwell on the legislation of this country in 1873, which struck the silver dollar from the list of coins authorized to be coined after that date, as a potent factor in causing a decline of silver by diminishing the demand would only allow their good judgment to control, they would see that it could hardly be possible that legislation discontinuing the coinage of the silver dollar which had not been coined for circulation for twelve years prior could have had any effect in diminishing the demand for or the price of silver. Indeed, when it is considered that two years after 1873 we began to coin fractional silver, and in 1878 again began to coin the silver dollar, and that in the eighteen years between 1875 and 1893 we used five times as much silver bullion for monetary purposes as we had used in the eighty years previously, it must be admitted that so far as this country is concerned our demand for silver for coinage has within twenty years been greatly increased instead of diminished, so that no charge can be justly made against the United States that its legislation has been hostile to silver. On the contrary, it has gone to the farthest verge of safety, if not beyond, in its efforts to restore silver, so far as natural conditions would admit, to its old position.

THE ACTION OF GERMANY AND FRANCE.

I have no doubt that the discontinuance of free coinage of silver by Germany in 1871, by France, Belgium, Switzerland, Italy, and Greece (the Latin Union) first by limitation in 1872 and then in full in 1875, and by other countries of Europe subsequently has, by diminishing the demand for silver for their coinage, had a marked influence in increasing the decline of silver, which would have inevitably taken place to a considerable extent because of the reduced cost of production and abnormal increase of supply. Although I do not regard it possible for these countries, reenforced by Great Britain and the United States, by reopening their mints to free coinage of silver to restore the old ratio of 16 to 1 so long as the present conditions of silver production continue, yet I am persuaded that by joint action all these countries, acting together in the adoption of a fixed international coinage ratio at some intermediate point that shall have regard to the probable cost of production and the consequent bullion ratio of silver to gold in the markets of the world, can accomplish the desirable result of securing both gold and silver, under free and unlimited coinage, as the final redemption money of the world. I do not believe the United States or either of these countries alone can bring this about. Neither does any bimetallist of authority in Europe or in this country (outside of politics) so believe.

THE THEORY OF BIMETALLISM.

The theory of bimetallism, as held by all its great advocates, is not, as some of its defenders assume, that free and unlimited coinage of gold and silver at any ratio which the law of any one country may declare will secure the maintenance of that ratio by increasing the demand for the metal that tends to fall and diminishing the demand for the metal that tends to rise, but that such coinage by a sufficient number of leading commercial nations to give a potent demand, at a ratio substantially the same as the coinage ratio, will do this, unless there shall be radically changed conditions of production and use of either metal.

It is important to keep in mind the fact that bimetallism is a system which seeks to have one monetary unit or standard of value represented in two different metals adjusted to a ratio that makes them equal, and which tends to keep them approximately equal by the operation of an alternative lessened or increased demand on either metal. When two full legal-tender dollars of different values are authorized in any country the practical standard is always the least valuable dollar. Thus from 1792 to 1834 the silver dollar was the practical unit or standard, from 1834 to 1861 the gold dollar was the practical unit or standard, and from 1861 to 1879 the depreciated greenback dollar was the practical unit or standard, notwithstanding the gold dollar was the legal unit from 1873 to 1879, as it has been since 1879 both the legal and practical unit or standard. And yet within proper limitations the alternating lessened or increased demand on either metal for coinage under bimetallism, when that alternating demand is made potent by the concurrence of enough commercial nations, and when the coinage ratio is approximately the bullion ratio at the time it is fixed, has been found a factor sufficiently effective to prevent any serious divergencies of the two metals from that ratio so long as the conditions of their production and the monetary status of the world were not seriously disturbed. It must be evident that the potency of this compensating and equalizing principle is very small when one country alone adopts bimetallism, and that it increases wonderfully as commercial nations unite in its maintenance at a fixed ratio. It is for this reason that all authorities on bimetallism, outside of politics, agree that under present conditions "international bimetallism" alone is possible.

THE FETICH OF 16 TO 1.

In many minds bimetallism seems to be regarded as the free and unlimited coinage of both silver and gold at the weight ratio of 16 to 1. To such the ratio of 16 to 1 in coinage is apt to be a permanently established principle of the fathers that has come down to us like the principles of the Declaration of Independence or the doctrines of the Constitution. They talk of the free coinage of silver at 16 to 1 as the restoration of "the policy of the fathers," and ask why silver should not have the same privileges as gold.

Now, it may surprise some of those who have adopted such ideas to learn that the "fathers" who established the first mint in 1792 did not set up the coinage ratio of 16 to 1, but that of 15 to 1, and that in establishing this ratio they turned their backs on the "fathers" who discovered America, for in those days the ratio was 11 to 1. Indeed, the evidence is conclusive that under the earliest Egyptian monarchy gold and silver were equally valuable by weight.

How did it happen that the "fathers" of 1792 adopted the ratio of 15 to 1? It was simply because Hamilton reported that after a careful investigation he found that the average market ratio of silver and gold was 15 ounces of silver to 1 of gold. And so the "fathers" supposed it to be the proper thing to make the coinage ratio the same in order to secure both silver and gold. That was their conception of bimetallism. Strange as it may seem to some of our modern crossroads financiers, no one reminded them that the earlier "fathers" held to 11 to 1 as the right ratio because then 11 ounces of silver would buy 1 ounce of gold.

How did it happen that we set aside the ratio of 15 to 1 established by the "fathers" of 1792? Simply because those "fathers" took it for granted that the coinage ratio must follow the bullion ratio in order to maintain bimetallism. In 1834 it was found that the bullion ratio had changed and was (as was supposed) 16 to 1, whereupon these "fathers" or their disciples changed the coinage ratio to 16 to 1. So it appears that the "fetich" of 16 to 1, which so many are worshiping to-day on the supposition that it is a fundamental principle which the "fathers" fought to maintain, comes down to us only from 1834.

COINAGE AND BULLION RATIO MUST BE IDENTICAL.

There is a monetary principle which comes down to us from these "fathers" which every authority in finance sustains, which every European bimetallist and every bimetallist outside of politics

in this country holds, and this is that to maintain successful bimetallism the coinage ratio must be approximately the bullion ratio, for while experience shows that coinage laws, by creating a demand for a metal, can thus exert some influence on the price, yet this influence is comparatively small when exerted by one country, and even when exerted by a combination of countries can not work miracles.

Gold is given free and unlimited coinage at exactly its bullion value, and consequently a gold dollar after it is coined is worth no more than before coinage. If the owners of silver bullion would consent to its free and unlimited coinage at its bullion value in the markets, just as we coin gold, the only objection would be that the ratio could not be permanent unless there was concurrent action by the leading commercial nations, and no material change in the conditions of production of the two metals; but what they want is to have 50 cents' worth of silver, as it sells in the markets of the world, received at our mints and certified to be a dollar worth 100 cents. They are not willing to accept the coinage principle of the fathers that both metals should be coined at their bullion ratio, whatever that may prove to be, but insist that because 16 ounces of silver were equal in value to 1 ounce of gold and given coinage at this ratio in 1834, therefore silver must have the same ratio to gold to-day that it had then. The wonder is that they do not insist on going back further, to the discovery of America, and making the coinage ratio 11 to 1; or even to the days of Thebes, when 1 ounce of silver was equal in value to 1 ounce of gold—the only time that silver and gold had equal "rights."

THE CAUSES OF FALL OF SILVER.

Mr. Speaker, it is not necessary to invent any fanciful reasons for the decline of silver bullion from $1.32 per ounce in 1870 to 68 cents per ounce in 1896, for, after making all reasonable allowance for the influence of the action of Germany, France and the other States of the Latin Union on the demand for silver—an influence which unquestionably has sent silver lower than it would have otherwise gone—every candid investigator must admit that the most potent cause for this decline must be sought for in the reduced cost and consequent exceptional increase of production.

INCREASE OF DEMAND FOR SILVER.

Indeed, the demand for silver has gone on increasing more rapidly than ever before in the history of the world. In the fifty years before 1860 the world's annual demand for silver and for the arts never exceeded 28,000,000 ounces. Even up to 1865 the the annual average consumption of silver did not exceed 40,000,000 ounces, but in 1890, 1891, and 1892 the average annual consumption of silver reached 125,000,000 ounces, of which 100,000,000 was for the world's coinage alone, more than three times the use of new silver for money in any year before 1873. According to the Director of the Mint, the silver coinage of the world was $135,000,000 in 1893, of which $120,000,000 was from new silver, four times as much as was coined in any year before the war. Mexico in 1893 coined twenty-eight millions; India, thirty-nine millions; Austria, eighteen millions; Japan, twelve millions; the United States eight and three-fourth millions, Great Britain, five millions, and Germany two millions.

Such facts as these, Mr. Speaker, set aside the theory that the fall in silver is mainly due to a decreased demand caused by what is styled hostile legislation, especially our legislation in 1873; and that all that is required to restore silver to its old price and ratio is to open the mints of this country to the free coinage of silver at 16 to 1.

REDUCED COST AND INCREASED PRODUCTION OF SILVER.

Evidently if an important discovery of exceptionally rich mines and of more economical metallurgical processes had not greatly reduced the cost of production of silver and largely increased the supply—in other words, if the conditions of silver mining had continued since 1870 as they had existed for seventy-five years before—silver could not have declined to any considerable extent.

The official statistics of silver production from the report of the Director of the Mint show so clearly the inevitable connection between an abnormal increase of supply accompanying a regular decline in price, in the relation of cause and effect, that I invite attention to them:

Period.	Average yearly production.	Silver per ounce in London.	Period.	Average yearly production.	Silver per ounce in London.
	Ounces.			*Ounces.*	
1800-1810	28,746,922	$1.29	1880-1885	92,003,944	$1.08
1840-1850	25,090,342	1.30	1889	125,830,000	.93½
1855-1860	29,095,428	1.35	1891	137,170,900	*.98
1860-1865	35,401,972	1.34½	1892	152,940,000	.87½
1865-1870	43,051,583	1.32½	1893	161,776,100	.78
1870-1875	63,317,014	1.29	1894	158,000,000	.63½
1875-1880	78,775,602	1.18	1895	158,000,000	.68

*First effects of silver purchases under act of 1890.

This official table presents a metal, mined by human labor, whose annual production for the seventy years from 1800 to 1870 increased from twenty-eight to forty-three million ounces—only 15,000,000 ounces, or one-fourth of 1 per cent per annum—and whose market price in gold during that period did not vary 5 cents per ounce; the most convincing evidence possible that during those seventy years the sources of supply and cost of production must have been remarkably uniform.

On the other hand, this table presents the same metal, commencing with the five-year period ending 1875, with a suddenly increased production of 4 per cent per annum—sixteen times the average rate of increase before 1870—swelling to a higher and higher pace as the years went on, in the face of a steady decline in price of almost 3 per cent per annum on the average since 1875, until in twenty-three years the 43,000,000 ounces of silver produced in 1870 mounted up to 161,000,000 ounces in 1893, all affording the most conclusive evidence of a reduction of cost of production and discovery of richer sources of supply, which rendered a fall of price inevitable.

I am aware that, in order to avoid the logical conclusion from these figures, the claim has been made that the precious metals are not governed by ordinary economic laws, but that their production is speculative and without regard to profit and their price made by law in providing for coinage. It is even seriously contended that on the average the silver which has been produced in this country and in the world in such increasing quantities in the past twenty years, at a price declining steadily from $1.29 in the five-year period ending 1875 to $1.08 in the five-year period ending in 1885, 93¾ cents in 1889, 87½ cents in 1892, 78 cents in 1893, and 68 cents in 1895 cost the silver-mine owners $2 per ounce.

It is sufficient to say in reply that while it is true the mining of the precious metals is a peculiarly precarious business, in which many lose, as is fruit-raising and many other kinds of business depending on the uncertain bounties of nature, yet it is pursued for profit, like all other industries, and not for amusement. To argue that the shrewd business men of Colorado, Montana, Idaho, and the other mining States have gone on doubling, yes, quadrupling, their output when they were really losing money by wholesale is to talk nonsense.

Certain it is that when there are thousands of capitalists and mine owners standing ready, as they have in the last fifteen years to furnish the world with all the silver it will use—more than twice as much per capita as it ever used before 1870—at less than $1 per ounce, so eager, indeed, that they have been constantly enlarging their production at a lower price, it is impossible by law or any other device to increase the price to $1.29 per ounce. Why so many men, who are sensible in everything else, should think it practicable by law to make 16 ounces of silver equal in value to 1 ounce of gold, when the tens of thousands of silver producers in the world would consider they had struck a bonanza if they could exchange 24 ounces of silver for 1 ounce of gold, and would come under bonds to largely increase their production in the future at such a figure, is one of the inexplicable phases of the "fiat" money delusion which now and then breaks out in periods of business depression. It evidently presents a case where the obvious fact that the law can exert a moderate influence on the price of one of the precious metals by increasing the demand for it for coinage is accepted by surface thinkers as conclusive evidence that the law, by its mere "fiat," can add to or even create value without limit.

An exaggerated idea of the influence on price of the demand for either of the precious metals under free and unlimited coinage has prevailed because of the fact that the great increase of production of gold between 1850 and 1865 caused a decline in gold, estimated not exceeding 10 to 15 per cent, and a divergence of only 5 per cent from the old bullion ratio of gold and silver. It is the opinion, however, of such authorities as Professors Fawcett, Cairnes, and Jevons, who have carefully examined all the facts, that this comparatively small disturbance, caused by the sudden increase of production of gold between 1850 and 1865, was not so much due to the compensatory influence of international bimetallism as to the great impetus given international trade by the Crimean war, and the opening up of new continents, and the tendency of the commercial world, then well under way, to use more gold and less silver as money, because of the greater convenience of the former in the large transactions of modern commerce, at a time when silver production was stationary and relatively small.

IMPOSSIBILITY OF BIMETALLISM NOW WITH FREE COINAGE AT 16 TO 1.

Mr. Speaker, the evidence that silver has greatly declined in the past twenty years is so conclusive that, in order to avoid the logical consequences, the advocates of the free and unlimited coinage of silver at 16 to 1 by this country alone insist that this is a decline only in appearance, only as measured in gold, and that what seems to be a decline of silver is really a rise of gold.

It is strange that it does not occur to these 16 to 1 advocates that such an explanation, even if it accorded with the facts, would not in the least modify the impracticability, not to say absurdity, of their scheme to declare by law that 16 ounces of silver are equal in

value to 1 ounce of gold, when in every market of the world 1 ounce of gold will buy 30 ounces of silver.

If it were true that the present divergence from the ratio between silver and gold that existed twenty years ago has been entirely caused by the rise of gold—which is not the case—that situation might justify gradual reduction of the weight of the gold dollar one-half in order to make the gold dollar one-thirtieth of the weight of the silver dollar, and thus to accord with the bullion ratio, but it would furnish no justification for attempting the free coinage of the silver dollar by the side of the gold dollar of one-sixteenth the weight, when such a gold dollar would be twice as valuable as a silver dollar.

THE EXPERIENCE OF FRANCE AND OTHER COUNTRIES.

Mr. Speaker, the last resort of those who, shutting their eyes to the developments of the past twenty-five years, insist that all that is necessary to make 16 ounces of silver equal in value to 1 ounce of gold the world over, notwithstanding 30 ounces of silver are only the equal of 1 ounce of gold to-day, is for the United States to repeal the legislation of 1873 and open its mints to the free and unlimited coinage of silver at 16 to 1 of gold, is to appeal to the example of France between 1800 and 1872. It is said that France preserved the ratio of 15½ to 1 between silver and gold for eighty years by simply keeping her mints open to the equal and unlimited coinage of silver at this ratio.

The conclusive answer to this assumption is, first, that, as I have already shown, between 1800 and 1865 the production of silver was so uniform (not exceeding 29,000,000 ounces per annum until 1861 and 35,000,000 until 1865) that this fact itself, entirely regardless of other considerations, made material variations of the price impossible, whereas now we have to deal with a sudden increase of production of silver to 160,000,000 ounces in 1893; second, that France was only one of many European nations that opened their mints to the equal and unlimited coinage of silver during that period at substantially the same ratio; and third, that even in spite of both of these conditions combined silver did vary in price more than 5 cents per ounce at different times during this period.

And when in 1872, 1873, and 1874 the changed conditions in silver production began to throw on the market a gradually and abnormally increasing product of silver, France and the four other nations in the Latin Union—Belgium, Switzerland, Italy, and Greece—threw up the sponge, admitted their inability to cope with the increased product and maintain the old coinage ratio, and closed their mints to any further coinage of private silver at a time when the product was less than half what it is now.

Surely, if France and four other nations of Europe could not cope with less than half the product of silver by unlimited coinage, what, with twice the product—and mines ready to quadruple the product if the price should reach $1 per ounce, to say nothing of $1.29 per ounce, required by the ratio of 16 to 1—could be expected from the United States alone now opening its mints to the world's silver at such a ratio?

I am amazed, Mr. Speaker, that anyone should come to seriously believe it possible for the United States to successfully grapple with the existing silver situation by opening its mints to the free and unlimited coinage of silver at 16 to 1 without going with headlong speed to silver monometallism.

EXPERIENCE OF UNITED STATES.

Even the experience of the United States between 1792 and 1861 affords most important instruction as to the limitations of the compensatory principle of bimetallism through the alternative demand caused by the workings of equal and unlimited coinage, which, as I have already said, is the extent of the influence of monetary laws on the value of either silver or gold.

In 1792, after an investigation by Hamilton as to the bullion ratio of gold and silver, the United States adopted a coinage ratio of 15 to 1. It was soon found that there was a slight divergence of about 2 per cent in this coinage ratio from the actual bullion ratio in the markets, gold being undervalued. The result was that in the forty years between 1793 and 1833 less than ten millions of gold were coined, including recoinage, while over forty millions of silver were coined and recoined. Of the one hundred and forty millions of specie estimated by Gallatin to be in the United States in 1833, not over five millions were in gold. During these forty years silver was the actual standard of value.

Finding that even with this small divergence between the coinage ratio and the bullion ratio the compensatory principle in free coinage of both metals would not offset the margin, Congress in 1834 readjusted our coinage laws and made the coinage ratio 16 to 1. This proved to undervalue silver about 2 per cent, in consequence of which silver began to be withheld from coinage. In the twenty years between 1834 and 1854 nearly two hundred and fifty millions of gold was coined and recoined, while, with this slight divergence of the coinage ratio from the bullion ratio, less than thirty-five millions of silver was coined and recoined. Indeed, the silver coined was so rapidly withdrawn from its use as money because it was worth 2 per cent more as bullion that in 1853, in order to secure sufficient fractional silver for small payments, Congress reduced the amount of silver in the half dollars and smaller silver pieces and made them token coins. And from 1853 to 1861, while over two hundred and sixty millions of gold was coined and recoined, the coinage and recoinage of full legal-tender silver was less than $1,000,000. Indeed, of the two hundred and fifty millions of specie estimated by the Secretary of the Treasury to have been in the country at the beginning of 1861, probably not over ten millions was full legal-tender silver. From 1834 to 1861, while the legal standard was both gold and silver, yet the actual standard was the gold dollar; and the actual standard from 1861 to 1879, when specie payments were resumed, was the depreciated greenback dollar—both silver and gold being withdrawn from use as money and selling as merchandise at a premium during this period in accordance with the well-known monetary law by which the least valuable full legal-tender dollar takes the entire field of circulation and becomes the actual unit or standard of value regardless of what may be the legal unit, while the more valuable dollar goes to the melting pot.

Certainly such an experience as that of our own country in establishing by law a coinage ratio only 2 per cent divergent from the bullion ratio ought to satisfy any inquirer of the futility of the attempt to maintain bimetallism with a coinage ratio 50 per cent divergent from the bullion ratio.

THE EXAMPLE OF MEXICO.

But we need not speculate. We have at our doors a country which has for years opened its mints to the equal and unlimited coinage of silver at 16½ to 1 of gold. I refer to Mexico. Has Mexico been able to keep both gold and silver as its redemption money and its circulating medium? In short, has Mexico made itself a bimetallic country? Has Mexico made her silver dollars as good as gold? I pause for a reply. No one answers, because you all know that Mexico, under this policy, has become a silver monometallic country on a silver basis, without any gold in the country as a part of its money. Instead of increasing its redemption money it has driven out every dollar of gold and has nothing but silver dollars whose power of redemption or purchase is only half that of gold. Instead of dollars equal in value to gold she has dollars worth only half as much as the dollars of this country are worth. Indeed, an American silver dollar, coined on the account and for the profit of the Government and maintained by our Government at par with gold by limitation and indirect redemption, can be exchanged for two Mexican dollars, and will purchase twice as much in Mexico or here as a Mexican dollar will buy.

Worse still, when Mexico exports any of its products it sells them at the gold price abroad, and when it imports anything from abroad it buys at the gold price abroad and then has to double the price at home, and is subject, either when exporting her own products or importing products from abroad, to an extra charge for the risk of further depreciation of her uncertain silver standard.

And it must be of interest to wage earners to learn that labor in Mexico and other silver-standard countries has not risen as fast as the silver dollar has diminished, so that one practical effect of the free coinage of silver at the ratio of 16½ to 1 has been to greatly injure the workingmen of that country. On the other hand, in this country, on a gold standard, the wages of labor increased 61 per cent between 1860 and 1892; and 15 per cent, estimated in gold, and 25 per cent, estimated in purchasing power, between 1873 and 1892.

THE ARGUMENT SUMMED UP.

Mr. Speaker, I might close the discussion here of the practical question presented, viz, whether free and unlimited coinage of silver at the ratio of 16 to 1 by this country alone would give the United States what the people understand by bimetallism—both gold and silver as redemption money—for, as I have already said, it receives its chief support from the impression which has gone abroad that it would secure this result. I have shown that the adoption of this policy would not give us bimetallism but, on the contrary, silver monometallism and a silver standard and basis without a dollar of gold in our currency, and for the following, among other reasons:

First. Because bimetallism, or gold and silver as money under free and unlimited coinage of both at a ratio which secures the concurrent circulation of both, is possible only when the coinage ratio is approximately the same as the bullion ratio, and this proposition is to make the coinage ratio 16 to 1 when the bullion ratio is 30 to 1.

Second. Because every authority in bimetallism in Europe and in this country, outside of politics, holds that such a course on the part of this country alone, or any other country alone, would inevitably result in failure, and speedily bring the country attempting it to silver monometallism, for the reason that the compensatory influence of the alternation from the cheaper to the dearer metal, which is the basis of the bimetallic idea, never in theory or

practice was claimed to cover a fraction of the divergence which now exists from the old ratio.

Third. Because the existing divergence from the old ratio of 16 to 1, after making all due allowance for the effect of the closing of European mints, is clearly due largely to a reduced cost of production and abnormal increased yield of silver now continuing for more than twenty years, causing such a marked change of existing conditions of production of silver and gold that it necessitates a readjustment of the ratio, not by our nation alone, but by concurrent action of the leading commercial nations.

Fourth. Because, even if this divergence from the old ratio has been entirely caused, as some claim without good reason, by a rise of gold, this would not change the impracticability of one nation alone undertaking free coinage at the old ratio or the necessity of concurrent action by the leading commercial nations in fixing a ratio and reopening their mints.

Fifth. Because the experience of this country, the experience of France, and the present experience of Mexico all show the impossibility of one nation alone undertaking under present conditions the free and unlimited coinage of silver at the ratio of 16 to 1 without driving out gold and bringing itself to silver monometallism.

Important, Mr. Speaker, as I regard the establishment of true bimetallism, these considerations make it clear that the only safe and practicable method of reaching it at present is by continuing to press other leading commercial nations to unite with us in fixing a common coinage ratio that can be maintained by all and that will secure both gold and silver in the redemption money of the commercial world, and that the adoption of the plan of having this country alone open her mints to the free and unlimited coinage of silver at 16 to 1 would make bimetallism impossible and rapidly carry us to silver monometallism.

THE FIAT CHAMPIONS OF FREE SILVER AT 16 TO 1.

Mr. Speaker, although this conclusion must on reflection be accepted by all friends of true bimetallism who have been inclined to adopt free coinage of silver by this country alone at 16 to 1, yet it will not be accepted by those who adopt the "fiat" theory of money, and who favor free silver at 16 to 1 as they favored irredeemable greenbacks, because they think they see in the scheme a realization in part of their favorite idea of a cheaper dollar, not in the sense of a cheaper price (rate of interest) for its use, but cheaper in the sense that it will have less real value or purchasing power. With these gentlemen a cheaper dollar of silver is only a halfway station on the road to still cheaper ideal dollars of paper that cost nothing but paper and printing.

These gentlemen frankly admit that they are opposed to "international bimetallism," for that would not give them the depreciated dollar they seek.

They are not bimetallists, but silver monometallists, and look at cheaper silver only as a stepping stone to something cheaper still.

Thus the desire for a cheaper dollar and the blind antagonism to gold because the commercial world regards it as the standard money have led the "fiat" money advocates, notwithstanding their claim that more money is needed, to overlook the fact that free coinage of silver at 16 to 1 by this country alone must reduce rather than increase the volume of full legal-tender coin by driving out gold and diminish the exchangeable value of both silver and paper. For while our present monetary system is one that needs thorough revision, and while we earnestly seek the establishment of true bimetallism in every practicable way, yet the system we now have is not gold monometallism, but a limited bimetallism, under which six hundred millions of gold, four hundred and twenty-five millions of full legal-tender silver, together with one hundred and thirty millions of silver represented by one hundred and thirty millions of full legal-tender Treasury notes, three hundred and forty-six millions of greenbacks, and two hundred millions of national-bank notes, in addition to seventy-five millions of fractional silver, all maintained at a parity with gold, constitute the volume of our outstanding currency—twice as much per capita as before the war, 25 per cent more than any leading commercial country in the world except France, whose per capita is more only for the reason that France has but few banks and her people are not accustomed, as are other commercial nations, to the general use of substitutes for money like checks and bills of exchange. For checks, bills of exchange, and other substitutes for money, employed to such an extent in countries having extensive banking facilities, are more convenient and as effective as coin or other forms of money in making exchanges and deferred payments and have the same influence on prices as either.

THE APPRECIATION-OF-GOLD EXCUSE.

Recognizing the seriousness of a step which would not only deprive us of gold as money, but would also depreciate our dollar one-half and place us on a silver standard, thus dislocating our export and import trade and suddenly changing the price of every article in this country and the basis of our immense domestic trade—as the free and unlimited coinage of silver by this country alone at the ratio of 16 to 1 inevitably would—the "fiat" money advocates have seen the necessity of justifying such a revolutionary step on some ground that affords a plausible defense. Accordingly they have set up the plea that the silver dollar to-day has really the same value that it had twenty-five years ago; but that the gold dollar, which measures the price of silver as well as everything else, has doubled in value, and thus reduced prices one-half and doubled debts contracted twenty-three years ago.

But, as I have already said, even if this were true—which it is not—it would not afford the slightest excuse for discarding gold as our unit and standard of value, and thus breaking our monetary tie with the commercial world, whose standard of value is grains of gold, in order to depreciate our dollar. Reduction of the weight of the gold unit, even if this state of facts existed, would depreciate the dollar just as effectually as the adoption of the silver standard would, but would still leave us in touch with the standard which makes the world's prices and finally determines our prices, and at the same time would give us gold as well as silver as our money, while the adoption of free coinage at 16 to 1 by this country alone would not only carry us to a silver standard but would also deprive us of gold.

But the assumption of the "fiat" money advocates that silver has been stationary and the wide divergence of silver and gold from the old ratio of 16 to 1 has been caused solely by the appreciation of gold is without foundation, as has been clearly proved by the statistics of silver production which I have already cited. While gold is the nearest stable in value of any known substance, according to the consensus of opinion of every scientific authority, yet it varies somewhat in value under the influence of supply and demand. There is no doubt that gold declined somewhat (probably from 10 to 15 per cent) between 1850 and 1865 under the influence of the increased production of California and Australia, although this decline was counteracted in part by the increased demand caused by the great extension of commerce following the Crimean war and by the increasing tendency on the part of advanced commercial nations to use more gold and less silver; and it is probable that gold appreciated between 1870 and 1890 about the same that it depreciated in the first period in consequence of increased demand. At least Professors Fawcett, Cairns, and Jevons, probably the highest authorities on the subject, conclude that the appreciation in the latter period and the depreciation in the former period substantially offset each other, and that in consequence of the rapidly increasing production since 1890 it is doubtful if there has been any rise of gold since, and that the probabilities favor the view of a movement in the near future in the opposite direction.

Director of the Mint Preston calls attention to the fact that the world's annual production of gold, after rising to $134,000,000 in the five-year period ending 1860 and falling but slightly below up to 1870, and then running along slightly above the one-hundred-million mark up to 1890, rose in 1891 to one hundred and thirty millions and increasing from eleven to sixteen millions regularly each year thereafter, culminated in 1895 with two hundred and three millions (probably two hundred and fifty millions in 1896), which was sixty-nine millions more than the highest yield in any year of the Californian and Australian period, and more than the output of both gold and silver in any year previous to 1873. Mr. Preston estimates the world's consumption of gold in the arts at sixty millions, which leaves one hundred and forty-three millions of the annual product to be added to the store of gold devoted to monetary uses, which is estimated at four thousand millions, with about the same amount of silver set apart for similar purposes. As Professor Fawcett states that Great Britain, which engrosses so large a share of the world's commerce, requires only fifteen millions of new gold annually to meet her monetary wants, it is easy to see that, with the supply of gold already in sight, we have already passed the point of its appreciation, and that the rise of gold between 1870 and 1890 caused but a small part of the divergence from the old ratio to silver of 16 to 1. The chief cause of the divergence must be ascribed to an actual decline of silver.

THE FALL OF PRICES.

Mr. Speaker, probably no argument has had so much influence in support of the view that silver has not really declined in value in the past twenty years as that derived from the fall of prices. The inevitable fall of prices of all articles whose production has been cheapened by labor-saving devices has been exaggerated by selecting as a basis of comparison the exceptionally high prices of 1873, when we had only partially recovered from the inflation and boom of war, and an erroneous impression as to the movement of prices of agricultural products as a whole given by dwelling upon two articles (cotton and wheat) which have been subject to exceptional influences. And the erroneous impression thus created has been further exaggerated recently by using the exceptionally low prices of the past three years of industrial and business depression as if they represented a permanent rather than temporary situation.

Fortunately we have the report of an official investigation made by Labor Commissioner Wright, under direction of the Senate Committee on Finance, as to the movement of prices and wages in this country between 1840 and 1892, which will serve to correct much of the misinformation that finds so ready acceptance in times of business depression. Commissioner Wright's tables take the year 1860 as the basis of comparison, and assigns the index number 100 as the average prices and wages of that year, selecting 223 leading articles for investigation, and increasing or reducing the points each year according as the investigations indicate the comparative average prices and wages. I give below enough of these figures to indicate the changes of average gold prices and wages for the years named, adding thereto the London price of silver:

Average gold prices and wages ascertained by Commissioner Wright.

Year.	Average prices.	Average wages.	Average price silver per ounce.
1840	116.8	87.7	$1.32
1843	101.5	86.6	1.29⅛
1847	106.5	90.8	1.30⅛
1849	98.7	92.5	1.31
1851	105.9	90.4	1.33⅛
1856	113.2	99.2	1.34⅛
1860	100	100	1.35⅛
1866	136.3	108	1.34
1870	117.3	133.7	1.32⅛
1873	122	148.3	1.29⅛
1875	113	140.8	1.24⅛
1878	99.9	140.5	1.15⅛
1879	96.6	139.9	1.12⅛
1880	106.9	141.5	1.14⅛
1882	108.5	149.9	1.13⅛
1886	91.9	150.9	.99⅛
1889	94.2	156.7	.93⅛
1891	92.2	160.7	.98⅛

Observe the almost universal disregard of the price of silver shown in the movement of prices as a whole. Prices fell more than 16 points in the twenty years between 1840 and 1860, with silver a little higher in 1860 than in 1840 and entitled to free coinage all the time. Pray what caused this decline of prices? Surely not the fall of silver or the appreciation of gold.

On the other hand, prices as a whole fell only 7.8 points in the thirty-one years between 1860 and 1891, notwithstanding silver declined 36⅛ points and gold appreciated probably 10 points.

Is it not clear that something besides the movement of gold and silver was the potent factor in determining prices, and that this "something" was the diminished cost of production through labor-saving devices, etc.?

This table exhibits the absurdity of selecting the prices of 1873 as the basis of comparison, because that is the date of the legislative "crime" selected by the "fiat" advocates as the cause of falling prices. Why take 1873 as the initiative of falling prices, when war prices began to fall not in 1873 but in 1866? The fall in prices between 1866 and 1873 was 14⅛ points, during all which time silver was at a premium over gold and was entitled to free coinage—a fall three times that from 1879, when specie payments were resumed, to 1892. Surely the silver excuse will not explain the fall in prices between 1866 and 1873. Of course candid investigators must admit that the abnormal rise of 36 points in prices from 1860 to 1866, and the abnormal fall of 36 points between 1866 and 1878, simply represent the boom of inflation and war on the one hand and the gradual rebound during the process of readjustment of industrial conditions to a peace basis. And whoever selects prices between 1861 and 1878, or between 1893 and 1895, as a basis for the study of the normal movement of prices will either deceive himself or those whom he addresses.

The more detailed tables of Commissioner Wright show that the prices of agricultural products, as a whole, rose 2 points between 1860 and 1891 in the commercial centers, and outside of cotton and wheat rose much more; and that, too, notwithstanding the cost of transportation from the farm to the great markets has been greatly reduced. Indeed, an investigation of prices of agricultural products in Maine, where neither cotton nor wheat is grown to any extent and where farm products are sold at home, shows that they rose 28 per cent between 1858 and 1892, notwithstanding silver fell 36 points while the prices of the non-agricultural products (generally machine-made articles) which the farmer buys declined over 25 per cent. A little investigation would satisfy those Southern and Western farmers who listen to fanciful suggestions of mischievous monetary legislation as a remedy for low prices that the true remedy is such a diversification of industries as will give farmers a home market for varied products at good prices, instead of a short-sighted concentration on cotton and wheat for which markets must be secured at long distances from the farm, where the cost of transportation practically reduces, to that extent, the return of the farmer.

While the variation in the value of gold, which is the standard or measurer, affects prices somewhat, yet the annual variation is so small as to have little effect. The potent factor which modifies prices is cost of production. Where production is mainly by hand labor the rise of wages, which has been so constant in this country for years, tends to increase the price; but where the production admits of labor-saving devices the invention of new and improved machinery and the improvement in methods diminishes the amount of manual labor more than wages are increased, and the result is a lower cost of production and consequently lower prices.

Thus we find that while manufactured products have fallen in price an average of 25 per cent—some articles, like steel, wire nails, steel rails, and kerosene, 80 per cent—the great mass of small products of the farm, cultivated mainly by hand labor, beef, pork, and many other articles, have risen 25 per cent since 1860; and the average decline of all prices between 1840 and 1860 was 16⅛ points; between 1860 and 1892, 7⅛ points; and between 1879 and 1892, 4⅛ points. And looking more closely at the movement of prices between 1879 and 1892, we find that prices rose 8⅛ points between 1879 and 1882; fell 16⅛ points between 1882 and 1886; rose 2⅛ points between 1886 and 1889; and again fell 2 points between 1889 and 1892—the variations marking the changes of condition of the crops and of the general state of business and the slight trend downward indicating the irresistible tendency of competition to stimulate labor-saving devices and more economical methods and curtail profits.

PRICES OF COTTON.

I have spoken of cotton and wheat, especially the former, as standing out as exceptions to the general trend of improvement in prices of agricultural products between 1860 and 1892. It is for this reason that they are always selected by the "fiat" money advocates as object lessons for the peculiar kind of instruction in which they delight, the exceptional boom prices of 1873 always being selected as the basis for comparison. The prices of corn, beef, pork, etc., and the prices of farm products before the war are rarely alluded to, as would be necessary if the object was to ascertain the whole truth, because they tell quite another story.

It would be amusing, if it did not result in deceiving the public, to hear one of these "fiat" money advocates gravely quoting 20 cents as the price of cotton in 1873 (the year of "the crime of crimes," you know) and then proceed to expatiate on the fall since, as if he did not know that the price of 20 cents (gold, 18 cents) in 1873 was an abnormal one due to the sweeping destruction of industries in the South by the war, which did not fully recover their normal condition until later. Why do not the gentlemen who make so much of the fall of cotton from 1873 also declaim about the fall of cotton from 43 cents in 1866 to 20 cents in 1873, when silver was at a premium and entitled to free coinage by law? Pray, did not the same causes that made cotton decline between 1866 and 1873 also make it decline between 1873 and 1879?

The statement sometimes made in defense of the stability of silver, that an ounce of it will buy as much of anything as it ever would, and no more, even if true, would only show that silver, instead of being stationary, had been subject to the law of diminishing cost, instead of being stable. The fact is that an ounce of silver will not buy as much of any agricultural product (except cotton and wheat) as it would in 1860. Neither will it buy as much of any manufactured product except the few articles whose cost of production has been reduced one-half by improved machinery. It is inevitable that if the standard of value is stable—as it should be, at least as near as possible—the prices of all articles into whose production labor-saving machinery enters in constantly increasing measure will fall, while the prices of those articles into whose production labor-saving machinery does not materially enter will either remain stationary or rise, if wages rise. And the claim that silver as a unit or standard of value would have averted present falling prices for cotton, cloth, iron, steel, wire nails, and other manufactured products is simply a confession that it is utterly unfit to measure values.

The simple fact is that cotton varied before the war from 5⅛ cents in April, 1843, 8 cents in 1848, 7⅛ cents in 1849, 12 cents in 1850, 9⅛ cents in 1852, 11 cents in 1853 and 1854, 10⅛ cents in 1855 and 1856, 13⅛ cents in 1857, and 12 cents in 1859 and 1860, at a period when the cotton seed was a waste product; and after the full reestablishment of Southern industry varied from 11 cents in 1879, 11⅛ cents in 1880, 12 cents in 1881, 11⅛ cents in 1882 and 1883, 10⅛ cents in 1884, 10⅛ cents in 1885, 9⅛ cents in 1886, 10⅛ cents in 1887 and 1888, 10⅛ cents in 1889, 11 cents in 1890, and 8⅛ cents in 1891—an average substantially the same in the twelve years before the war and the twelve years beginning with 1879, when the cotton seed was utilized so as to yield a large return and thus practically reduce the cost of production. In 1891 and 1892 the price went down to 8⅛ cents and 7⅛ cents, almost exactly what it was in 1848 and 1849, and in 1894 and 1895 went abnormally low under the influence of enormous crops, the fruit of the bad policy of putting industrial eggs into one basket instead of distributing them and

the influence of the general demoralization of business the past two years, but in the past year it has risen 25 per cent over the price of 1895.

PRICES OF WHEAT.

The fall in the price of wheat has been greatly exaggerated by selecting the quotations of the inflation and boom period between 1862 and 1878 and of the New York or London market, distant from the point of production, in consequence of which the great reduction in cost of transportation has been made to appear as a decline in the price realized by the farmer, when, as a matter of fact, this reduction is not a loss to the producer, but a gain to the consumer. Since 1868 there has been a reduction of 25 cents per bushel in the cost of transportation of wheat from the West to New York, and more than this from the farm, not in consequence of fall of silver or appreciation of gold, but solely because of the improvement of means of communication.

Taking the quotations of spring wheat in Chicago—the great market nearest the wheat fields and therefore the market where the effect of reduction of cost of transportation will be partly eliminated—as I find them given in Commissioner Wright's report for each year from 1840 to 1891, I find that the price between 1878 and 1891—fourteen years—averaged 93 cents per bushel; the highest price being at $2 at one time in 1888 and the lowest 69¼ cents on one day in 1884 and 77 cents in 1878. The average price in 1891 was $1 and in 1892 81 cents. On the other hand the average price of wheat at Chicago between 1846 and 1860—the same number of years—was 82 cents. The average price between 1840 and 1846 was only 67 cents, frequently falling to 50 cents. Indeed, wheat fell at one time in 1861 to 55 cents, and all this time silver had free coinage by law and did not fall below $1.30 per ounce. The following average price of spring wheat in Chicago from 1878 to 1892, taken from Commissioner Wright's tables, with the price of silver for each year, ought to open the eyes of those persons who have swallowed the theory that the price of wheat depends upon the price of silver:

Year.	Price wheat.	Price silver.	Year.	Price wheat.	Price silver.
1860	$0.90	$1.35¼	1885	$0.82½	$1.06
1878	.90½	1.15½	1886	.77	.99½
1879	1.07½	1.12½	1887	.80	.97½
1880	1.09	1.14½	1888	1.36	.94
1881	1.18	1.13½	1889	.92	.93½
1882	1.15½	1.13½	1890	.91	1.04½
1883	1.01½	1.11	1891	1.00	.98¾
1884	.80½	1.11	1892	.81	.87½

Observe the fact that wheat in 1860, when silver was $1.35¼, was slightly lower than wheat in 1889, when silver was 93½, and also that wheat in 1888 was $1.36, with silver at 94, and only 80½ cents in 1884 with silver at $1.11. Wheat rose in 1879, 1881, 1885, 1887, 1888, and in 1891, notwithstanding silver fell; and wheat fell in 1883, 1886, 1889, and in 1892, when silver happened to fall. It is so clear that the rise and fall of wheat are due to other causes that it is astonishing anyone should attempt to impose upon a credulous public, and especially to base a scheme to put the country on a silver basis, on such an assumption.

The methods by which a class of agitators seek to make farmers believe that the price of agricultural products is bound up in the price of silver is, as I have already said, not only by taking the exceptional articles of wheat and cotton, but by giving the highest New York price (not Chicago price) for one day—not the average price for the year—in depreciated currency in the period from 1873 to 1878, when we had only partly settled down from the boom of war. I have before me a pamphlet published by the agitators for a silver basis, and extensively circulated, in which they give the price of wheat in 1874 as $1.35 (which it did reach on one day), when the average price in Chicago was $1.05; and when the pamphlet gets down to 1892 and 1893 it selects, for purposes of comparison, the lowest price on any day. Of course such a dishonest presentation to the people of an important subject is a confession that the truth will not serve their purpose.

By taking advantage of the exceptionally low prices which have prevailed for wheat as well as everything else in the industrial and business depression of the past three years—a period in which the shrinking of the consuming power of the people, and consequently the demand for products, by well-known causes having no relation to silver, has forced prices temporarily below the paying point—these agitators have created the impression that the cause of our industrial ills is to be found in the decline of the price of that metal, and that the remedy is to depreciate our unit or standard of value.

While the decline in the price of wheat, setting aside the exceptional period from 1862 to 1878 and the present depression, has by no means been so much as represented, yet there is no doubt that the tendency has been for several years to lower prices, although, of course, short or abundant crops always cause great variations of price. Whatever effect the silver situation has had on the decline, even on the theory of the advocates of silver monometallists, has been due entirely to the fact that India, one of the competing wheat-growing countries, is on a silver basis, in consequence of which it has been possible for Great Britain to buy silver at a discount and use it in purchasing wheat in India at a price which afforded an extra discount to the purchaser, and therefore tended to force wheat lower than it would have been if India's currency had been on a low basis. It is surprising that those who present this as a reason why wheat growers in this country should favor a silver basis here do not see that such a fact is a strong argument for us to maintain our currency on a gold basis, making our silver equal to gold, for the reason that a silver basis would place us at the same disadvantage as to the real price obtained for our wheat that India now is. While true bimetallism—that which would give us both gold and silver equal in value to gold—would be of great advantage, silver monometallism and a silver standard would place us where India and Mexico are.

The chief causes for the declining tendency of wheat, unlike the tendency of most agricultural products, outside of the great reduction of cost of transportation, are to be found in the rapidly increasing competition of Argentina, India, Russia, and other countries, and in the fact that wheat has been cultivated in the great Northwest in recent years with so little hand labor and so extensive a use of labor-saving machinery and on so large a scale as to introduce economizing methods.

The fact that neither corn (a more important crop than wheat), bacon, lard, pork, beef, butter, eggs, hay, potatoes, nor most other agricultural products has declined on the whole since 1860, or even 1878, shows conclusively that exceptional causes have affected wheat and cotton, for if the decline of wheat and cotton had been caused by a fall of silver and appreciation of gold, then there would have been a similar decline of other farm products. The following movement of prices of many farm products since 1878, taken from the report of the Bureau of Statistics, which gives New York prices, will serve to emphasize this conclusion:

Year.	Corn.	Bacon.	Lard.	Pork.	Beef.	Butter.	Eggs.
1879	47	6.9	7	5.7	6.3	14.2	15.5
1882	66	9.9	11.6	9	8.5	19.3	19.2
1885	54	9.2	7.9	7.2	7.5	16.8	21.5
1889	47¼	8.6	8.6	7.4	5.5	16.5	13.9
1892	55	8.1	7.2	6	5.7	16	18

In the report of the Statistician of the Agricultural Department for 1894 the following average prices on the farm or at the nearest local market for wheat, corn, and oats from 1880 to and including 1894 fully substantiates the view that there has been no such general decline of prices of farm products as would indicate an appreciation of the dollar measurer. We call attention to these statistics, indicating that wheat and cotton are the only articles that have fallen:

Year.	Wheat.	Corn.	Oats.
1880	$0.95	$0.39½	$0.36
1881	1.19	.63½	.46½
1882	.88	.48½	.37½
1883	.91	.42½	.32½
1884	.64½	.35½	.27½
1885	.77	.32½	.28½
1886	.68½	.36½	.29½
1887	.68	.44½	.30½
1888	.92½	.34½	.27½
1889	.69½	.28½	.23
1890	.83½	.50½	.42½
1891	.84	.40½	.31½
1892	.62½	.39½	.31½
1893	.53½	.36½	.29½
1894	.49	.45½	.32½

The average price of corn (which is the most important farm crop) was 39½ cents between 1879 and 1889, and 42½ cents between 1889 and 1894.

The average price of oats in the first period was 31 cents, and in the second period 33 cents. The value of the oat crop was about the same as that of the wheat crop.

I notice in the "fiat" publication to which I have alluded that even the decline in wool is referred to as having been brought about by a decline of silver, when the fact is that wool has fallen 11 cents in this country since 1892 because, first, of anticipation and then as a realized result of the removal of the 11 cents duty on wool; and the decline before that period in the price of wool in the world's markets was due to the increase of production in South America, Australia, and South Africa, where sheep do not require to be housed or fed. Wool in London is slightly higher to-day than it was in 1892, but 11 cents lower here.

VALUE AND PRICES.

But, Mr. Speaker, there is an entire misapprehension in many minds as to what prices really are. Price and value are confounded. Value is the relation of one product to all other products; in other words, how much of other products any one product will exchange for. Price is simply the relation of any product to the unit or standard of value; in other words, how much of gold any one product will exchange for. There can not be such a thing as a general fall or rise of values (and value is the essential thing), because so long as products maintain the same relation to each other (all rising or falling together) there can be no change in their value. One product may rise or fall in relation to other products, and this would be a real increase of value of that particular article.

There may be a general fall or rise of prices, caused by a variation of the value of the standard or measure, but this would not be a fall of values. The value of a bushel of corn continues the same so long as it will exchange for the same quantity of other products, although its price may be changed by an appreciation or decline of the standard of value. When the standard of value appreciates and thus causes all prices to fall, this does not change in the least the value of any article (although all bear a less price), for the reason that each article continues to exchange for the same quantity of other products as before.

If, for example, we should listen to the appeals of the "fiat" money advocates who want a "cheaper," that is a less valuable, dollar, and make 50 cents' worth of silver coined into a dollar our standard of value, in order to raise prices, we would find that, in suddenly lifting prices in this deceptive way we had accomplished nothing except to deceive those who had been led to believe that we should have more cloth by cutting the yardstick used in measuring into two parts of 18 inches each, or more money by dividing our measuring dollars into halves. Prices raised by the restoration of confidence, the resumption of industrial operations, and the increase of demand for products are real blessings. Prices raised by depreciating our standard or measures of value give no one more of other products for his corn, or wheat, or pork, or beef, but on the contrary create distrust, and in the end only evil. Who can measure this?

If such a scheme gives us more so-called dollars, those dollars are diminished in purchasing power at least to the extent of their seeming increase in number; for it must be remembered that whatever one produces he sooner or later desires to exchange for what others have produced. Money is only the medium by which the exchange is effected. Indeed, when the money used in exchange is depreciated or of doubtful value, an extra share is always taken by some intermediary, which comes partly out of producer and partly out of consumer, for the risk of change of value during the time required for distribution of products. That standard of value and that money best serves the people which has the largest degree of confidence of the commercial world.

All of our money now, notwithstanding five hundred millions—with that back of the Treasury notes, six hundred millions—of it is silver, is equal in value to gold, and prices are adjusted to this basis so far as the standard of value affects prices. This adjustment has been going on since 1834 with so slight annual changes as in no manner to disturb exchanges. Imagine the tremendous shock that would be given to all our immense business, to all of our exchanges, to all of our markets, by the sudden change of our standard of value from gold to silver involved in free coinage of silver at 16 to 1, and the sudden substitution of a dollar of 50 cents for a dollar of 100 cents as the measurer of prices. And for what possible advantage?

THE DEBT-PAYING EXCUSE.

Mr. Speaker, the only possible benefit that I have ever heard suggested as the result of this tremendous leap in the dark is that "cheaper" dollars would make it easier to pay debts, which of itself is a confession that free coinage of silver at 16 to 1 is not expected to make silver and gold coins of equal value. This is the whole of it. This is the meat in the cocoanut. This is the insinuating argument which reaches thousands, although they may not be ready to confess it.

Of course where there were debts contracted previous to the adoption of free and unlimited coinage of silver at 16 to 1 on the basis of a 100-cent dollar, where 100-cent dollars had been borrowed or purchases had been made at prices measured by 100-cent dollars, the sudden adoption of a 50-cent dollar as the standard of value would give the creditors the legal (not the moral) right to discharge such debts by paying in the new depreciated money—that is, by paying 50 cents on the dollar. From one point of view that would benefit the debtor and injure the creditor to this extent, provided the creditor should not demand payment before the scheme of depreciating the currency could be carried out, as he certainly would.

But the apparent benefit to the debtor would end here. Every new debt contracted and every new purchase made would be on the basis of the new depreciated dollar or standard of value. The probabilities indeed are that the apparent advantage gained by the debtor by this legalized robbery (for discharge of a debt by depreciating the standard of value has not the justification of an insolvent or bankrupt law which relieves debtors who can not pay, for the reason that the former relieves those who are abundantly able to pay as well as those who are not) would in the end prove a curse rather than a benefit by the shock it would give to confidence, which is not only the basis of credit but of commercial prosperity.

Such a deliberate plan to rob creditors so shocks the moral sense that it becomes necessary to invent a seeming excuse for it. And the excuse is that the dollars which the debtor promised to pay the creditor have been increased in value by the appreciation of the gold unit to an extent that justifies their payment in depreciated silver.

Let us see, Mr. Speaker, how much basis exists for this excuse. The highest estimate that any scientific authority makes of the possible appreciation of gold between 1870 and 1890—for such experts believe that there has been no appreciation since—is one-half of 1 per cent per annum, substantially the same as the depreciation between 1850 and 1865. The great mass of deferred payments average about nine months. Certainly there was no material change of the dollar in any one year, or even two years, since the return to specie payments in 1879. And the amount of debts which continue more than two years is proportionately small. At any rate, the existing indebtedness contracted prior to 1890—for since that time it is probable there has been no appreciation of gold, at least none of any importance—is very small outside of the bonded indebtedness of railroads. And in most cases of railroad bonded indebtedness, especially at the West, the bonded debt is practically a perpetual annuity, both roads and bondholders being content with the payment of the semiannual interest. And as the rate of interest is lower than it ever was prior to 1879, this burden on debtors has been reduced instead of increased. Indeed, the fact that the cost of the rent or interest of money (gold or its equivalent) is 25 per cent less than before the war, and less than ever known before, is very convincing evidence that there can not have been any material appreciation of the money itself. The rise or fall of the rental or charge for the use of any form of wealth is a gauge of the movement of the value of the wealth itself.

But it is urged with much vehemence, as a reason for practically repudiating a part of existing indebtedness by depreciating the money, that it requires 2 bushels of wheat to pay a debt where 1 bushel would have sufficed fifteen years ago.

The answer to this insinuating excuse for repudiation is—

First, that while it is true that in consequence of the complete demoralization of business and industry prices have exceptionally fallen during the past three years—wheat and cotton almost alone of agricultural products having fallen since 1879—yet in 1889, 1890, and 1891 1 bushel of wheat would pay more indebtedness than it would have paid in 1860, 1861, 1878, 1884, 1885, 1886, or 1887; and in 1892 1 bushel of corn, 1 pound of pork, 1 pound of butter, 1 pound of bacon, 1 dozen of eggs, and 1 unit of almost any article of farm produce outside of wheat and cotton would pay more indebtedness in Chicago, or even New York, than in 1879, or on the average before the war or since 1879.

Second. That while money, in whose terms all indebtedness must be stipulated, varies but slightly in value from year to year, while products vary much in value—some rising and others falling—so it will happen from the necessity of the case that it requires sometimes more and sometimes less of products to make a deferred payment at maturity than it would have required at the date of the contraction of the debt; yet as the prices of products in the long run are eventually made by the labor cost of production, and permanent falling prices mean simply that machinery and labor-saving devices have been used in larger measure, the ultimate payment of all indebtedness is really made in labor (or fruits of labor); so that the fact that in case of a deferred payment it may happen that more of a particular product is required to pay a certain amount of indebtedness at maturity than would have been required when the debt was contracted is not necessarily evidence that the payment costs more of labor.

Third. That the fact that wages (the compensation paid labor) increased every year from 1860 to 1892—the wages of 1892 having been 60 per cent higher than in 1860 and all deferred payments being ultimately paid in labor—is conclusive evidence that the burden of discharging indebtedness has not been increased as charged, but, on the contrary, lessened from year to year since 1860 and 1878 down to and including 1892.

What has happened since 1892 is exceptional and abnormal, as I have already explained, and furnishes no basis for intelligent comparison.

What I have already said as to the means by which deferred payments are really met is a sufficient answer to the suggestions

of those who never get below the surface of economic and monetary questions, that the magnitude of the indebtedness of our people is such that we can not hope to pay it in gold, but must necessarily pay it in something depreciated. Debts, I repeat, are not paid in gold or money even, but in products, or, in the last analysis, the labor which produces products. It must be assumed that every dollar our people have borrowed abroad or here has been invested profitably; that is, in such a way as to pay the interest charge on it and leave a surplus to the debtor. It must be assumed that those who have borrowed had their means of payment more than proportionately increased by the transaction. When a farmer borrows to obtain means to enlarge or improve his farm; when a manufacturer obtains loans to enlarge his plant; when a business man borrows to extend his facilities for distribution, and when the projectors of a railroad borrow to construct improved means of transporting products to market, it is reasonable to infer that, as intelligent men, the indebtedness which they have incurred will eventually increase their assets far beyond the increase of obligations.

I have no patience with that class of unthinking or reckless agitators who endeavor to arouse prejudices between creditors and debtors, between the men who have loaned their surplus means and the active men who regarded it at the time a great favor to be able to borrow this surplus means and use it in developing the West or the South to the advantage of the whole people.

I have here a pamphlet published by this class of public enemies, the whole burden of which is an effort to arraign the South and West as debtor communities against the East and New England as creditor communities. The unholy and unpatriotic mission of the pamphlet is set forth by a full-page cartoon which represents a well-fed and thriving cow at whose head is pictured the debtor West feeding liberally with the bounties of the farm and getting nothing for its work, while at the other end of the animal sits the creditor East drawing all the milk. The impression sought to be conveyed is that the West is growing poorer and poorer with its commercial and political relations to the East, while the East is drawing in the riches of the West and fattening on the spoils.

If such demagogues, who seek to carry out some selfish schemes by such groundless and unpatriotic appeals to passion and prejudice, could be persuaded to seriously think not only of the unreasonableness of their position but also of its disregard of official facts, they would be ashamed of themselves.

It would be strange indeed if the older sections of our country had not accumulated some surplus capital, not required for their fully developed States, which they would be willing to loan; and if the younger sections, with a rich virgin soil to be tilled and immense resources awaiting development, should not seek and hire this capital in order that the West might grow richer and more populous than it could have otherwise done. For certainly it must be supposed that the sagacious business men and farmers of the West obtained such loans for their own advantage, notwithstanding the demagogues who publish such stuff as I have referred to seem to think that Western financiers were fools. Indeed, a glance at the wealth statistics of the last census shows very clearly that the West has made a good use of the surplus capital which they borrowed at the East. According to the census, the five divisions of the United States increased in wealth between 1880 and 1890 as follows:

	Increase.	Per inhabitant, increase.
	Per cent.	
North Atlantic division (New England, New York, etc.)	21	$23
Western division	200	959
North Central division	60	197
South Atlantic division	110	84
South Central division	70	148

Evidently those who pictured the East increasing enormously in wealth at the expense of the West forgot that the official statistics spoiled their cartoon, for the official evidence shows that the wealth of the West per inhabitant increased forty-five times as much as New England.

They also overlooked the fact that their assumption that the West was exclusively the debtor section of the country and the East exclusively the creditor section is contradicted by the official figures. According to the census of 1890 the per capita State, county, and municipal debt of New England, New York, New Jersey, and Pennsylvania was $26.89; while the similar per capita debt of the 12 Central Western States was only $14.32; and even of the Western States beyond the Mississippi, only $22.09. Even the public debt of Great Britain is $87.79 per inhabitant.

The fact is that there are no distinctively creditor and no distinctively debtor States or classes of citizens. Nearly all of our citizens, outside of our workingmen, who are creditors only, are both creditors and debtors. As a rule, the heaviest debtors are active business men of large wealth. Even bankers are debtors to as great an extent as they are creditors, for they bank on funds lent or deposited with them. The deposits of all the savings, national, State, and private banks, very largely made by workingmen, are over four thousand millions of dollars; and that class of our people would suffer directly more than any other by this proposition to scale down debts by depreciating our money.

Depreciated money means also lower wages and salaries estimated in purchasing power, a reduction of pensions, the overthrow of credit, and general distrust.

THE BEST MONEY FOR ALL.

Mr. Speaker, I have heard it frequently said by way of advocacy of a depreciation of our money that gold—the gold dollar or its equivalent, whether silver or paper—is the money of the rich, and silver—the depreciated silver dollar, as it would be under free and unlimited coinage at 16 to 1—is the money of the poor.

I know of no reason, Mr. Speaker, why the poor should have a less valuable dollar than the rich; no reason why the workingman should receive for his labor a dollar that will buy any less than the dollar paid the rich. All, whether poor or rich, laborers or bankers, are entitled to receive the best money there is—money every dollar of which is equal in value to gold and will purchase as much of the necessaries and comforts of life as the gold dollar.

WOULD A SILVER BASIS BE BENEFICIAL?

Mr. Speaker, it would be a very serious step by one act of legislation to suddenly change the unit and standard of value in this country from a dollar of 100 cents to a dollar of 50 cents and drive gold from our currency, which would be the inevitable and speedy result of the free coinage of silver at 16 to 1 by this country alone.

I know that those who are back of this movement laugh to scorn the suggestion that it would be much of a shower, and even depict in glowing terms the grand results that would follow our discarding the standard of value of Europe and joining Mexico and the South American States and China.

I have here a pamphlet entitled A Silver Basis, published by the American Bimetallic League—the organization that is pushing and molding the 16 to 1 scheme—in which it is affirmed that, as the writer understands the so-called "double standard" which it is intended to adopt, it contemplates not "the constant contemporaneous circulation of both gold and silver," but that "when the silver dollar becomes cheaper than the gold dollar * * * the employment of gold should cease and the entire money service be performed by silver alone"; and in which the idea that there is any purpose to make our money as good as gold is repudiated. And having laid down this platform of silver monometallism, which repudiates bimetallism notwithstanding it is still flippantly called by that name, the writer goes on to argue at length on the alleged advantages of having a silver basis and only silver for metallic money.

Inasmuch as the adoption of the scheme of free and unlimited coinage of silver at 16 to 1 by this country alone means this and nothing more, the so-called American Bimetallic League—whose name should now be changed to Silver Monometallic League, so as to have their name correspond with their real end—is to be congratulated on frankly meeting the real issue involved in the 16 to 1 scheme, viz, whether this country will make silver its sole metallic money and standard of value.

A SILVER BASIS AND FOREIGN TRADE.

After pointing out that the adoption of the silver dollar, worth half as much as a gold dollar, would open the way for the payment of our national debt in such depreciated dollars, and thus save one-half of its amount, notwithstanding every dollar borrowed by the Government was gold, the writer of this American Bimetallic League plea for "a silver basis" goes on to argue that while the adoption of a silver basis on our part might "increase the fluctuations of the rate of exchange" in our trade with the gold-standard nations of the world, whose population is put at 300,000,000, this would be offset by closer trade relations that would come with the silver-basis countries of Central and South America and Asia, including Russia (which is not on a silver but a depreciated paper basis), whose population is placed at 900,000,000, or 800,000,000 deducting Russia. In this estimate of silver-basis countries the pamphlet includes Cuba and Puerto Rico and the British, Danish, and French West Indies on a gold basis; Brazil, which is by law on a gold basis, but, in fact, on a depreciated paper basis, and Chile and Argentina, which are on a depreciated paper basis. So that the only countries on this continent on a silver basis are Mexico, Central America, Venezuela, Colombia, Uruguay, and Bolivia.

I have heard so much in sounding rhetoric of the great trade of silver-basis countries ready to pour into our ports if we would only adopt such a basis that I am pleased to have the opportunity afforded by this silver appeal to contrast it with the volume of our trade with countries on a gold basis. The suggestion that there are two or three times as many people doing business on a silver basis as on a gold basis sounds very enticing until we come to

measure the fact that the barbarous or semicivilized races of the earth said to do business with silver and copper alone have very little production and very little trade comparatively.

I find that in 1893 of our sixteen hundred millions of foreign trade nearly thirteen hundred millions was done with countries on a gold basis, of which seven hundred and sixty-five millions was exports and five hundred and thirty millions imports, and only one hundred and seventy millions with countries on a silver basis, of which only fifty-two millions was exports and one hundred and seventeen millions imports, together with one hundred and fourteen millions with Brazil, Russia, Argentina, and Chile, on a depreciated paper basis.

The proposition of this silver-basis writer, then, is to have this country break its monetary tie with countries with which our foreign trade mounts up to thirteen hundred millions, and to which we sell seven hundred and sixty-four millions of our exports, including nearly all of our agricultural products, and thus increase the friction and expense of exchange, which necessarily to that extent diminish the prices received for our exports, in the glittering and airy hope of offsetting our losses in this direction by our gains in dealing with silver-basis countries, whose trade with us reaches one hundred and sixty-nine millions only, of which only fifty-two millions is exports from this country.

Why, our trade with Great Britain alone in 1893 was six hundred and fourteen millions, of which four hundred and twenty-one millions was exports and one hundred and eighty-three millions imports—more than double the entire foreign trade of the silver-basis countries of the world.

It is only necessary to state the facts, without comment, to show every thinking man how absurd, not to say stupid and reckless, is the scheme to put this country on a silver basis to catch the trade of silver-basis countries.

One of the most serious objections to going to a silver basis is the fact that it would place us not only on a different value basis from the rest of the commercial world, with which most of our foreign trade is carried on, but also that it would place us on a fluctuating silver basis instead of a comparatively stable basis, and this increased fluctuation of exchange would introduce a new element of risk in dealing with us, against which there must be an insurance charge that comes out of the exporter of wheat, flour, pork, bacon, beef, etc., and the importer of foreign products, and is by him transferred to the farmer who grows the grain or the consumer who buys the sugar, coffee, etc.

After all the articles that have been published by bimetallists pointing out the losses to which silver-basis countries are subject by the world's hesitancy to adopt true bimetallism, it would indeed be a strange result if the advocates of free coinage at 16 to 1 by this country alone should succeed in forcing us to a silver basis and to subjection to such losses also.

EFFECT OF SILVER BASIS ON DOMESTIC TRADE.

Mr. Speaker, having considered the arguments adduced in favor of a silver basis in its bearing on our foreign trade, I now desire to examine the assertions of this writer, having the approval of the American Bimetallic (so called) League, that a silver basis would benefit our domestic trade and increase the prosperity of our people.

An important change of a monetary standard, even when it comes comparatively gradually, as it did during the war, and has the increased consumption of war as an offset, is always a serious matter. But the change of the unit or standard of value from the gold dollar, composed of 100 cents' worth of gold bullion, to the silver dollar, containing 50 cents' worth of silver bullion, as proposed by the advocates of free and unlimited coinage of silver at 16 to 1 by this country alone, would come suddenly, and the whole brunt of it would have to be borne by our own people.

Legislation proposing such a great and sudden change in the currency of this country is of far graver import than, I think, is fully appreciated by most of its advocates. The currency of any country is the lifeblood of its commercial existence. Consider for a moment the extent of the commercial transactions of this country into which the value of the legal-tender dollar enters.

The transactions through the national banks alone reach one hundred and twenty billions annually, more than two thousand millions every week, four hundred millions every secular day, forty millions every hour—in all of which the value of the standard dollar is the controlling element. Not a bushel of wheat, not a bushel of corn, not a pound of hay or cotton, not a yard of cloth, not a day's work is sold or bought into which this value does not enter. Surely legislation which proposes to suddenly disturb this value to the extent of 50 per cent should be advocated with bated breath.

Commercial prosperity can only exist under permanent and settled conditions—at least, conditions so nearly permanent that annual changes are reduced to a minimum. And nothing promotes distrust, paralyzes trade, discourages investments, closes avenues of employment, and diminishes wages so effectually as a demoralized and depreciating currency. One of the most graphic of Macaulay's chapters is that in which he depicts the gloom and palsy which brooded over England at the close of the seventeenth century in consequence of the depreciation of the current silver of the Kingdom, caused not by a decreased market value per ounce, as in this case, but by the constant wear and clipping of the coins in use. And yet, in the face of the warnings of the past, we have those who have deluded themselves with the idea that prosperity can be conjured by clipping the dollar by law.

RISING PRICES, ABUNDANT MONEY, AND PROSPERITY.

But we are told that by depreciating the dollar we shall make prices rise, and that rising prices always stimulate trade.

That depends upon what causes rising prices. If the rising prices are caused by increased activity—especially after a season of depression—by the increased purchase and consuming power of the people, then indeed they are healthy and stimulating. Such rising prices are to be sought after by every means at hand, and are in fact the concomitant of a sound monetary system. Unquestionably one of the causes that has aided during the past three years in strengthening the distrust that originated in a disturbance of our economic system, as well as with the inevitable cycles of boom and rebound that accompany the intensity of modern industrial life, has been a growing fear that we might not eventually be able to maintain the stability of our currency.

But rising prices made by clipping the dollar which measures prices—prices which rise only in imagination, only by calling 18 inches a yard and 50 cents a dollar, and never in reality—are a cheat and a lie, and while they may produce temporary intoxication, in the end bring curses rather than blessings.

It must be borne in mind that the accepted quantity theory of money and prices is not, as some persons erroneously suppose, that the volume of outstanding money, but that the volume of circulating or used money, including paper and token, as well as full redemption money, and also such substitutes for money as checks and bills of exchange, makes prices. Money hoarded or unused has no effect on prices. Those persons who think they can raise prices by coining or issuing more money, regardless of the demand for use, without changing the value of each dollar, misunderstand the nature and uses of money. For, however much each of us would like to have more money if we could get it without giving an equivalent for it, none of us is prepared to buy more than we require for use. Every well-adjusted currency system should have provision for an increase in response to a demand; but the demand is in proportion to the activity of business, and activity of business is largely dependent upon confidence, while nothing impairs confidence more than schemes to demoralize and depreciate money.

This is a sufficient answer to the assertion of this "silver-basis" advocate that abundant money, without regard to its quality or whether it is used or unused, and high prices, without regard to whether they are real or apparent, promote national prosperity. Abundant money used, which is only another expression for business activity, is promotive of prosperity. But however large may be the volume of money unused—indeed we never had so large a volume of money outstanding and so large a proportion unused as we have had the past three years—it has not the slightest effect in raising prices (so long as the dollar is not depreciated) or promoting prosperity.

The assumption that a silver basis would give us more money is without foundation. Under free and unlimited coinage by this country alone, for reasons which I have already shown, the value and purchasing power of each coined silver dollar would be in a short time the value of the silver bullion in it—not much exceeding the present value of such bullion. Prices generally would apparently—not really—rise to keep pace with the diminished value of the measurer. Inasmuch as the silver dollar when coined could be no more valuable and have no more purchasing power than the bullion in it uncoined, as is now the case with gold, there would be no inducement to coin silver beyond the demands for business, and to supply the loss of gold. Of course, as the purchasing power of the new dollar would be largely diminished, it would require more of them to do the same business as before. The result would be that with the drop to a silver basis there would for a time be less money than before, and in the end no more abundant money, so far as effectiveness goes, than before. The loss in quality, in stability, in confidence, however, would be incalculable.

UNITY OF NATIONS IN MONETARY RELATIONS.

Mr. Speaker, there is another serious objection to the proposition to abandon the common monetary unit of grains of gold, which has practically been the standard of value of this country since 1834—barring the depreciated paper period—and substitute for it the standard of grains of silver as well as silver monometallism, and this is, that our present standard is not only that of the commercial world but practically the monetary unit to which are adjusted the prices of every market.

It is sometimes asked why the United States should follow the

great commercial nations in adopting grains of gold as the standard of value. Why not have a monetary policy of our own, it is asked, and adopt a more plebeian substance—silver, for example? It might as well be asked, Why slavishly follow the Old World and use steel screw steamships to navigate the oceans? Why not continue the exclusive use of the old wooden sailing vessel, a more plebeian ocean transport, and maintain an independent system of navigation?

The answer is plain. The steel screw steamship has proved to be the best instrument of quick and convenient transportation of persons and most property, although the sailing vessel still continues to do good service in its proper place; and grains of gold have been found to be so much better adapted to the purposes of a standard of value, and so much nearer stable than any other substance, that by common consent the commercial world has made them the world's measurer of value, and will always continue to use silver as money adjusted to this standard. And any country that sets up any other substance as its standard of value finds itself not only out of adjustment with the world's measurer and subjected to friction and extra expense, but also trammeled and inconvenienced in its domestic exchanges by a more fluctuating standard into which it has to daily translate the pulses of commerce.

It must be remembered that in these days of steam and telegraph the whole world is one in a very important respect. There now can be no surplus of money or merchandise anywhere in the world that is not hurried to fill the shortage, if there be one anywhere. This facility of transfer tends to equalize values throughout the world. We know every evening what has been going on in every part of the world during the day—the condition of the crops, where there is a surplus and where there is a shortage; and in every great market supply and demand meet, and the adjustment of prices takes place, and the language in which those prices are expressed is grains of gold.

It is absurd—yes, suicidal—for us to think for a moment that we can or should get outside of the world's commercial current and set up a standard of value which the world has laid aside because experience has shown a better and more convenient one.

But in continuing the standard of value which we have found so useful it should be borne in mind that we shall continue to use the largest amount of full legal-tender silver possible with a maintenance of its parity with gold, and at the same time we do not in any manner relax our efforts to have the world also continue the use of silver as money, in free and unlimited coinage, too, at such a ratio as will make gold and silver coinage equal in value everywhere. For when the leading commercial nations unite in an agreement which establishes a fixed coinage ratio of gold and silver throughout the commercial world—the only method in which full bimetallism can be secured—then there will be one common standard in international trade, and that standard will still be gold or its equivalent.

Speed the Plow—It Feeds All—The Condition of the American Farmer.

SPEECH

OF

HON. HARRY SKINNER,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 10, 1896,

On the joint resolution to adjourn Thursday, June 11, 1896, at 4 o'clock.

Mr. SKINNER said:

Mr. SPEAKER: The managers of the Senate and House have agreed and arranged that this resolution of adjournment shall pass, and that the first session of the Fifty-fourth Congress shall close at 4 o'clock to-morrow. To resist the passage of the resolution would doubtless prove futile, and a persistent and protracted effort with this purpose would be regarded as trifling with the desires of the great majority on both sides. Notwithstanding I can assign cogent reasons why the resolutions should not pass and present overwhelming evidence why Congress should remain in session until they shall work out some relief to the depressed, distressed, and almost despairing people.

In these closing scenes I have observed that the mind and heart of the Republican party are at St. Louis, and consequently centered upon the best interest of their party and the success of their personal favorites. The Democratic leaders are looking to Chicago, and their anticipated declaration for the free coinage of silver at 16 to 1, as the star of hope that at least will preserve their organization from disintegration and restore them to the confidence of the people. Mr. Speaker, the Democratic party is prolific in good platforms and party promises, but it is a better platform breaker. The past indicates that they make platforms to get on and off, and not to keep. From 1868 to the present hour there is not a single plank in any national platform that they have not repudiated, and consequently they have deservedly lost the confidence of the plain, honest masses, whose champion they professed to be, and whose interest they should have faithfully guarded.

A DESIRE FOR FREE COINAGE AND PROTECTION.

I feel, I know, personal contact has convinced me, that there are sincere and honest advocates of free silver at 16 to 1 in this House both in the Democratic and Republican parties. These, together with the Populists, have a common cause, a cause higher and stronger than party ties, because in that cause is involved the strength, stability, and continuance of American institutions, the contentment, happiness, and prosperity of the American people.

I had hoped, Mr. Speaker, that those of this faith and order might get together and pull together, forgetting old party ties, and thinking only of the perpetuity of our institutions and the prosperity of the American people. The common ally of the bimetallist is the protectionist, not the sectional or class protectionist, but the broad-minded American protectionist, the protectionist that would protect labor against immigration and convict and pauper labor; the protectionist that will care for the fields as well as the shops; the protectionist that wants and desires to protect all and every interest in this country so as to bring that equalization that will assure the greatest good to the greatest number. Bimetallism and this class of protection are one and inseparable. Consequently I had hoped that the protectionist of this order in the South and West, together with the bimetallist at 16 to 1, might come together and make a common battle against monopoly, combine and trust, and the single gold standard, and thereby save the Union, restore confidence to the people, and reinstate conditions from which may be evolved a hope for the future.

THE OPPORTUNITY OF DEMOCRACY.

The Democratic party has a grand opportunity just ahead of it. It remains to be seen if it possesses the wisdom, the statesmanship, the patriotism, the intuition, the inspiration to take advantage of the ripened fruit and pluck it, not for the eclat or success of their political organization, but for the good of the country and the material benefit of the people. To do so they must so act at Chicago as to convince the people that they are the organized force capable and patriotic to espouse and defend their cause. They must, so far as practcal, disassociate themselves from the goldbug Eastern Democracy; so long as these enemies of the people are permitted in their council, so long will the people look upon Democracy with suspicion, and justly so, because they will always constitute a respectable and very powerful minority of the Democratic party, and will always be effectual in defeating measures that mean relief to the people by uniting with the minority party. Will the leaders of the Democracy permit me to blaze the way for them? Let every Democrat that favors free silver at 16 to 1, with or without an international agreement, meet in Chicago at least three days in advance of the national convention. Let the distinguished Senator JONES, of Arkansas, call a caucus of the silver forces at least two days before the national Democratic convention, a conference to be provided for by this caucus. Let them invite the executive committee of the Populists, the bimetallists, and the silver Republicans to meet them at least one day before the meeting of the national Democratic convention and make an honest effort in this general conference of the silver forces to name such a ticket as will be satisfactory to the silver Republicans and that will be ratified by the two conventions that will meet in St. Louis July 22. In this conference let the good of the people—the success of silver—prevail, and you will sweep the country and bring dismay and disaster to time servers and enemies of the American institutions and American people.

RESULT OF PARTISANSHIP.

On the contrary, if you meet in a clannish manner, looking alone to your political organization, and you make no conciliations or concessions to the honest, patriotic silver sentiment of the country, then you await a defeat not only of the ticket that you shall name, but an elimination of the word Democracy from the political dictionary, and upon your wreck and ruin a true People's Party will be increased into numbers sufficient to sweep the country in A. D. 1900. If I desired party success I should want you to so act. But I want and the people I represent want action now and without delay. I am careless or indifferent as to the name in which relief shall be vouchsafed to the people. What we want is relief, and we will take it from the Republican party, the Democratic party, the silver party, or a party of any other name; but it occurs to me that the People's Party is the proper name in which to win a great victory that means a real people's victory. A people's victory means the restablishment of conditions that meaneth life, hope, and contentment to the people, out of which can be secured a higher state of civilization and a greater capacity to enjoy the blessings and wise provisions of Providence.

TELLER AND SOME YOUNG SOUTHERN SILVER MAN.

I do not desire the privilege of naming your ticket, but only to suggest that a ticket named under these conditions would mean success in November. If you will permit me, I will suggest that a national figure such as H. M. TELLER, of Colorado, who led the battle against the force bill and has constantly fought for silver at 16 to 1, and now adheres to those principles and places them above party—when his party would give him anything at its command for him to remain silent—such a character and figure around which all the silver forces of this country could and would rally and inspire confidence all along the line, that would marshal the silver forces in such companies, regiments, and brigades as to successfully attack and rout the common enemy of America and humanity—the single gold standard—whether fighting the American people openly or in disguise.

I may be pardoned for advising the Southern silver Democrat, with whom I have a common feeling and interest to secure the best possible local government consistent with the reign of the people, that the election of H. M. TELLER as President of this country would mean a better and more substantial recognition of Southern interests and Southern statesmen and policies than could possibly be secured by the election of any straight Democrat in sight. With his nomination you can with impunity take a Southern man as his running mate. I would suggest one without a war record, a young man. I have many in my mind. I will not disparage any by the mention of names, and I only mention TELLER, because he stands out like the tall oak, he is a commanding figure at this stage in politics; he can unite the South and West as no other man in sight can possibly do.

THE STATUS OF THE POPULIST PARTY.

Mr. Speaker, should the Democratic party, when it meets in Chicago, think that it is strong enough to live and succeed alone without advice, consideration, or council with the other silver forces of the country, then we shall regard them as party servers and proceed with our middle-of-the-road fight to the finish, and we will not be the minority party. We have now the balance of power in the Senate, and as sure as the ides of November shall have passed we will have the balance of power in this House and dictate its organization. The people know that we have kept faith with them. We mean what we say. They can trust us, and they will trust and give us their certificate of confidence in the shape of that small white sheet of paper called the ballot, which falls as noiselessly as the snowflake, but the accumulation of which can arrest the iron horse in progress carrying travel and freight, as well as it can resist the machinations of party leaders and cause tyranny to be resisted and truth established.

TO THE LEADERS OF THE OLD PARTIES.

Mr. Speaker, I desire that the leaders of Democracy in this House, including Mr. SAYERS of Texas, BAILEY of Texas, DOCKERY of Missouri, CRISP of Georgia, LITTLE and MCRAE of Arkansas, LIVINGSTON of Georgia, MCLAURIN of South Carolina, RICHARDSON of Tennessee, MCMILLIN of Tennessee, DE ARMOND of Missouri, and others that I might mention whom I believe to be sincere advocates of free silver—16 to 1—shall understand before this House adjourns that if they want to succeed and win a victory they must confer before acting at Chicago with such true silverites as the Populists have proven themselves to be and such silver Republicans as TELLER, DUBOIS, CANNON, ALLEN of Utah, HARTMAN, TOWNE, and others, and if all these silver forces shall agree and unite you will demoralize the Republican party from the beginning. They will go into the campaign upon a plea of confession and avoidance; whereas you will go in with the true doctrine of universal protection and bimetallism, one and inseparable, and both necessary to the doctrine of "America for Americans" and the happiness and prosperity of all Americans.

RELIEF IN THIRTY DAYS.

Mr. Speaker, I will never consent to the resolution to adjourn. If the President, if Democrats and Republicans in the House and Senate would for thirty days forget that they belong to any political party and would act as the Populists have desired to act and have acted, and Congress should remain in session thirty days, I believe, by conference or otherwise, some legislation might be reached that would give the people relief; but as long as we place party victory in advance of the people's interest the people must suffer, and no relief will be in sight.

Mr. Speaker, when I appeal to the action of the Populists in the House and Senate as a guide for the silver Democrats and Republicans, I do so for the purpose of challenging the closest scrutiny as to their conduct, their action, their votes, and the measures introduced by them in the Fifty-fourth Congress. I can, in these closing hours of the first session of the Fifty-fourth Congress, point with pride and satisfaction to the record made in this Congress by the Populist party. We have been few in numbers but constant in industry, punctual in attendance, attentive to business in the House and in committees, ceaseless in energy, and faithful to our platform and husting promises in giving votes. We have introduced measures in the Senate and the House that meaneth and carry with them relief to the people, but unfortunately we are impotent to crystallize these measures into law.

CONFESSION AND AVOIDANCE.

Mr. Speaker, these closing scenes, the speeches made by Mr. DINGLEY, the very able chairman of the Ways and Means Committee, who by virtue of his official position, as well as by his information and natural ability, is entitled to be the leader of the House, have been a simple plea in confession and avoidance. He is an expert in special political pleading; that is, he has excused the large appropriations, not that they were not necessary or were extravagant, notwithstanding, with the wise and frugal Speaker, he tried to keep them down and tried to be economical, but he has promised that under the anticipated Republican Administration, through a wise system of protection, the Treasury would be so repleted as to be able to stand such appropriations without detriment to the service; and likewise the distinguished chairman of the Appropriations Committee, Mr. CANNON, notwithstanding he has tried earnestly, and I know honestly, to be economical, yet, even though his wishes have been overruled and this Congress must go into history as extravagant, in his closing remarks he tries to palliate the effect; that with a full Republican Administration the Treasury will be so repleted through the effective service of a wise protective system that we can stand large appropriations without creating a deficit in the Treasury or creating the necessity for bond issues.

The leading Democrats of the House have simply contented themselves with attacking these appropriations, seemingly forgetful that the present Republican Congress has not exceeded the extravagance of the last Democratic Congress.

THE INDIVIDUAL AND COMMUNITY OVERLOOKED.

Both the Republican and Democratic leaders seem to overlook or forget the condition of the individual citizen, community, and nation when separated from politics, and are absolutely barren in suggestions or measures that shall bring and assure contentment, happiness, and prosperity to the people. The Populist party, and the Populist party alone, seems to be fertile and persistent in measures that mean and intend to carry relief to the plain and toiling masses. Mr. Speaker, I desire to observe just here, before I protract my remarks further, that while the people desire to understand and know that the money that is expended shall be wisely and properly expended, they would not complain at reasonable public expenditures, if you convince them it is honestly expended and accurately accounted for; if you will bring about conditions out of which they may meet these public expenditures without causing personal deprivations and sacrifices, and surround them with conditions out of which they may be enabled to support themselves and those dependent upon them with an education that shall equip them to grapple with the future. Mr. Speaker, we all know that these enormous public expenditures, such as they are or may be, must be paid by labor and agriculture. The accumulated wealth of the country, whether in the shape of United States bonds or incomes from any source, is franked "free from taxes" and is not called upon to meet these expenditures, consequently it is indifferent as to their volume. It is the day laborer, the tenant, the farmer, and the small commercial dealers whom these matters affect.

PUBLIC EXPENSES.

Mr. Speaker, it may be of interest and a matter of information to the public to recapitulate the public expenses of the first session of the Fifty-fourth Congress, and if I had the time and the House had the patience I would tabulate these in detail; but for my present purpose it is sufficient to refer to these as comprising, in round figures, $500,225,000. If this is to be repeated in the second session, this Congress will go into history as the billion-one-hundred-million-dollar Congress.

We are expending for the Federal Government entirely too much money. It is indeed alarming when we couple these with city, county, and State governments, which the census of 1890 places at $569,252,634 per annum; and these, added to the appropriations of the Fifty-fourth Congress, make a sum total for Federal, State, and municipal government more than $1,100,000,000 per annum, a sum far exceeding the expenditures of any other Government on earth.

Russia expended in 1895 $885,005,996; France, $690,184,119; Great Britain, $469,592,105; Italy, $337,868,552; the German Empire, $297,240,240; Spain, $164,727,145.20. Our expenditures are $4,000,000 per day, and the monarchial and imperial nations of Europe, which we have been accustomed to regard as extravagant, are spending much less. A sum greater than the entire value of the cotton crop, corn crop, wheat crop, oat crop, and tobacco crop, all put together—these fruits of toil and soil—are wasted in government.

HOW TO REDUCE EXPENSES.

Mr. Speaker, a burning question, one that the politician may as well prepare himself to meet, is how can these public expenditures be decreased without detriment to the public service.

First, lay the ax to the root. All public officials are receiving more salary than they should receive, and are living in a state of extravagance that fails to keep them in touch with the condition, needs, and wants of the people. So, then, let a reform begin at the beginning by reducing all official salaries at least 33⅓ per cent. Second, the river and harbor appropriations need to be severely pruned. I am not opposed to the principle of Federal river and harbor appropriations. I have the distinction of representing a meritorious river and harbor district—the Albemarle, Roanoke and Pamlico districts of North Carolina. I can name here and now worthy objects for Federal appropriations, to wit, the inland commerce from the Chesapeake Bay to Florida, the free connection of the Virginia and North Carolina waters, the opening of Currituck and Nags Head inlets, and the deepening of Oregon Inlet and Ocracoke Inlet, and the making of Lookout as a harbor of refuge, and others that I could, if time would permit me, mention. Notwithstanding these worthy objects of Federal assistance I felt constrained and did vote to sustain the President's veto of the river and harbor bill, because I believed that the President was right, and because I believed I was serving the best interest of my district and the people by trying to assist the President in stopping and resisting the diversion of this Federal assistance from proper channels.

As to the pension appropriation, it is simply alarming. I believe in a wise dependent pension bill, but I am opposed to this special legislation whereby officers and their widows are given an unusually large pension. Our statesmen need apply themselves to reform along this line, unless their consideration for the old soldier will permit the public revenues to be absorbed in special increased pensions.

But, Mr. Speaker, I have not the time now to analyze the extravagance of the public service. My purpose in occupying the attention of the House was to demonstrate the discontent, unrest, misery, distress, and dissatisfaction of the great masses, and to show that their cause was just, above party considerations, and demanded the best thought and heart of the Republic.

CONDITION OF THE FARMER.

God created the farmer to begin with in all the ages that have passed. Wherever his interest has been the first concern of government this heaven-appointed institution has prospered and all conditions that are dependent on agriculture have likewise flourished. The Good Book verily saith that "When the virtuous are in authority, the people rejoice; but when the wicked beareth rule, the people mourn."

Mr. Speaker, in this connection I desire that the public shall be fully and intelligently informed as to the true and accurate condition of the American farmer, and to this end I desire to freely quote from a pamphlet entitled The Condition of the American Farmer, by Hon. H. E. Taubeneck, chairman of the national committee of the Populist party.

THE FARMER'S INCOME.

The mind can not grasp the true condition of the American agriculturist until his income is properly analyzed. Though much has been written on this subject, yet few writers have gone to the bottom and presented the facts in their true significance.

The statistics of the Tenth and Eleventh censuses, as well as the agricultural reports, contain many startling facts and figures in regard to the average income from the average farm in the United States.

THE CENSUS OF 1880.

The report of 1880, volume 1, pages 684 and 685, gives the following figures:

Number of farms in the United States	4,008,907
Number of acres in farms	536,081,835
Number of acres in average farm	134
Number of persons engaged in agriculture	7,670,439
Representing a population of	23,011,317
Average number of persons depending on each farm for a living	5.74
Value of farm products sold, consumed on the farm, and on hand, for the census year 1879	$2,213,462,564
Value of farm products per average farm	$552
Per capita income of agricultural population	$96.16

THE CENSUS OF 1890.

Census Bulletin No. 378, issued March 19, 1894, and the report of the Statistician of the Department of Agriculture for December, 1894, pages 742 to 751, inclusive, contain the agricultural statistics for 1890, of which the following is a synopsis:

Number of farms in the United States in 1890	4,564,641
Number of acres in farms	623,218,619
Number of acres in average farm	137
Total value of farms and stock	$15,982,267,689
Value of farm products sold, consumed on the farm, and on hand	$2,460,107,454
Value of farm products per average farm	$538.94

These figures [says the bulletin] are subject to modification for the final report.

Carroll D. Wright, in reply to a letter asking if the value of farm products quoted above included all that was produced on the farms, said:

I desire to inform you that the figures relative to the value of farm products were furnished by the farmers themselves to the enumerators in answer to the following query: "Estimated value of all farm productions (sold, consumed, or on hand) for 1889." These statistics, therefore, include all farm productions.

According to this estimate, the annual income from the average farm, containing 137 acres, was $538.94. If we allow 5.74 persons to each farm for 1890, as reported by the census for 1880, and divide this $538.94 among them equally, we receive for our agricultural population an average annual per capita income of $93.89. If we again divide this amount by the number of days in the year (365), we receive for those who have to depend on the farm for a living an average per capita income of 25.8 cents per day.

It must be remembered that this $538.94 per farm, or 25.8 cents per day per capita, is not the profit made from the average farm or day's labor, but constitutes the value of the entire crops. It includes that portion consumed on the farm as well as that portion sold. Out of this amount the farmer must pay his taxes, insurance, interest, the cost of seed, hired help, wear and tear of farm implements, repairing of fences and buildings, and feed for his teams for one year while cultivating the crops. All these items must be paid out of the $538.94 before the farmer can have anything for himself and family. The question then is, How much will the average farmer and his family have for their own support after paying all these items? Will they have 15 cents per day per capita? No. Will they have 10? Possibly yes, but I doubt it. For argument's sake, however, we will admit that our agricultural population received a per capita income of 10 cents per day, with which to buy food and clothing, educate the children, and pay incidental expenses.

PAUPERS AND CONVICTS.

The board of supervisors of Clark County, Ill., as stated by the county clerk, W. S. Lowery, pays $2 per week for keeping each pauper, the keeper providing board, clothing, medical attendance, and funeral expenses. If we accept this as the average amount paid by other counties and in other States, it amounts to 28.5 cents per day, almost three times as much as the net per capita income of those who have to depend on the farm for a living.

According to the report of the commissioner of the Illinois Southern Penitentiary for 1890, the State for years received an average of $36,000 per annum for 250 convicts leased, which amounts to $144 per year, or 39.4 cents per day for each convict. Thus we are confronted with the cold fact that our agricultural population is compelled to live on an income below that provided for paupers, and receive less for their labor than is paid for convict labor.

THE ILLINOIS AGRICULTURAL REPORT.

The statistical report of the Illinois State Board of Agriculture, issued August 1, 1895 (Circular No. 170, page 4), contains a table giving the area, yield, value, and cost of raising wheat in that State for thirty-six years, from 1860 to 1895, inclusive.

For the twenty-three years beginning with 1873 and ending with 1895 the farmers of Illinois produced 711,201,270 bushels of wheat. The total cost of raising the wheat was $513,796,560, or an average of 72 cents per bushel. The total value of the wheat crops for the twenty-three years was $570,196,855, or an average of 80 cents per bushel, leaving the wheat growers an average net profit of 8 cents per bushel.

For the fifteen years beginning with 1881 and ending with 1895, the wheat growers of Illinois produced 433,622,246 bushels of wheat. It cost them $317,938,450, or an average of 75.6 cents per bushel, to raise the wheat, and they received for it $314,901,674, or an average of 74.9 cents per bushel, leaving a net average loss to the wheat growers of Illinois, for fifteen years, of seven-tenths of 1 cent per bushel.

For the three years from 1893 to 1895, inclusive, the wheat growers of Illinois produced 78,324,916 bushels of wheat. It cost them $54,398,410, or 69.4 cents per bushel, to raise the wheat, and they received for it $37,705,974, or 48.1 cents per bushel, leaving a net loss of 21.3 cents for every bushel produced since the demonetization of silver by the present Administration.

The same circular, on page 5, contains a similar table in regard to the statistics of the oat crops.

For the same twenty-three years the farmers of Illinois produced 2,032,054,015 bushels of oats. It cost them $579,402,111, or an average of 28.3 cents per bushel, to raise the oats, and they received $532,953,288, or 26.2 cents per bushel, leaving a net loss to the oat growers of Illinois of 2.1 cents per bushel.

For the three years from 1893 to 1895, inclusive, since the demonetization of silver, the oat growers of Illinois raised 326,012,952 bushels of oats. It cost them $94,105,341, or 28.6 cents per bushel, to raise the oats, and they received $77,116,027, or 23.6 cents per bushel, leaving a net loss to the oat growers of Illinois for the three years named of 5 cents for every bushel produced.

Circular No. 163, issued December 1, 1893, contains a similar table giving the statistics for the corn crops.

For twenty-two years, from 1872 to 1893, inclusive, the farmers of Illinois produced 4,579,699,946 bushels of corn. It cost them $1,609,625,941, or an average of 35.1 cents per bushel, to raise the

corn, and they received for it $1,518,676,296, or an average of 33.1 cents per bushel, leaving a net loss of 2 cents per bushel for every bushel produced since 1871.

In 1893 the farmers of Illinois produced 167,687,971 bushels of corn. It cost them $57,422,269, or an average of 34.2 cents per bushel, to raise the corn, and they received for it $51,099,698, or an average of 30 cents per bushel, leaving a net loss of 4.2 cents per bushel for every bushel produced.

The total profit since 1872 on raising wheat was $54,400,295, and the loss on oats $46,448,823, and on corn $90,949,645, which leaves a net loss to the farmers of Illinois on the three staple products of $82,998,173. These are cold facts gathered from the statistics of official documents. Illinois is one of the best agricultural States in the Union. Her soil is as fertile, her climate as genial, and her farmers as enterprising as those of any other State. Whatever is true of the condition of the Illinois farmer is also true of the farmers of all other States.

THE MICHIGAN AGRICULTURAL REPORT.

Senator Peffer, in his report on "Agricultural depression," published a table giving the value and cost of raising wheat, oats, and corn in the State of Michigan for the year 1889, as follows:

	Cost.	Value.	Loss.
Wheat	$18,200,328	$16,728,803	$1,471,525
Oats	10,130,655	7,390,457	2,740,198
Corn	12,269,032	7,254,245	5,014,787

The farmers of Michigan received $9,226,510 less for these crops in 1889 than it cost to raise them.

THE UNITED STATES AGRICULTURAL REPORT.

The report of the Secretary of Agriculture for 1893, pages 515 to 518, inclusive, gives the estimated cost of the principal items and the total cost of the production of wheat and corn per acre for 1893, as consolidated from the returns of nearly 30,000 leading farmers scattered throughout the United States.

WHEAT.

The items and the total cost of raising an acre of wheat were as follows: Rent of land, $2.75; fertilizing, $2.34; preparing ground, $1.85; seed, 87 cents; sowing, 35 cents; harvesting, $1.17; thrashing, $1.13; housing, 33 cents; marketing, 69 cents. Total, $11.48.

The same report, on page 481, contains a table giving the value of the wheat crops for fourteen years, from 1880 to 1893, inclusive. The value of an acre of wheat in 1893 was $6.16, and the cost of raising it, as stated above, $11.48, which leaves a net loss to the wheat growers of the United States of $5.32 for every acre produced in that year.

The report also says that the average annual value of an acre of wheat for the fourteen years (from 1880 to 1893) was only $9.73. If the cost of raising an acre was no greater for each of the thirteen years preceding 1893 than for that year ($11.48), then we are confronted with the stubborn fact that the wheat growers of the United States have lost $1.75 for every acre produced since 1879.

CORN.

The items and the total cost of raising an acre of corn for 1893 were as follows: Rent of land, $2.90; fertilizing, $2.10; preparing ground, $1.60; seed, 14 cents; planting, 38 cents; cultivating, $1.72; gathering, $1.37; housing, 42 cents; marketing, $1.08. Total, $11.71.

The same report, on page 478, contains a table giving the value of the corn crops from 1880 to 1893, inclusive. The value of an acre of corn for 1893 was $8.21, and the cost of raising it, as stated above, $11.71, which leaves a net loss to the corn growers of the United States of $3.50 for every acre produced in that year.

The report further says that the average annual value of an acre of corn for the fourteen years (from 1880 to 1893) was only $9.61. If the cost of raising an acre was no greater for each of the thirteen years preceding 1893 than for that year ($11.71), then the corn growers of the United States received $2.10 less per acre since 1879 than it cost to produce the corn.

Thus the investigation made by the United States Department of Agriculture corroborates the statistics of the Illinois and Michigan agricultural reports. Since 1880 the farmers of the United States have been producing products below the cost of production. Whatever is true of corn, oats, and wheat is also true of every other staple product produced by the farmers of the United States.

These are facts and figures taken from official documents, the best evidence we can get. They tell us in language as plain and forcible as words can make it why there is distress, unrest, and discontent among our agricultural population; why there is a mortgage on the farm, and why the farmer who once owned the soil he cultivates is now a tenant. It is because for years he has been compelled to raise products below the cost of production. The results of this loss is disclosed by the increase of mortgages and the loss of farms and homes, together with the enforced idleness seen on every hand.

DEPRECIATION OF FARM PROPERTY.

Senator PEFFER, on page 13 of his report on "Agricultural depression," in speaking of the depreciation of farm property, says:

In Illinois improved lands fell from $20.81 in 1873 to $11.18 in 1892; wheat fell in the same time from $1.10 to 69 cents a bushel; corn fluctuated, but about maintained its normal price; oats was 3 cents higher in 1892 than it was in 1873; cattle dropped nearly 60 per cent; horses and mules went below that; hogs fell 50 per cent, and sheep 33 per cent.

In Iowa all classes except sheep declined from 1870 to 1892.

In Nebraska improved lands fell from $4.60 to $3.72, more than 20 per cent, since 1885, and live stock dropped on an average about 40 per cent.

In Kansas land was about 15 per cent lower in 1892 than it was in 1874 and 1884.

In New York, according to the report of the State comptroller submitted January, 1891, farm lands in that State had depreciated at least 33⅓ per cent within a few years.

In Pennsylvania, while correspondents differ, it may be stated that on the whole farm lands in that State have fallen 25 to 30 per cent in less than twenty years.

In the New England States lands used for agricultural purposes are not valued as high now as they were in 1875 by 30 per cent.

INCREASE OF TENANT FARMERS.

Fred Perry Powers, in an article published in Lippincott's Magazine for February, 1895, gives some important statistics, compiled from the census report, in regard to the rapid increase of "tenant farmers" in the United States:

Between 1880 and 1890 the number of owning farmers decreased in every New England State and the number of tenant farmers increased. In each of these States there was a marked increase in the percentage of farmers who plowed the fields of another man and in the sweat of whose brow somebody in Boston ate cake. In the six States, in the ten years, the owning farmers diminished 24,117 and the tenant farmers increased 7,246. The percentage of tenant farmers in Massachusetts, though not large in 1890, was nearly double what it was in 1880; over 17 per cent of the farmers in Vermont and Connecticut and 25 per cent of the farmers in Rhode Island were tenants in 1890.

In each of the four Middle States the number of owning farmers decreased and the number of tenant farmers increased. In the group the owners decreased 42,304 and the tenants increased 24,075. In New Jersey the tenants increased from nearly a fourth to nearly a third of the whole. In New York the loss of owning farmers was 26,534 and the gain of tenant farmers was 12,108. For Pennsylvania these figures were 11,292 and 9,222, respectively. * * * Of twelve Southern States six show a decrease in the number of owning farmers. In the group there was an increase of 13,915 owning farmers and 275,785 tenant farmers. In three Southwestern States—Missouri, Arkansas, and Texas—there was a gain of 47,882 owning farmers and 114,510 tenant farmers. * * * Each of the three States of the Middle West—Ohio, Indiana, and Illinois—gives evidence of the same change, and the group lost 31,259 owning farmers and gained 48,864 tenant farmers. In Illinois the tenants increased from 31.37 to 36.72 per cent of the whole. In eight States of the Northwest, in several of which public lands have been obtainable till quite recently, the number of owning farmers increased 129,322 and the number of tenant farmers increased 108,507. In Iowa the number of owning farmers increased 3,521, while the number of tenant farmers increased 16,563. In Kansas the owning farmers increased 2,121 and the tenant farmers increased 30,463. In the Pacific and Mountain States and the Territories, the number of owning farmers increased 65,512 and the number of tenant farmers increased 20,350.

In forty-seven States and Territories the number of owning farmers increased 158,951 and the number of tenant farmers increased 599,337. In 1880 25.62 per cent of the farms were cultivated by tenants; in 1890, 34.13 per cent of the farm families hired.

In commenting on these figures Mr. Powers has this to say:

The American farmer is following the English yeoman into extinction, and the creation of landlord and tenant classes has already made considerable progress here. Specialization is one of the incidents of evolution, and evolution in agriculture is giving us, instead of one class of farmers, who were simultaneously landlord, tenant, and laborer, farmers of the three classes permanently distinct.

The economic change is already producing political changes. The Populist movement of the day is the beginning of the dying struggle for political power of a race of farmers who supplied most of the Fathers of the Republic, who were for many years the controlling power within it, but who are now losing their land, and with it their political weight. * * *

The man who owns a farm of three or four sections will find town life within his reach and much more to his taste, and especially to the taste of his wife and children, than life in the country, and this means the three agricultural classes of England: The owner, who lives in the city or in Europe and enjoys the revenues formerly distributed among a considerable number of owning farmers; the tenant farmer, who has increasing difficulty in paying his rent; and the farm laborer, who gets not quite enough food to keep him thoroughly nourished, and who is attached to the soil, not by any law of serfage, but by the iron law of poverty, ignorance, and lack of spirit.

I hope that every farmer in the land will read these quotations from a plutocratic pen, and ponder well the future condition of his class therein predicted—serfdom as degrading and ignominious as that of the feudal ages.

DECADENCE OF HOME OWNERSHIP.

Mr. J. A. Collins, in an able article in the American Magazine of Civics for January, 1895, on "The decadence of home ownership in the United States," says:

The census of 1890 shows that on June 1 of that year the total population was about 63,450,760, or 12,690,152 families of five members each, or an aggregate of that many homes, both owned and rented. Out of this 12,690,152 families, the number owning and occupying mortgaged homes and farms was 2,250,000, leaving 10,440,152 families occupying hired homes and farms or those they own free of incumbrance. About 8,250,000 occupy hired homes or farms—that is, they are tenants—leaving 2,190,152 who occupy their homes free of incumbrance. This is only about 16 per cent of the total number of families, leaving 84 per cent of the total number as occupants of hired and mortgaged homes. As about 18 per cent of the whole number occupy mortgaged homes, the percentage of actual tenants is about 66 per cent. But the occupant of a mortgaged home is virtually but a tenant of the mortgagee, and we find 84 per cent of the families of the nation are virtually tenants.

It may be stated as an undeniable fact that fifty years ago the United States was a nation of home owners; a mortgaged home was an unusual condition; to-day almost 70 per cent of our population are actually tenants, and a mortgage stands on record against every seven individuals of the entire

population—almost one to every family in the nation. * * * Already above 70 per cent of our population are reduced to the condition of tenants; the free home owner is becoming the exception; a landlord system is being rapidly established, and the great mass of the population, under our boasted free institutions, is dependent upon a class for the very roofs which shelter them. The American people, from a nation of free home owners, are becoming the dependents of a favored class, not only for the employment which gives them food, but for the roof which shelters their helpless families.

The United States to-day shows a greater proportion of dependents or tenant families than any nation of the civilized world, with the exception of Great Britain, and is not far behind that.

Country.	Per-centage of ten-ants.	Country.	Per-centage of ten-ants.
Australia	10.17	Holland	39.60
Belgium	33.62	Portugal	28.17
Denmark	66.09	Sweden	17.32
France	28.94		

United States, over 70 per cent. In the United Kingdom the great bulk of the population is of the tenant class. In the other countries the percentage is given of the average, which probably is not far from the percentage of population.

Country.	Per-centage of ten-ants.	Country.	Per-centage of ten-ants.
Canada	12.01	Norway	31.82
Germany	34.31	South Africa	55.00
Italy	35.19		

Is it not startling that in the greatest Republic on earth, whose free institutions and free homes have been its boast for a hundred years, the percentage of its dependent population should be greater than even in the monarchies of Europe?

DEPRECIATION OF FARM PRODUCTS.

Gen. A. J. Warner, in an able article on "The depreciation in the value of farm products," published in the New York Sun January 12, 1894, says:

Take first the leading staples—wheat, cotton, corn, oats, and hay. The average value of an acre's product of these crops in 1873 was $15.65; in 1893, for the same quantity of products, $8.15, a fall of nearly 48 per cent.

If we take wheat alone, the fall has been from $13.16 to $6 per acre, or over 54 per cent; and if we take cotton, the fall has been greater still, or from $28.01 to $10.65, or a decline in value of an acre's product, the quantity being the same as for 1873, of 62 per cent. The average acre's value of the crops of 1873 was 85 per cent greater than in 1893. * * * If the farm products of this year (1893) could be sold at the price prevailing in 1873 they would bring the farmers nearly $1,500,000,000 more than the price prevailing this year. This would make a big difference in the debt-paying power of the farmers.

Again, in "Facts about silver," pages 34 and 35, he continues:

In 1872 milch cows were worth $33 each. In 1893 not over $20 each. The number of cows in 1872 was one to a little less than four of population. In 1893 the number was one to a little more than four of population, so that, relatively to population, the number of cows had decreased, and their value at the same time had fallen 40 per cent. * * * At the price of wheat in 1873 the value to the farmers of the crop of 1893 would have been $455,000,000 instead of $178,000,000, a difference of $277,000,000. This would have gone a long way toward paying off mortgages. The corn crop of 1893 at the price of 1873 would have yielded $660,000,000 instead of $412,000,000.

The cotton crop of 1893 at the price of cotton in 1873 would have been worth to the South $496,000,000, instead of $184,000,000, its actual value in 1893.

The New York Sun, in an able editorial of September 10, 1893, among other things has this to say in regard to the decreased purchasing power of the farmer's products:

The extent of the reductions made in revenue from each acre under staple crops is best shown by saying that the acreage revenue from 1866 to 1870 was $7.59, or 93 per cent greater than in 1893; from 1871 to 1875 it was $7.04, or 86 per cent greater than in 1893; from 1876 to 1880 it was $3.73, or 46 per cent greater than in 1893; from 1881 to 1885 it was $3.13, or 38 per cent greater than in 1893; from 1886 to 1890 it was $1.74, or 21 per cent greater than in 1893. The great diminution in the purchasing power of the farmer, implied by these progressive reductions in acreage revenue, without compensating reduction in the cost of cultivation, is thus clearly shown, but the enormous yearly aggregate of lost purchasing power is comprehensible only when we multiply the acres now employed in growing staples by the decline shown in the acreage value of products since 1870.

As 206,000,000 acres are now employed in growing staple crops, it follows that the power of the farmer to purchase is this year (1893) $1,563,000,000 less than it would be if he were receiving the price of 1866-1870 for his great staples. If the prices now realized in the farm markets equaled those received from 1871 to 1875, the farmer would this year be able to spend $1,450,000,000 more for manufactures and other commodities than he will be able to spend with prices at the present level. Were prices now equal to the average of those obtained from 1876 to 1880, the purchasing power of the farmers would this year be augmented by $768,000,000. Should the crops of 1893 give average yields and prices equal those current from 1881 to 1885, the farmers' spending power would be $645,000,000 greater than with present prices. Even with prices as low as those prevailing from 1886 to 1890 the farmers of the United States would have $358,000,000 added to their debt-paying and purchasing power in 1893, and like advances on the other products of the farm would create an ample fund for building and general improvement, thus employing more labor.

THE OVERPRODUCTION FALLACY.

The next question is, Why is the farmer compelled to raise products below the cost of production?

We are told that it is overproduction, that prices are low because farmers produce more than can be consumed. This is a serious question, and deserves careful consideration. If the farmer has reduced the price of his products below the cost of production by raising too much and working too hard, then the only remedy required is for him to work less and produce less.

If the farmers of the United States produce more wheat, corn, cotton, and other products per capita to-day than they did five, ten, or fifteen years ago, or the increase in food products has been greater than the increase in population, then I will admit that overproduction has something to do with it; but, upon the other hand, if we can prove that the United States and the world produce less agricultural products per capita at the present time than they did five, ten, or fifteen years ago, or that the increase in population has been greater than the increase in food products, then overproduction is a myth and has nothing to do with these abnormal conditions.

WHEAT.

The following table gives the annual production and the farm price of wheat in the United States, as compiled by the Department of Agriculture. The bushels per capita is obtained by dividing the number of bushels produced by our population:

Year.	Number of bushels produced.	Bushels per capita.	Price per bushel.
			Cents.
1880	498,549,868	9.9	95.1
1885	357,112,000	6.3	77.1
1886	457,218,000	7.9	68.7
1887	456,329,000	7.7	68.1
1888	415,868,000	6.8	92.6
1889	490,560,000	7.9	69.8
1890	399,262,000	6.3	83.8
1891	611,780,000	9.5	83.9
1892	515,949,000	7.9	62.4
1893	396,131,725	5.9	53.8
1894	460,267,416	6.6	49.1
1895	467,103,000	6.7	50.9

Take a glance at this table and then think of the overproduction theory. In 1880, when we produced almost 10 bushels per capita, wheat sold for 95.1 cents per bushel, and in 1889, ten years later, with 2 bushels less per capita, it sold for 69.8 cents.

Again, in 1893, with but 5.9 bushels per capita, it sold for 53.8 cents per bushel, 41.3 cents less than in 1880, when our per capita production was 9.9 bushels. If overproduction was the cause of low prices, these figures would be reversed; the farmers would have received more for their wheat in 1893 and 1892 than they did in 1891 and 1880. In 1893 we produced 4 bushels less per capita than in 1880, and yet it sold for 41.3 cents less per bushel; and again, in 1894, with 6.6 bushels per capita, the farmer received only 49.1 cents per bushel, while in 1888, with 6.8 bushels, wheat brought 92.6 cents. If overproduction was the cause, why should there be so much difference in the price when there is comparatively none in the quantity produced?

CORN.

The following is a similar table, from the same source, in regard to the production of corn:

Year.	Number of bushels produced.	Bushels per capita.	Price per bushel.
			Cents.
1880	1,717,434,543	34.2	39.6
1885	1,936,176,000	34.3	32.8
1886	1,665,441,000	28.8	36.6
1887	1,456,161,000	24.7	44.4
1888	1,987,790,000	33.0	34.1
1889	2,112,892,000	34.3	28.3
1890	1,489,970,000	23.7	50.6
1891	2,060,159,000	32.2	40.6
1892	1,628,462,000	24.9	39.4
1893	1,619,496,131	24.3	36.5
1894	1,212,770,052	17.6	45.7
1895	2,151,139,000	30.7	26.4

This table is far more significant than the one for wheat, because it may be said that the price of wheat in this country is fixed by the Liverpool market, and the production of that cereal in India, Australia, and South America has a tendency to depress prices here; but this can not be said of corn, because we are the only great corn-producing nation on earth, and its price here is not fixed by foreign competition.

The average annual export of corn from 1870 to 1890 has been but 3.8 per cent of the amount produced, which is too small to exert much influence on its price here. But what does this table teach? In 1880, with 34.2 bushels per capita, corn was worth 39.6 cents per bushel, and in 1889, ten years later, with 34.3 bushels per capita, it sold for 28.3 cents per bushel. Again, in 1890, with 23.7 bushels per capita, it sold for 50.6 cents per bushel, and in 1893, with 24.3 bushels per capita, it brought only 36.5 cents. Again, in 1891, when we produced 32.2 bushels per capita, corn was worth 40.6 cents per bushel, and one year later, with but 24.9 bushels per capita, it sold for 39.4 cents per bushel. If overproduction was the

cause, these figures would be reversed; we would have received more for our corn when we had but 24.9 bushels per capita than when we had 32.2 bushels.

COTTON.

The same is true of cotton. The following table gives the annual production from 1885 to 1894, inclusive. The figures for the first seven years are those compiled by the Department of Agriculture, in its miscellaneous series, Report No. 5, for 1893; those for 1892 are taken from the Statistical Abstract for 1893, page 218; those for 1893 are taken from General Warner's article published in the New York Sun January 12, 1894, where he estimates the crop of 1893 at 6,600,000 bales; and those for 1894 are taken from the report of the Statistician of the Department of Agriculture for January and February, 1895, in which the crop is estimated at 9,088,000 bales. The price is also that given by General Warner in "Facts about silver," except for 1894, which is taken from the report of the Department of Agriculture. The number of pounds per capita is obtained by dividing the annual product by our population:

Years.	Number of pounds produced.	Pounds per capita.	Price per pound.
			Cents.
1885	3,182,350,531	56.4	10.6
1886	3,157,378,443	54.7	9.9
1887	3,406,068,157	57.8	9.5
1888	3,437,408,459	57.1	9.8
1889	3,622,827,694	59	9.9
1890	4,316,043,982	68.9	10.1
1891	4,506,531,951	70.5	10
1892	3,352,653,458	51.6	8.7
1893	3,300,000,000	49.6	7
1894	4,516,736,000	65.4	4.6

This table exhibits some startling facts. From 1886 to 1889, inclusive, the production of cotton gradually increased from 54.7 to 59 pounds per capita, and during these years the price remained almost stationary. In 1890 and 1891 the production increased about 10 pounds per capita, and the price also increased one-tenth and two-tenths of a cent per pound. Again, in 1892 and 1893, with a great and sudden decrease in production, the price also declined, so that the small crop of 1893, which was 29.6 per cent less per capita, sold for 30 per cent less per pound than the large one produced in 1891. Again, in 1894, with a crop no larger than for 1890 and 1891, cotton sold for 4.6 cents per pound, while in the two former years it was worth 10.

This table controverts the theory of overproduction and bids defiance to every argument advanced on that line. Here are the actual facts: Prices not only declined with a decrease in production, but they actually increased with an increase in production. No argument, however ingenious, can prove that these falling prices are due to overproduction.

FARM ANIMALS.

Report No. 123 of the Department of Agriculture for January and February, 1895, page 5, contains a table giving the number and value of horses, mules, milch cows, oxen and other cattle, sheep, and swine in the United States from 1868 to 1895, inclusive. The aggregate number of farm animals, their total value and average value per head for the three years named, are as follows:

Years.	Number.	Total value.	Value per head.
1893	164,284,573	$2,483,506,681	$15.11
1894	161,783,453	2,170,816,754	13.41
1895	155,555,051	1,819,446,306	11.69

This table shows that from 1893 to 1895 there was a decrease of 5.3 per cent in the number of farm animals and a decline of 22.6 per cent in their value. If overproduction was the cause these figures would be reversed; the price of farm animals would be higher in 1895 than in previous years.

What is true of wheat, corn, cotton, and farm animals is also true of other agricultural products. The best evidence obtainable proves that our population has increased faster than the increase in food products. This is especially true of corn and farm animals, as the foreign market has little or no influence on their price here.

PRODUCTION OF THE WORLD.

No doubt our friends who believe in overproduction are willing to concede the fact that our population has increased faster than the increase in food products; but they reply that the price of those commodities which we export is fixed in the foreign market, where we are compelled to compete with the world, and that the increase in the production of agricultural products since India, South America, and Australia opened their wheat and cotton fields exceeds the increase in the world's population. Although their arguments have often been refuted, yet many able writers still give this point some consideration.

In 1886 the population of the globe, according to Levasseur's table in Mulhall's Dictionary of Statistics, was 1,479,445,230, with an annual increase of about 0.4746 per cent.

WHEAT CROPS OF THE WORLD.

The table below, compiled by Morton Frewen, by striking a mean between the figures published by the Department of Agriculture, from Dornbusch and from the report of the Vienna Congress, with the London price, gives the world's production of wheat for the years named:

Years.	Number of bushels produced.	Bushels per capita.	London price.
1891	2,432,800,000	1.606	$1.25
1892	2,403,200,000	1.575	.87
1893	2,304,800,000	1.506	.76

In 1891 wheat in the London market was worth $1.25 per bushel, and in 1893, with one-tenth of 1 bushel less per capita, it was worth but 76 cents. A decrease of 5.3 per cent in the quantity produced, with a decline of 39.2 per cent in its price, does not accord with the overproduction theory.

COTTON CROPS OF THE WORLD.

The following table gives the world's production of cotton, the number of pounds per capita, and the Liverpool price for the years named. The figures of production from 1890 to 1891, 1891 to 1892, and 1892 to 1893 are taken from the report of the Statistician of the Department of Agriculture for 1893, page 547, and those for 1893 to 1894 and 1894 to 1895 from the World's Almanac, as furnished by Ellison & Co. The price for the first four years is that given by Latham, Alexander & Co., in their report for 1894, page 120, and for the last year from the London market quotations:

Years.	Number of pounds produced.	Pounds per capita.	Price per pound.
			Cents.
1890 to 1891	5,063,200,000	3.3	9.88
1891 to 1892	5,276,000,000	3.4	8.36
1892 to 1893	4,257,600,000	2.8	9.14
1893 to 1894	4,847,076,000	3.1	8.46
1894 to 1895	4,932,000,000	3.2	6.70

This decline in the price of cotton, like that for wheat, can not be attributed to overproduction. Another important factor against this theory is that the percentage of the world's population using wheat and cotton is constantly increasing. As new countries, like the interior of Africa, China, and others, are opened to commerce, cotton more than any other product enters into their trade. No argument, however ingenious, can prove that low prices for agricultural products, either in this country or the world at large, are due to overproduction. We must look for the cause in some other direction.

THE CAUSE.

If overproduction, as we have proven, is not the cause for the decline in the price of agricultural products, what, then, is it? Is the decline in prices due to exorbitant transportation rates? No. They are lower at present than ever before. Is it due to the land question? No. Land values have depreciated with the price of farm products. Is it due to the tariff or the wage question? No. What, then, is it? The real and fundamental cause is due to our financial system—the contraction of our paper currency and the demonetization of silver. At least 90 per cent of the depreciation in the price of farm products is due to the increased purchasing power of the dollar caused by a change in our financial system.

All the money in circulation is always pitted against all the property, and prices spring out of the relation money and property bear toward each other. So long as this relation is undisturbed the general level of prices is maintained; but the moment we increase or decrease the amount of property on the one hand, or the volume of money on the other, we also disturb this relation.

To illustrate: Suppose that the value of all the property in the United States is $65,000,000,000, and the volume of money in circulation, as stated by the Secretary of the Treasury January 1, 1894, is $1,729,018,266. We then have $37.59 worth of property for every dollar in money; that is, the relation or ratio of money to property is 1 to 37.59. Every time we add one dollar to our money volume, or destroy one dollar, we also add or destroy $37.59 of value in the property in order to maintain the proper ratio between the two.

An act of Congress which would destroy one-half our money would squeeze $37.59 worth of property into $18.79 of money, and

an act which would double the volume of money would expand prices so that $37.59 worth of property would then be worth $75.18 in money.

The supply and demand of that one article, money, is as potent in determining the price of products and property as the supply and demand of all other articles combined. An increase or decrease in the supply of any one commodity, say, corn or cotton, affects the price of that particular commodity only, but an increase or decrease in the volume of money affects the price of all commodities alike.

Suppose the supply of every article which enters the channels of commerce should be cornered by a few speculators—that is, suppose there should be a special corner for each article produced. Think of the power these combined corners would have in fixing prices which the people would have to pay.

Again, suppose that over on the opposite side of all these corners we should have one more—a corner on money. Then the power of this one corner in fixing the price of products and property would be as great as that of all other corners combined. Why? Because the demand for money equals the demand for all other articles.

In 1866 the population of the United States was 35,819,281 and our volume of money $1,863,409,216, which gave us a per capita circulation of $52.01.

On March 1, 1895, according to the statement of the Secretary of the Treasury, we had $1,574,534,557 outside of the Treasury vaults, and a population of about 69,000,000, making our per capita circulation at the present time $22.82. Admitting that every dollar reported to be outside the Treasury vaults is in circulation (but everybody knows that it is not), we still have $288,874,659 less money among the people to-day, with a population of 69,000,000, than we had thirty years ago with a population of only 35,819,281.

Since 1866 our population has increased 92 per cent, commerce and trade have doubled, but our volume of money has actually decreased 15 per cent.

For thirty years our demand for money has advanced in one direction, while its supply has receded in another.

SILVER.

Prices in gold-standard countries like the United States and the principal nations of Europe have fallen 45 to 50 per cent since 1873. Prices in silver-standard countries like Mexico, India, China, and Japan have remained stationary since 1873. These are cold facts which no theory can controvert. From this it logically follows if a silver-standard country like Mexico should demonetize silver and establish the gold standard, the general range of prices in that country would gradually fall until they reached a level with those of other gold-standard countries. Again, if a gold-standard country like the United States should remonetize silver, the general range of prices would gradually rise until they reached a level with those of silver-standard countries.

The great benefit to the American farmer from the free coinage of silver is that it will increase the price of agricultural products to the extent of the difference between the gold or commercial price of silver and its mint or coinage price.

To illustrate the point: The price of a bushel of wheat in the Liverpool market for more than a generation has been an ounce of silver. The value of the two has remained in touch for more than a quarter of a century. As the price of silver has gone up or down wheat has followed. If we single out any one year, say 1892, we can estimate what the demonetization of silver has cost the wheat growers since 1873. The average London price for silver in 1892 was 87.1 cents per ounce. In that year an India farmer could ship a bushel of wheat to Liverpool, receive an ounce of silver for it, and have the silver coined into rupees at a ratio of 15 to 1, worth $1.37 in legal-tender money in India. An American farmer could also take a bushel of wheat to Liverpool, receive an ounce of silver for it, bring this silver home to the United States, and sell it for whatever he could get, which was about 86 cents per ounce. Thus the India farmer realized $1.37 per bushel for his wheat delivered in Liverpool, while the American farmer received but 86 cents for his, a difference to the disadvantage of the American farmer of 51 cents per bushel.

But suppose we had had free coinage of silver in this country in 1892 at the ratio of 16 to 1, what then would have been the price of wheat in that year? Then an American wheat grower could have shipped a bushel of wheat to Liverpool, received his ounce of silver for it, brought this silver home, taken it to the mint, and had it coined into full legal-tender standard silver dollars, thus receiving $1.29 instead of 86 cents for his bushel of wheat—a difference of 43 cents per bushel. This is also true of cotton and other products which we export and which come in competition with the products of free-coinage nations.

The decline in the gold price of silver has the effect of giving the wheat and cotton growers in silver-standard countries an export bounty to the extent of the difference between the mint price and the bullion price of silver. The contest between the yellow metal and the white metal involves the question of putting the farmers of this country on an equal footing, in the markets of the world, with those of silver-standard countries.

To illustrate the point: Suppose a wheat grower of the United States and one from a silver-standard country meet in Liverpool, each with 1 bushel of wheat. They sell their wheat for, say, 65 cents per bushel, and receive their pay in gold. The wheat grower from the silver-standard country takes his gold and buys silver bullion worth 65 cents per ounce. On his arrival home he takes it to the mint and has it coined into legal-tender money worth (16 to 1) $1.29. But the wheat grower of the United States returns with his 65 cents in gold, because our Government tells him, "You need not bring any silver home. We will not coin it." Thus our wheat grower would realize 65 cents for his bushel of wheat and the one from the silver-standard country $1.29.

Suppose a cotton planter of the South and one from Mexico should meet in Liverpool, each with 1 bale of cotton? The transaction would result to the disadvantage of our planter just as the wheat transaction resulted to the disadvantage of our wheat grower.

Thus the farmers of the United States, especially the wheat and cotton growers, are only receiving the gold price of silver for their products, while those in silver-standard countries are receiving its mint or coin price for theirs. The demonetization of silver in this country has the same effect as paying an export bounty to the farmers of silver-standard countries.

Our farmers are compelled to cultivate 2 acres, raise 2 bushels of wheat and 2 bales of cotton, while their competitors in silver-standard countries raise but 1 bushel of wheat, 1 bale of cotton, and do only half as much work, and yet receive the same amount of money with which to pay debts and taxes as those who cultivate our soil. How long can our farmers exist under these conditions?

The silver question is of greater importance to the farmers and planters of this country than to any other class. Unless they can be placed upon an equal footing with the planters and farmers of silver-standard countries it is but a question of time when we will have a system of peasantry like that of Europe.

Senator JONES, of Nevada, in his speech in the extra session of Congress of 1893, said:

Every decline, therefore, in the price of silver bullion, so far as our farmers and cotton planters are concerned, is a decline in the price of wheat and cotton at Liverpool, though not a decline in the price of anything that the East Indian people need, or consume, or buy. * * * Every decline in the gold price of silver bullion is a premium—a bounty—given to the producer of wheat and cotton in India over the American farmer and cotton planter in the prices of those commodities in European markets.

Senator JONES also quotes from Mr. Bagehot, for many years the editor of the London Economist, who says:

The necessary effect of a depreciation of silver as against gold is to give a bounty on exports from India and the other silver-using countries to England. An English merchant can now buy many more rupees than he formerly could with the same number of sovereigns, and therefore he can import from India, though prices at Calcutta are not at a level at which it would have paid him to operate if he had not had that novel facility in getting rupees.

Again he quotes from Sir Robert Fowler, a member of Parliament and ex-mayor of London, who in 1886 said:

The effect of the depreciation of silver must finally be the ruin of the wheat and cotton industries of America and be the development of India as the chief wheat and cotton exporter of the world.

Senator JONES continues:

So long, therefore, as India exports wheat, and it has hardly more than commenced, the price of India wheat will fix the price of American wheat until such time as silver is remonetized in the United States. * * * With reference to cotton, an ounce of silver will place 10 pounds of that commodity in Liverpool. However low, therefore, the price of silver bullion may fall, the American planter must, for the price of an ounce of that metal, deliver 10 pounds of raw cotton in Liverpool. Should silver fall to 50 cents an ounce, if he would sell his cotton he must deliver 10 pounds of cotton in Liverpool and pay transportation charges on it, all for 5 cents a pound.

By bringing the price of silver bullion to a parity with gold on the relation established in this country since 1792, our farmers and cotton planters will be relieved of the competition of the East Indian in the markets of Europe.

Let the reader for a moment reflect what the demonetization of silver has cost the American farmer since 1873. The loss sustained by the cotton planters alone for the seventeen years from 1873 to 1889, as stated by Senator JONES, of Nevada, in his speech in the United States Senate, May 12 and 13, 1890, is as follows:

At the price of cotton in 1873 the result of each year would be 2,500,000,000 pounds, at 16.4 cents, $410,000,000.

According to the figures given by the Bureau of Statistics, the average price received each year of the seventeen was 13.1 cents per pound: 2,500,000,000 pounds at 13.1 cents per pound equals $327,000,000, showing a difference of $83,000,000, that being the average for each separate year for seventeen years, or a total sum for the entire period of $1,411,000,000, which represents the loss in debt and tax paying power suffered by the cotton planters by reason of the demonetization of silver.

In regard to the loss sustained by the wheat growers for the same number of years, he continues:

A like computation with regard to wheat will show a loss in debt-paying and tax-paying power of not less than $100,000,000 a year to the farmers of the Northwest by reason of the demonetization of silver—a total of $1,700,000,000 in the article of wheat alone in seventeen years.

Again, in his speech during the extra session of Congress in 1893 he further stated that the loss sustained by the wheat and cotton growers of this country, for the eight years preceding 1893, averaged for wheat $225,000,000, and for cotton $100,000,000 per year, making a total loss of $1,300,000,000 for the four years following 1889. If we add to this amount $700,000,000 for the loss sustained since 1893, and the $3,111,000,000 for the seventeen years previous to 1889, we have the enormous sum of over $5,000,000,000 which the demonetization of silver has cost the American farmer and planter on wheat and cotton.

For twenty years the silver taken out of the American mines has been used as a club to drive the American wheat and cotton out of the markets of the world. It almost seems incredible that the American farmer, intelligent and enterprising as he is, should for twenty years go to the polls and vote for men and parties who have annually legislated over $250,000,000 out of his pocket on wheat and cotton alone.

It is evident that the silver to be taken from the American mines will develop the wheat, cotton, wool, beef, and hide industries of Mexico and South America in the future as it has developed India's industries in the past. Nothing but free and unlimited coinage of silver in this country will prevent South America, Mexico, China, Japan, and other free-coinage nations from developing their agricultural resources at the expense of the farmers of the United States.

This question has often been asked: "If the mints of Mexico, South America, China, and Japan are open to the free and unlimited coinage of silver, and silver is worth $1.29 per ounce, why do the mine owners of the United States sell their silver for 66 cents per ounce instead of shipping it to any of these countries and having it coined?"

Because foreign coins are not a legal tender in this country. Suppose a mine owner should ship 1,000 ounces of silver, worth in the United States 66 cents per ounce, or $660, to Mexico, have it coined at the ratio of 16 to 1, worth $1.29 per ounce, or $1,290 in legal-tender money in that country. Again, suppose he brings this coined silver home to the United States, what will he do with it? He is compelled to sell the Mexican coins for the commercial or gold price of silver, which is 66 cents per ounce. Thus the mine owner will receive as much less for his silver as it cost to ship it to and from Mexico. If Mexican coins were legal-tender money in the United States, then it would be profitable to the owner of silver bullion to ship his silver to Mexico and have it coined.

There is but one way by which the owner of silver bullion may receive a profit on his silver in shipping it to the mints of some silver-standard country, and that is this: Suppose a mine owner takes 1,000 ounces of silver to the mint in Mexico or Japan, has it coined, remains in that country and invests it.

THE REMEDY.

The American farmer can not continue much longer to sell his products below the cost of production, or to live on an income below that provided for paupers, or on earnings less than the wages paid for convicts in our State prisons. To seek a remedy for the conditions which are destroying the yeomanry of our Republic is the imperative duty of the hour. The remedy must not be a temporary expedient that will strike at the effect only, but a radical one that will remove the cause. Ninety per cent of the depreciation in the price of farm products is due to the increased purchasing power of the dollar. To remedy this we must have free-coinage of silver at the ratio of 16 to 1. This will place the American farmer on equal terms in the markets of the world with the farmers of free-coinage nations, and will increase the price of farm products to the extent of the difference between the gold price and mint price of silver. But, much as free coinage would help, that alone will not give permanent relief.

First. Because there is not a sufficient amount of gold and silver on hand for monetary use, nor can the mines supply it.

Second. Because it would still leave the power of money in the hands of individuals and corporations, those who control the products of the mines and issue the paper currency, and our volume of money, at the mercy of the ebb and flow of coin, would produce an inflation every time it comes to our shores and leave a panic whenever it departs.

At present our money is practically controlled by a gold trust. If we add free coinage of silver and let the banks issue the necessary paper money our money volume will still be at the mercy of a few individuals and corporations. The money power will control our volume of money as effectively as it now does, with only this difference, that the two metals will be more difficult to control than the one. Much as free coinage of silver will do toward restoring prices of products and property, this alone will not destroy all the evil that surrounds our present financial system.

If free coinage of silver will not destroy the money trust, what, then, can we do that will? Suppose you undertake to destroy the coal trust, whisky trust, or any other trust, what would be the first thing you would have to do? Think for a moment.

The first thing to do would be to take from the trust the power to control the supply, the power to limit or restrict production. Unless you could do this it would be impossible to destroy the trust. The one essential thing absolutely necessary to the existence of a trust is its ability to control the supply and limit the production of the article in which it deals.

So it is with the money trust. The only effective way to destroy its power is to take from it the authority to issue the paper money, because the right to issue the money also carries with it the ability to control its volume, and to fix the prices at which all products and property shall be sold. To accomplish this the Government must issue the necessary paper money, and in sufficient volume to restore and maintain the general range of prices as they were previous to the demonetization of silver in 1873.

This paper money must be a full legal tender, and not redeemable in coin; otherwise it would be exposed to the avarice of the same trust that dominates our present financial system. If the Government should issue paper money redeemable in coin a syndicate of foreign bankers could get possession of $100,000,000 of paper currency, present it for redemption, and thereby contract the money volume four or five hundred million dollars, which would be followed by a panic, a fall in prices, and general business stagnation.

Mr. Speaker, the liberal extracts I have made from Mr. Taubeneck's most succinct and able treatise, voices the contention of every true reformer. They contrast the true conditions of the past and present in a most striking and authentic manner, and present a lesson that the American people as a whole may with profit carefully consider.

It is the financial piracy of the single gold standard that has wrought this elimination of values through the contraction of our currency and thickly strewn the business highways of our nation with wrecks and disasters.

It is the mailed hand of the gold conspiracy that is now crushing the life out of all industrial enterprises and ruthlessly hurling into the yawning abyss of bankruptcy and ruin all who labor in production. It is those gamblers in gold who stand like the buccaneers of old on every thoroughfare of progress and levy toll upon all who may pass in that direction. The time has come for a change, for a more equitable distribution of the fruits of labor, which if not brought about speedily will be too late.

The condition of the laboring portion of our people is appalling and calls loudly for immediate and wise legislation. It is the statesman and patriot instead of the politician and demagogue that the exigency of the times demand.

Realizing the duties and dangers of the hour, I must enter my protest against an adjournment until some remedial legislation has been accomplished.

Mr. Speaker, the proposition to adjourn this Congress and return to our homes, leaving the finances of the country in their present deplorable condition, can not fail to bring down upon the heads of the responsible majority the condemnation of an outraged people. The members of the People's Party, though small in number and powerless to have measures for the relief of the country reported by the committees of this body, have performed their duty by formulating and introducing measures that would afford the needed relief. The Republican majority, in obedience to the dictates of party leaders, have pursued a policy of do nothing and inaction that marks the decadence of that once aggressive organization. The first session of the Fifty-fourth Congress, so far as this branch is concerned, has distinguished itself by simply dittoing the financial policy of Grover Cleveland and an attempt to facilitate the work of plunging the country deeper into debt in time of profound peace. Mr. Speaker, we are told that our only trouble is lack of revenue, and the only remedy that has been proposed by the Republican majority in this House has been one bill to increase taxation by a horizontal elevation of tariff duties, and another to borrow money by selling bonds. The Republican party claims to be the party of protection to American industry and American labor, and many of my colleagues are no doubt anxious to adjourn that they may hasten to their various homes to make the welkin ring on the hustings in the name of protection.

Mr. Speaker, I am a believer in the principles of protection. I believe it is sound doctrine. I am ready to vote for any and all measures that will elevate the general level of American citizenship, and to vote for any measure for benefiting any particular class provided it is not at the expense of others. I will go further and vote for measures that may for a limited time bear unevenly upon our people if it can be shown that it will ultimately benefit all alike. But, Mr. Speaker, I contend that all attempts to legislate on protective lines without first restoring the bimetallic standard of money will be an inexcusable blunder, and the Republican party stands convicted before the intelligence of mankind by coupling two inconsistent and antagonistic policies, with the result of confusion confounded. It would be just as easy to turn a mill wheel with a stream composed of equal parts of fire and water as it would to enact tariff laws that would protect American

industry and labor until the gold-standard policy of Cleveland and SHERMAN is abandoned. To amplify my meaning upon this point I will now ask the Clerk to read from the speech of Mr. John M. Devine, of Nebraska, at the Lubin conference at the Ebbitt, Washington, D. C., January, 1896.

The Clerk read as follows:

Mr. Chairman, I notice that we have with us Mr. J. M. Devine, of Nebraska. I know we would all be delighted to hear from him.

Mr. DEVINE. Mr. Chairman and gentlemen, the proposition that is before this body for discussion—Mr. Lubin's proposition—is something that is entirely new to me. I knew nothing of the nature of the proposition until I listened to the reading of Mr. Lubin's paper in this room yesterday. Therefore, in what I have to say I wish to be understood as not committing myself to the specific measures proposed by Mr. Lubin to remedy the defects in our protective system, but will briefly consider some of the facts in the case that deserve the attention of all who desire the continuance of a protective policy in this country.

I agree with Professor Gunton that no nation should expose its people to free competition with the people of nations whose social conditions are upon a lower level than its own; that it is the prerogative of government to adopt fiscal policies favorable to the highest development of the industrial and social conditions of its people, and that competition that would tend to degrade and lower their civilization should neither be invited nor permitted. But at this point I desire to ask the professor if a policy can be called "protection," or should be dignified with that name, that results in benefiting a class or a portion of the people only; a policy that does not distribute its benefits and its burdens alike to all of the people. This question admits of very nearly a direct answer, and before proceeding further I would like to have the professor answer it.

Mr. GUNTON. The habit is that if anybody is to be interrogated it is me in this meeting. I will answer the question. I will answer directly now. For the sake of facilitating your speech, I will say this, that class legislation—I lectured on that last Wednesday evening—I took the peculiar position that class legislation is about the only legislation we ever get, and that it is perfectly defensible, provided—for instance, a ten-hour law—it was not for the manufacturers or land owners, it was for the laborers as a class. But whenever you have any legislation, as the abolition of the sweating system that we hope to accomplish very soon in New York, which is purely for them—I believe that you can have legislation for a section or a portion of the community at a time, and that is all there is of class legislation. But it is never justifiable unless it will benefit that portion without injuring any other portion—bringing them up and then lift another bunch up, and then another bunch, and we will get them all up bye and bye.

Mr. SMITH. We are a bunch asking to be lifted up.

Mr. DEVINE. That is a pretty long answer, but I think I understand you to say that there is no warrant in equity for legislation that does not distribute its benefits and impose its burdens upon all alike, ultimately.

Professor GUNTON. Yes; that it is to the general advantage of the whole.

Mr. DEVINE. Well, then, having agreed that a policy does not inure to the general advantage of the whole is indefensible, I invite your attention to the conduct of the political party that sets up the lofty claim of being the champion of protection to American labor and to the business interests of our nation; and also to the conduct of the two great political parties in that section of the country where in the main those special industries are located that have demanded and received the enactment of laws to benefit them in the most direct, specific, and, in some instances, extraordinary manner. In so doing, I am apprehensive that it must appear to the impartial mind that the principle "The good of the whole" has been forgotten, and is no longer considered by them necessary or material. If it can be shown that this principle, "The general benefit of the whole," has been departed from, I expect of this intelligent and honorable body of men recognition of the fact and a verdict that it ought to be corrected. The press of New England and the Middle States, which are the homes of the protected interests, in the main, regardless of political affiliation, have been zealously contending during the past fifteen years that the general prosperity of the country depended upon our borrowing capital from foreign countries. Every investment made in our country by foreign capitalists has been heralded as evidence that our nation was enjoying a great boom.

The statesmen in both Houses of Congress from the aforesaid States, regardless of the political party they represented, have proclaimed with one voice that the prerequisite of national prosperity was such a credit as would enable brokers of New York to float loans on everything American in foreign countries. With them the question of the establishment and continuation of the gold standard was the first question before the American people, outranking in importance even high-tariff schedules. The press and politicians of these States have zealously taught the people that the means necessary to a good credit was that all loans should be made payable in gold, overlooking the fact that the parity between gold and commodities and labor in this country had so changed that 50 cents in gold in 1895 possessed a purchasing power equal to 100 cents in gold in 1873, and that the parity between obligations to pay money and the property necessary to command the money to pay had so changed that it took double the property now to cancel a money debt that it did twenty years ago. The politicians from these States, particularly those of the Republican persuasion, while demanding an American industrial system, by which they mean high-tariff schedules on the products of the factories of their States, have insisted that it would be dishonest for the United States to have a monetary system of its own, to the end that money supply might keep pace with legitimate demand, and thus preserve a parity between money and commodities and maintain alike the equities of debtors and creditors. They have insisted that we must ask the consent of foreign nations, have an international agreement, before we could correct the most glaring imperfections in our monetary system—that of an appreciating money standard, which transfers the property of debtors to creditors without an equivalent therefor.

The one advantage urged to offset this gross injustice to debtors, and the paralysis of the productive energies of our people by the constant fall in prices consequent upon an appreciating money standard, is that we can borrow capital from abroad if we continue to promise payment in gold, and that as evidence of our good faith we must transact all of our domestic business on the gold standard; that it would be dishonest to adopt any other standard without the cooperation of foreign nations.

Good credit on the part of a nation or an individual is a good thing to be used in an emergency, to bridge over a misfortune and avoid sacrifice. But the idea that prosperity consists in borrowing, or that a nation can borrow itself great and rich is as novel as it is absurd in both economics and morals. The Bible teaches that the borrower is the slave of the lender.

Now, Mr. Chairman, the American people, with their enlightened conscience, do not believe that anything is good policy that does not possess the essential quality of honesty. Honesty demands the payment of measure for measure—the dollar of payment as good as was received by the borrower—no worse, no better. But I am afraid that the prosperity of our States that have enjoyed the benefits derived from high tariff schedules has been so much greater than the general prosperity of the whole country that a vast creditor interest has grown up in them, and that this interest has become so powerful and selfish that it has forgotten all about the general good of the whole.

A NEW INDUSTRY FOSTERED.

This new industry of borrowing foreign capital that has been fostered and developed during the past twenty-five years has so changed conditions that the general good of the whole people can no longer be promoted by tariffs against the importation of manufactured goods, and in the absence of an American monetary system that will maintain a parity of values between money and commodities and property and afford some protection to the one-half of all the people who are engaged in agriculture there is no longer any warrant for the agriculturists of the country to concede further legislation in the interest of manufacturers.

The gentlemen present admit that there is no warrant for legislation that benefits only a section of the country, or the people engaged in certain industries, and that nothing can be properly called "protection" that does not distribute its benefits and impose its burdens upon all alike in the end. Now, the manufacturers who demand the enactment of tariff laws to enable them to sell their product for good prices in the American market, free from the competition of foreign countries where labor is cheap and the social condition of the laborers wretched, should be the last of all to lend their aid and support to the fostering and development of this new industry of borrowing foreign capital, because the existence of a foreign debt makes it impossible to maintain tariff schedules that will enhance the price of manufactures and at the same time distribute their benefits to the whole people. Think how inconsistent it is with the good of the whole to foster the creation of a debt that can only be paid through the forced sale of the products of agriculture that constitute our staples for export, while we demand a tariff to increase the price and retard the sale of foreign commodities to enable domestic manufacturers to obtain better prices for their products. Our exports are chiefly the products of agriculture, the principal ones being wheat, cotton, and meat products. Ought not the producers of these products be permitted to buy their supplies under the same market conditions that they are obliged to sell their products?

Professor Gunton has been forced to admit, as all economists admit, that the price of all commodities, a considerable portion of the annual product of which must be exported, is fixed by the price received for that portion which is exported; or, in other words, that the price of the entire product is fixed in the free-trade markets of the world.

OUR INDEBTEDNESS TO FOREIGNERS.

Now, what is our condition as a debtor nation and how does it affect the producers of our staples for export? Conservative estimates place the indebtedness of the people of this country to the people of foreign countries at about $6,000,000,000, and the tribute that the people of this country are obliged to pay to the people of foreign countries annually as interest on loans and other investments above $1,000,000 per day. We owe the people of foreign countries an amount equal to one and one-half times the total value of the gold known to be in existence, and we owe as interest each year on this indebtedness an amount equal to twice the value of the annual product of gold from the mines of the earth. The manufacturer who asks for protection does not expect to pay any portion of the principal or interest on this vast foreign indebtedness with his products. On the contrary, he asks the intervention of government to prevent the manufacturers of similar products in other countries selling their goods in this country by the imposition of duties for enhancing the price in order that he may receive higher prices for his product than foreign goods could be otherwise sold for. How, then, is this debt to be paid? And paid it must be, either in gold or commodities, in the end. We may send bonds abroad and settle our interest account in that way a while longer and enlarge the debt, or we may transfer the titles to property in lieu of sending commodities or gold out of the country.

What is to be the end of all this? Are we not digging the pit deeper into which we must fall? If, starting with no debt and no tribute to pay, we have in less than thirty years piled up a debt representing one and one-half times the total gold money of the world, have an annual tribute to pay equal to double the world's annual gold product, what will be our condition twenty or thirty years hence? If, in order to establish a credit to incur this debt, it was necessary to have a money standard that has appreciated 100 per cent, causing a fall of one-half in general prices, what will be the condition of further credit; what must the fall in prices be in the future?

At the present time, in order to balance our account with foreign nations each year, we are obliged to export products equal to the value of those that we import from other countries and about four hundred millions besides. Upon what condition can we sell $400,000,000 worth of commodities to other countries each year in excess of what we buy of them? In this way, and this only: By offering our commodities in the markets of the world in competition with the products of all other debtor countries at prices sufficiently low to induce buyers to buy of us rather than from any other source. Thus you will see that this borrowing has brought about a condition that has deprived the producers of staples for export of any benefits whatever that may accrue from our protective system, and equity demands that the agriculturists engaged in the production of wheat, cotton, and meats have the privilege of buying whatever they require to supply their wants in the cheapest markets of the world, to offset their being obliged to dispose of their products in the cheapest markets of the world in competition with free-trade countries.

Nor is this all. Being a debtor country, with an annual tribute of more than four hundred millions to pay, only such low prices for staples for export as will force their sale against the competition of other debtor countries can prevent such an export of gold as would involve the country in general ruin.

The monumental imbecility of American manufacturers who demand protection for their products in advocating the gold standard of money can only be excelled by the agriculturists who produce our staples for export giving their further consent to tariff schedules to enhance the price of manufactured goods that they must consume. Protection involving the general good of the whole is incompatible with the gold standard. An honest interpretation of this principle must accord to all producers the right to purchase their supplies under as favorable market conditions as they are forced to sell their products.

FALLING PRICES DECREED BY DEMONETIZATION.

The demonetization of silver was a decree that all money values in the United States and Europe must be so readjusted that property and commodities could be priced in one-half the amount of money as before. The gold in those countries must express the prices of and pass in exchange for twice the amount of property and commodities that it did when silver was its equal partner. It had to be spread thinner to do it. Fifty cents must do the work formerly done by 100. Prices must fall to one-half their former level both here and in Europe. It was no more possible to discard one-half the standard money and maintain prices at the old level than it would be to double the area of a reservoir and maintain the water at the old level, or to detach one horse from a team and not increase the draft upon the other.

When the Atlantic Ocean can be made by law to maintain a higher level in New York Harbor than in that of Liverpool then, and not till then, can the prices formerly sustained by gold and silver be sustained by gold alone in any country by means of tariffs.

Metallic money distributes itself among the nations of the earth in response to price levels, commodities seeking the markets where prices are high and money seeking the markets where prices are low. Each nation's distributive share of the whole stock of metallic money is that portion which they can buy with their products in competition with all other nations, and they can only retain permanently that portion necessary to price the products of their country at home at a point where other nations can not bring into their markets similar products and undersell them.

Under the stimulus of rising prices the productive energies of a nation find full play, and both capital and labor receive their reward; but when falling prices extend over a long period the margin of profits narrows and finally disappears, forcing wages and prices down, lessening consumption, and limiting production to the imperative demands of daily life. Under this condition equities shrink and mortgages fatten, and money lenders alone prosper, but unjustly and at the expense of debtors. With the increase or decrease of money supply prices have ever moved upward or downward, and must continue so to do so long as one grain of gold is as good as another grain of gold. When a ton of new gold is produced from the mines of the earth it takes to itself a share of the preexisting money values and makes the exchange value of every grain of gold in existence a little less in terms of other things, causing an advance of prices. The prosperity that has ever followed an advance in prices brought about by an increased money supply, and the distress that has ever followed a diminishing money supply gave rise to the appreciation in which favorable trade balances are held among commercial nations. Although the balance of trade in favor of a nation means that the people of that nation have produced and parted with to other nations more products than they had received in return, receiving the difference in metallic money, which is neither food nor raiment for its people, yet it is the means of sustaining prices, which is the condition of profitable employment for capital and labor, while the nation that received their products and parted with its money has lost that which would sustain prices and causes the industry of that country to languish.

ORIGIN OF PROTECTION.

The experience of ages, through alternating periods of prosperity and adversity following the ebb and flow of money, taught men to seek to prevent the escape of money from their country. Herein is the foundation of the idea of protection. England at one time prohibited by law the export of coin. France at a later period charged a seigniorage of 8 per cent at her mints, thereby giving coin a value 8 per cent greater than the bullion it contained. Under this law, whenever a coin of France found its way into other nations 8 per cent more profit could be made by selling that coin back to France than by recoining it or selling it elsewhere. This law enabled France to retain her money and maintain a price level 8 per cent higher than outside nations, and to the extent of the seigniorage charged afforded the people of France immunity from the leveling influence of free competition.

A CONTRACT.

How striking is the contrast between the protectionists of France at that time and the protectionists of the United States of our day. Our protectionists have joined hands with the money changers and credit mongers of the world to change the money standard from gold and silver to gold alone, and, with a simplicity that calls for pity, thought they could maintain prices and prosperity through the agency of tariff schedules. A knowledge of the law through which the precious metals distribute themselves among nations and the causes that developed the protective system would have taught them the utter absurdity and folly of falling into the gold-standard trap.

PROTECTION INCOMPATIBLE WITH THE GOLD STANDARD.

In the adjustment of trade relations between nations, when it is sought to enact laws that will inure to the advantage of the people of a particular nation, if the laws through which price levels are determined are left out of account, serious blunders may be made that will defeat the object sought. The effect of the change from bimetallic prices to prices based on gold monometallism is that laws that were protective under bimetallism are no longer protective between countries that have decreed the gold standard, and can not be made such until the adjustment of values to the new standard is completed and prices have reached their lowest level under the changed standard; and a nation that creates a foreign debt in resisting the adjustment of values to the new standard can not maintain an even level of prices with the creditor nations until after the foreign debt is extinguished, and the monumental absurdity of economics is the claim that we can so protect by tariffs that we can have high-priced labor and high-priced products while changing from a lower to a higher valued money standard. Twenty-three years of an effort in this direction—a period marked by labor strikes, lockouts, business failures, and the organization of trusts—gives a net result of prices reduced one-half and a foreign debt of such magnitude that protection by tariffs is an impossibility until prices have reached a point sufficiently low that the nations that have already adopted the gold standard will become the owners of gold that will remain in the channels of circulation after having canceled their foreign debts with their products, and purchased the gold and become its rightful owners.

If the revolution involved in the change from the bimetallic money standard to the single standard of gold was comprehended by our people; that the property of the nations adopting this standard was to be revalued and priced in a scarcer and dearer money; that price levels were doomed to constantly fall until the gold of the world became redistributed and each nation became the owner of such share as it could wring from the others through the most grinding and relentless competition, they would have seen the folly of resistance, and that protective laws would prove as ineffectual to save us as the drumming of tom-toms to frighten away a comet.

THE OWNERS OF THE WORLD'S GOLD.

The general level of prices in all countries that have decreed the gold standard has already fallen one-half, and the gold of the world instead of being redistributed has become more centralized than before. England has become the creditor of the rest of the world in a sum approaching $15,000,000,000. Germany, France, and Holland have also enlarged their holdings of debts against the people of other nations. To those creditor nations not only does all the gold of the world belong, but they have the balance of the world under tribute to them in the form of interest on their obligations to such extent that the debtor nations are doomed to a perpetual and never-ending competitive struggle to obtain the gold to pay the ever-maturing interest account. Think of the position of our country being a debtor in the sum of $6,000,000,000, created in an attempt to resist a revolution in prices inaugurated by our own Government in 1873. To what extent are prices doomed to fall in this country before we can sell enough products abroad to release ourselves from our money obligations to other countries and buy with our products a share of the world's gold which we can hold and call our own? Shall we continue the policy of protection and deceive ourselves with the idea that we can resist the inevitable fall in prices thereby and mortgage ourselves to the gold-owning creditor countries until we have sent abroad in lieu of gold not only all of our railroad bonds and mortgages, our national, State, and municipal indebtedness, but the titles to our lands as well. This is what awaits us if we continue the gold standard. There is no way to avoid this except to abandon protection, put down prices to where we can undersell the world, and buy gold with our products in the free-trade markets of the world with which to cancel our foreign debt. After this has been done we can draw gold to our shores that will remain here, and not before.

No contention is made that the protective feature of tariffs is made more or less operative between nations having a common money standard, because of the standard being bimetallic, or composed of either of the metals singly, but the contention is that the protective feature is inoperative if the standard is appreciating, that our tariff ceased to be protective soon after 1873, on account of the appreciation of gold occasioned by the increased demand, and that in addition to our high war tariff, superseded by the still higher McKinley tariff, and the incurring of a foreign debt of about six billions of dollars, our efforts to resist the inevitable fall in prices proved futile. Prices have fallen one-half and the period has been marked by labor strikes, business failures, the practical annihilation of domestic competition through the organization of trusts and the unprecedented centralization of wealth at the money centers.

PROTECTION DEFINED.

Fundamentally, protection is a policy to so modify and restrain trade with foreign countries having a common money standard that the protected country shall retain not only what would be its distributive share of the total metallic money of the world under free trade, but that its distributive share be made larger and that its domestic price levels may be raised higher than the international free-trade level.

That high tariffs have failed to protect in the United States since 1873 is evidenced by the fact that instead of having more than would be our distributive share of the metallic money of the world under free trade we have none that is our own; that we owe foreign countries more gold than is possessed by all the nations and people of the earth, and that we must abandon the gold standard and restore bimetallism, because the policy that we have pursued since 1873, if continued, will at no distant day force us to part with to foreigners everything in the country of any value, even to the titles to our land.

The ostrich is said to seek safety against impending danger by burying its head in the sand. The intelligence of American manufacturers parallels the instinct of this bird when they seek relief from present conditions and safety for the future through protective tariffs coupled with the gold standard. The policy that we have pursued since 1873, if continued, can only end in repudiation and revolution, or the permanent enslavement of the masses of our people.

CIVILIZATION MENACED BY ASIATIC COMPETITION.

But there is another phase of this question that is still more alarming, because if not checked at once it involves the destruction of the civilization of the Western world. I refer to the revolution in the industrial world resulting from the destruction of the bimetallic money standard and the dividing of the world into two monetary hemispheres—the silver hemisphere of the East and the gold hemisphere of the West.

Under bimetallism all the gold and silver of the world, coined and uncoined, was potentially money at the legal ratio, and whenever exchange on countries coining gold alone or silver alone departed from the coinage ratio sufficient to profitably transport coin to or from countries conferring equal monetary rights on both metals, automatic adjustment took place.

But with the destruction of the bimetallic standard all this was changed. The rapid and constant rise in the price of gold exchange in silver-standard countries soon doubled the price of commodities imported from gold-standard countries. The effect of this was to force the Asiatic countries, where the wages of labor and prices in general have been for centuries and still continue at a lower level than ever known among any other people, to manufacture for themselves. The price of gold exchange having doubled had the same effect in increasing the price of imports from gold-standard countries that an import duty of 100 per cent would have.

While India and Japan under the stimulus thus afforded were developing their cotton mills, until they now supply the Asiatic demand for cotton yarn, England was purchasing the wheat and cotton of India, paying the same price in silver as before 1873, and laying the same down in Liverpool at a cost to them in gold as much below the price of 1873 as silver bullion had fallen below the mint price under free coinage.

It must be borne in mind that the cost of commodities—that is, the material, labor, land rents, and interest on capital—together with the profits, must be reckoned in the money of the country where the goods are produced, and that they are always paid for in current money of the country where they are sold.

If goods are produced in the United States and sold in Japan sufficient silver must be received for them that when exchanged for gold it will cover the cost and the profits; likewise, that if goods are produced in Japan and sold in the United States, they can be sold for just sufficient gold that when exchanged for silver it will cover the cost and the profits.

Under bimetallism it was shown that neither country was benefited nor injured because of the metal comprising the current coin, but it will be readily seen that under existing conditions the advantage is on the side of Japan and against the United States to the extent of the fall in silver exchange below the rate that prevailed prior to demonetization in 1873.

With thousands of years behind us during which the Mongolian nations manifested no disposition toward commercial exploitation, but on the contrary resisted every innovation upon their long-established modes of life—content with selling other nations the few articles of manufacture peculiarly their own and such products as soil and climate gave them a natural monopoly of—there is no good reason for believing that this sleeping giant of the East could have been aroused from his slumbers by conditions less extraordinary than were presented by the exchanges after the manufacturing nations adopted the gold standard.

Agriculture in gold-standard countries suffered first. The wheat and cotton from India in the Liverpool market keeping step with the fall in rupee exchange, soon cut the price of the world's crop in two and destroyed the profits and depreciated the property of the producers in all gold-standard countries.

The only reason why the manufacturers and laborers in all gold-standard countries have not suffered a worse fate than has overtaken the wheat and cotton growers is that the Asiatic nations did not have competing articles to offer.

Silver in the oriental nations continues to purchase raw material and labor as cheaply as in any time in the past. Those overpopulated nations containing one-half of the human family, perpetually on the verge of famine, the frequency and fatalities of which have developed and intensified a universal system of hoarding, constantly trenching upon the coin in circulation, has had for thousands of years and still continues to have a wage rate barely permitting continued existence to the teeming millions of toilers.

Before silver was outlawed in the Western world, 15½ ounces of silver in the Orient paid for commodities that cost an ounce of gold in the Occident, but at the present time it requires 31 ounces of silver to purchase the product of an ounce of gold.

Upon a wage in silver barely sufficient to continue life the alternative to the toilers of Asia was to manufacture for themselves the articles formerly imported from America or Europe or forego their use altogether.

These extraordinary and exasperating conditions awoke the Japanese from the sleep of ages. The recent invasion of our markets by manufactures from Japan is perhaps the most threatening and direful in the chain of calamities resulting from the ill-conceived and totally wicked effort of the world's creditors to plunder and enslave the world through the demonetization of silver.

Upon the gold standard the present rate of exchange gives Japan an advantage over the manufacturing nations of America and Europe equivalent to a protective duty of 100 per cent and an export bounty of the same amount. This is the premium that the devotees of the gold standard in the United States have put upon the destruction of the civilization of the Western world. Who among them will contend that when factories are established in Japan, China, and India, equipped with the latest improved labor-saving machinery, and operated by labor paid from two to three dollars per month, that the era of colleges, schools, and churches is not doomed?

The Financial Legislation of the Republican Party all Favors Monopolies and Wealth.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 11, 1896.

Mr. WHEELER said:

Mr. SPEAKER: Prior to 1861 each State enacted its own banking laws, and pursuant thereto banks were established in all localities where they were needed by the people. There were no general money centers, but each bank vault was the point of issue and redemption, and the best business of the country bank was to loan its money to farmers and others, taking land and other real estate as security. In 1861 the country fell into the hands of the Republican party, and every financial law enacted by them has been in the interest of monopoly and wealth and against the interest of the people.

They enacted what are called the national banking laws. They were framed and dictated by the moneyed men and the bankers of New York, who took special pains to so frame the laws as to give them the monopoly of banking and the substantial control of the money of the United States. By these laws all bankers other than national bankers were prohibited from issuing any currency by the attachment of a penalty of 10 per cent on every dollar issued. This gave the national bankers the monopoly of issuing currency. These men possessed vast amounts of personal property, and in order to give them the monopoly of borrowing from these banks they secured the enactment of a provision which prohibited national banks from loaning money unless it was secured by the kind of property which they had and which the mass of the people did not have. This made it impossible for the great mass of the people of the United States, whose property consisted of land or other real estate, to borrow one dollar from the national banks, which under the law were the only banks of issue allowed to exist. This monopoly, of course, resulted in the Northeastern moneyed men becoming owners of substantially all the money and bonds issued by the Government.

REPUBLICANS LEGISLATE FOR BONDHOLDERS AND CAPITALISTS.

In 1869 the currency of the country was at a discount of 30 or 40 per cent, and all bonds stated upon their face that they were payable in this currency. The bondholders were so powerful that in March, 1869, they induced a Republican Congress to enact a law stating that their currency bonds should be paid in coin. At that time the silver in a silver dollar was worth as much and even more than the gold in a gold dollar, and therefore they did not designate the kind of coin that they were to receive; but, realizing that to reduce the amount of coin would enhance its value, in 1873 they again exercised their influence over Congress and secured the enactment of a law demonetizing silver, which, of course, enhanced the value of gold, and at the same time necessitated the payment of their bonds in that metal.

Having secured the enactment of a law making gold the only money of ultimate redemption, the moneyed classes again came to a Republican Congress in 1874 demanding the enactment of the resumption law, which made it the duty of the Secretary of the Treasury to redeem the legal-tender notes in excess of $300,000,000, and after January 1, 1879, to redeem in coin the legal-tender notes then outstanding.

The consideration by Congress of this and kindred measures caused a political revolution in our country.

The Forty-third Congress, then sitting and seeking to enact this legislation, had a Republican majority of 115, but so obnoxious were this and kindred Republican measures to the people that in November, 1874, they rose in their might and elected the Forty-fourth Congress, with a Democratic majority of 77.

The members of the Forty-third Congress were so well aware of the unpopularity of this measure that they did not dare to fully complete this work until after the election, and the resumption act did not become a law until after the election of November, 1874, the date of the final enactment being January 14, 1875.

One hundred and thirty-six Republicans voted for the bill, and every Democrat in the House voted against it.

EFFECT OF RESUMPTION ACT.

The effect of the resumption act was so disastrous to the country that there was an almost immediate and well-nigh universal demand for its repeal. Property of all kinds fell in value, mortgages were foreclosed, and distress prevailed throughout the land. This was responded to by the Democratic party, and the national Democratic platform adopted on June 28, 1876, which it is understood was written by that great conservative statesman, Samuel J. Tilden, said:

We denounce the resumption clause of the act of 1875, and we here demand its repeal.

This demand was further responded to by the Democratic House of Representatives, which, a month later, August 5, 1876, passed a bill repealing the law; and Congress still further responded to the demand by the passage of an act for the free coinage of silver, and it still further responded by a very nearly unanimous vote upon the following resolution:

Resolved by the Senate (the House of Representatives concurring therein), That all the bonds of the United States issued, or authorized to be issued, under the said acts of Congress hereinbefore recited, are payable, principal and interest, at the option of the Government of the United States, in silver dollars, of the coinage of the United States, containing 412½ grains each of standard silver; and that to restore to its coinage such silver coins as a legal tender in payment of said bonds, principal and interest, is not in violation of the public faith, nor in derogation of the rights of the public creditor.

The Republicans became alarmed, and to save the party from defeat they incorporated the following expression in the Republican platform of the national convention of 1888:

The Republican party is in favor of the use of gold and silver as money.

And to be more emphatic, they denounced the Democratic Administration for what they chose to term—

The efforts of the Democracy to demonetize silver.

Notwithstanding their pledges, the moment the Republicans obtained power they, in obedience to the demands of the moneyed classes, enacted the Sherman law of July 14, 1890, which repealed the silver-coinage law of 1878, and from that time to this the struggle has continued between the moneyed power to maintain the gold standard and the people to restore bimetallism.

It was this same influence which secured the repeal of the purchasing clause of the Sherman Act.

In 1892 the Democratic platform demanded the—

Coinage of both gold and silver without discriminating against either metal.

And the Republicans promised the people—

The use of both gold and silver as standard money.

The Republicans have now become emboldened by their party victories in 1894, and now they for the first time throw off the mask and declare unblushingly for the perpetuation of the single gold standard.

That the honest farmers, laborers, and wage workers in all vocations throughout our land will rebuke this arrogant, unprecedented, and astounding demand of the monopolists, bankers, and millionaires can not admit of doubt.

Banking and Currency.

REMARKS

OF

HON. JAMES S. SHERMAN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1896.

Mr. SHERMAN said:

Mr. SPEAKER: Under the general leave to print which has been granted by the House I desire to submit certain facts as to banking and currency.

As supplemental thereto I add as appendices the article on "Free trade or protection," being the reply of the Hon. James G. Blaine to the Hon. William E. Gladstone, and published in the North American Review for January, 1890, the copyright of which is in the North American Review and has been very kindly granted me for this purpose by Mr. Lloyd Brice, of the North American Review. Mr. Blaine was for many years possibly our foremost, certainly one of our greatest citizens. He has now gone from us, but his words, his counsels, his opinions will bear weight—a greater weight with each succeeding generation of his fellow-citizens, who recognize in him a typical, intense, and far-sighted American.

As a timely exposition of the views and aims of what we trust is a majority of our citizens, I also add the platform recently adopted at the Republican national convention in St. Louis, Mo.

At that convention one of the most notable though brief expositions of sound American doctrine was delivered by the permanent chairman, Hon. J. M. THURSTON, a Senator from Nebraska, with whose words I conclude.

THE USE OF METAL AND PAPER MONEY.

Metallic money, gold and silver, each has been, ever will be the base for the exchanges of mankind. But as commerce increases substitutes for these in the form of paper, covered or uncovered, have come more and more largely into use. Wholly uncovered or fiat money is the dream of the Greenbackers in the United States and of those of similar views under different names in other countries; but these have never yet succeeded in changing the preference of the peoples of the world for metallic money as the ultimate or redemption money. It is, however, fully established that an issue of paper money, each dollar based on a metallic dollar deposited in a secure place and obtainable on demand, furnishes a most desirable medium for the chief purposes of money.

NATIONAL VS. STATE CURRENCY.

In the early days of the Republic we had a national bank issuing paper money based on the coin reserve provided by law. When this had been legislated out of existence by the Democratic party of Jackson, the country had to fall back on the system of State banks. This policy continued so long as the Democratic party was in power, and until in 1862, when, under the wise management of the Treasury Department in the hands of Salmon P. Chase, the Republican party gave the country the present safe system of national banks. The Democratic party is still in favor of a return to the antiquated and dangerous method of State banks, disregarding the wonderful changes in the conditions of the country since they ceased to exist, and a return of which would cause more disaster, if that be possible, than that caused by their bungling with the tariff.

WHAT STATE BANKING ISSUES MEAN.

It is well for this generation to consider to what the Democratic party desires to return. It will be instructive to study the pen picture shown in the report of the Secretary of the Treasury, Hugh McCullough, made in 1876:

There were scarcely two States in the Union whose systems were alike. In some States banks were chartered with proper restrictions upon their discounts and their circulation; in others without any such restrictions. In some there was individual liability; in others no liability at all, not even in cases of gross mismanagement. In some States the circulation of the banks was secured partially, at least, by mortgages and bonds; in others there was no security except the capital, which was frequently a myth. In some States banking was a monopoly; in others it enjoyed the largest liberty. The consequence was that we had a bank-note circulation frequently worthless and, when solvent, lacking that uniform value which was needed in business transactions between the citizens of the different States. It is enough to say that the circulation of the State banks was entirely unfitted for a country like ours; that by it the people were subjected to enormous losses, and not only in the way of exchanges, but in the inability of a great many of the banks to redeem their notes.

Does this inspire us with a desire to have single States, say Florida, Mississippi, Alabama, and Arkansas, giving the people of these United States a safe circulating medium?

Yet the platform of the Democratic party adopted at Chicago in 1892 says:

We recommend that the prohibitory 10 per cent tax on State-bank issues be repealed.

That is all that is needed to open the flood gates of unlimited paper money by every one of the 45 States. It would even allow Arizona and Alaska an opportunity to come to our rescue. It would be a sight to please the gods of discord and unrest to see the honest farmers and laborers of this country studying the figures and make-up of Democratic "wild-cat" money printed in far-off Alaska, or Utah, Arkansas, or Florida, to see if it was a safe return for their wheat or labor. We would, indeed, have back the good old times when the well-to-do Michigan farmer, en route to Chicago with $1,500 of this precious State money, was put off the train because he did not have the sort of money required by the seemingly heartless corporation which placed little trust in the promises to pay of any man who set up a money shop in his back yard and peddled out his promises to pay with generous hand, but at the time of redemption hied himself where the woodbine twineth.

REPUBLICAN PAPER MONEY.

All whose memories reach back to the fall of Sumter know that this Democratic money was the only substitute for gold or silver until the Republican party came into power in 1861. The first call of the Treasury exhausted the specie, and the banks promptly suspended payments. A national currency was absolutely indispensable to save the nation. In this, as in every crisis, the Republican party met the exigency; legal tender (Treasury notes and greenbacks) were issued to take the place of the disappearing specie; and a system of national banks was devised (the most perfect ever known in this or any other country), with their issues secured by a deposit of national bonds; the often worthless and always unreliable State-bank issues were cleared away by a tax of 10 per cent on their circulation, and, more than all, the revenues necessary for maintaining the national life were provided.

THE NATIONAL BANKS.

Unlike the old Government Bank, these were independent of each other, so they could not combine against the Government or the people. Within safe limits any number of individuals could associate themselves and issue their notes. They were under strict governmental supervision—aye, more, each and every one of the bills issued by them was and ever has been worth 100 cents on the dollar wherever in all this broad land it may have been issued. Who cares or looks to see where the bill thus devised by the Republican party to help obtain funds to preserve the national life was issued unless it be from curiosity? Oregon or Florida, Maine or Texas, it matters not; they pass current in any bank in Chicago, New York, or over the counter of any store in the Union. The farmer of the West, the planter of the South, the laborer wherever he may be, has only to note the figures they represent.

NATIONAL BANKS HELPED RESUMPTION.

When peace was once more restored this same system aided the Government to resume specie payments and to pay off and fund the national debt in bonds drawing less interest. Of course the Democrats opposed every step; that has appeared their main mission in life. Dazed by the popularity of the national currency, it plunged into the vagaries of "greenbackism" and denounced the "resumption act" of 1875.

The Democratic party has never forgiven the national banks for helping to furnish the sinews of war, and in 1892 laid aside all false pretenses and demanded the unconditional repeal of the only hindrance to the flood of State money, the 10 per cent tax on State-bank circulation.

DEMOCRATIC TESTIMONY ON DEMOCRATIC PAPER MONEY.

It is this paper system of extravagant expansion, raising the nominal price of every article far beyond its real value, when compared with the cost of similar articles in countries whose circulation is wisely regulated, which has prevented us from competing in our own markets with foreign manufactures, has produced extravagant importations, and has counteracted the effect of the large incidental protection afforded to our domestic manufactures by the present revenue tariff. But for this the branches of our manufactures composed of raw materials, the product of our own country—such as cotton, iron, and woolen fabrics—would not only have acquired almost exclusive possession of the home market, but would have created for themselves a foreign market throughout the world.—*Message*, December 8, 1857.

When Congress met in December last the business of the country had just been crushed by one of those periodical revulsions which are the inevitable consequence of our unsound and extravagant system of bank credit and inflated currency. With all the elements of national wealth in abundance, our manufactures were suspended, our useful public and private enterprises were arrested, and thousands of laborers were deprived of employment and reduced to want.—*Message*, December 6, 1858.

It will appear from the report of the Secretary of the Treasury that it is extremely doubtful, to say the least, whether we shall be able to pass through the present and the next fiscal year without providing additional revenue. It is now quite evident that the financial necessities of the Government will require a modification of the tariff during your present session for the purpose of increasing the revenue.—*Messages*, December 19, 1859, and December 3, 1860.

It will be observed that while the President (Buchanan) charges to the excessive and insecure State-bank issue the chief cause of the panic, he is compelled to admit that "the revenue tariff" of his party did not produce the requisite revenue, and that the only conservative feature of this tariff was its "incidental protection" to manufactures from "our own raw material." But the chief point here is that no State-bank system can have its "circulation wisely regulated" and properly secured. Competition between numerous States to secure the most bank capital, ignorance of the laws which determine commercial business, laxity of sentiment in regard to the obligations of debt, desire to favor influential private interests, striving after party advantage, and inevitable difference of opinion in different States multiply and vitiate these bank systems. But with the close of the Buchanan Administration a speedy end was brought to this whole business.

And yet even at this late day, and with the present conditions most decidedly opposing such a scheme, they rise up and ask for its restoration.

NATIONAL BANKS AND REFUNDING THE PUBLIC DEBT.

Let us see what the banks did to facilitate the tremendous work of getting our bonds scaled down from high to low rates of interest. As the war was over, the credit of the nation rose so that the Republican party sought to reduce the interest rate. In this work they were greatly aided by the national banks, as is shown by the following extracts:

COMPTROLLER OF THE CURRENCY—1879.

The wisdom of Secretary Chase and the others who, in 1862, advocated the establishment of a national banking system was long since recognized by those who understood the principles which should govern a sound system of currency and banking; but in the light of the extraordinary financial operations of the Government during the present year the wisdom and the economy of the system, both for the Government and the people, are now more apparent than ever.

The refunding of the national debt commenced in 1871, at which time the national banks held nearly four hundred millions of the 5 and 6 per cent bonds, and from that date to the present time they have held more than one-fifth of the interest-bearing debt of the United States. A large portion of the bonds held by them in 1871 bore interest at the rate of 6 per cent. This class of bonds has been greatly reduced, and is now less than one-sixth of all the bonds pledged for circulation, while more than one-third of the amount consists of bonds bearing interest at 4 per cent.

It is certain that if the national banking system had not existed, and United States notes had alone been issued, the refunding operations here described and the consequent large reduction of interest upon the public debt would not have been possible.

NATIONAL BANKS AND RESUMPTION OF SPECIE PAYMENTS.

The same report of the Comptroller says:

The resumption act not only fixed the day of resumption, but authorized the Secretary, in order to prepare and provide therefor, to use any surplus revenues not otherwise appropriated, and to issue, sell, and dispose of, at not less than par in coin, any of the bonds of the United States described in the act of July 14, 1870. Under this act, the Secretary in 1877 sold at par fifteen millions of four-and-a-halfs and twenty-five millions of fours; and in April, 1878, he sold fifty millions of 4½ percents at a premium of 1½ per cent. The coin in the Treasury continually increased, so that on the day of redemption the Secretary held over one hundred and thirty-five millions ($135,382,639) of gold coin and bullion, and, in addition, $32,476,095 in silver coin and bullion, the gold coin alone being nearly equal to 40 per cent of the United States notes then outstanding.

The banks in the cities of New York and Boston strengthened the hands of the Government by their action in October, 1878, an account of which will be found in my report for that year. The assistant treasurer of the United States at New York became a member of the clearing house, thus facilitating the business of the banks with the Government, and the banks agreed to receive United States notes, not only for their ordinary balances, but in payment of the interest upon the public debt and of other coin obligations of the Government. The banks of the country at the date of resumption held more than one-third of the outstanding Treasury notes; but they had so much confidence in the ability of the Secretary to maintain resumption that none were presented by them for redemption.

The people also, who held more than three millions of the issues of the national banks, which issues were based upon the bonds of the nation, preferred such notes to coin itself. There was, therefore, no demand for payment of the notes of the Government, and the gold coin in the Treasury, which amounted to one hundred and thirty-five millions on the day of resumption, increased more than thirty-six millions in the next ten months, the amount held on the 1st day of November, 1879, exceeding one hundred and seventy-one millions.

There are victories of peace quite as great as those of war, and these of refunding and resumption may safely be classed in the latter list. The national banks served a useful purpose in both these instances, and they have never been forgiven therefor by the Democratic party.

PROFITS ON CIRCULATION OF NATIONAL BANKS.

In blind hostility to every act of the Republican party Democracy has charged that the national banks, besides having aided in putting down the rebellion, refunding, and resuming specie payments, not to mention the other fact of having furnished the safest and most convenient paper money ever known in the world, were sucking the blood out of the people by the immense profits they make on their circulation. There is no law or regulation which prohibits Democrats or even Populists, if they have the required capital, from entering the system of national banks. Consequently it would seem that, if their charge were true, the Republican party had been foolish enough to put a powerful weapon into the hands of their enemies.

But they make elaborate charges, only to have them disproved, to the effect that the circulation feature of the national banks is of immense value to them, and as a result a great burden to the people.

AN EXAMPLE.

A Democratic Secretary of the Treasury authorizes the following statement of the matter, which will be found on page 355 of the Report of the Comptroller of the Currency for 1895, Part I:

Deposit of $100,000 of bonds, 4 percents, October 31, 1895:		
Market value, $111,483.70; interest, 4 per cent		$4,000.00
Circulation, 90 per cent ($90,000), at 6 per cent		5,400.00
Total		9,400.00
From this deduct—		
Tax	$900.00	
Annual cost of redemption	45.00	
Express charges	3.00	
Plates	7.50	
Agents' fees	7.00	
Sinking fund	686.60	
Total deductions		1,649.10
Net receipts		7,750.90
Interest on cost of bonds		6,689.02
Profit on circulation		1,061.88
Percentage, 1.062.		

The above is on a 4 per cent bond of 1907. On one of the same rate of interest, but falling due in 1925, one of those which have been recently issued by this Administration to meet the current expenses of the Government, the net profits are stated as being $855.21, or eight hundred and fifty-five one-thousandths of 1 per cent.

LESS THAN 1 PER CENT.

The above figures, which are absolutely correct, show that the maximum profit is only a trifle over 1 per cent, and on the extended 4 percents less than that amount. But there are other provisions of law which national banks must observe which reduce even this small profit. For instance, they must keep on hand at all times 25 per cent of their circulation as a lawful redemption fund. This would require of the above money $22,500 out of the $90,000 not loanable and bringing in no revenue. Then, too, they can not keep all their available money loaned all the time; there is always a loss between the payment of one and the placing of another.

CIRCULATION HAS DECREASED.

The above explains why the actual circulation is so much less than that authorized by law. The following table exhibits this difference from the date of the establishment of the national-bank system up to the end of the year 1895:

Authorized and actual circulation of national banks.

Year. (Last statement of year.)	Authorized circulation.	Actual circulation.	Per cent.	Number of banks.
1863	$6,469,553.70	Not stated.		66
1864	78,104,521.80	$45,260,504.00	.579—	508
1865	353,841,485.40	171,321,903.00	.481—	1,513
1866	373,925,132.10	280,253,818.00	.749—	1,644
1867	378,066,073.50	293,887,941.00	.777—	1,642
1868	378,571,059.90	295,769,489.00	.781+	1,643
1869	383,759,235.90	293,593,645.00	.765—	1,617
1870	391,820,403.60	296,205,446.00	.755+	1,648
1871	414,203,297.40	318,265,481.00	.768—	1,790
1872	434,345,626.80	336,289,285.00	.774—	1,940
1873	441,239,949.90	341,320,256.00	.773—	1,976
1874	446,222,232.90	331,193,159.00	.742—	2,027
1875	454,917,278.50	314,979,451.00	.693—	2,086
1876	447,733,814.40	292,011,575.00	.652—	2,082
1877	429,415,893.90	299,240,475.00	.696+	2,074
1878	418,387,496.40	303,324,733.00	.724+	2,055
1879	409,048,663.50	321,949,154.00	.787+	2,052
1880	412,686,076.50	317,484,496.00	.769—	2,095
1881	419,273,851.50	325,018,161.00	.775—	2,164
1882	436,395,142.80	315,230,925.00	.722—	2,308
1883	460,653,817.50	304,994,131.00	.662—	2,529
1884	471,680,158.50	280,197,043.00	.594—	2,664
1885	476,424,652.50	267,430,837.00	.561—	2,732
1886	495,628,807.50	202,078,287.00	.407+	2,875
1887	522,659,784.978	164,904,094.00	.315+	3,070
1888	534,463,422.561	143,540,296.50	.268+	3,150
1889	556,056,148.203	126,039,541.30	.226+	3,326
1890	592,089,502.50	123,038,785.50	.207+	3,573
1891	609,621,234.30	134,792,873.25	.220+	3,692
1892	620,728,215.75	145,669,499.00	.234+	3,784
1893	613,631,664.00	179,973,150.50	.293—	3,787
1894	599,643,940.50	169,337,071.00	.282—	3,737
1895	591,421,948.785	182,481,610.50	.308—	3,712

NOTE.—The above statement is made from the official report of the Comptroller of the Currency for 1895, Part I, pages 521-541. The column headed "Authorized circulation" is computed at 90 per cent of the actual capital and, while not exact—a few banks being limited to 80 per cent, 75 per cent, and 60 per cent—is substantially accurate. The column headed "Actual circulation" is copied from the official tables, as also the dates and number of banks. The column of percents has been calculated and any possible errors can be detected by a division.

An examination of these figures shows that within three years from their organization national banks were circulating 75 per cent of the full amount allowed them by the law; that they never went higher than 78 per cent, in 1868, and 78.7 per cent, in 1879; that this went down to 65 per cent in 1876, fell steadily from 77½ per cent in 1881 to 20.7 per cent in 1891, and has slightly gained since, reaching 30.8 in 1895. If there were so much money or profit in the circulation of their own notes, we may be sure these national banks would not have failed to avail themselves of the opportunity to the fullest extent.

PROFITS ARE IN DEPOSITS, NOT CIRCULATION.

As has before been shown, the true source of profit in national banks, as indeed in all banks, is in the large amount of individual deposits. To induce these deposits they must command the confidence of the community. A bank is very much like the Texan's pistol. He did not often need it. Indeed, he went many years carrying around, at considerable inconvenience, a dangerous and heavy weapon; but when he did at last need it he needed it badly and at once, and he needed a mighty good one. Like the Irishman who wanted his money until he found the bank had it and would give it to him, we all want to know that the particular money we receive for any transaction is good to-day and will be good at any time in the future.

THE VALUE OF A NAME.

The very fact that a certain institution is called a "national" bank, and is known to be under the regulations of the national banking act and regularly inspected by Government bank examiners who are clothed with authority to promptly take charge when conditions require it, is a strong evidence of soundness and tends to bring to it a larger line of deposits. In this is the chief profit. Many a bank with but small capital has deposits very many times that sum, and on these makes the difference between the small allowance of interest on deposits and per cent charged on loans. That the privilege of issuing their own notes is not generally a source of profit is shown by the figures given.

PROFITS OF NATIONAL BANKS.

There were, September 1, 1895, 3,703 national banks in the United States. Of these, 589 in the New England States earned, for the half year ended September 1, 1895, 2.1 per cent on their capital and surplus; 840 in New York, Pennsylvania, and New Jersey earned 2.97 per cent; 166 in Delaware, Maryland, Virginia, West Virginia, and the District of Columbia, 2.94 per cent; 492 in

the Southern States, 3.18 per cent; 753 in Ohio, Indiana, Illinois, Wisconsin, and Michigan, 2.96 per cent; 556 in Iowa, Minnesota, Missouri, Kansas, and Nebraska, 2.15 per cent; 119 in Colorado, Nevada, California, Oregon, and Arizona, 2.44 per cent; while 188 in the remaining Northwestern States and three Territories earned 1 per cent less than nothing for the time given. Savannah, Ga., 1 per cent: St. Paul, Minn., 0.53 per cent; Nevada, 0.49 per cent; South Dakota, 1.76 per cent; Washington, 1.55 per cent; and Montana, 5.88 per cent, are all minus quantities. In other words, they made nothing; did business for the time given at a net loss. The average earnings in all the United States for this period was 2.6 per cent. (Report of the Comptroller of the Currency, 1895, Part I, pages 420–423.)

PROFITS OF STATE BANKS.

On page 14 of the same report returns from 928 State banks from 24 States for the year ended June 30, 1895, give an average dividend of 7.2 per cent, or considerably above that earned by the national banks. Evidently banking is not the endless picnic which many seem to think; and, more than this, national banks are not making more money than State banks, in spite of the wonderful privilege they enjoy of issuing their own money.

HOW MONEY IS ISSUED.

Let us look into this question of issuing money a little further, so as to discover why it seems so fertile a source of invective on the part of those who oppose the national-bank system. It seems very fascinating to the average mind that one can sign his own bills and have, back of them, the whole credit of the United States. When one comes to look into the conditions they are not all so inviting. Uncle Sam hedges this privilege around pretty thoroughly. He says in substance that whoever pretends to furnish money to his people must give ample guaranty that this money shall be good—good not only now and for a few months, but good for all time; and so long as the United States lasts it will hold an ample fund with which to redeem any of these bills which the bank does not itself take up. It makes no difference whether the bank continues or ceases to exist. If it stops it can not get hold of the bonds which it had to deposit before it was allowed to issue its own paper until lawful money has been deposited to redeem the last of its bills. Uncle Sam's heartless Treasurer retains these bonds or this money regardless of the personnel or politics of the owners. No excuse is accepted, and nothing satisfies except the strict compliance with the letter of the law.

STARTING AND MANAGING A NATIONAL BANK.

But before a bank cashier or president can sit down and sign off his notes he has had to do several things. He has to associate with him four other persons, and they together have to put up money enough to purchase $100,000, par value, of Government bonds. These are still expensive articles to have in the house, even if they have become rather more plenty since the Cleveland Administration acquired the habit of issuing them for running expenses. In the year 1895 this transaction would have required for fours of 1925, $121,752.70. On this outlay he will be able to float 90 per cent of the par value, or $90,000. But he must always keep on hand a reserve of 25 per cent, either in this money or in that of those whom he can induce to deposit in his bank. This calls for $22,500 off, or leaves him a net circulation beyond his own bank of $65,500. His association can not do business in their hats; it must have vaults, and a safe, and a convenient location for its bank, and these things cost good money. He must have a full set of books and a sufficient force of officials and clerks to do the business. In our West and Southwest he must also lay in a fair supply of firearms with which to discourage those who wish to reach wealth by quicker ways than those usually accepted as legitimate. Of late he has to do this in other sections also. He has to pay local taxes, a circulation tax of 1 per cent, cost of redemption, express, plates, agents, and carry one-tenth of the net profits to a sinking fund to be available when needed to make up for bad debts or any other losses. His bank can only charge the legal interest in the State where it is located; a violation forfeits the entire interest. He must furnish reports to the Comptroller when demanded, and from time to time pay the charge fixed by law—$25 and up—to compensate the national-bank examiner who comes to check up his cash and see exactly how he is carrying on the business.

No overdraft can be cashed, not even for his best customer, nor can he loan to any one person more than a certain portion of the capital. No more real estate can be held than is needed for the bank's uses, and if any comes in on debts it must be disposed of within five years.

In short, he is so hedged about with restrictions and limitations that his bank is safe—the safest in the world. It is just what a bank should be and fills a necessary place in every community.

WHAT IS A BANK GOOD FOR?

It is the fashion in these days for certain classes to lay all monetary ills at the door of banks and to declare that we would be better off without any banks at all. Well, we could get along without banks, or without hearts either, for awhile—a very short while! As a general proposition we need a heart for the gathering up, conservation, and redistribution of the blood which nourishes the body. Unless we have some such organ, without this force, either of blood for the individual or of money for the community, we get clogged up, and life, individual and financial, comes to an abrupt stop. The safety of the community lies in having the banks well regulated, secure as places of deposit, furnishing a supply of money to the people which shall have a stable value, and finally to have its own, and the funds of those who have deposited with them, to loan out to those who may need them in the carrying on of any business.

WE HAVE PASSED THE STOCKING PERIOD.

The coffee pot and stocking have ceased to be a safe and useful place for the deposit of the people's money. Even the hiding place under the floor or in the back yard has come to be more honored in the breach than in the observance. Indeed, there are those who declare that such hoarding of money is an offense against good morals as well as unsafe. We are 70,000,000 people, and the simultaneous withdrawal of five or ten or a thousand dollars by a large number of people would have a serious effect on the supply of money for all the people.

The peasants of France still do this, although in smaller proportion each year. The poor people of Mexico, who have no safe banks in which to deposit their little savings and a poor money to save, still dig holes in the ground to hide away their hoards; but the people of these United States are not like either of these. They possess the intelligence to see that such hoarding is not only unsafe and unprofitable for themselves, but against public policy.

GOOD BANKS ENCOURAGE THRIFT AND AID BUSINESS.

The day laborer who saves a few dollars each week can put his money into a secure bank where it earns him a small annual interest and is of service to others who need it for the time being. The farmer need not hide the surplus money from the sale of his crops (indeed, in these good Democratic days he has no surplus; his surplus is a deficit); he can deposit it and use it as his needs require. If he leaves it long enough he can get interest on his balances. The national banking system of the United States is the safest in all the world; it can be enlarged and extended to secure wider benefits to all the people. If necessary, the Government can guarantee the security of the deposits as well as that of the money issued by the banks. The statistics since the establishment of this system by the Republican party in 1863 show that a small tax on all banks would have been ample to cover such a guaranty against loss on deposits.

MODIFICATIONS OF BANKING LAW.

With the changed conditions due to the lapse of time some changes are now needed to make the national-bank system more perfectly in touch with commercial needs.

BANKS WITH $25,000 CAPITAL.

It is possible to safely reduce the limit of capital to $25,000 for smaller towns where so much as $50,000 can not be conveniently raised or used. These should be encouraged, to the end that each community should have its own local banks and be more independent of those from a distance. If owned in whole or in part at home the management would be directly interested in the development of the place, and thus foster all legitimate home enterprises.

CIRCULATION TO PAR VALUE OF BONDS.

At present the limit of circulation is 90 per cent of the par value of the Government bonds deposited. We are not likely to run any risk, even should the Democracy continue in power another four years—and such a catastrophe seems about to be averted by unanimous consent—in allowing the limit to be increased to 100 cents or to the par value of the national bonds deposited. This would tend to encourage the establishment of more national banks and the change from private and State to national banks.

TEMPORARY INCREASE OF CAPITAL.

Much is said about the need of an elastic as well as a safe currency. In times of financial stringency the need for legal-tender money is greater than in good times. It often happens that banks in outlying sections are unable to procure from their metropolitan correspondents the actual money needed. This may be remedied, in part at least, and with no risk of inflation beyond the actual needs of the country, by some such plan as:

1. Any national bank to have the right to increase temporarily its capital and thereby its circulation by remitting to the Treasury or the subtreasury nearest to it Government bonds in any multiple of $1,000 as collateral security and to receive in return by next mail its own unsigned notes in equal amount.

2. While such bonds are thus on deposit for such temporary loan the interest to be forfeited to the Government, and if they are not redeemed within one year, then the permanent capital of the bank to be increased to the amount of the former and additional capital and the bonds turned into the Treasury for sale.

3. If within one year the need for temporary increase of circulation ceases, the bank to be allowed to deposit lawful money and receive the bonds back again, less the interest and such sum as will cover the cost to the Treasury of the transaction.

Among the good results of such a plan would be that any bank holding Government bonds could within a few days get a supply of ready money without being wholly dependent on a distant money center. It would also make the bonds worth more at home, because of this provision, than abroad, and tend to keep them in this country and avoid the drain of interest to foreign countries every three months.

Indeed, it is possible that by this means some of the long-time, high-rate bonds issued by the Cleveland Administration could be refunded into lower rate bonds with this circulation feature as an inducement.

RETIRE ALL SMALL GOLD COINS.

The gold pieces of $2.50, $5, and $10 might be retired and only the twenty-dollar piece left for use. For the few who get a gold piece it would be better to have the coins of convenient and safe size. The ten-dollar piece is too small for either. Then the restriction of pieces of gold coinage would be an economy in coinage to the Treasury, while the fact that gold was only usable for coinage into twenty-dollar pieces would help to equalize the present disparity of values. This would be materially aided by the increased use of silver demanded to take the place of the one and two dollar bills.

THE ENDLESS CHAIN OF SECRETARY CARLISLE.

The threat of the Treasury notes, so graphically portrayed by Mr. Cleveland's Secretary of the Treasury, is due largely to the impecunious condition of the Treasury under the reduced revenues provided by the Wilson-Gorman tariff bill. When the revenues were ample, as under the Republican protective-tariff system, this alleged endless chain did not trouble the country; it did not trouble Secretary Windom; we had enough money left over each year to reduce the principal and interest of the public debt from fifty to an hundred millions. This was done, too, without stinting any proper use of money for the expenses of the Government. No one was then sitting up nights to see how they could stave off the pension payments from day to day so as to keep the expenses down to the meager measure of the receipts under a Democratic tariff. Public works for which money had been appropriated were carried on, not grudgingly, as now, but with the idea that the people believed in having those things done, and well and promptly done. In those days, when there was plenty of money coming into the Treasury from the imposts on foreign goods—when the foreign manufacturer was doing his share to support this Government—we were not troubled, as is Secretary Carlisle now, about the Treasury notes.

STARTING THE ENDLESS CHAIN.

Any man who attempts to run his business between wind and water, between hay and grass, must not be astonished if all the world does not have confidence as to his financial standing. In this case we all knew that these United States were amply able to pay all bills, but in many well-informed quarters there was a very robust opinion that the parties at the head of affairs here were wholly incompetent to perform their duties. It was this opinion and the well-known condition of chronic impecuniosity of the Treasury under the Democrats that have set this endless chain so busily at work to plague and frighten the Secretary. The Republican party had this chain; it was in position, but it did not move; it stood still. It had stood thus so long that people had begun to think it was stuck; that in fact it was rusted fast and could not revolve, until, lo! Democratic impotence came to its own—came to attempt to direct the destinies of this mighty nation—oiled this chain with free trade, hard times, and no cash, when all at once it began rapid revolutions.

Confidence in the engineer, and a full knowledge that sufficient funds are to be provided, will "put this wheel to sleep" again, put it into the same state of innocuous desuetude in which the Democratic party now languishes.

TAXES PAID BY NATIONAL BANKS.

It is often alleged that national banks do not pay their full share of taxes. Money hidden in a stocking or buried in the ground can not well be gotten at for taxation, but the capital, deposits, and circulation of a national bank are all of record; they can not be hidden from the assessor, whether for the Government or for local purposes.

Up to March 3, 1883, they were required to pay a tax on capital and deposits, as well as on circulation. This amounted to—

Tax on capital (to March 3, 1883)	$7,855,887.74
Tax on deposits (to March 3, 1883)	60,940,067.16
Tax on circulation (to June 30, 1895)	77,539,004.86
Total	146,334,959.76

This does not include cost of redemption, of new plates, and examiners' fees.

From 1883 to 1895 the figures show—

Semiannual tax on circulation	$25,285,486.62
Cost of redemption	1,688,523.08
Cost of plates, new banks	199,610.00
Cost of plates, extended banks	197,395.00
Examiners' fees	1,862,415.73
Total	29,233,430.43

GOVERNMENT GUARANTEE OF DEPOSITS.

From 1863 to 1895 only 303 national banks failed—less than 10 per year—a showing never made by any system of banks in the history of the world. Of these every one had on deposit bonds with which to redeem every dollar of their outstanding circulation. The total due to depositors by these banks when they failed amounted to $94,634,062, and of this the receivers appointed by the Government collected $69,686,616, and have already paid over net to these same depositors the sum of $60,314,185. One hundred and forty-nine are still in liquidation, so that the present total uncollected of $34,319,877 will be cut down probably one-half—say half a million per year.

The tax on circulation if left as now would be twice as much as would be required to absolutely guarantee every depositor from loss. If the tax were reduced one-half it would still be ample for this purpose.

With such a guaranty every person who deposited any sum whatever in any national bank would know that besides the solvency of the bank they had the full credit and pledge of the United States that their money would be repaid to them when demanded. Then with national banks in small towns, as would be possible with the capital requirement reduced to $25,000, there would be within the reach of all the people banks in which they could safely deposit their savings and not only receive reasonable interest thereon but keep it in circulation for the benefit of the balance of the people.

APPENDIX A.

FREE TRADE OR PROTECTION?—BLAINE'S REPLY TO GLADSTONE.

[Reprinted by special permission from the North American Review, copyrighted, 1889, by Lloyd Brice.]

There can be no doubt that Mr. Gladstone is the most distinguished representative of the free-trade school of political economists. His addresses in Parliament on his celebrated budget, when chancellor of the exchequer, in 1853, were declared by Lord John Russell "to contain the ablest exposition of the true principles of finance ever delivered by an English statesman." His illustrious character, his great ability, and his financial experience point to him as the leading defender of free trade applied to the industrial system of Great Britain.

Mr. Gladstone apologizes for his apparent interference with our affairs. He may be assured that apology is superfluous. Americans of all classes hold him in honor; free traders will rejoice in so eminent an advocate, and protectionists, always the representatives of liberality and progress, will be glad to learn his opinions upon a question of such transcendent importance to the past, the present, and the future of the Republic.

Perhaps the most remarkable feature in the argument of Mr. Gladstone, as indeed of every English free trader except John Stuart Mill, is the universality of application which he demands for his theory. In urging its adoption he makes no distinction between countries; he takes no account of geographical position—whether a nation be in the Eastern or the Western hemisphere, whether it be north or south of the Equator; he pays no heed to climate or product or degree of advancement; none to topography—whether the country be as level as the delta of the Nile or as mountainous as the Republic of Bolivia; none to pursuits and employments, whether in the agricultural, manufacturing, or commercial field; none to the wealth or poverty of a people; none to population, whether it be crowded or sparse; none to area, whether it be as limited as a German principality or as extended as a continental empire. Free trade he believes advantageous for England; therefore, without the allowance of any modifying condition, great or small, the English economist declares it to be advantageous for the United States, for Brazil, for Australia; in short, for all countries with which England can establish trade relations. It would be difficult, if not impossible, for Mr. Gladstone to find any principle of administration or any measure of finance so exactly fitted to the varying needs of all countries as he assumes the policy of free trade to be. Surely it is not unfair to maintain that, deducing his results from observation and experience in his own country, he may fall into error and fail to appreciate the financial workings of other countries geographically remote and of vastly greater area.

The American protectionist, let it not be discourteous to urge, is broader in his views than the English free trader. No intelligent protectionist in the United States pretends that every country would alike realize advantage from the adoption of the protective system. Human government is not a machine, and even machines can n t be so perfectly adjusted as to work with equal effectiveness at all times and under all conditions. Great Britain and the United States certainly resemble one another in more ways than either can be said to resemble any other nation in the world; yet when we compare the two on the question at issue the differences are so marked that we almost lose sight of the resemblance. One is an insular monarchy with class government; the other a continental Republic with popular government. One has a large population to the square mile; the other has a small population to the square mile. One was old in a rich and complex civilization before the establishment of the other was even foreseen. One had become the wealthiest nation of the world while the other was yet in the toils and doubts of a frontier life and a primitive civilization. One had extensive manufacturers for almost every field of human need, with the civilized world for its market, while the population of the other was still forced to divide its energies between the hard calling of the sea and the still harder calling of a rude and scantily remunerative agriculture.

The physical differences between the two countries are far more striking than the political and social differences. They are, indeed, almost incalculable. Great Britain is an island less than 90,000 square miles in extent. It

lies in the far north. Its southernmost point is nearly 30 degrees of latitude above the tropics. Its northernmost point is but 9 degrees below the Arctic Circle. Within its area the exchange of natural products is necessarily limited. Its life depends upon its connection with other countries. Its prosperity rests upon its commerce with the world. On the other hand, a single State of the Union is nearly three times as large as Great Britain. Several other States are each quite equal to it in area. The whole Union is well-nigh forty times as large. Alaska excepted, the northernmost point of the Union is but 60 miles south of the southernmost part of Great Britain, and the southernmost point of the Union is but little more than 100 miles from the tropics. Its natural products are more varied, more numerous, and of more valuable character than those of all Europe. To quote one of Mr. Gladstone's phrases, we constitute "not so much a country in ourselves as a world." He tells us that we carry on "the business of domestic exchanges on a scale such as mankind has never seen." Our foreign commerce, very large in itself, is only as 1 to 25 compared to our internal trade. And yet Mr. Gladstone thinks that a policy which is essential to an island in the northern ocean should be adopted as the policy of a country which, even to his own vision, is "a world within itself."

With these fundamental points of difference between the two countries I assume that varied financial and industrial systems, wrought by the experience of each, would be the natural and logical result. Hence I do not join issue with Mr. Gladstone on both of his propositions. He defends free trade in Great Britain. He assails protection in the United States. The first proposition I neither deny nor affirm. Were I to assume that protection is in all countries and under all circumstances the wisest policy I should be guilty of an error similar to that which I think Mr. Gladstone commits. It might be difficult to prove that free trade is not the wisest financial policy for Great Britain. So far from guarding herself against material imported from other countries, her industrial system would wither and die if foreign products were withheld for even a brief period. She is in an especial degree dependent upon the products of other nations. Moreover, she does not feel bound to pay heed to the rate of wages which her labor may receive. That, like the fabrics which her labor creates, must take its chance in the markets of the world.

On many points and in many respects it was far different with Great Britain a hundred years ago. She did not then feel assured that she could bear the competition of Continental nations. She was, therefore, aggressively, even cruelly, protective. She manufactured for herself and for her network of colonies reaching around the globe. Into those colonies no other nation could carry anything. There was no scale of duty upon which other nations could enter a colonial port. What the colonies needed outside of British products could be furnished to them only in British ships. This was not protection! It was prohibition, absolute and remorseless, and it was continued even to the day when Mr. Gladstone entered upon his long and splendid career in Parliament. It was not broken, though in some respects it was relaxed, until in the fullness of time British energy had carried the wealth and the skill of the Kingdom to the point where no competition could be feared.

During the last thirty years of her protective system, and especially during the twenty years from 1826 to 1846, Great Britain increased her material wealth beyond all precedent in the commercial history of the world. Her development of steam power gave to every British workman the arms of Briareus, and the inventive power of her mechanicians increased the amount, the variety, and the value of her fabrics beyond all anticipation. Every year of that period witnessed the addition of millions upon millions of sterling to the reserve capital of the Kingdom; every year witnessed a great addition to the effective machinery whose aggregate power was already the wonder of the world. The onward march of her manufacturing industries, the steady and rapid development of her mercantile marine, absorbed the matchless enterprise and energy of the Kingdom. Finally, with a vast capital accumulated, with a low rate of interest established, and with a manufacturing power unequaled, the British merchants were ready to underbid all rivals in seeking for the trade of the world.

At that moment Great Britain had reason to feel supremely content. She found under her own flag, on the shores of every ocean, a host of consumers whom no man might number. She had Canada, Australia, and India with open ports and free markets for all her fabrics; and, more than all these combined, she found the United States suddenly and seriously lowering her tariff and effectively abolishing protection at the very moment England was declaring for free trade. The traffic of the world seemed prospectively in her control. Could this condition of trade have continued, no estimate of the growth of England's wealth would be possible. Practically it would have had no limit. Could she have retained her control of the markets of the United States as she held it for the four years preceding the outbreak of the civil war, the American people would have grown commercially dependent upon her in a greater degree than in Canada or Australia to-day.

But England was dealing with an intelligence equal to her own. The American people had, by repeated experience, learned that the periods of depression in home manufactures were those in which England most prospered in her commercial relations with the United States, and that these periods of depression had with a single exception, easily explained, followed the enactment by Congress of a free-trade tariff* as certainly as effect follows cause. One of the most suggestive experiments of that kind had its origin in the tariff to which I have just referred, passed in 1846 in apparent harmony with England's newly declared financial policy. At that moment a Southern President (Mr. Polk) and a Southern Secretary of the Treasury (Mr. Robert J. Walker) were far more interested in expanding the area of slave territory than in advancing home manufactures, and were especially eager to make commercial exchanges with Europe on the somewhat difficult basis of cotton at high prices and returning fabrics at low prices.

Under ordinary circumstances the free-trade tariff of 1846 would have promptly fallen under popular reprobation and been doomed to speedy repeal. But it had a singular history, and for a time was generally acquiesced in, even attaining in many sections a certain degree of popularity. Never did any other tariff meet with so many and so great aids of an adventitious character to sustain it as did this enactment of 1846. Our war with Mexico began just as the duties were lowered, and the consequence was the disbursement of more than $100,000,000 in a way that reached all localities and favorably affected all interests. This was a great sum of money for that period, and for the years 1846, 1847, and 1848 it considerably more than doubled the ordinary outlay of the Government. In the middle of this period the Irish famine occurred and called for an immense export of breadstuffs at high prices. The discovery of gold in California the succeeding year flushed the channels of business as never before by rapidly enlarging the circulation of coin in all parts of the country. Before this outpouring of gold had ceased the three great nations of Europe, as precedence was reckoned at that time—England, France, and Russia—entered upon the Crimean war. The export of manufactures from England and France was checked; the breadstuffs of Russia were blockaded and could not reach the markets of the world. An extraordinary stimulus was thus given to all forms of trade in the United States. For ten years, 1846 to 1856, these adventitious aids came in regular succession and exerted their powerful influence upon the prosperity of the country.

*The phrase "free-trade tariff" involves a contradiction of terms. It is used to designate that form of duty which is levied with no intention to protect domestic manufactures.

The withdrawal or termination of these influences by a treaty of peace in Europe and by the surcease of gold from California placed the tariff of 1846 where a real test of its merits or its demerits could be made. It was everywhere asked with apprehension and anxiety, Will this free-trade tariff now develop and sustain the business of the country as firmly and securely as it has been developed and sustained by protection? The answer was made in the ensuing year by a widespread financial panic, which involved the ruin of thousands, including proportionately as many in the South as in the North, leaving the country disordered and distressed in all the avenues of trade. The disastrous results of this tariff upon the permanent industries of the country are described in President Buchanan's well-remembered message, communicated to Congress after the panic: "With unsurpassed plenty in all the elements of national wealth, our manufacturers have suspended, our public works are retarded, our private enterprises of different kinds are abandoned, and thousands of useful laborers are thrown out of employment and reduced to want." This testimony as to the result of a free-trade tariff is all the more forcible from the fact that Mr. Buchanan, as a member of President Polk's Cabinet, had consented to the abandonment of protection, which in his earlier career he had earnestly supported.

If these disasters of 1857, flowing from the free-trade tariff, could have been regarded as exceptional, if they had been without parallel or precedent, they might not have had so deadly a significance. But the American people had twice before passed through a similar experience. On the eve of the war of 1812 Congress guarded the national strength by enacting a highly protective tariff. By its own terms this tariff must end with the war. When the new tariff was to be formed a popular cry arose against "war duties," though the country had prospered under them despite the exhausting effect of the struggle with Great Britain. But the prayer of the people was answered, and the war duties were dropped from the tariff of 1816. The business of the country was speedily prostrated. The people were soon reduced to as great distress as in that melancholy period between the close of the Revolutionary war and the organization of the National Government—1783 to 1789. Colonel Benton's vivid description of the period of depression following the reduction of duties comprises in a few lines a whole chapter of the history of free trade in the United States:

"No price for property; no sales except those of the sheriff and the marshal; no purchasers at execution sales except the creditor or some hoarder of money; no employment for industry; no demand for labor; no sale for the products of the farm; no sound of the hammer except that of the auctioneer knocking down property. Distress was the universal cry of the people; relief the universal demand."

Relief came at last with the enactment of the protective tariff of 1824, to the support of which leading men of both parties patriotically united for the common good. That act, supplemented by the act of 1828, brought genuine prosperity to the country. The credit of passing the two protective acts was not due to one party alone. It was the work of the great men of both parties. Mr. Clay and General Jackson, Mr. Webster and Mr. Van Buren, Gen. William Henry Harrison and Richard M. Johnson, Silas Wright and Louis McLane voted for one or the other of these acts, and several of them voted for both. The cooperation of these eminent men is a great historic tribute to the necessity and value of protection. Plenty and prosperity followed as if by magic the legislation to which they gave their support. We have their concurrent testimony that the seven years preceding the enactment of the protective tariff of 1824 were the most discouraging which the young Republic in its brief life had encountered, and that the seven years which followed its enactment were beyond precedent the most prosperous and happy.

Sectional jealousy and partisan zeal could not endure the great development of manufactures in the North and East which followed the apparently firm establishment of the protective policy. The free-trade leaders of the South believed—at least they persuaded others to believe—that the manufacturing States were prospering at the expense of the planting States. Under the lead of Calhoun South Carolina rebelled, and President Jackson, who had so strikingly shown his faith in the policy of protection, was not able to resist the excitement and resentment which the free traders had created in the cotton States. He stood between hostile policies, represented by his two bitterest personal enemies—Clay for protection; Calhoun for free trade. To support Clay would ruin Jackson politically in the South. He could not sustain Calhoun, for, aside from his opposition to free trade, he had cause for hating him personally. He believed, moreover, that Calhoun was at heart untrue to the Union, and to the Union Jackson was as devoted as Clay. Out of this strange complication came, not unnaturally, the sacrifice of the protective tariff of 1824–1828 and the substitution of the compromise tariff of 1833, which established an ad valorem duty of 20 per cent on all imports and reduced the excess over that by a 10 per cent annual sliding scale for the ensuing ten years. Like all compromises, it gave complete satisfaction to neither party, but it was received with general acquiescence from the belief that it was the best practical solution of the impending difficulties. The impending difficulties were two. One was the portentous movement which involved the possibility of dissolving the Union. The other was the demand for a free-trade tariff as the only measure that could appease the Southern nullifiers. Disunion and free trade from that time became associated in the public mind—a source of apprehension in the North, a source of political power in the South. Calhoun was the master spirit who had given the original impulse both to disunion and free trade. Each in turn strengthened the other in the South, and both perished together in the war of the rebellion.

For a time satisfaction was felt with the tariff adjustment of 1833, because it was regarded as at last a temporary reconciliation between two sections of the Union. Before the sliding scale was ruinously advanced there was great stimulus to manufacturing and to trade which finally assumed the form of dangerous speculation. The years of 1834, 1835, and 1836 were distinguished for all manner of business hazard, and before the fourth year opened the 30 per cent. reduction (three years of 10 per cent. each) on the scale of duties was beginning to influence trade unfavorably. The apprehension of evil soon became general, public confidence was shaken, the panic of 1837 ensued, and business reversals were rapid, general, and devastating.

The trouble increased through 1838, 1839, and 1840, and the party in power, held responsible for the financial disasters, fell under popular condemnation. Mr. Van Buren was defeated, and the elder General Harrison was elevated to the Presidency by an exceptionally large majority of the electoral votes. There was no relief to the people until the protective tariff of 1842 was enacted, and then the beneficent experience of 1824 was repeated on even a more extensive scale. Prosperity, wide and general, was at once restored. But the reinstatement of the Democratic party to power two years later by the election of Mr. Polk to the Presidency, followed by a perverse violation of public pledges on the part of men in important places of administration, led to the repeal of the protective act and the substitution of the tariff of 1846, to which I have already adverted, and whose effects upon the country I have briefly outlined.

Measuring, therefore, from 1812, when a protective tariff was enacted to give strength and stability to the Government in the approaching war with Great Britain, to 1861, when a protective tariff was enacted to give strength and stability to the Government in the impending revolt of the Southern States, we have fifty years of suggestive experience in the history of the Republic. During this long period free-trade tariffs were thrice followed by industrial stagnation, by financial embarrassment, by distress among all

classes dependent for subsistence upon their own labor. Thrice were these burdens removed by the enactment of a protective tariff. Thrice the protective tariff promptly led to industrial activity, to financial ease, to prosperity among the people. And this happy condition lasted in each case, with no diminution of its beneficent influence, until illegitimate political combinations, having their origin in personal and sectional aims, precipitated another era of free trade. A perfectly impartial man, unswerved by the excitement which this question engenders in popular discussion, might safely be asked if the half century's experience, with its three trials of both systems, did not establish the wisdom of protection in the United States. If the inductive method of reasoning may be trusted, we certainly have a logical basis of conclusion in the facts here detailed.

And by what other mode of reasoning can we safely proceed in this field of controversy? The great method of Bacon was by "rigid and pure observation, aided by experiment and fructified by induction." Let us investigate "from effects to causes, and not from causes to effects." Surely it is by a long series of experiments, and by that test only, that any country can establish an industrial system that will best aid in developing its hidden wealth and establishing its permanent prosperity. And each country must act intelligently for itself. Questions of trade can no more be regulated by an exact science than crops can be produced with accurate forecast. The unknown quantities are so many that a problem in trade or agriculture can never have an absolute answer in advance. But Mr. Gladstone, with an apparent confidence in results as unshaken as though he were dealing with the science of numbers, proceeds to demonstrate the advantage of free trade. He is positively certain in advance of the answer which experiment will give, and the inference is that nothing is to be gained by awaiting the experiment. Mr. Gladstone may argue for Great Britain as he will, but for the United States we must insist on being guided by facts and not by theories; we must insist on adhering to the teachings of experiments which "have been carried forward by careful generalization to well-grounded conclusions."

As an offset to the charge that free-trade tariffs have always ended in panics and long periods of financial distress, the advocates of free trade point to the fact that a financial panic of great severity fell upon the country in 1873, when the protective tariff of 1861 was in full force, and that, therefore, panic and distress follow periods of protection as well as periods of free trade. It is true that a financial panic occurred in 1873, and its existence would blunt the force of my argument if there were not an imperatively truthful way of accounting for it as a distinct result from entirely distinct causes. The panic of 1873 was widely different in its true origin from those which I have been exposing. The civil war, which closed in 1865, had sacrificed on both sides a vast amount of property. Reckoning the money directly expended, the value of property destroyed, and the production arrested and prevented, the total is estimated to be nine thousand millions of dollars. The producers of the country had been seriously diminished in number. A half million men had been killed. A million more had been disabled in various degrees. Help was needed in the honorable form of pensions, and the aggregate required for this purpose exceeded all anticipation and has annually absorbed an immense proportion of the national income. The public debt that must be funded reached nearly three thousand millions, demanding at the beginning more than $150,000,000 for annual interest. A great proportion of the debt, when funding was complete, was held in Europe, calling for an enormous export of gold, or its equivalent, to meet the interest.

Besides these burdens upon the people, the country was on a basis of paper money, and all gold payments added a heavy premium to the weight of the obligation. The situation was without parallel. The speculative mania which always accompanies war had swollen private obligations to a perilous extent, and the important question arose of restoring coin payment. On the one hand it was contended that to enforce the measure would create a panic by the shrinkage of prices which would follow; and on the other hand it was urged with equal zeal that to postpone it longer would increase the general distrust among the people as to the real condition of the country, and thus add to the severity of the panic, if one should be precipitated.

Notwithstanding the evil prophecies on both sides, the panic did not come until eight and a half years after the firing of the last gun in the civil war. Nor did it come until after two great calamities in the years immediately preceding had caused the expenditure of more than $200,000,000, suddenly withdrawn from the ordinary channels of business. The rapid and extensive rebuilding in Chicago and Boston after the destructive fires of 1871 and 1872 had a closer connection with the panic of 1873 than is commonly thought. Still further, the six years' depression, from 1873 to 1879, involved individual suffering rather than general distress. The country as a whole never advanced in wealth more rapidly than during that period. The entire experience strengthened the belief that the war for the Union could not have been maintained upon a free-trade basis, and that the panic of 1873 only proved the strength of the safeguard which protection supplies to a people surrounded by such multiform embarrassments as were the people of the United States during the few years immediately following the war. And, strongest of all points, the financial distress was relieved and prosperity restored under protection, whereas the ruincus effects of panics under free trade have never been removed except by a resort to protection.

Does Mr. Gladstone maintain that I am confusing post hoc with propter hoc in these statements? He must show, then, that the United States during the war could have collected a great internal revenue on domestic manufactures and products, when under the system of free trade similar fabrics would daily have reached New York from Europe to be sold at prices far below what the American manufacturer, with the heavy excise then levied, could afford to set upon his goods. And if the Government could collect little from the customs under free trade and nothing from internal products, whence could have been derived the taxes to provide for the payment of interest on public loans, and what would have become of the public credit? Moreover, with free trade, which Mr. Gladstone holds to be always and under all circumstances wiser than protection, we should have been compelled to pay gold coin for European fabrics, while at home and during the tremendous strain of the war legal-tender paper was the universal currency. In other words, when the life of the country depended upon the Government's ability to make its own notes perform the function of money the free-traders' policy would have demanded daily gold for daily bread.

The free trader can not offset the force of the argument by claiming that the laws regulating revenue and trade are, like municipal laws, silent during the shock of arms, because the five closing years—indeed, almost six years—of the decade in which the rebellion occurred were passed in peace, and during those years the ravages of war were in large degree repaired and new wealth rapidly acquired. But I shall not give to Mr. Gladstone or to the American free trader the advantage of seeming to rest the defense of protection upon its marvelous value during the exhaustive period of war. Viewing the country from 1861 to 1889—full twenty-eight years—the longest undisturbed period in which either protection or free trade has been tried in this country, I ask Mr. Gladstone if a parallel can be found to the material advancement of the United States?

Mr. Gladstone admits the wonderful increase of wealth acquired under a protective tariff, but he avers that the results would have been larger under free trade. That, of course, is a speculative opinion, and is entitled to respect according to the knowledge and experience of the man who utters it. Every statement of Mr. Gladstone carries weight, but in this case his opinion runs directly counter to the fifty years of financial experience through which this country has passed with alternate trials of the two systems. Moreover, it is fair to say that Mr. Gladstone does not in his utterance represent European judgment. He speaks only for the free-trade party of Great Britain and their followers on this side of the ocean. The most eminent statesman on the Continent of Europe holds opinions on this subject directly the reverse of those held by the most eminent statesman of Great Britain. We feel assured in America that so far as the question of protection may be affected, either favorably or adversely, by the weight of individual judgment, we may safely leave Mr. Gladstone to be answered by Prince Bismarck.

But better than the opinion of Mr. Gladstone, better than the opinion of Prince Bismarck, are the simple facts of the case of open record in both countries. A brief rehearsal of these facts, with the pertinent comparison which they suggest, will give the best answer to Mr. Gladstone's assumption that the United States would have made more rapid progress under a system of free trade. I take the official figures of the census of the United States, and for the United Kingdom I quote from Mr. Giffen, who is commended by Mr. Gladstone as the best authority in England:

In 1860 the population of the United States was, in round numbers, 31,000,000. At the same time the population of the United Kingdom was, in round numbers, 29,000,000. The wealth of the United States at that time was fourteen thousand millions of dollars; the wealth of the United Kingdom was twenty-nine thousand millions of dollars. The United Kingdom had, therefore, nearly the same population, but more than double the wealth of the United States, with machinery for manufacturing fourfold greater than that of the United States. At the end of twenty years (1880) it appeared that the United States had added nearly thirty thousand millions of dollars to her wealth, while the United Kingdom had added nearly fifteen thousand millions, or about one-half.

During this period of twenty years the United States had incurred the enormous loss of nine thousand millions of dollars by internal war, while the United Kingdom was at peace, enjoyed exceptional prosperity, and made a far greater gain than in any other twenty years of her history—a gain which during four years was in large part due to the calamity which had fallen upon the United States. The United Kingdom had added 6,000,000 to her population during the period of twenty years, while the addition to the United States exceeded 18,000,000.

By the compound ratio of population and wealth in each country, even without making allowance for the great loss incurred by the civil war, it is plainly shown by the statistics here presented that the degree of progress in the United States under protection far exceeded that of the United Kingdom under free trade for the period named. In 1860 the average wealth per capita of the United Kingdom was $1,000, while in the United States it was but $450. In 1880 the United Kingdom had increased her per capita wealth to $1,230, while the United States had increased her per capita wealth to $870. The United Kingdom had in twenty years increased her per capita wealth 23 per cent, while the United States had increased her per capita wealth more than 93 per cent. If allowance should be made for war losses, the ratio of gain in the United States would far exceed 100 per cent. Upon these results, what ground has Mr. Gladstone for his assertion?

With great confidence, Mr. Gladstone proposes to carry the war for free trade into the enemy's country. Perhaps the enemy, who are only modest protectionsts, may embarrass the march of his logic with a few pertinent questions, or at least abate the rate of speed which he proposes for his triumphant movement. I shall not give counter theories. I shall only cite established facts, and allow the facts to establish their own theories:

1. John Edgar Thompson, late president of the Pennsylvania Railroad Company, purchased 100 tons of steel rails in 1862 at a price (freight paid to New York, duty of 45 per cent unpaid) of $103.44, gold coin. (By way of illustrating Mr. Gladstone's claim to superior quality of manufactures under free trade, the railroad company states that many of the rails broke during the first winter's trial.) In 1864 English rails had fallen to $88 per ton in New York, the freight paid and the duty unpaid. English manufacturers held the market for the ensuing six years, though the sales at the high prices were limited. In 1870 Congress laid a specific duty of $28 per ton on steel rails. From that time the home market has been held by our own manufacturers, with a steady annual fall in price as the facilities of production increased, until the past summer and autumn, when steel rails were selling in Pittsburg, Chicago, and London at substantially the same prices. Does any free trader on either side of the ocean honestly believe that American rails could ever have been furnished as cheaply as English rails except by the sturdy competition which the highly protective duty of 1870 enabled the American manufacturers to maintain, against the foreign manufacturers in the first place, and among American manufacturers themselves in the second place? It is not asserted that during the nineteen years since the heavy duty was first established (except during the past few months) American rails have been as cheap in America as English rails have been in England, but it is asserted with perfect confidence that, steadily and invariably, American railroad companies have bought cheaper rails at home than they would have been able to buy in England if the protective duty had not stimulated the manufacture of steel rails in the United States and if the resulting competition had not directly operated upon the English market.*

* In 1870 only 30,000 tons of steel rail were manufactured in the United States. But the product under the increased duty of that year rapidly increased. The relative number of tons produced in England and the United States for a period of twelve years is shown as follows:

Year.	England.	United States.
1877	508,400	385,865
1878	622,390	491,427
1879	520,231	610,682
1880	732,910	852,196
1881	1,023,740	1,187,770
1882	1,235,785	1,284,067
1883	1,097,174	1,148,709
1884	784,968	996,983
1885	706,583	959,471
1886	730,343	1,574,703
1887	1,021,847	2,101,904
1888	979,083	1,386,277
Total in 12 years	9,963,454	12,980,054

For the same period, 1877–1888, inclusive, the following table will show the number of tons of steel ingots produced in the two countries respectively:

Year.	England.	United States.
1877	750,006	500,524
1878	807,527	653,773
1879	834,511	829,439
1880	1,044,382	1,074,202
1881	1,441,719	1,374,247
1882	1,673,649	1,514,687
1883	1,553,380	1,477,345
1884	1,209,676	1,375,531
1885	1,304,127	1,519,430
1886	1,570,520	2,209,190
1887	2,089,403	2,936,063
1888	2,032,794	2,511,161
Total in 12 years	16,401,688	18,035,622

Under the protective duty of 1870 the United States soon manufactured annually a much larger quantity of steel than Great Britain, and reduced the price from $100 per ton in gold to less than $35 per ton in gold.

2. English steel for locomotive tires imported in 1865, duty paid, was 34 cents per pound in gold. The American competition, under a heavy protective duty, had by 1872 reduced the price to 13 cents per pound, duty paid. At the present time (1889) American steel for locomotive tires, of as good quality as the English steel formerly imported, is furnished at 4¼ cents per pound and delivered free of cost at the point where the locomotives are manufactured. The lowering of price was not a voluntary act on the part of the English manufacturer. It was the direct result of American competition under a protective duty—a competition that could not have been successfully inaugurated under free trade.

3. In the year 1860, the last under a free-trade policy, the population of 31,000,000 in the United States bought carpets to the amount of $12,000,000. Nearly half of the total amount was imported. In 1888, with a population estimated at 63,000,000, the aggregate amount paid for carpets was nearly $60,000,000, and of this large sum less than one million was paid for foreign carpets and about half a million for oriental rugs. Does any free trader in England believe that the United States, without a protective tariff, could have attained such control of its own carpet manufacture and trade? It will not be unnoticed in this connection that under a protective tariff the population by reason of better wages was enabled to buy a far greater proportion of carpets than under free trade. Nor must it escape observation that carpets are now furnished to the American buyer under a protective tariff much cheaper than when a nonprotective tariff allowed Europe to send so large a proportion of the total amount used in the United States.

These illustrations might be indefinitely multiplied. In woolens, in cottons, in leather fabrics, in glass, in products of lead, of brass, of copper; indeed, in the whole round of manufactures it will be found that protection has brought down the price from the rate charged by the importers before protection had built up the competing manufacture in America. For many articles we pay less than is paid in Europe. If we pay higher for other things than is paid across the sea to-day, figures plainly indicate that we pay less than we should have been compelled to pay if the protective system had not been adopted; and I beg Mr. Gladstone's attention to the fact that the American people have much more wherewith to pay than they had or could have under free trade.*

Mr. Gladstone boldly contends that "keeping capital at home by protection is dear production, and is a delusion from top to bottom." I take direct issue with him on that proposition. Between 1870 and the present time considerably more than 100,000 miles of railroad have been built in the United States. The steel rail and other metal connected therewith involved so vast a sum of money that it could not have been raised to send out of the country in gold coin. The total cost could not have been less than $500,000,000. We had a large interest to pay abroad on the public debt, and for nine years after 1870 gold was at a premium in the United States. During those years nearly 40,000 miles of railway were constructed, and to import English rail and pay for it with gold bought at a large premium would have been impossible. A very large proportion of the railway enterprises would of necessity have been abandoned if the export of gold to pay the rails had been the condition precedent to their construction. But the manufacture of steel rails at home gave an immense stimulus to business. Tens of thousands of men were paid good wages, and great investments and great enrichments followed the line of the new road and opened to the American people large fields for enterprise not theretofore accessible.

I might ask Mr. Gladstone what he would have done with the labor of the thousands of men engaged in manufacturing rail if it had been judged practicable to buy the rail in England. Fortunately he has given his answer in advance of the question, for he tells us that "in America we produce more cloth and more iron at high prices, instead of more cereals and more cotton at low prices." The grain growers of the West and the cotton growers of the South will observe that Mr. Gladstone holds out to them a cheerful prospect! They "should produce more cereals and more cotton at low prices"! Mr. Gladstone sees that the protective system steadily tends to keep up the price of "cereals and cotton," and he asks that manufactures of "cloth and iron" be abandoned, so that we may raise "more cereals and more cotton at low prices." Mr. Gladstone evidently considers the present prices of cereals and cotton as "high prices."

Protectionists owe many thanks to Mr. Gladstone for his outspoken mode of dealing with this question of free trade. He gives us his conclusions without qualification and without disguise. The American free trader is not so sincere. He is ever presenting half truths and holding back the other half, thus creating false impressions and leading to false conclusions. But Mr. Gladstone is entirely frank. He tells the laborers on protected articles that they would be better engaged in "raising more cereals and more cotton at low prices." Where does Mr. Gladstone suggest a market for the additional grain and cotton to be raised by American mechanics becoming farmers and increasing the production of those great staples? The foreign market is filled with a competing grain supply to such a degree that already the price of wheat is unduly lowered to the Western farmer. The farmer needs a still larger home consumption of his grain, while Mr. Gladstone thinks he needs a still larger home production. The legitimate involvement of Mr. Gladstone's argument is that all mechanical and manufacturing enterprises in America producing articles of higher price than the same produced in Europe should be abandoned, and the laborers so engaged should be turned to the production of "more cereals and more cotton at low prices." The Western farmer's instinct is wiser than Mr. Gladstone's philosophy. The farmer knows that the larger the home market the better are his prices, and that as the home market is narrowed his prices fall.

Mr. Gladstone's pregnant suggestion really exhibits the thought that lies deep in the British mind, that the mechanic arts and manufacturing processes should be left to Great Britain, and the production of raw material should be left to America. It is the old colonial idea of the last century, when the establishment of manufactures on this side of the ocean was regarded with great jealousy by British statesmen and British merchants. Some years before the Revolutionary struggle began Parliament had declared that "the erecting of manufactories in the colonies tends to lessen their dependence on Great Britain." A few years later the British Board of Trade reported to Parliament that "manufactures in the American colonies interfere with profits made by British merchants." The same body petitioned Parliament that "some measures should be provided to prevent the manufacturing of woolen and linen goods in the colonies." Finally Parliament declared that "colonial manufacturing was prejudicial to the trade and manufactures of Great Britain." These outrageous sentiments (the colonists characterized them much more severely) were cherished in the time of the glorious Georges, in the era of Walpole and the elder Pitt.

I do not mean to imply that Mr. Gladstone's words carry with them an approval, even retrospectively, of this course toward the colonies, but there is a remarkable similarity to the old policy in the fundamental idea that causes him in 1889 to suggest that Americans produce "too much cloth and too much iron," and should turn their labor to "low-priced cereals and low-priced cotton." Are we not justified in concluding that Mr. Gladstone's theory of free trade, in all its generalizations and specifications, is fitted exactly to the condition of Great Britain, and that British hostility to American protection finds its deep foundation in the fact, to quote the old phrase, that "it is prejudicial to the trade and manufactures of Great Britain," that "it lessens our dependence upon Great Britain," and that "it interferes with profits made by British merchants"?

Mr. Gladstone makes another statement of great frankness and of great value. Comparing the pursuits in the United States which require no protection with those that are protected, he says: "No adversary will, I think, venture upon saying that the profits are larger in protected than in unprotected industries." This is very true, and Mr. Gladstone may be surprised to hear that the constant objection made by American free traders against the "protected industries," as he terms them, is that the profits derived from them are illegitimately large. Mr. Gladstone sees clearly that as a rule this is not true, and he at once discerns the reason. He says: "The best opinions seem to testify that in your protected trades profits are hard pressed by wages." The free traders of America try by every cunning device to hide this fact. Its admission is fatal to their cause. Not one free-trade organ or leader among them all dares to take his position beside Mr. Gladstone and plainly tell the truth to the American laborer. Not one free-trade organ or leader dares frankly to say to the great body of American workmen that the destruction of protection inevitably and largely reduces their daily wages. I thank Mr. Gladstone for this testimony, at once accurate and acute. It is fair to presume that he intends it to be applied to the unprotected manufacturer in England and to the protected manufacturer in America, both producing the same article. His logic gives, and I have no doubt truly, as large profit to the manufacturer of England, selling at a low price, as to the manufacturer of America, selling at a high price—the difference consisting wholly in the superior wages paid to the American mechanic.

There is another important effect of protective duties which Mr. Gladstone does not include in his frank admission. He sees that the laborers in what he calls the "protected industries" secure high pay, especially as compared with the European school of wages. He perhaps does not see that the effect is to raise the wages of all persons in the United States engaged in what Mr. Gladstone calls the "unprotected industries." Printers, bricklayers, carpenters, and all others of that class are paid as high wages as those of any other trade or calling, but if the wages of all those in the protected classes were suddenly struck down to the English standard, the others must follow. A million men can not be kept at work for half the pay that another million men are receiving in the same country. Both classes must go up or must go down together.

Mr. Gladstone makes another contention, in which, from the American point of view, he leaves out of sight a controlling factor, and hence refers an effect to the wrong cause. Regarding the advance of wages in England he says: "Wages which have been partially and relatively higher under protection have become both generally and absolutely higher, and greatly higher, under free trade." I do not doubt the fact, but I venture to suggest that such advance in wages as there has been in England is referable to another and a palpable cause—namely, the higher wages in the United States, which have constantly tempted British mechanics to emigrate, and which would have tempted many more if the inducement of an advance in wages at home had not been interposed. Especially have wages been high and tempting in the United States since 1861, when the country became firmly protective by the enactment of the Morrill tariff. It will be found, I think, that the advance of wages in England corresponds precisely in time, though

* In spite of these facts President Cleveland made the following statements, which I quote from his free-trade message to Congress in December, 1887:

"Our present tariff laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty by precisely the sum paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty. So it happens that, while comparatively a few use the imported articles, millions of our people who never use and never saw any of the foreign product, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles."

I recall this quotation primarily for two reasons: First, Mr. Cleveland stands without a rival at the head of the free-trade party in the United States, and it is instructive to see how exactly he adopts the line of argument used by the English free trader. Second. It is a valuable admission from the head of the free-trade party when he affirms that "comparatively a few of our people use imported articles," and that there are "millions of our people who never use and never saw any of the foreign products." In what words could the complete success of the protective policy in the United States be more fitly expressed?

But when Mr. Cleveland asserted that our people pay for our domestic fabrics "nearly or quite the same enhanced price which the duty adds to the imported articles," he evidently spoke without investigating facts, and accepted as true one of those fallacious statements which have been used in the interest of foreign importers to deceive the people. Mr. Cleveland's argument would have been strengthened if he had given a few examples—nay, if he had given one example—to sustain his charge. As he omitted all illustrations of his position, I venture to select a few which apparently establish the exact reverse of Mr. Cleveland's statement:

India-rubber goods are protected by a duty of 25 per cent; but, instead of those goods being 25 per cent higher in price than the foreign goods, they are, in fact, cheaper. They undersell the English article in Canada and successfully compete with Canada's goods, which are protected by a duty of 20 per cent.

Patent leather is subject to a duty of 20 per cent; but patent leather is not, therefore, 20 per cent higher in the United States than elsewhere. On the contrary, it is cheaper. Five years ago the city government of London advertised for bids for a large amount of patent leather to be used in connection with the uniforms of the police. There were bids from several countries, but the lowest bid was offered by a manufacturer of Newark, N. J. He secured the contract, and furnished the goods at a fair profit.

Steel rails are selling in London for £7 per ton. The duty is $15 per ton. The price, therefore, in the United States ought to be, according to Mr. Cleveland's doctrine, $50 per ton. But in fact the price is but $35 per ton, and during the last summer and autumn was as low as $25 per ton, and large sales were made at $30 per ton.

Boots and shoes are subject to 30 per cent duty. According to Mr. Cleveland they should be 30 per cent higher than the foreign article. As a matter of fact, they are cheaper. American boots and shoes hold the Canadian market against the European manufacture.

Examples of this kind could be shown on almost the whole tariff list where an American manufacture is firmly established. In fact, the whole history of protection has vindicated what Alexander Hamilton said of it when he was at the head of the Treasury: "The internal competition which takes place soon does away with everything like monopoly, and by degrees reduces the price of the article to the minimum of a reasonable profit on the capital employed. This accords with the reason of the thing and with experience." Mr. Hamilton thus effectually answers both Mr. Gladstone and Mr. Cleveland.

not in degree, with the advance in the United States, and the advance in both cases was directly due to the firm establishment of protection in this country as a national policy. But it must not be forgotten that American wages are still from 70 per cent to 100 per cent higher than British wages. If a policy of free trade should be adopted in the United States, the reduction of wages which would follow here would promptly lead to a reduction in England. The operatives of Manchester, Leeds, and Sheffield recognize this fact as clearly as do the proprietors who pay the advanced wages, and more clearly than do certain political economists who think the world of commerce and manufactures can be unerringly directed by a theory evolved in a closet without sufficient data and applied to an inexact science.

The zeal of Mr. Gladstone for free trade reaches its highest point in the declaration that "All protection is morally as well as economically bad." He is right in making this his strongest ground of opposition, if protection is a question of morals. But his assertion leaves him in an attitude of personal inconsistency. There is a protection on sea as well as on land. Indeed, the most palpable and effective form of protection is in the direct payment of public money to a line of steamers that could not be maintained without that form of aid. I do not say that such aid is unwise protection, least of all do I say it is immoral. On the contrary, I think it has often proved the highest commercial wisdom, without in the least infringing upon the domain of morals. Mr. Gladstone, however, commits himself to the principle that "All protection is morally bad." If this has been his belief ever since he became an advocate of free trade, his conscience must have received many and severe wounds, as session after session, while chancellor of the exchequer, he carried through Parliament a bounty—may I not say a direct protection?—of £180,000 to a line of steamers running between England and the United States—a protection that began six years before free trade was proclaimed in English manufactures and continued nearly twenty years after. In the whole period of twenty-five years an aggregate of many millions of dollars was paid out to protect the English line against all competition.

It may be urged that this sum was paid for carrying the Anglo-American mails, but that argument will not avail a free trader, because steamers of other nationalities stood ready to carry the mails at a far cheaper rate. Nay, a few years ago, possibly when Mr. Gladstone was premier of England, public bids were asked to carry the Anglo-Indian mails. A French line offered a lower bid than any English line, but the English Government disregarded the French bid and gave the contract to the Peninsular and Oriental line, owned by a well-known English company. Still later the German Lloyd Company contracted to carry the Anglo-American mails cheaper than any English line offered, and the German company actually began to perform the duty. But Englishmen did not want that kind of free trade, and they broke the contract with the German line and again gave protection to the English ships. Does not this justify the opinion that the English policy of free trade is urged where England can hold the field against rivals, and that when competition leaves her behind she repudiates free trade and substitutes the most pronounced form of protection?

Does Mr. Gladstone's estimate of the immorality of protection apply only to protection on land, or is supremacy on the sea so important to British interests that it is better to throw morals to the wind and resort to whatever degree of protection may be necessary to secure the lead to English ships? The doctrine of improving harbors in the United States by the National Government was for many years severely contested, the strict construction party maintaining that it must be confined to harbors on the seacoast at points where foreign commerce reaches the country. During one of the many discussions over this narrow construction an Ohio member of Congress declared that he "could not think much of a Constitution that would not stand being dipped in fresh water as well as salt." I fear that Mr. Gladstone's code of morals on this question of protection will not secure much respect in other countries so long as it spoils in salt water.

It will not escape Mr. Gladstone's keen observation that British interests in navigation flourish with less rivalry and have increased in greater proportion than any other of the great interests of the United Kingdom. I ask his candid admission that it is the one interest which England has protected steadily and determinedly, regardless of consistency and regardless of expense. Nor will Mr. Gladstone fail to note that navigation is the weakest of the great interests in the United States, because it is the one which the National Government has constantly refused to protect. If since the civil war the United States had spent in protecting her shipping merely the annual interest on the great sum which England has expended to protect her ocean traffic, American fleets would now be rivaling the fleets of England, as they rivaled them before the war, on every sea where the prospect of commerical gain invites the American flag.

The failure of the United States to encourage and establish commercial lines of American ships is in strange contrast with the zealous efforts made to extend lines of railway inside the country, even to the point of anticipating the real needs of many sections. If all the advances to railway companies, together with the outright gifts by towns, cities, counties, States, and nation be added together, the money value would not fall short of a thousand millions of dollars. No effort seems too great for our people when the interior of the country is to be connected with the seaboard. But when the suggestion is made to connect our seaboard with commercial cities of other countries by lines of steamships the public mind is at once disturbed by the cry of "subsidy." We really feel as much afraid of protection at sea as Mr. Gladstone is of protection on land. The positions of the American Congress and the English Parliament on this subject are precisely reversed. England has never been affrighted by the word subsidy, and, while we have stood still in potent fear, she has taken possession of the seas by the judicious, and even the lavish, interposition of pecuniary aid. I have already said that the interest on the amount which England has paid for this object since she began it with great energy fifty years ago would give all the stimulus needed for the rapid expansion of our commerce. Let it be added that if the Government of the United States will for twenty years to come give merely the interest upon the interest at the rate of 5 per cent on the amount which has been a free gift to railroads, every steam line needed on the Atlantic, the Pacific, and the Gulf will spring into existence within two years from the passage of the act. It is but a few years since Congress twice refused to give even $125,000 per annum to secure an admirable line of steamers from New York to the four largest ports of Brazil. And the sum of $125,000 is but the interest upon the interest of the interest at 5 per cent of the gross amount freely given to the construction of railroads within the Union. Is it any wonder that we have lost all prestige on the sea?

The opposition to the policy of extending our foreign commerce by aiding steamship lines with a small sum, just as we have aided internal commerce on railroads with a vast sum, originates with the American free trader. Mr. Gladstone can not fail to see how advantageous the success of this free-trade effort in the United States must prove to Great Britain. The steady argument of the free trader is that if the steamship lines were established, we could not increase our trade, because we produce under our protective tariff nothing that can compete in neutral markets with articles of the like kind from England. How, then, can the free trader explain the fact that a long list of articles manufactured in the United States find ready and large sale in Canada? The Canadian tariff is the same upon English and American goods. Transportation from England to Quebec or Montreal is cheaper than from the manufacturing centers of the United States to the same points. The difference is not great, but it is in favor of the English shipper across the seas, and not the American shipper by railway. It is for the free trader to explain why, if the cost of transportation be made the same, the United States can not compete with England in every country in South America in all the articles of which we sell a larger amount in Canada than England does. I append a note naming the American articles sold in Canada, and the free trader, if candid, will admit that the list is one that is constantly and rapidly increasing.*

Giving heed to the cry of the professional free trader in America, Mr. Gladstone feels sure that, though the protected manufacturers in the United States may flourish and prosper, they do so at the expense of the farmer, who is in every conceivable form, according to the free-trade dictum, the helpless victim of protection. Both Mr. Gladstone and the American free trader have, then, the duty of explaining why the agricultural States of the West have grown in wealth during the long period of protection at a more rapid rate than the manufacturing States of the East. The statement of the free trader can be conclusively answered by referring to the census of the United States for the year 1860 and also for the year 1880:

In 1860 eight manufacturing States of the East (the six of New England, together with New York and Pennsylvania) returned an aggregate wealth of $5,123,000,000. Twenty years afterwards, by the census of 1880, the same States returned an aggregate wealth of $16,228,000,000. The rate of increase for the twenty years was slightly more than 216 per cent.

Let us see how the agricultural States fared during this period. By the census of 1860, 8 agricultural States of the West (Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Nebraska, and Wisconsin) returned an aggregate wealth of $2,271,000,000. Twenty years afterwards, by the census of 1880 (protection all the while in full force), these same States returned an aggregate wealth of $11,268,000,000. The rate of increase for the twenty years was 396 per cent, or 180 per cent greater than the increase in the 8 manufacturing States of the East.

The case will be equally striking if we take the 15 Southern States that were slaveholding in 1860. By the census of that year the aggregate return of their property was $6,792,000,000; but $2,000,000,000 was slave property. Deducting that, the total property amounted to $4,792,000,000. Their aggregate return of wealth by the census of 1880 was $8,633,000,000. The rate of increase for the twenty years was 80 per cent. Consider that during this period 11 States of the South were impoverished by civil war to an extent far greater than any country has been despoiled in the wars of modern Europe; consider that the labor system on which previous wealth had been acquired in the South was entirely broken up; and yet, at the end of twenty years, the Southern States had repaired all their enormous losses and possessed nearly double the wealth they had ever known before. Do not these figures incontestably show that the agricultural sections of the country, West and South, have prospered even beyond the manufacturing sections, East and North? And all this not merely with protection, but because of protection!

As Mr. Gladstone considers protection immoral, he defines its specific offense as "robbery." To have been fully equal to the American standard of free-trade vituperation, Mr. Gladstone should have denounced our manufacturers as "robber barons." This is the current phrase with a class who are perhaps more noisy than numerous. The intention of the phrase is to create popular prejudice against American manufacturers as growing rich at the expense of the people. This accusation is so persistently repeated that its authors evidently regard it as important to their cause. It may perhaps surprise Mr. Gladstone to be told that out of the fifty largest fortunes in the United States—those that have arrested public attention within the the last ten years—certainly not more than one has been derived from protected manufacturing; and this was amassed by a gentleman of the same Scotch blood with Mr. Gladstone himself. The forty-nine other fortunes were acquired from railway and telegraph investments, from real-estate investments, from the import and sale of foreign goods, from banking, from speculations in the stock market, from fortunate mining investments, from patented inventions, and more than one from proprietary medicines.

It is safe to go even further and state that in the one hundred largest fortunes that have been viewed as such in the past ten years not five have been derived from the profits of protected manufactures. Their origin will be found in the fields of investment already referred to. Moreover, the fear of the evil effect of large fortunes is exaggerated. Fortunes rapidly change. With us wealth seldom lasts beyond two generations. There is but one family in the United States recognized as possessing large wealth for four consecutive generations. When Mr. Jefferson struck the blow that broke down the right of primogeniture and destroyed the privilege of entail he swept away the only ground upon which wealth can be secured to one family for a long period. The increase in the number of heirs in successive generations, the rightful assertion of equality among children of the same parents, the ready destruction of wills that depart too far from this principle of right, and, above all, the uncertainty and the accidents of investment, scatter fortunes to the wind and give to them all the uncertainty that betides human existence.

In no event can the growth of large fortunes be laid to the charge of the protective policy. Protection has proved a distributor of great sums of money; not an agency for amassing it in the hands of a few. The records of our saving banks and building associations can be appealed to in support of this statement. The benefit of protection goes first and last to the men who earn their bread in the sweat of their faces. The auspicious and momentous result is that never before in the history of the world has comfort been enjoyed, education acquired, and independence secured by so large a proportion of the total population as in the United States of America.

APPENDIX B.

THE REPUBLICAN PLATFORM.

[Text of the declaration of principles as adopted by the St. Louis convention.]

The Republicans of the United States, assembled by their representatives in national convention, appealing for the popular and historical justification of their claims to the matchless achievements of the thirty years of Repub-

* The following articles of American manufacture are sold in Canada more largely than like articles of English manufacture:

Brass goods, copper goods, cordage, ginghams, bottles, flasks, india-rubber goods, printing ink, ingrain carpets, wood manufactures, twines, tinware, ship rigging, wall paper, writing paper, envelopes, blank books, strawboard paper, boots and shoes, leather and skins, sole leather, leather goods, patent leather, figured oilcloths, grain drills, harrows, harvesters, hoes, forks, mowing machines, scythes, spades, shovels, builders' and cabinetmakers' hardware, house-furnishing hardware, nails, firearms, sewing machines, screws, stoves, axes, jewelry (sterling and plated), silverware, lamps, locomotives, hatchets, hammers, saws, mechanics' tools, organs, pianos, "notions," plain house furniture, especially hotel furniture.

lican rule, earnestly and confidently address themselves to the awakened intelligence, experience, and conscience of their countrymen in the following declaration of facts and principles:

For the first time since the civil war the American people have witnessed the calamitous consequences of full and unrestricted Democratic control of the Government. It has been a record of unparalleled incapacity, dishonor, and disaster. In administrative management it has ruthlessly sacrificed indispensable revenue, entailed an unceasing deficit, eked out ordinary current expenses with borrowed money, piled up the public debt by $262,000,000 in time of peace, forced an adverse balance of trade, kept a perpetual menace hanging over the redemption fund, pawned American credit to alien syndicates, and reversed all the measures and results of successful Republican rule.

In the broad effect of its policy it has precipitated panic, blighted industry and trade with prolonged depression, closed factories, reduced work and wages, halted enterprise, and crippled American production, while stimulating foreign production for the American market. Every consideration of public safety and individual interest demands that the Government shall be rescued from the hands of those who have shown themselves incapable to conduct it without disaster at home and dishonor abroad, and shall be restored to the party which for thirty years administered it with unequaled success and prosperity, and in this connection we heartily indorse the wisdom, patriotism, and the success of the Administration of President Harrison.

TARIFF.

We renew and emphasize our allegiance to the policy of protection as the bulwark of American industrial independence and the foundation of American development and prosperity. This true American policy taxes foreign products and encourages home industry; it puts the burden of revenue on foreign goods; it secures the American market for the American producer; it upholds the American standard of wages for the American workingman; it puts the factory by the side of the farm, and makes the American farmer less dependent on foreign demand and price; it diffuses general thrift, and founds the strength of all on the strength of each. In its reasonable application it is just, fair, and impartial; equally opposed to foreign control and domestic monopoly, to sectional discrimination and individual favoritism.

We denounce the present Democratic tariff as sectional, injurious to the public credit, and destructive to business enterprise. We demand such an equitable tariff on foreign imports which come into competition with American products as will not only furnish adequate revenue for the necessary expenses of the Government, but will protect American labor from degradation to the wage level of other lands. We are not pledged to any particular schedules. The question of rates is a practical question, to be governed by the conditions of the time and of production; the ruling and uncompromising principle is the protection and development of American labor and industry. The country demands a right settlement, and then it wants rest.

RECIPROCITY.

We believe the repeal of the reciprocity arrangements negotiated by the last Republican Administration was a national calamity, and we demand their renewal and extension on such terms as will equalize our trade with other nations, remove the restrictions which now obstruct the sale of American products in the ports of other countries, and secure enlarged markets for the products of our farms, forests, and factories.

Protection and reciprocity are twin measures of Republican policy and go hand in hand. Democratic rule has recklessly struck down both, and both must be reestablished. Protection for what we produce; free admission for the necessaries of life which we do not produce; reciprocity agreements of mutual interests which gain open markets for us in return for our open markets to others. Protection builds up domestic industry and trade, and secures our own market for ourselves; reciprocity builds up foreign trade and finds an outlet for our surplus.

SUGAR.

We condemn the present Administration for not keeping faith with the sugar producers of this country. The Republican party favors such protection as will lead to the production on American soil of all the sugar which the American people use, and for which they pay other countries more than $100,000,000 annually.

WOOL AND WOOLENS.

To all our products—to those of the mine and the fields as well as to those of the shop and the factory—to hemp, to wool, the product of the great industry of sheep husbandry, as well as to the finished woolens of the mill—we promise the most ample protection.

MERCHANT MARINE.

We favor restoring the American policy of discriminating duties for the upbuilding of our merchant marine and the protection of our shipping in the foreign carrying trade, so that American ships—the product of American labor, employed in American shipyards, sailing under the Stars and Stripes, and manned, officered, and owned by Americans—may regain the carrying of our foreign commerce.

FINANCE.

The Republican party is unreservedly for sound money. It caused the enactment of the law providing for the resumption of specie payments in 1879; since then every dollar has been as good as gold.

We are unalterably opposed to every measure calculated to debase our currency or impair the credit of our country. We are, therefore, opposed to the free coinage of silver except by international agreement with the leading commercial nations of the world, which we pledge ourselves to promote, and until such agreement can be obtained the existing gold standard must be preserved. All our silver and paper currency must be maintained at parity with gold, and we favor all measures designed to maintain inviolably the obligations of the United States and all our money, whether coin or paper, at the present standard, the standard of the most enlightened nations of the earth.

PENSIONS.

The veterans of the Union Army deserve and should receive fair treatment and generous recognition. Whenever practicable they should be given the preference in the matter of employment, and they are entitled to the enactment of such laws as are best calculated to secure the fulfillment of the pledges made to them in the dark days of the country's peril. We denounce the practice in the Pension Bureau, so recklessly and unjustly carried on by the present Administration, of reducing pensions and arbitrarily dropping names from the rolls as deserving the severest condemnation of the American people.

FOREIGN RELATIONS.

Our foreign policy should be at all times firm, vigorous, and dignified, and all our interests in the Western Hemisphere carefully watched and guarded. The Hawaiian Islands should be controlled by the United States, and no foreign power should be permitted to interfere with them; the Nicaraguan Canal should be built, owned, and operated by the United States; and by the purchase of the Danish Islands we should secure a proper and much-needed naval station in the West Indies.

ARMENIAN MASSACRES.

The massacres in Armenia have aroused the deep sympathy and just indignation of the American people, and we believe that the United States should exercise all the influence it can properly exert to bring these atrocities to an end. In Turkey American residents have been exposed to the gravest dangers and American property destroyed. There and everywhere American citizens and American property must be absolutely protected at all hazards and at any cost.

MONROE DOCTRINE.

We reassert the Monroe doctrine in its full extent, and we reaffirm the right of the United States to give the doctrine effect by responding to the appeal of any American State for friendly intervention in case of European encroachment. We have not interfered and shall not interfere with the existing possessions of any European power in this hemisphere, but these possessions must not, on any pretext, be extended. We hopefully look forward to the eventual withdrawal of the European powers from this hemisphere, and to the ultimate union of all English-speaking parts of the continent by the free consent of its inhabitants.

CUBA.

From the hour of achieving their own independence the people of the United States have regarded with sympathy the struggles of other American peoples to free themselves from European domination. We watch with deep and abiding interest the heroic battle of the Cuban patriots against cruelty and oppression, and our best hopes go out for the full success of their determined contest for liberty.

The Government of Spain, having lost control of Cuba, and being unable to protect the property or lives of resident American citizens, or to comply with its treaty obligations, we believe that the Government of the United States should actively use its influence and good offices to restore peace and give independence to the island.

THE NAVY.

The peace and security of the Republic and the maintenance of its rightful influence among the nations of the earth demand a naval power commensurate with its position and responsibility. We therefore favor the continued enlargement of the Navy and a complete system of harbor and seacoast defenses.

FOREIGN IMMIGRATION.

For the protection of the quality of our American citizenship and of the wages of our workingmen against the fatal competition of low-priced labor, we demand that the immigration laws be thoroughly enforced, and so extended as to exclude from entrance to the United States those who can neither read nor write.

CIVIL SERVICE.

The civil-service law was placed on the statute book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced and extended wherever practicable.

FREE BALLOT.

We demand that every citizen of the United States shall be allowed to cast one free and unrestricted ballot, and that such ballot shall be counted and returned as cast.

LYNCHINGS.

We proclaim our unqualified condemnation of the uncivilized and barbarous practice well known as lynching or killing of human beings suspected or charged with crime, without process of law.

NATIONAL ARBITRATION.

We favor the creation of a national board of arbitration to settle and adjust differences which may arise between employers and employees engaged in interstate commerce.

HOMESTEADS.

We believe in an immediate return to the free-homestead policy of the Republican party, and urge the passage by Congress of a satisfactory free-homestead measure, such as has already passed the House, and is now pending in the Senate.

TERRITORIES.

We favor the admission of the remaining Territories at the earliest practicable date, having due regard to the interests of the people of the Territories and of the United States. All the Federal officers appointed for the Territories should be selected from bona fide residents thereof, and the right of self-government should be accorded as far as practicable.

ALASKA.

We believe the citizens of Alaska should have representation in the Congress of the United States, to the end that needful legislation may be intelligently enacted.

TEMPERANCE.

We sympathize with all wise and legitimate efforts to lessen and prevent the evils of intemperance and promote morality.

RIGHTS OF WOMEN.

The Republican party is mindful of the rights and interests of women. Protection of American industries includes equal opportunities, equal pay for equal work, and protection to the home. We favor the admission of women to wider spheres of usefulness, and welcome their cooperation in rescuing the country from Democratic and Populist mismanagement and misrule.

Such are the principles and policies of the Republican party. By these principles we will abide and these policies we will put into execution. We ask for them the considerate judgment of the American people. Confident alike in the history of our great party and in the justice of our cause, we present our platform and our candidates in the full assurance that the election will bring victory to the Republican party and prosperity to the people of the United States.

APPENDIX C.

CHAIRMAN THURSTON'S ADDRESS.

GENTLEMEN OF THE CONVENTION: The happy memory of your kindness and confidence will abide in my grateful heart forever. My sole ambition is to meet your expectations, and I pledge myself to exercise the important powers

of this high office with absolute justice and impartiality. I bespeak your cordial cooperation and support to the end that our proceedings may be orderly and dignified, as before this have been the deliberations of the supreme council of the Republican party.

Eight years ago I had the distinguished honor to preside over the convention which nominated the last Republican President of the United States. To-day I have the distinguished honor to preside over the convention which is to nominate the next President of the United States. This generation has had its object lesson and the doom of the Democratic party is already announced. The American people will return to the Republican party, because they know that its administration will mean—

The supremacy of the Constitution of the United States.

The maintenance of the law and order.

The protection of every American citizen in his right to live, labor, and to vote.

A vigorous foreign policy.

The enforcement of the Monroe doctrine.

The restoration of our merchant marine.

Safety under the Stars and Stripes on every sea, in every port.

A revenue adequate for all governmental expenditures and the gradual extinguishment of the national debt.

MEANS A SOUND CURRENCY.

A currency as sound as Government and as untarnished as its honor, whose dollars, whether of gold, paper, or silver, shall have equal purchasing and debt-paying power with the best dollars of the civilized world.

A protective tariff which protects, coupled with reciprocity which reciprocates, thereby securing the best markets for American products and opening of American factories to the free coinage of American muscle.

A pension policy just and generous to our living heroes and to the widows and orphans of their dead comrades.

The governmental supervision and control of transportation lines and rates.

The protection of the people from unlawful combination and unjust exaction of aggregated capital and corporated power.

An American welcome to every god-fearing, liberty-loving, Constitution-respecting, lawabiding, labor-seeking, decent man.

The exclusion of all whose birth, whose blood, whose condition, whose practices would menace the permanency of free institutions, endanger the safety of American society, or lessen the opportunities of American labor.

The abolition of sectionalism—every star in the American flag shining for the honor and welfare and happiness of every Commonwealth and all the people. A deathless loyalty to all that is true and American and a patriotism eternal as the stars.

Protection and Bimetallism the Watchwords of Prosperity.

That which has engaged the attention without harmonizing the convictions of such master minds as Aristotle, Plato, Brahe, Copernicus, Locke, Newton, Smith, Bastiat, and Mill is surely a study which none can afford to broach with rashness nor to leave with complacency. When the principles which underlie it are thoroughly understood, money is perhaps the mightiest engine to which man can lend an intelligent guidance. Unheard, unfelt, unseen, it has the power to so distribute the burdens, gratifications, and opportunities of life that each individual shall enjoy that share of them to which his merits or good fortune may fairly entitle him, or, contrariwise, to dispense them with so partial a hand as to violate every principle of justice and perpetuate a succession of social slaveries to the end of time.—*Alexander Del Mar.*

SPEECH

OF

HON. SAMUEL C. HYDE

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 6, 1896.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of the revenue—

Mr. HYDE said:

Mr. CHAIRMAN: The natural embarrassment with which I first rise to speak in the House of Representatives is much heightened by the momentous importance of the questions involved in the Senate amendment, questions which are now receiving the earnest attention of the first statesmen and financiers of the world, and upon which so many members of long service upon this floor have spoken with profound learning and great eloquence; but I should feel that I had failed in my duty to the people of that young and progressive State which I have the honor in part to represent were I to remain silent.

GOLD AND SILVER UNDER THE CONSTITUTION.

Recognizing the power to coin and regulate the value of money as one of the principal incidents of national sovereignty, the founders of our Government placed in that great organic law, the Constitution of the United States, the following provisions:

The Congress shall have power to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures. (Article I, section 8, paragraph 5.)

No State shall * * * coin money, emit bills of credit, make anything but gold and silver coin a tender in payment of debts. (Article I, section 10, paragraph 1.)

From these plain provisions it will be seen that gold and silver were made equally the money metals of the American people. The prohibition placed upon the States against making anything except gold and silver coins legal tender puts the two metals upon an equality, and shows clearly that they are to be regarded as the standard money of the Constitution.

Alexander Hamilton, whose genius as a creative statesman, in my opinion, was the greatest America has produced, as was Abraham Lincoln the greatest statesman in executive ability—the great emancipator, the preserver of this nation—the then Secretary of the Treasury, in his report to Congress upon the establishment of a mint in 1791, declared that—

To annul the use of either gold or silver as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full circulation with the evils of a scanty circulation.

On the whole—

Says Mr. Hamilton—

it seems most advisable not to attach the unit exclusively to either of the metals, because this can not be done effectually without destroying the office and character of one of them as money and reducing it to the situation of mere merchandise.

Thomas Jefferson, in his letter to Hamilton of February, 1792, says:

I will return you the report on the mint, which I have read over with a great deal of satisfaction, and concur with you in thinking that the unit must stand on both metals.

Mr. Chairman, I dislike to weary the House with quotations, but I believe there is no better method in the search for truth than to recur often to foundations and first principles. I will therefore send to the Clerk's desk and ask to have read the statutes of the United States enacted April 2, 1792, under the Constitution, pursuant to the recommendations of these great statesmen, establishing a mint and regulating coinage in the United States.

The Clerk read as follows:

SEC. 9. There shall be from time to time struck and coined at the said mint coins of gold, silver, and copper of the following denominations, values, and descriptions, namely: Eagles, each to be of the value of ten dollars or units, and to contain two hundred and forty-seven grains and four-eighths of a grain of pure or two hundred and seventy grains of standard gold. * * * Dollars or units, each to be of the value of the Spanish milled dollar as the same is now current, and to contain three hundred and seventy-one grains and four-sixteenths part of a grain of pure or four hundred and sixteen grains of standard silver. * * *

SEC. 11. That the proportional value of gold to silver in all coins which shall, by law, be current as money in the United States shall be as 15 to 1, according to the quantity and weight of pure gold or pure silver; that is to say, every 15 pounds weight of pure silver shall be of equal value in all payments with 1 pound weight of pure gold, and so in proportion to any greater or less quantities of the respective metals.

SEC. 14. That it shall be lawful for any person or persons to bring to the said mint gold and silver bullion in order to their being coined: and that the bullion so brought shall be there assayed and coined as speedily as may be after the receipt thereof, and that free of expense to the person or persons by whom the same shall have been brought. * * *

SEC. 16. That all the gold and silver coins which have been struck at and issued from the said mint shall be lawful tender in all payments whatsoever. * * *

Mr. HYDE. These statutes were approved and signed by the immortal George Washington.

Here is a system of true bimetallism, the free and unlimited coinage of both gold and silver with full legal-tender power to coins of both metals. This system was continued for the first eighty-one years of the life of this Republic, until 1873. Gold and silver were freely coined and nothing was heard of "unsound money."

WITH THE ANCIENTS.

Mr. Chairman, I would not have you infer that because I have so specifically pointed out the foundations of our bimetallic system that I would overlook the great fact that gold and silver have been the money metals of the world before these enactments—ever since civilization began—and, since the introduction of paper money, have been the only safe basis for that currency.

And Abraham hearkened unto Ephron; and Abraham weighed to Ephron the silver, which he had named in the audience of the sons of Heth, 400 shekels of silver, current money with the merchant.—Genesis, xxiii, 16.

This was nearly forty centuries ago, and yet the terms used show that silver was then money current in trade.

And Job says:

Yea, the Almighty shall be thy defense, and thou shalt have plenty of silver.

To speak of the mining of the precious metals, gold and silver, in Asia and Europe, and in all nations since the beginning of the world, is but to remind us of the teachings of history. None have summed up this subject with more eloquence than the late James G. Blaine in a speech in Congress. Referring to the purchase of a burial place by Abraham with silver, he said:

This was well-nigh forty centuries ago. Since that time nations have risen and fallen, races have disappeared, dialects and languages have been forgotten, arts have been lost, treasures have perished, continents have been discovered, islands have been sunk in the sea, and through all these changes silver and gold have reigned supreme as the representatives of value, as the media of exchange. The dethronement of each has been attempted in turn, and sometimes the dethronement of both, but always in vain.

[Applause.]

With some slight changes in ratio, all the gold and silver mined in the world, not required in the arts, was received into the mints

and coined as money until 1873. Gentlemen upon this floor have made much of the argument that no great quantity of silver was coined in the United States. There was in fact $143,000,000 coined, $84,000,000 of which was full legal tender. The reason why no more was coined was principally because silver at the ratio adopted, 15 to 1, was undervalued by us; it was at a premium over gold, and was sent abroad to be coined. It went into the great money supplies of the world, which, like all seas, find a common level in the great ocean of the world's money. It brought back to the United States its price in gold, or in the products of other countries, to increase the wealth of our people, and it helped to keep the balance of trade in our favor, the same as if it had been coined at home.

DEMONETIZATION.

No statesman ever thought of destroying one of these money metals. On one occasion Daniel Webster said:

I am certainly of opinion that gold and silver, at rates fixed by Congress, constitute the legal standard of value in this country, and that neither Congress nor any State has authority to establish any other standard, or to displace this standard.

Mr. Blaine, in the speech in Congress just referred to, touching upon this point, says:

I believe gold and silver coin to be the money of the Constitution—indeed, the money of the American people anterior to the Constitution; money which the organic law of the Republic recognized as independent of its own existence. No power was conferred on Congress to declare that either metal should not be money. Congress has, therefore, in my judgment, no more power to demonetize silver than to demonetize gold; no more power to demonetize either than to demonetize both.

In 1816 England demonetized silver. She was already pressing forward as the chief creditor nation of the world; her economists already taught the doctrine that an appreciating value of money made lower prices and therefore encouraged exports.

Somewhat later this policy and principle was explained by Lord Overstone with his usual perspicuity to the secret committee of the House of Lords, as follows:

Monetary distress tends to produce fall of prices; that fall of prices encourages exports and diminishes imports; consequently it tends to promote an influx of bullion. I can quote a fact of rather a striking character which tends to show that a contracting operation upon the circulation tends to cheapen the cost of our manufactured productions and therefore to increase our exports.

Here, sir, is striking proof and admission that free trade and the single gold standard must go together. But the value of silver remained unimpaired. The commercial ratio between the two metals was comparatively steady until the aid of the law of other nations was invoked to destroy the value of silver.

After the close of the Franco-Prussian war Germany recovered of the French people $1,000,000,000 as her war indemnity. Looking across the Channel she saw England, now the chief financial power, with a single gold standard. Hoping to increase the value of her exactions from the French she demanded gold, and in 1873 enacted a law demonetizing silver and adopting the single gold standard.

The United States the same year passed an act demonetizing silver. Mr. Chairman, I shall not weary you with the "crime of '73," but there are a few salient points to which I would like to call the attention of the House. When the United States and Germany thus entered upon the abandonment of the coinage of silver it was not depreciated, but was at a premium of about 3 per cent over gold. The people of the United States were doing business upon the basis of the cheaper metal, and were not alarmed because the dearer metal went abroad. Being at a premium over gold, silver could not have been demonetized on account of overproduction nor because of a depreciation in the commercial value of silver bullion.

The world's production for the preceding year was: Silver, $51,575,000; gold, $106,850,000.

Again, sir, there was no demand on the part of the people of the United States for the demonetization of silver. Veiled under the title of a bill to make appropriations for the mints and to revise the coinage laws, it struck out the silver dollar without the knowledge of the American people generally, and unknown to our greatest statesmen, numbers of whom were at that time members of Congress.

Sir, what leading journals of this country contained editorial discussions of the grave changes made by that bill? Imagine the passage of a bill of such importance in that manner through Congress to-day. It is also true, Mr. Chairman, that there has never been a time since the act of 1873, after the attention of the people of this country was called to the question, when a bill demonetizing silver could have been forced through Congress.

DOES LAW AFFECT BULLION VALUES?

Mr. Chairman, there is one thing I will promise. I will not weary the House with those diagrams covered with zigzag lines, by which it is sought to show the variations between gold and silver, the rise and fall of prices, and so on. To me they appear to need a man to go along to explain their meaning. They distract me, and I think must weary and puzzle many members. But I will ask gentlemen to give attention to a few figures from the table which I hold in my hand and will print in the RECORD. It is taken from the last (1895) report of the Director of the United States Mint, and shows the commercial ratio between gold and silver bullion from 1687 to 1894.

A glance at these figures will show that but three times in a period of more than two hundred years has the value of silver bullion fallen below 16 of silver to 1 of gold.

But, sir, more significant still are the figures for 1874, the first year after the demonetization acts, the ratio being 16.17. Looking back over the figures, we find that the ratio had not gone below 16 to 1 since 1813, a period of sixty years. In 1873 the ratio was 15.92. Demonetization came, and the ratio has steadily declined until in 1894 it was 32.56.

Commercial ratio of silver to gold each year from 1687 to 1894, based upon the price of silver in the London market.

[From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer; from 1833 to 1878 from Pixley and Abell's tables; and from 1879 to 1894 from daily cablegrams from London to the Bureau of the United States Mint.]

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1687	14.94	1729	14.92	1771	14.66	1813	*16.25	1855	15.38

1722	15.17	1764	14.70	1806	15.52	1848	15.85	1890	*19.76
1723	15.20	1765	14.83	1807	15.43	1849	15.78	1891	*20.92
1724	15.11	1766	14.80	1808	*16.08	1850	15.70	1892	*23.72
1725	15.11	1767	14.85	1809	15.96	1851	15.46	1893	*26.49
1726	15.15	1768	14.80	1810	15.77	1852	15.59	1894	*32.56
1727	15.24	1769	14.72	1811	15.53	1853	15.33		
1728	15.11	1770	14.62	1812	*16.11	1854	15.33		

And yet, Mr. Chairman, all around me there are gentlemen, on both sides of the House, who maintain that law can not create values, who insist that statutes can have no effect upon the value of either silver or gold. If value were a material thing this would be true, for "man can create nothing; he can only move something." And yet the same gentlemen say they are in favor of an international agreement for the establishment of bimetallism. But this international agreement, to have any force, must be supplemented and sustained by statute laws of the nations who enter into it. If law can not give value to the money metals, why hold an international convention?

A look at the figures of the last twenty-two years, shown in the table just referred to, must satisfy every impartial mind. Coinage creates demand; demand creates value. And it is not alone the fact that we coin the metals, but it is the right to be coined which gives it value. To gentlemen on the other side who argue that legislation can not give value to silver we ask, Why was it that the closing, without notice, of the Indian mint in 1893 caused a fall in the price of silver bullion of 15 cents an ounce in one day? There was no decrease in the cost, no increase in the quantity of silver produced. The law was rescinded and its value fell.

Mr. Chairman, we who follow the legal profession fall so readily into the habit of citing authorities, and these facts are so pertinent and indisputable, that I can not forbear to read to you from great men whose opinions sustain the principle for which we contend.

Our own Francis A. Walker, whose text-book upon Political Economy is a standard in three continents, in his work on Money has written:

The philosophy of money owes little to the cultivation of systematic political economy in modern times.

If this be true, we may safely turn to Aristotle, the master mind of the ancient world. In defining money he says:

Money has value only by the law, and not by nature, inasmuch as a change of agreement among those who use it can depreciate it completely and render it entirely unfit to satisfy any of our wants.

And Cernuschi, the greatest of bimetallists, has written:

Nature produces silver and gold, but does not produce money. It is the legislator who attributes to one of the metals, or the two conjointly, the monetary function. Numisma, money, comes from nomos, law.

Mr. Chairman, we are told that if the mints of the United States were opened to the coinage of gold and silver upon equal terms America would become a "dumping ground" for all the silver in the world. Gentlemen on the other side would have us believe that ships loaded with silver would race across the waters to reach the mints of the United States for coinage. But where is this silver to come from? Remember that all the coined silver in the world is doing duty as money at home, and is circulating at par with gold. In France, Italy, Spain, Belgium, Switzerland, and Russia it has been coined at a ratio of 15½ to 1; in Great Britain at 14.28 to 1; Germany, 13.95; Austria, 13.69. The English silver would lose 7 cents on every dollar's worth at home by conversion into the money of the United States. The Frenchman contemplating the exchange of his silver coin for our gold by converting his silver into our dollars and exchanging these dollars for our gold, must contemplate a minimum sacrifice of $35 on every $1,000 worth of his lawful money at home. Silver is the sole standard and full legal tender in all the oriental nations, and was coined at a ratio higher for silver than our ratio.

Mr. Chairman, one of the clearest statements of the condition and cost of the coined silver in the world which I have found is contained in a recent issue of the New York World, one of the leading journals of this country, which favors the single gold standard. I will send it to the Clerk's desk and ask that it be read. It will be remembered that the value of our coined silver is $1.29 per ounce.

The Clerk read as follows:

Has silver ever sold as high as $1.29 an ounce since the passage of the Sherman silver bill?

CLEBURNE.

That depends upon what you mean by the Sherman silver bill, for there were more than one, and what kind of silver you refer to. Silver vases and silver cups are sold as high as $2.50 an ounce, and silver spoons and the ordinary silver tableware as low as 90 cents an ounce. No silver bullion has been sold as high as $1.29 per ounce since the Sherman purchase act of 1890; but nobody has been able to buy 99.99 per cent of the silver in the market at a less rate than $1.29 to $1.32 per ounce. There are in the world $3,035,100,000 coined at and worth $1.32 per ounce, $605,500,000 coined at $1.29 per ounce, and $853,400,000 coined at about $1.40 per ounce. This comprises all the silver in the world in raw material, outside of manufactures, except a few thousand ounces of bar silver, for which the market price is about 70 cents. No silver in the world can be bought for or has a market value less than $1.29 per ounce except these few thousand ounces which have been shut out of the main use for silver—money.

FIFTY-CENT DOLLARS.

Mr. HYDE. Mr. Chairman, we are told by gentlemen on the other side that upon the adoption of bimetallism we shall immediately go to a silver basis, that the value of all money in the United States will be cut in two, that gold will leave the country, and we shall have nothing but 50-cent dollars. Sir, no such thing as a silver basis, if by that is meant 50-cent dollars, is possible in this country. If every dollar in gold in the United States were swept out of existence to-day, and none to take its place, we would not be upon a silver basis, but upon the basis of all our money—legal-tender, paper money of all kinds, and silver. Our money could not go down to 50 cents on the dollar, and under the worst view of the subject it would be at a small discount only. The eminent financial writer, Matthew Marshall, in a recent issue of the New York Sun, has touched upon this subject intelligently. Both the writer and that great journal favor the single gold standard. He writes:

Our currency other than gold, large as it is, is restricted within definite limits, and its value, as compared with gold would still be greater than that of silver bullion. * * * At this very moment we see how a limited quantity of coin, both here and in Europe, is kept at par with gold coin, and the suspension of gold payments would send it to a discount governed only by the excess of its nominal amount above that fixed by the demand for it as a medium of exchange. In Italy, for example, where gold payments have been suspended for several years, the discount is only about 7 per cent; in Austria it is not even 3 per cent, and in France, when the Bank of France refuses to pay out gold at par, it is seldom as much as 1 per cent. * * * It is an error to imagine that as soon as it occurred gold would at once go to 95 per cent premium and our currency lose one-half of its purchasing power.

Sir, gold is at a premium at this hour; it is not helping to carry on the legitimate business of this country. Heavens! Can a monetary system be imagined which will send gold abroad faster than it goes under the mongrel system which we now have? It will only remain with us when employed as the instrument through which our beloved country is sunk deeper and deeper under the burden of a bonded debt. As soon as these bonds are issued gold will take up its course again for the money centers of Europe. American gold coins are to-day being hoarded in the money chests of European governments as a reserve for their next great wars.

THE BOND ISSUE.

Mr. Chairman, I will digress for a moment to speak of the present bond issue, because it is really part of the question under consideration. On yesterday the Secretary of the Treasury received bids for $100,000,000 in interest-bearing bonds and to-morrow he will accept bids and allot the bonds, and thus, in a time of profound peace, this nation will go $100,000,000 more in debt. And for what purpose? It is not to raise money with which to carry on the Government. On yesterday there was $170,774,876.93 free money in the Treasury available for use. It is to supply gold for the benefit of those who will export it to foreign countries; who will hoard it, hoping for a premium, and this process must be repeated as soon as this voracious crowd can return to the attack upon the Treasury. It must be a long bucket which can be kept full after the bottom has fallen out. It is true this one hundred and seventy millions was not acquired through the legitimate revenues of the Government. It is principally the proceeds of former bond sales, but, being in the Treasury, it is as available for every purpose of the Government as if obtained through the ordinary sources of revenue. When the sale of bonds which took place on yesterday is completed over a hundred millions more will be added to the surplus in the Treasury, so that plainly these bond sales are not to obtain revenue. Both the President and Secretary so declare. The currency in circulation will be contracted another hundred millions. Greenbacks, which so many gentlemen on this floor object to having retired, will be most effectually locked up from circulation, causing sharp contraction in the currency. Neither, sir, can I join with gentlemen who would congratulate the Government upon the favorable terms of this loan. The rate of interest will not be less than 3⅜ per cent per annum. Great Britain pays only 2½ per cent on some of her consols, and they sell in the market at $1.04, and the 3 percents of the Republic of France sell at par. With the $162,000,000 already issued during the present Administration this will make a bonded indebtedness of $262,000,000 to run thirty years. Sir, this debt, with the interest added, when paid will be more than $500,000,000; and worst of all, it appears as if there were no power save the hand of the Almighty to stay these bond issues.

To you, my comrades, who fought the good fight to save the Union, so many of whom have seats in this Chamber, I say how you must feel the humiliation which is now being brought upon this nation. We have fondly believed this generation has given to the world some of the most glorious pages of its history. The greatest war of modern times has been fought out, the Union preserved, the slave made free, the enormous debt of about three billions nearly paid off, and in a few more years, could we have kept on, we could have said to posterity, "We present you with an open book and a fair page." Now we must cross the threshold of the coming century in the chains of a great national debt which must bind the coming generation. And this great wrong must be borne at the behest of those who will profit by our adoption of the free trade and single gold standard system of Great Britain. [Applause.]

Sir, when this bill in its original form, regulating the issue of bonds, was before the House, I voted against it. I will have no part or parcel with Grover Cleveland in this gold-bonding scheme; I wash my hands of the whole business. [Loud applause.]

HAVE WE BIMETALLISM NOW?

Mr. Chairman, there seems to be confusion in the minds of many as to whether we live under the bimetallic system or have a single gold standard. And when we consider our various kinds of current money and the operations of the Treasury under the rulings adopted there we can not wonder that there is doubt in the minds of the people concerning the law upon these most important subjects. Once more, what is bimetallism? Maurice L. Muhleman, deputy assistant treasurer of the United States at New York, in his recent work, Monetary Systems of the World, defines bimetallism as follows:

By *bimetallism*, strictly defined, is meant the free and unlimited coinage of both gold and silver into coins of full debt-paying power. Not the mere use of the double standard, but the actually open mints on the terms above given.

This definition agrees exactly with the system given us by Washington, Hamilton, and Jefferson. A clear understanding of the meaning of terms is the first necessity in the discovery of truth. Gentlemen might as well talk about the "horse marines" or discourse upon "white blackbirds" as to talk about bimetallism with any one of the essentials included in this definition left out. Any other is a bastard affair and not bimetallism.

Under our existing laws we lack but one essential of bimetallism; that is, we have closed the mints to the further coinage of silver. The act of 1873 discontinued the coinage of the silver dollar, and the Revised Statutes of 1873, which came in force in 1874, provided that silver coins should be a legal tender for no more than $5. But specie payments being at that time suspended, the stoppage of the coinage of silver and its demonetization were not felt. The passage of the Bland-Allison Act in 1878 and the Sherman law in

1890 restored the silver dollar to its full legal-tender power. The repeal of the purchasing clause of the Sherman Act, although it stopped the coinage of silver, took away from the silver dollar none of the high attributes of money of final redemption. And so stands the American silver dollar in the eyes of the law to-day.

Mr. Chairman, I will not weary the House by pointing out the different acts providing for the payment of the indebtedness of the United States. It is admitted on all sides that the resumption act and all acts for the payment of the bonded and other obligations of the United States provide for payment in "coin" only, and not in gold. And, sir, here it is that we are lacking in one more and a most important essential of bimetallism. The Secretary of the Treasury construes the word "coin" to mean gold, if the creditor demands it. Instead of holding the option of payment in either coin with the Government, and thus protecting the Treasury, he gives the option to the creditor. This second requisite we lack, namely, that the Government itself shall give its faith, full value and credit to the silver dollar by tendering it in payment of the obligations of the United States whenever the law provides that it may be done and the condition of the Treasury requires it. In this we differ from France.

The law says that silver shall be a legal tender for all debts, public and private. All our outstanding obligations, including the greenbacks, are payable in "coin," yet from the very hour of resumption the Treasury Department has transferred to the holder of United States notes—greenbacks—the option to demand and receive gold in payment. This statement being often questioned, I have been at some pains to procure the testimony of the Secretary of the Treasury, so there can be no doubt about it. That official testified before the Committee on Appropriations of the House of Representatives, during the consideration of the sundry civil appropriation bill for the year 1896, as follows:

Question by Mr. Sibley, a Representative from Pennsylvania:

I would like to ask you what objection there could be to having the option of redeeming either in silver or gold lie with the Treasury instead of with the note holder?

Mr. CARLISLE. If that policy had been adopted at the beginning of resumption—and I am not using this for the purpose of criticising the action of any of my predecessors, or anybody else—but if the policy of reserving to the Government at the beginning of resumption the option of redeeming in gold or silver all its paper presented, I believe it would have worked beneficially, and there would have been no trouble growing out of it; but the Secretaries of the Treasury from the beginning of resumption have pursued the policy of redeeming in gold or silver at the option of the note holders. There is a vast difference between establishing a policy at the beginning and reversing the policy after it has been a long time established.

This testimony of the Secretary removes all doubt concerning the law.

Mr. Chairman, to show to what lengths these ministerial officers of the Government will go, they pursue this policy not only with greenbacks, but with Sherman notes—silver certificates issued under the Sherman law. And the law there expressly provides that the option to redeem such notes in gold or silver coin shall be at the discretion of the Secretary. Sir, no lawyer upon this floor will contend that there is authority for interpreting the statute to give the discretion of the Government to the creditor where it expressly provides that this discretion shall lie with the Secretary.

HOW THIS WORKS.

The distinguished gentleman from Pennsylvania [Mr. BROSIUS], in debate upon this floor a few days ago, said:

In respect to the gold reserve, it may be said that the situation of the Treasury of the United States under our system is singularly unique. I think it is the only place where gold redemption is absolutely compulsory without qualification or limitation. It is the only custodian of gold on the face of the earth that I know of which is without the means of resisting incursions from foreign claimants or domestic speculators or hoarders.

It is these rulings of the Secretaries of the Treasury, Mr. Chairman, which furnish the "endless chain" with which to draw all of our gold out of the Treasury, force these bond issues, and discredit one-half of the metal money of this Government. It is these rulings which leave us standing two steps from full bimetallism instead of one, where we might stand under the law.

It appears to me that we have the same system under the law as the French people. They have full bimetallism, except that free coinage has been discontinued. The Bank of France, which stands in place of the Government, exercises the option of paying in gold or silver. In this manner it is able to regulate the amount of gold and silver retained in the bank, and the amount of coins of each metal in circulation throughout that Republic. Coins of both metals are thus held at a parity and the credit of the bank is maintained.

Sir, the Republican party will never be a party to the creation of "dishonest dollars." The people of the State of Washington honestly differ in opinion as to whether bimetallism in this country may be restored by the enactment of a full bimetallic law at once. But, sir, in my opinion, they do not differ in their desire that full bimetallism shall be established in this country. They differ as to what are safe means to bring it about. Gentlemen on the other side tell us that this full bimetallic law which has been sent to us from the Senate Chamber can not pass at this time; that even were it to pass this House it must fail under the veto of the President. It would be interesting to know how many put away investigation and discussion of this question, lay aside misgivings, and join their forces with the strongest legions. But, sir, no such course as that will answer for me. I shall accept the responsibility. When this question comes to a vote I shall first vote for the amendment to open the mints to coinage of silver produced in the mines of the United States. If this fails, gentlemen on the other side must show that some other measure leading to bimetallism will be offered, some step to relieve us of this terrible pressure for gold, or I shall support the Senate amendment.

Sir, being a new member of this body I shall not set up as a "know-it-all" nor as being able to solve this great problem alone. But let me suggest that if we can not begin by the enactment of this full bimetallic law, the first step to break up these gold raids upon the Treasury, stop the issue of interest-bearing bonds, and restore perfect parity of value between gold and silver, and thus lead to full coinage of both metals, will be for our Secretaries of the Treasury to reserve to the Government the option of paying in either coin, and pay gold and silver in equitable proportions, as is done at the Bank of France. I can not concede that the various statutes and joint resolutions adopted by Congress declaring it to be the policy of the Government to maintain the parity are followed in letter or in spirit by giving all the preference to gold. We can certainly see that the plan is working most disastrously to our people. The hundred millions in bonds issued on yesterday will not be the last. Soon another issue will be called for, and so on.

The Secretary in his testimony says: "If this policy had been adopted in the beginning, I believe it would have worked benecially and there would have been no trouble growing out of it." If, sir, we have already drifted far away from safe moorings, shall we drift farther and farther away until we are lost in the deep sea of financial ruin? No, sir; let us put about before it is forever too late, and make for the haven of law, good faith, sound finance, and bimetallism. [Applause.]

Sir, ninety-five out of every hundred of the people of this country "live and move and have their being" by the fruits of toil. "In the sweat of thy face shalt thou eat bread" is the law of humanity. The plain people do not believe the policy of the Government should be directed entirely in the interests of the income classes and those whose business in life is to deal in money. People honestly differ, as I have said, as to the means by which bimetallism may be reached, but they favor bimetallism, and are strongly opposed to the single gold standard. The chief doubt, sir, it appears to me, lies in the difference between the commercial value of the bullion from which the gold and the silver dollars are made. I have already shown beyond dispute, it seems to me, that this has been caused principally by the enactment of laws directed against silver; but the question is, How shall we recover the lost ground? Adopt this policy of paying all obligations of the Government in the coins of both metals, and it will increase the value of silver and give confidence in that metal. As population increases and business grows and the demand for more money to carry on the business of the country presses, we may take the next step toward full bimetallism by opening the mints to the coinage of the American product.

Mr. Chairman, one argument advanced by the other side I must notice briefly. It is that the Government has no silver coin with which to make payments in silver as well as gold. The argument has no foundation. To make sure, I examined the question in the office of the Treasurer of the United States, Hon. D. N. Morgan, this morning, and had the courteous assistance of that gentleman. No records are kept of the vast sums of money received by the Government through internal revenues, nor at the custom-houses of the United States, except in the city of New York, where the principal part of the revenues from customs is received. There records of the different kinds of money paid to the Government are kept, and the reports show that for the past three years more than one-third of the revenues were paid in silver or silver certificates. There is no question but the same proportion holds good as to internal revenues and collections at other custom-houses. The Government has a great silver revenue, amounting to probably two hundred millions each year. Where received in certificates, all that is necessary is for the Government, which then becomes the owner of the certificates, to replace the certificates with the silver dollars in the Treasury, and by this method become enabled to pay out the silver coin. The coin is a legal tender, the certificates under the Bland-Allison law are not. The creditor may take his choice in silver coin or silver certificates. The right of the Government to take this course, I am informed by the honorable Treasurer, is unquestioned.

"It is hard for an empty bag to stand alone," says Franklin. The Government has a splendid silver revenue, and in the bimetallic system, which I believe will come, it will also have a gold revenue. If the Government must pay gold, it must have a gold revenue other than that derived from the sale of bonds in

time of peace. This was the system of Lincoln and Seward, of Chase and Fessenden.

OUR SILVER DOLLAR TO-DAY.

Mr. Chairman, if gentlemen will bear with me a moment, I would like to speak of the character of the American silver dollar and the important work it is performing to-day in carrying on the business of the people. I know of no subject about which so much misrepresentation is constantly made and concerning which so much misapprehension exists. On yesterday there were $331,462,893 in silver certificates under the Bland-Allison law and $58,334,092 in standard silver in circulation. It is constantly charged that each of these silver dollars and certificates is worth 100 cents only because there is a gold dollar behind it, because the Government will redeem it in gold. The mails come laden with pamphlets written upon this question, where this contention is strenuously argued; magazine and newspaper articles constantly reiterate it. Sir, the assertion is always a flat falsehood or an ignorant mistake.

These silver certificates are redeemable in silver dollars only; the certificate is practically a receipt for silver dollars deposited in the Treasury. Upon demand by the holder they are paid in silver dollars. This dollar is a full legal tender for all debts, public and private, except where otherwise expressly stipulated in the contract. The silver dollar is not redeemable by the Government at all; it redeems itself; it is standard money and rests in no manner whatever upon gold. That there may be no question upon this point, I take the liberty of reading an extract from a letter upon the subject, written by the honorable Secretary of the Treasury to Hon. JOHN W. DANIEL, Senator from Virginia, which has been published. It is as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., October 18, 1894.

SIR: I have the honor to acknowledge the receipt of your letter of the 12th instant, and to inform you, in reply to first, second, and third questions therein contained, that there is no statute or practice of this Department under which any of the standard silver dollars coined by this Government can be converted into gold at the Treasury.

* * * * * * *

Respectfully, yours,

J. G. CARLISLE, *Secretary.*

Hon. JOHN W. DANIEL, *Lynchburg, Va.*

The certificates are no more convertible into gold than the coined dollars.

Here, sir, are nearly $400,000,000 in active circulation throughout the country, carrying the burdens of the people, filling every office of money, except that it can not be used to raid the Treasury of its gold, nor to force the Government to issue bonds to buy gold with which to redeem it. There were at the same time in circulation $137,230,280 of Treasury notes, issued under the Sherman law, making a total of over five hundred millions of silver circulation. These Treasury notes, like the silver dollar, are a full legal tender, and were it not for the rulings of the Secretary of the Treasury, that he will allow the holder of these notes to exercise the option of demanding gold, which I have already referred to, they, like the dollars and certificates under the Bland-Allison law, could not be used to raid the Treasury and force bond issues. Sir, this silver money is the money of the people to-day. Take a check to a bank in the city of Washington for payment and you will receive $90 in silver certificates out of every hundred paid. Ninety dollars out of every hundred paid to members of this House for their salaries day before yesterday, was paid in silver certificates. When we pass appropriation bills in this House for carrying on the operations of the Government—the Army, the Navy, rivers and harbors, coast defenses—we appropriate in dollars, and the silver dollar, and the silver certificate which represents it, are included. The Government tenders it and pays it out in all its vast operations. And right now, national-bank notes (being convertible into greenbacks), Treasury notes, greenbacks, and all other paper money have practically disappeared from circulation, being hoarded with which to draw gold from the Treasury. And yet, sir, we are constantly met with the statement, both in the press and arguments of advocates of the single gold standard, that the silver dollar will not circulate, that the silver lies piled up in the Treasury useless, and, many are made to believe, at a dead loss to the Government. This silver bullion is in circulation the same as the gold bullion of the Bank of England. The gold remains in the vaults of the bank and scarcely ever circulates; the notes of that bank are practically gold certificates. Here we may well ask again, Mr. Chairman, are we upon the gold basis?

Sir, Republicans are wont to refer with much gratification to the era of great prosperity in the United States, extending especially from 1880 to 1892, when it reached its zenith, when the wage earner received more for his toil than ever before in this country; not only that, received a higher wage rate than was ever known under any other Government. This era of prosperity might well be termed the silver age. In 1878, under the Bland-Allison law, we began coining two millions of silver per month and continued it uninterruptedly. In 1890, under the Sherman law, we increased the coinage to four and one-half millions per month, and the prosperous times of 1891 and 1892 followed. But Grover Cleveland took the Presidential chair, and immediately clouds gathered. The President called Congress in special session to repeal the wicked Sherman law. "Confidence" was wanted. Senator SHERMAN said, advocating the repeal, "In ten days from this time the skies will brighten, business will resume its ordinary course, and the clouds that lower upon our house will be in the deep bosom of the ocean buried."

The law was repealed, and, sir, every man, woman, and child knows the condition of this country from that time to this hour. Its memory will last as long as this generation.

But, Mr. Chairman, candor will not allow me to claim that the evils that have fallen upon this country since 1893 are due to the repeal of the Sherman law. But I wish to point out how this prompt repeal shows fully that the hard times were in no wise the result of silver legislation.

Sir, the truth is that for the first time in more than thirty years we have turned our backs upon the American home and American fireside; we have given our splendid markets over to the foreigner, instead of the American producer; we have turned away from the American wage earner and thrown our favors to his foreign competitor. But ah, sir, even now, while we discuss this question, the victorious legions of protection, once led by the immortal Lincoln, are forming, and in November will sweep this country with the greatest victory since 1861. [Loud applause.]

THE FARMER.

Mr. Chairman, agriculture has been fittingly termed "the mother of all industries." The farmer has ever been the bulwark of the Republican party. Of the 70,000,000 people in these United States 35,000,000 are interested directly or indirectly in the tilling of the soil. None should be more quick than Republicans to inquire after the welfare of the farmer. It was the farmer who, rallying from hill and dale, forest and plain, gave us Abraham Lincoln for President in 1861. And so, faithful until 1892, he gave the full measure of his support to Benjamin Harrison, while the manufacturer, caught by the Democratic cry of free raw materials and protection for the finished product, voted for Grover Cleveland. And what is the condition of the farmer to-day? In September a year ago cotton was at a lower price than in thirty years and wheat lower than in three hundred years. There has been little improvement from that day to this. Statistics show that there has been a greater proportion of business failures and that the times have been in all respects worse from the 1st day of January last down to the present hour than at any time during the history of this country.

In 1880 the farmer produced 498,549,868 bushels of wheat. Although the yield was an average one, the prices were below the average of that period; but it brought him $474,201,850. In 1895 the farmer produced 467,102,947 bushels of wheat. Although this was but 31,446,921 bushels less than in 1880, it only brought him $237,938,998, which was $236,262,852 less than in 1880, and yet he has not murmured.

Let us look again at the wretched year 1895 and see what the farmer has done in that year. The total value of all exports of the productions of the United States that year was $793,392,599. Of this sum $553,210,026 was the product of agriculture, or 69.73 per cent. These figures are taken from the United States Statistical Abstract of 1895. Sir, the basis of all business or personal prosperity is what we produce. Is it possible for any people to prosper when the product of labor is below the cost of production? Ask the cotton planter what he has left after marketing his cotton at 5 or 6 cents per pound in New York. Ask the farmer in Pennsylvania, Illinois, or California what he has left after selling his wheat at 50 to 60 cents a bushel in New York.

Sir, I have seen the most beautiful samples of wheat ever grown in the world selling, during the fall of 1895, throughout the great "inland empire" embracing eastern Washington, Oregon, and Idaho, at 30 cents per bushel, and this within 400 miles of the seaboard.

Mr. Chairman, during the past twenty years the farmer has seen, first, the banking interests, second, the railway interests, third, the manufacturing interests all surpass him in the accumulation of wealth and prosperity. He has seen the value of his farm lands constantly decrease, until well-nigh half their value has fallen away; the value of the products of his toil year by year fall off, until at last there is no longer a certainty of market even. Sir, the farmer, first of all to feel the evil effects of unsound money, least prepared of all to withstand the evils of a depreciated currency, has ever stood firm for sound money. But, sir, the time has come when the farmer will cry for "sound property" as well as sound money. There can be no beauties in a financial system which leaves the value of his lands to walk away in a night, which leaves the farmer's crops upon his hands, after all his care and toil of production, worth less than their cost.

Constantly declining values are ruining the farmer, transferring his home to the hands of the mortgagee, compelling him to take the place of tenant instead of owner.

Sir, men tell us money is not scarce; indeed, they say that the banks in New York are full of it. But let the farmer try to get some of it for his own by selling a field, a house, some wheat, cotton, cattle, horses, or any of the products of his labor and he will soon find out whether money is cheap and plentiful or not. Indeed, sir, the farmer is beginning to ask, "Is not the value of money appreciating?" And I ask you in all candor, sir, can we safely adopt a single gold standard before we have carefully consulted the farmer? The farmer has been the sturdy reliance of the Republican party, and whenever he withdraws his support the mission of that party will be ended. [Applause.]

MORE MONEY.

Next to the alphabet—
Says Macaulay—
money is the greatest of labor-saving inventions.

Sir, this country needs more money in circulation. Notwithstanding our rapid growth in population and business, the currency has been contracted a round hundred million dollars during the past year. The per capita decrease in circulation is becoming appreciable in the business world.

Says John Stuart Mill:

That an increase in the quantity of money raises prices and a diminution lowers them is the most elementary proposition in the theory of coinage, and without it we should have no key to any of the others.

So Hume taught in his Essay on Money:

The policy of the good magistrate consists in keeping the money of the nation, if possible, still increasing, because by that means he keeps alive a spirit of industry and increases the stock of labor, in which consist all real power and riches. Accordingly we find that in every kingdom into which money begins to flow in greater abundance than formerly everything takes a new face—labor and industry gain life, the merchant becomes more enterprising, the manufacturer more diligent and skillful, and even the farmer follows his plow with greater alacrity and attention.

Sir, under our present monetary system little new currency is being added to our circulation; gold coinage gives but slight increase. It must be remembered that about one-half of all the gold produced in the United States is required for use in the arts; the mints are closed to silver; the price of United States bonds is so high that national-bank circulation is not profitable, and scarcely anything is being added through that channel, and yet the nation is advancing in growth, business, and population as no other nation has done in ancient or modern times. Why, sir, we take on an added population equal to Canada and all British Columbia every three years. In 1910 we shall have 90,000,000 people. During the coming century we will have 400,000,000.

Mr. Chairman, what has become of the "Baltimore plan" and the "Carlisle plan" for banking currency, of which we have heard so much? Ah, sir, the Egyptian mummies across yonder in the Smithsonian Institution are not more dead than these plans. Who would resurrect the State banks, with their wild-cat money? [Applause.]

I ask you, then, sir, what will be the monetary system of the future? Mr. Chairman, for thirty years the United States Government has given to the people a currency, and never one dollar of this currency has been found bad. Can the Government now, after discharging this duty so long and so satisfactorily, abdicate this important function of government? The people have indicated that they are not ready for it. I believe, sir, that the plan will be a simple one and its execution easy; the money of the future will consist of gold and silver coins and United States notes (greenbacks); the latter redeemable in gold and silver at the option of the Government, to be always issued in sufficient quantities to do the business of the people and prevent cornering of the money market, panics, low prices, and hard times. National banks will be simply banks of loans, deposit, and exchange.

For all this, sir, the people must look to the great Republican party. There is no other hope. The Democratic party, always for free trade, has been broken into fragments by Grover Cleveland and his Wall street allies. The leaders of the Populist party—a party always opposed to protection—already admit that they can not hold together after the next Presidential election. The party of bimetallism must be the party of protection. Protection gives a balance of trade in favor of the United States and enables her to hold her specie at home, while free trade demands the gold standard. I predict, sir, that this will be the policy of the future, and that the people will demand it; it is an American policy. [Applause.]

THE PACIFIC SLOPE.

Down to the end of the year 1894 there had been produced in gold and silver bullion in the United States $3,310,186,769. Sir, this is nearly one-third of all the money metals of the world, and of this vast sum more than $3,000,000,000 was produced in the Pacific Coast States and Territories. This production of the precious metals changed the course of business and commerce in two continents, and raised the United States from a second to a first class power.

Gentlemen on the other side say we have not demonetized silver, but we have demonetized the silver in the mountains; we have turned the miner's pack horse loose to graze; we have tampered with his fuse and dampened his powder; we have paralyzed his arm and chilled his heart. [Applause.]

Why this discrimination in favor of gold and against silver mining? Why the epithet "silver baron"? For every ounce of pure gold the Government gives $20.67 in coin. Sir, there are 20 mines in Colorado where gold is produced at a cost of $1 per ounce, and there is one mine where gold is produced at a cost of 25 cents per ounce, and yet we hear nothing of "gold barons." It must be remembered, Mr. Chairman, that nature often holds the gold and silver ore locked in the same ledge. Remove the profit of mining the silver, and the gold can not be extracted and remains lost to circulation, for which there is such urgent need.

Sir, it is the declared policy of the Republican party to favor and protect all of the industries of the people of the United States. The mining of silver is a great American industry and has been during all of the history of our country. I ask gentlemen of the other side, and I confess with some feeling, if during the year 1896 silver mines were discovered in the "tight little isle" where the British Government has its seat, and 60,000,000 ounces of silver were produced, what would be the policy of that Government toward silver? The answer is too plain. [Applause.] On the other hand, the principal gold-producing district, South Africa, is already securely sealed to English interests. Sir, every principle of patriotism, every law of self-protection, every policy of Americanism demands the adoption of bimetallism by the people of the United States.

Mr. Chairman, I have detained you and the House too long. But I would ask you for a moment to look away to the broad lands of our Western Slope. There, sir, is an empire—there the greatest preserve of undeveloped resources in these United States. It is in its infancy. There is more gold and silver locked in its mountains than in all the money chests of the world. It is a land of grand forests, beautiful valleys, broad seas, and peaceful harbors; of lofty mountains, vast plains, sunny climes, and health-giving breezes. It is awaiting the touch of the genius and the enterprise of those who would unlock its untold wealth. And among the grandest and fairest of all is the young State of Washington.

Mr. Chairman and gentlemen, I thank you for your kind attention. [Loud and long-continued applause.]

Laws Relating to American Seamen.

REMARKS
OF
HON. JOHN MURRAY MITCHELL,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1896,

On the bill (H. R. 6399) to amend the laws relating to American seamen.

Mr. MITCHELL said:

Mr. SPEAKER: Owing to the migratory life which a sailor leads, he is at a great disadvantage when compared with every other employee in the way of recommendation.

No manufacturer, merchant, or other employer on land takes an employee without some recommendation. As a rule, the sailors, when a voyage is finished, be it short or long, are paid off and go ashore and are left to their own devices and to the mercy of the land sharks. When a master of a vessel wishes to get a crew, he takes such men as he finds, and, as a rule, they have no certificate to show their previous service. Every employee in every other class of business would dislike to be associated with men of doubtful character and men who cause great trouble and dissension in the line of their own employment; but the risk that they run is nothing compared with that which a good sailor takes when shipping on a vessel with a miscellaneous crew about whom he knows nothing, and about whom the master who shipped them knows little more.

The result is, necessarily, that the good men are frequently disciplined in the most savage manner and on slight pretext by the master of the vessel in order to assure the safety of his life and the lives of others on his ship, as well as the cargo and the ship he has in charge. And the rules which have governed the control of the sailor by the master have been considered necessary in the past, as the ship has been a species of small kingdom.

There is no reason why a ship should not be manned by sailors of universally good character any more than there is reason for a banker employing dishonest or crazy clerks and office boys. The trouble, as far as I have been able to find out, lies in the

method of employment and the lack of any method by which the employer can determine the character of the men he employs, and it seems to me, therefore, in the interest of sailors who are capable of shipping as able-bodied seamen that a bill should be introduced for their benefit which should provide that every custom-house in the United States should be furnished with a book entitled "A registry list," and that every sailor when arriving in a port in the United States should be given the absolute right of going to the custom-house where his ship is in port and having recorded on said "registry list" his record as a seaman. This would enable him to refer anybody in doubt of his capabilities to the custom house or houses in the United States where he had filed a record previously as a sailor.

Every master should be compelled under the law to give such sailor a certificate to the effect that such sailor had been on board his vessel from the time he had shipped to the time of his leaving the same.

I would not make this certificate broader, for the reason that if you required the master to certify to the character of the sailor he might easily avoid giving such a certificate; but the sailor who had a certificate from various sailing masters or from one sailing master that he shipped for a number of months or years on a certain vessel or number of vessels would have a prima facie recommendation. It also enables the shipper or master to inquire into the record of the sailor and discover what his record has been on the vessel or vessels on which he has shipped. A sailor with such a certificate or certificates from various sailing masters would have an advantage over sailors who had no such certificate.

It must be evident to everyone that it could not be detrimental to the character or interests of any able-bodied seaman, as it would be required by a provision in the law to be enacted that a sailor when leaving a ship should be as much entitled to receive the certificate which I have suggested as he would be to get his pay. A sailor with this certificate could then go to any custom-house in any port in which his vessel was at anchor, and by showing his certificate to the custom-house have such custom-house make in its registry list, as suggested above, a record of his experience at sea.

I beg leave to state now that at the next session of Congress I shall introduce a bill for the benefit of seamen in this respect.

I state this now for the purpose of inviting suggestions on this subject from everybody interested in sailors and ships, and in order that the bill may be prepared with regard to the best interest of the sailors, and that it may pass as proposed, with amendments made before it is introduced rather than after. A carefully prepared bill to this effect will, I believe, meet with the entire approval of both branches of Congress and could be made most beneficial to both sailors and masters and owners of ships, and I cordially invite suggestions from everybody interested in this subject, in order that I may have the advantage of the experience of those better posted than I am in these matters and be able to express their views at the next session of Congress.

International Bimetallic Conferences—National Action.

SPEECH

OF

HON. FRANCIS G. NEWLANDS,

OF NEVADA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 6, 1896.

The House having under consideration the bill (H. R. 2904) to maintain and protect the coin redemption fund, and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue—

Mr. NEWLANDS said:

Mr. SPEAKER: The gentleman from Maine [Mr. DINGLEY] in opening the debate stated that the free-coinage bill submitted by the Senate for the bond bill passed by the House was not responsive to the action of this House. I submit that this depends upon the point of view. The purpose of the bill passed by the House was, as I understand it, to provide a fund for gold redemption; and that fund is made necessary by the constant export of gold from this country. The real evil, then, is the export of gold; and I submit that any legislation which would have a tendency to check such export meets fully the requirements intended to be met by the bills which passed this House. And what causes that export of gold? The fact that the balance of trade is and has been for a long time against this country. What measures should we take to check that export? First, in my judgment, the tariff wall should be raised a little higher, so as to diminish the importation of foreign goods; and second, legislation should be adopted which will raise the value of the ounce of silver throughout the world, and thus concurrently raise the value of the natural products of this country—wheat, cotton, wool, and other farm products which we export for the payment of our debts abroad. Thus by the diminution of our imports and the increase of the value of our exports the balance of trade would be turned in our favor, and there would be no need of providing a fund for gold redemption by the constant sale of bonds.

MR. DINGLEY FAVORS BIMETALLISM.

I understood the learned gentleman from Maine to say that he would welcome bimetallism; that he would welcome any system which would maintain in this country and throughout the world the concurrent use of both metals at a ratio established by law. The fact that the gentleman favors bimetallism, favors the free and unlimited use of both metals, indicates that he recognizes the evils which arise from the use of one metal alone; that he is opposed to gold monometallism; that he believes that the business of the world is too large to be transacted with gold alone; that the country's business and the world's business require a concurrent use of both these metals—not only the accumulated stock, but the current product of the mines of the world.

We then agree as to the desirability of bimetallism; we both agree that the amount of gold in the world is too limited, and that there is not more than enough of both metals to transact the monetary business of the world.

The only point of difference between us is as to the method of restoring silver. The gentleman insists that it shall be done only by the concurrent action of the powerful nations of the world. I agree with him as to the desirability of such concurrent action; and if it were, in my judgment, probable, I would favor delaying action by this nation alone. But I insist that our experience ever since 1873—the experience of four international conferences—the action of the powerful creditor nations of the world to-day upon this subject—indicate that the concurrence of those nations is impossible. The only question with me is whether we shall submit to conditions which are at present intolerable in a debtor nation, or whether we shall take the chance of leaping in the dark, as the gentleman from Maine terms it. He calls it a leap from light into darkness; I call it a leap from darkness into light.

PROSPECT OF INTERNATIONAL BIMETALLISM.

Now, gentlemen, what is the prospect of international bimetallism? What is the prospect of the concurrence of the leading commercial nations of the world, without whose assent it is claimed that the restoration of bimetallism is impracticable? What are the leading commercial nations? They are the great creditor nations of the world—England, Germany, and France; the latter occupied almost exclusively with domestic concerns, and cutting but little figure in international matters, England and Germany being the principal creditor nations. Look upon the map of the world, and see how small a space those nations occupy. If that map were spread before us to-day in front of the Speaker's desk you could hardly distinguish those countries in the vast space which is covered by other nations of vast population, of vast possibilities, and almost infinite capacity for the absorption of new money.

The American Republic, suffering from the scarcity of gold and yet boastful in her suffering of her resources and power, with a population nearly two-thirds as great as the population of these three countries, rejects the friendly aid of countries having a population of over 1,000,000,000 people and asserts that without the friendly aid of these three countries, having a population of only 120,000,000 people, the gold famine must continue and that silver must be denied its fruitful and energizing use. It becomes important, therefore, to ascertain what the attitude of these countries is to the question after twenty-three years of agitation and four international conferences. And what do we find? That France is friendly to bimetallism, that Germany, once hostile, is progressing toward friendliness, but that both declare positively that they will not act unless England joins. And what does England say? She declares to-day, as she has uniformly during these many years of agitation, her unalterable purpose of adhering to the gold standard.

ENGLAND'S POSITION.

And what arguments can we use to convince these leading commercial nations that it is to their interest to join us in an international adjustment which will restore the use of silver to both? We say that there is too little gold in the world for business purposes; that the disuse of silver has appreciated the value of gold and depreciated the value of all property which is measured in gold. What does Great Britian reply? She says, "We own the gold of the world, and yet you ask us to resist a movement which is rapidly appreciating the value of that very gold. You delude yourselves

with the idea that you own between four and five hundred millions of gold; but that is a mistake. It belongs to us. We temporarily deposited it in your country. We loaned it to you on call or upon long-time bonds, which is substantially the same, because whenever we want to realize on them at any time we can call them in; we can sell them; we can recall our loans and recover our gold.

"We can do just as we did in 1890, at the time of the Barings failure. We wanted gold then and we took $90,000,000 of your gold, and almost bankrupted you. You afterwards threatened war with us on the Venezuelan question. We took our gold away from you again, demoralized your stock markets, threatened your Treasury with bankruptcy and your banks with insolvency, and paralyzed the arm that was raised to strike us. And yet you ask us to abandon the position of strength which we occupy; and why? Because you say that the appreciation of gold has caused a decline in the value of all the products of your country—wheat, cotton, and wool, and all other natural products which you produce in competition with silver-standard countries. Do we sell these things? No. We buy them; and the less the price we have to pay for them the better for us."

We then point to her manufacturing population, which is now suffering from competition with silver-standard countries, whose labor, always cheap, is now doubly so, measured in gold. We point to the land-owning class, the burdens of which in Great Britain have become absolutely intolerable.

A CLASS-GOVERNED COUNTRY.

What is the answer to our suggestion in that regard? That England always was a class-governed country. For centuries it was governed by the landowners. In the early part of this century the manufacturing class, under the aggressive leadership of Cobden, advanced into power, and raising the cry for cheap food for the operatives, repealed the corn laws, which gave protection to domestic farmers, and so the landowning interest became subservient to the manufacturing interest. And how is it to-day with the manufacturing class? Through her commerce England has swept the seas of the world, carried her manufactured products to all nations, taken their gold and heaped it up in her banks and treasure houses, and then loaned out the gold so accumulated to other countries on bond and mortgage, and to-day the capitalistic class, the money-loaning class, the banking class, is the predominating class in England, and it proposes to sacrifice the manufacturing class just as the manufacturing class did the landowning class in years gone by. Some interests must suffer in pursuing a great national policy, and the people of England will stand, as they have heretofore stood, for the interest of the governing class of that country, a class which subordinates every consideration of domestic and economic policy to the desire of maintaining a constantly increasing control over the products of labor throughout the world by a cunningly devised system of credits based on the gold which England mainly owns, and which makes her the controlling power in peace and war, the partner without risk in all enterprise and production, the absorber of wealth, fastening her tentacles upon the energies, the hope, and the vitality of all peoples bound to her by the golden chains of financial dependence.

But what other arguments can we address to these countries? We say that there is not enough money in the world. The answer is: "We have enough for our purposes." We say that the per capita circulation of England and Germany is insufficient—that it is less than that of the United States. They answer: "That is true; but it is sufficient for our purposes, because we are creditor countries. The man who is not in debt needs no reserves. The man who is in debt and has hundreds of obligations that must always be met on demand must keep in bank some necessary fund to meet the requirement of any strain that may arise. So the creditor nations can reduce their reserves to the lowest limit without danger, and thus reduce their per capita circulation, while the debtor nation must always have a larger reserve and a larger per capita circulation to meet the constant calls which will arise. Besides that, if at any time our reserves fall below what is regarded as a safe limit, and our per capita circulation becomes too small, we have an easy remedy. We do not need to coin money, to coin silver, to replace it. All we have to do is to call upon the debtor nations who owe us to pay up and we then immediately raise our reserve and our per capita circulation to the required amount." Was not that so at the time of the Barings failure? There was a state of panic caused by the withdrawals of gold by Russia; and how did England recoup her reserves? By coining more money? Oh, no. She called upon America for $90,000,000. She looked about the world for the nation that was best able to respond to her demand, fixed upon America, and put her, as I said, upon the verge of bankruptcy and recouped her reserve.

BALFOUR AND SALISBURY.

I ask, then, what appeal can we make to those creditor nations that will swerve them from the line they have steadily pursued? You have observed that there is a large bimetallic sentiment in both these countries. That is true. But it is confined to the land-owning and the producing classes, and they are dominated by the creditor class, even more strongly dominated than in this country. We have had the evidence of it in England herself recently. We all hoped for a restoration to power of the Conservative party. Why? Not because we were in sympathy with the general policy of that party, but because we knew it was led by the land-owning class of England, that Lord Salisbury and Balfour were at the head of that party, and we knew from the utterances of Balfour that he was as thorough and enthusiastic a bimetallist as the most pronounced and radical bimetallist in this country. We hoped when that party was restored to power that, whatever its policy might be with reference to the Irish question, and other questions with reference to which our sympathies were against it, its action upon this momentous question, affecting the political economy of the entire world, would be favorable to the interests of this country and of the world. But what do we find? When that party comes into power, it comes with shackles imposed upon it by the banking interests of England.

FRANCE.

And how is it with France? We go to France and we say to her, "You have always been the friend of silver. You organized the Latin Union. You sustained silver for many years. You used the ratio of 15½ to 1, and by the free coinage of silver maintained it upon a parity with gold. You have to-day one-half of your currency in gold and one-half in silver. Stand with us for the restoration of silver."

What is her answer? Her answer is: "It is true that we sustained silver for a number of years, but it was your action in connection with that of Germany that forced us to suspend its use." What was that? In 1873 the United States of America was neither upon a gold nor a silver basis. That is to say, we had suspended specie payments. There was neither gold nor silver in the country. A resumption of specie payments was desirable. In 1875, I think it was, we passed an act declaring that we would resume specie payments. What did specie payment mean at that time? It meant payment in silver and in gold. What was the interest of this country? To maintain both metals so that specie payments could be more easily made.

What was the interest of this country as a producing country? It was the interest of a country that produced more than one-half of the silver of the world—from every aspect, financial and industrial—to sustain silver. And what was our action? When our silver mines were opening up abundantly, when Providence pointed out her riches for our benefit, we declared by law that these mines should be practically closed so far as any benefit that we should receive was concerned. We not only deprived silver of its legal-tender quality, but we also declared by law that not an ounce of silver should be brought to our mints, and we gave notice to the world, "We regard this silver as worthless. We propose to throw it upon you for absorption."

Is it any wonder that the civilized world, as you term it, in Europe was alarmed? Just about that time, Germany having received a large subsidy from France, was able to go upon the gold basis as no other country could go. This large subsidy enabled her to make the turn without danger. So Germany's silver was thrown upon France, and the country to which we now appeal was made the victim of our action. For recollect that the United States of America was the first country to act in the demonetization of silver. My friend from Maine [Mr. DINGLEY] is mistaken when he says that the action of this country followed that of other powers. The only action that Germany took prior to February, 1873, was the restoration of gold, not the demonetization of silver. She was upon a bimetallic basis when we took our action, and she did not go to the gold standard absolutely—though perhaps her action was threatened—until three months later. So this country, the greatest debtor nation, the greatest silver-producing nation in the world, more interested in this subject than any other, led the crusade against silver, and now begs France, the victim of her action, to help her restore it.

What else does France say in answer to our statement that the world has not sufficient money? She says, "That may be so with reference to the rest of the world, but we have enough." The United States has a per capita circulation of $25, and France has a per capita circulation of about $40. France, having no interest in the production of silver, adhered to it loyally prior to and for many years subsequent to our demonetization act of 1873, absorbing it all at a higher price than this country, namely, 15½ to 1. She has to-day a per capita circulation of silver of $12 against our $8. Can she not with great propriety say that it would be more becoming in us to raise our per capita circulation at least to hers by increasing the use of silver before we ask her to join us in increasing the volume of the money of the world?

The mint statistics show that of the $4,000,000,000 of gold coin in the world, one-half is to-day actually located in these three countries, England, Germany, and France, and we all know that the

other half, though scattered around among the rest of the world, is really tied by bond and mortgage to these three countries and can be called back at any time. Do they need more money? No. They have a plethora of money and loan the surplus to other countries. Do they have undeveloped areas to populate and build up? No.

DIFFERENCE IN INTERESTS.

Now, these are the three creditor nations to which the gentleman proposes to appeal, to which we have appealed for twenty years, without results. Has the gentleman any hope? He discloses none—and as he proposes no remedy except with the concurrence of the leading commercial nations, what hope is there for relief from existing intolerable conditions? Does the gentleman recognize the difference between these countries and our own? The nations of Europe, the gold-owning nations of the world, are the gold-using nations of the world. Their communities are all built up, their populations are fixed, there is little need of development in any of these countries, and hence the accumulations of their citizens are invested in the development of other countries, in interest-bearing bonds and securities. As the owners of money, it is their interest to make money more valuable, and the only way they can make it more valuable is by limiting its quantity. The easiest way of limiting its quantity is to destroy the use of one of the money metals and to throw the burden of the world's exchanges upon the other.

Now, then, the creditor classes of these nations were and are the owners of gold, and they succeeded in forming the gold trust when three of the greatest nations of the world—the United States, Germany, and France—had just passed through exhausting wars and had contracted large war debts.

THE GOLD TRUST.

We all recognize that this is the age of combines, corners, and trusts. The effort of the wealth seekers of the world has been to accumulate some product, either natural or manufactured, which mankind universally needs or desires, and then, by limiting the production, to raise the price and clear a profit. Such have been the corners, trusts, and combines relating to sugar, iron, steel, oil, and wheat. All such combines have been successful where, the demand remaining the same, the production was limited. All have been unsuccessful where nature or man's energy has broken the corner by increasing production.

The evidence is indisputable that prior to 1873 the greatest combine trust and corner known to history was organized in Europe. Its purpose was not only to limit the production of metallic money in the future but destroy the efficiency of half the money in the world by taking from silver its legal-tender quality and thus increase the value of the other half in the shape of gold, of which, represented either by cash or by interest-bearing gold obligations, the members of the combine were the owners. The world was to be deprived not only of its annual crop of money from the silver mines, but one-half of its store collected through the ages was to be destroyed.

This combine has been successful. It has moved on year after year, and induced nation after nation to abandon the use of silver. We have been for years suffering under its oppression, and yet we say that the only way to obtain relief from it is to persuade those who are interested in the combine to relax their grasp, to enter into a national conference which will restore silver. How can we expect this, when there is no community of interest between us? The action of France and Germany is dependent upon the action of England; and how does her condition contrast with our own? We think we are a very wealthy nation, and we are—in everything but money. England's wealth consists principally in money; England is a creditor nation; we are a debtor nation. England has money scattered all over the world, loaned out on interest-bearing bonds; we have no money whatever loaned to any other country. We not only utilize all the money which we own, but all we can borrow from other countries. Why should these three countries join us? Their positions are entirely different; they are creditor nations, and the United States is a debtor nation. They are interested in having money dear and products cheap. We rely upon good prices for our products to pay our debts. They have a call on us for all the money we have in our country, and have gained an advantage by our legislation which has largely enhanced the value of their gold.

Was it ever known that a debtor, by a mere conference with his creditor, induced him to forego his advantage? The only way a debtor can reduce his creditor to terms is by going into bankruptcy. Are we prepared to go into bankruptcy and to repudiate our obligations in order to bring about a successful conference with our creditors?

What reason can we give to England for urging her to join us in restoring silver—that it will take from gold its enhanced value? Her answer will be that of her royal commission:

It must be remembered that this country is largely a country of debts payable in gold, and any change which involves a rise in the price of commodities generally—that is to say, a diminution of the purchasing power of gold—would be to her disadvantage.

And yet they tell us that the best way of bringing these three countries to terms is for us to remain upon a gold basis. President Harrison in his annual message declared that he knew no more effectual way of promoting a more favorable sentiment to silver in Europe than by accumulating gold here; that a scarcity of gold in the European reserves would be the most persuasive argument for the use of silver there.

In other words, we are to distress Europe by borrowing more gold of her and borrowing it substantially on call, responsive to any demand that she may make in an emergency. One is at a loss to understand how a debtor can get a creditor under his control by borrowing more money of him. We had some experience of that when the Baring Bros. failed, and during the panic of 1893, and during the Venezuelan difficulty. We begin to realize that so long as we are upon a gold basis we suffer from any financial storm that occurs in the world, and that we can not take any independent action whatever in the way of maintaining the dignity of the country or its power without England's calling for gold and driving us on the shore of insolvency.

INTERNATIONAL UNION WITH DEBTOR NATIONS.

The folly of our position with reference to an international conference has been that we have thought international action unavailing unless the three great creditor nations of the world would consent, and yet their power in raising the value of silver is small as compared with that of the debtor and producing nations. What is our problem? It is to increase the use, and in that way increase the value of silver, so as to restore the old parity. We find that the dislocation between silver and gold has given an advantage to countries that are not upon a gold basis that they are able to produce more cheaply, that their farm products are driving our products out of foreign markets, and that their manufactured products are likely to seriously and disastrously affect the manufacturers of gold-standard nations. We have, therefore, a direct interest in increasing the value of silver. We have the interest of a debtor nation. We have the interest of a silver-producing nation. We have the interest of a nation that relies upon its exported farm products for the payment of its debts. We have a nation whose farm products have been driven down in gold price as silver has fallen, and whose manufactured products are menaced in our home markets by the products of the Orient, whose labor, always phenomenally cheap, is now twice as cheap in terms of gold. We wish to enlarge the use of silver in order to increase its value; and by the use of silver I mean the coinage of the current product of the mines, for the accumulated stock is in actual use in the various countries of the world as money, and will remain so.

Now, to what countries ought we to go to increase the use of silver? To England, France, and Germany, which have a plethora of metallic money—so much so that they all loan their surplus to other countries—or such countries as Russia, Austria, Italy, Spain, Portugal, and the South American countries, all of which have a deficiency of metallic money, and all of which are compelled to keep out large amounts of uncovered paper money because of the scarcity of metallic money? If we wish to increase the use of wheat, would we go to the countries that had their granaries full, or to countries whose granaries were empty? Suppose England, France, and Germany should all open their mints to the free coinage of silver, how long would it remain in those countries? They have an abundance of metallic money. Would not this silver go speedily to other countries? Why not go directly to the countries to which it would ultimately go either by way of loans or in purchases of products and urge them to admit it to coinage?

UNCOVERED PAPER.

The financial history of the world proves that there never has been enough of either gold or silver to satisfy its requirements for money, and so we find, according to our Mint Director's report, that the debtor countries of the world have about two thousand five hundred million dollars of uncovered paper money—paper not backed by silver or gold. Russia has $540,000,000; Austria $204,000,000; Italy $191,000,000. The South American States have $550,000,000, and America has $450,000,000 of uncovered paper money, consisting of greenbacks and national-bank notes. Do not the countries which have this large amount of uncovered paper money outstanding furnish the best market for silver, and would not an international conference with them, resulting in the coinage of silver and the gradual retirement of the uncovered paper money, so increase the use of silver in the world as to increase its value and restore the old equilibrium, and would not we then have throughout the world the soundest kind of money, namely, gold and silver, in the place of the depreciated paper which at present exists? For recollect that not a single debtor nation in the world except the United States has been able to keep its paper at a parity with gold.

The paper of Russia, Austria, Italy, Spain, and South America is all depreciated paper. Russia has $450,000,000 of gold, and Austria $140,000,000. Both are desirous of going upon a gold

basis, and yet neither is able to do so. They are obliged to keep their gold locked up in their war chests, for they know if they should attempt specie resumption their gold would slip out of their boundaries like water out of a sieve. The United States is the only debtor nation that has been able to maintain its paper at a parity with gold, but how does it do it? Simply by grinding out gold bonds to the extent of $250,000,000, and these really represent the premium that has been paid for gold redemption since 1893. Is not the argument conclusive that no producing and debtor nation can possibly keep out uncovered paper money and maintain it at a parity with gold without the issue of bonds and thus constantly increasing its national debt? And would not this very argument, if presented to the debtor nations, induce them to see that it would be to their advantage to increase the metallic base throughout the world, to increase the use of silver, and to substitute silver coin for the depreciated paper which they now have, or for the Government paper which this country has, and which it maintains at a par with gold only by the issuance of gold bonds?

Had this kind of an international conference been called—a conference of the debtor and producing nations of the world as against the creditor nations of the world—there might have been some international results favorable to silver, but the fact is that there never has been an Executive that was favorable even to an international adjustment of this matter. International conference has simply been the club with which to beat down national adjustment of the silver question.

NATIONAL ACTION.

But, gentlemen, are we not exaggerating the difficulties of the task before us? Remember that in order to restore the price of silver throughout the world it is only necessary to absorb the current production of the mines of the world at the price of $1.29 per ounce as against the present price of 67 cents per ounce. The accumulated stock of silver is in actual use as coined money. There is no bullion collected anywhere in the world except here, where it is constructively coined, for silver certificates and Treasury notes have been issued against it and are in circulation as coin.

What, then, is the current production of the mines of the world? It is stated by our Mint Director to be about 150,000,000 ounces, of the actual value of about $100,000,000 and of a coinage value of about $200,000,000. All this product is at present absorbed at the existing price of 67 cents per ounce.

To what extent can this country use silver? At present it uses none of the current product of the mines, but throws its entire production of 50,000,000 ounces, being one-third of the total production, upon the markets of the world. It is clear that we can not get along without maintaining the present per capita of circulation, namely, about $25 per head, counting both the paper and metallic money. Our population is increasing at the rate of 2,000,000 per annum, and we therefore require $50,000,000 per annum of new money to maintain our present per capita. Of course, our banks say they will supply this if we will give them the power, but it will not be given. If the Government can not keep its greenbacks at par with gold without issuing bonds, how can the banks keep their paper money at par without similar loss? For if the greenbacks are retired and the balance of trade remains against us, as it certainly will with the present price of farm products, governed as this price is by the low price of silver, the strain of gold payments would fall upon the banks, and they would be subjected to a double strain—that of their note holders and that of their depositors. They could not possibly maintain gold redemption, and paper money would not be issued or if issued would not be redeemed.

We certainly can not get enough gold, for England, France, and Germany require one-half of the gold of the world for local use, and the rest of the world can only get the other half, and our proportional part is small and constantly diminishing. We are therefore compelled to use silver.

But $25 per capita is not sufficient. We ought to have at least $30 per capita, for we need more money than any other country in the world, as we have a great country to build up and enormous resources to develop. If we should conclude to gradually increase our per capita to $30, which is $10 less than that of France, we would have to coin $70,000,000 per annum for five years.

But the uncovered paper money of this country should also be retired. It consists of greenbacks and national-bank notes, and aggregates, after deducting the $100,000,000 of gold reserve in the Treasury, about $450,000,000. It will take $90,000,000 per annum for five years to take the place of these notes as they are gradually retired. We would thus have the following annual demand for five years at least:

To maintain the present per capita of $25	$50,000,000
To increase the per capita to $30	70,000,000
To take the place of uncovered paper money	90,000,000
Total	210,000,000

Will any man contend that with a present silver production of $200,000,000 coinage value which is entirely absorbed in current uses an increased demand for $210,000,000 of new money will not restore the old value of $1.29 per ounce, and with it restore the value of our farm products and other property which, measured in gold, have depreciated nearly 50 per cent in the last decade? I insist that a demand for even one-third of this amount would restore the old value. Yet we can in this country alone, without inflation of our currency, create a demand equal to the entire present current product of the mines of the world, which product is now entirely absorbed by uses other than our own.

INCREASED PRODUCTION.

But the timid say production will increase as the price advances. No man can, of course, predict what the production will amount to. If the world, struggling through the ages in its search for silver, has been able to accumulate a cube of 66 feet, filling a space only half the size of this Hall, it is safe to say that though search be stimulated effort will not always be attended by reward. The increased output of the mines has always resulted in the advance of civilization and prosperity with the sole exception of the last twenty years, when its beneficent effects have been blocked by unwise legislation.

It should be remembered also that should production unduly increase it would be entirely practical to restrain production either by laws imposing a tax upon it, which would increase its labor cost, or by withdrawing mineral lands from private entry. The existing silver mines in hands of private owners will soon be exhausted, as the deserted mining camps once maintaining large populations testify everywhere in the West. Two-thirds of the silver of the world is produced by the United States and Mexico. These two countries own almost all the mines of the future, and should production be unrestrained, as some, without any good reason, fear, they could unite in a policy which would restore Government monopoly in mines with a view to limiting production. Thus the stores of the future would not be unduly drawn upon for the present, and a calm and equal production of silver commensurate with its use could be established and secured.

But, say our opponents, the existing silver coin of the world would drift to this country. The fear is absurd and I will not waste time in arguing about it. I can only say that if it has any lodgment in the legislative mind it is easy to provide against it by legislation admitting to our mints only the current product of the mines. A system of proof directly from the mine to the mint could be devised which would prevent fraud and which would compel foreign countries to retain the silver they now have in actual use as coin instead of sending it to this country at a loss, as the promulgators of this absurd fear proclaim.

But my time is too limited to permit a thorough consideration of this subject. I can only call the attention of the House to this fact, that whilst the gentlemen from Maine admits the evils of gold monometallism, he claims that bimetallism is impossible without the concurrence of the leading commercial powers. He thus closes the door to hope, for whilst I can conceive of a union of the debtof and producing nations of the world, I can conceive of no union into which the great nations owning all the gold of the world and interested in its appreciation will enter save upon terms that will be practically destructive of bimetallism as we understand it. During all these years had we an Executive who was an earnest and true friend of bimetallism an international adjustment would have been secured through a union of the debtor and producing nations of the world. But as it is, we are asked to suffer until the creditor nations conclude to be generous and to yield an advantage never before secured in the history of the world.

IMMEDIATE ACTION.

Believing, therefore, that our difficulties are entirely due to the appreciation of gold and that such appreciation can only be stopped by restoring its only competitor—silver; that this country is great and powerful enough to create such a use for silver as to restore its old value, and that with the restoration in value of every ounce of silver the value of every unit of property, whether it be a bushel of wheat or a pound of cotton or an acre of farm land, will be restored, I am for the immediate action of this country alone without waiting for the action of any other country. I believe that the best way of preventing the export of gold is to obtain a favorable balance of trade, and I know of only one way of doing that, and that is to restore the value of our exportable products by raising the gold price of silver and thus diminish the efficiency of the silver-standard countries which export in competition with us. Bond bills and bankruptcy bills are recognitions of the serious condition of our affairs. A silver bill presents the only radical cure for the evils of gold exports and the gold famine.

Tariff Reform and Free Coinage.

SPEECH

OF

HON. JOSEPH M. KENDALL,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 7, 1896,

On the bill (H. R. 2904) to maintain and protect the coin redemption fund and to authorize the issue of certificates of indebtedness to meet temporary deficiencies of revenue.

Mr. KENDALL said:

Mr. SPEAKER: The fact that our bonded indebtedness has increased recently, in a period of profound peace, indicates to my mind that there is something radically wrong with our systems of finance and taxation, and that the coin redemption fund can be best protected by beginning at the foundation. I purpose addressing myself to these two issues, not with any hope of converting my colleagues here, not with any hope of throwing new light upon these problems, but rather to emphasize my position, which, it seems to me, is the position of the dominant element of the district which sent me here, and who feel a deep solicitude in the result of our legislative labors. Although an ardent member of the political party to which I belong, I am willing to meet those who differ with me on conservative ground, and if necessary to place country before party in the solution of these problems.

The tariff, as a much mooted question, consists of three most important branches: First, a tariff that has for its purpose the protection of monopolies; second, a tariff that has for its principal object the accumulation of the largest amount of moneys for sustaining the Government, economically administered, at the smallest expense to the whole bulk of citizenship, and third, free trade, which would necessitate our obtaining the public revenues by direct taxation. The first-mentioned division means oppression; the second common sense, and the third is impracticable. The tariff has unceasingly been one of the momentous points of difference with which our lawmakers have been compelled to deal, and, excluding eras of extraordinary turmoil, it has at all times engaged the larger portion of attention. Upon it has been, as a concern of consequence, centered the most brilliant intellects of this century. However, limited time as well as information will preclude my tracing minutely the progress made and the policy pursued by other commonwealths and kingdoms in the periods that are past.

I shall be contented with confining myself in a desultory and superficial way to our own country. Here it has been a momentous issue since our earliest period of republican existence. It was the father of the Revolution and the mother that nursed the present Republican party in its infancy. An excise upon tea which they considered exorbitant marked the commencement of that war in the configuration of the Boston tea party. It was the central, pinnacle point in controversy with which our statesmen were compelled to grapple during that long period of our country's history previous to the paramount ascendency exercised upon the public understanding by the vexed question of human servitude that for a time dwarfed all others and in comparison with which all others were forgotten. Calhoun and Webster at distinct times were arrayed upon antagonistic sides, seemingly shifting as if by contract to opposite positions. Webster's oration in opposition to protection is universally pronounced a masterpiece of statesmanly declamation upon this important topic of economic legislation. Henry Clay countenanced what was called the American system, but he sagaciously, sincerely, and conscientiously said that the consideration that impelled him to appeal for the manufacturers was because they were at that time in their infancy. Were he with us to-day we can readily imagine his assaulting the foul fabric with all-prevailing cogency and completely pulling it to pieces as an eagle would a helpless, gorged snake.

Senator SHERMAN apprised the manufacturers of Chicago as long ago as 1880 in a public address that they competed with the cotton market in Manchester, with the iron in Birmingham, and that they sold cutlery in Sheffield cheaper than they could sell it who manufactured a similar article. And yet the hungry protectionists are continually complaining and demanding more. In the name of common sense and common fairness, just meditate on this fact for one moment—that our manufacturers could make cotton goods even then, sixteen years ago, ship them to Manchester, that celebrated city, constituting as it does the center of that far-famed English cotton region, and sell against them in their very teeth; that we could manufacture plows, hoes, reapers, and all the implements of tillage, take them across the broad Atlantic and sell in opposition to Birmingham, and our cutlery to Sheffield and undersell at home those who are the most extensive cutlery makers in the world. Despite all this we are told that the American people are in favor of still higher protection, and that the present Congress will be asked to give it. In the name of this bright day what are we to expect next? The English language is inadequate to characterize the absurd injustice of this demand, and I will not undertake to do so. Ineffaceably was victory imprinted upon the copious folds of our unmarred banner when our political antagonists chose the cause of the manufacturing monopolist and championed that crowning atrocity of party policy which has nearly eliminated our starred ensign from the oceans and seas, and which has, by the vile exploits of partisan legerdemain, poured the residue wealth of the producing class of this country into the pockets of a few pride-swollen protection monopolies.

The interest of the farmer and the manufacturer are inimical in nature and character. The Democratic party, discerning the obvious fact that the farmers of this country constitute an overwhelming majority of her citizens, and consequently that they could combine and not only take away from the manufacturing interests the advantages they now enjoy, but could demand and obtain protection for themselves, and in so doing win tribute instead of rendering it, as they have been doing—comprehending all this, my party desists from simulating the demagogue and asseverates its intention of shielding the agricultural, manufacturing, and mining avocations in, as near as is feasible, an even-handed, conscientious proportion, assessing the heaviest imposts upon luxuries and those commodities which will, without consideration as to class, yield our country's coffers the largest aggregate revenue, believing, as we do, that if the Republic would be equitable to individuals she has but to be sincere with herself. The Republican party's conception of protection, as disclosed by their sickening, saddening legislation in that direction, tends to turn aside toil from its essential and interested channels and promotes interminable dissension between those who covet it upon the one hand and those who refuse to render it upon the other, bearing, as it does, behind its perfidious mask the false-hearted specter of individual injustice.

There is not a single product cultivated by our farmers—and yet we are all citizens of the great Republic—that ever had conferred upon it the overruling vantage ground of ample protection. The vindicators of this balky system bring forward the argument that agriculture is overstrong in this country, and that consequently these other callings ought to be in this way encouraged. In refutation to that chain of reasoning I will simply remark that if a strict revenue duty after this lengthened period is not adequate to develop our manufacturing industries to the level of that preponderating position which farming has always occupied in America until recently and in spite of the discriminating laws against it in comparison with the world, then it is my candid judgment that the wealthy monopolist had best get rid of his immense plants, his majestic mansions, his elegant and superb attendant finery, and with the proceeds purchase a small tract of land and go to farming. Let him try it a while. But, seriously, it is despotically tyrannical, it is inconsistent with the teachings of political economy, and contrary to the foundation principles that underlie our system of free government that the impoverished farmer, either directly or indirectly, should divide his meager earnings with the already overopulent protected manufacturer. The controversy squarely presented to the people is, Whether the farmers of this country must continue forever serfs? Must this mothlike meanness endure that has continued so long? Will this path of iniquity never end? If the farmer would act in accordance with the manner in which he himself has at all times been treated by the lawmakers under corporate control, he would not only take the present protection off to an exact revenue basis, but in many instances he would remove it all and compel them to disgorge, placing it, if possible, upon agricultural productions alone, and in that way force these gentlemen to pay tribute to him for a hundred years.

A revenue tariff of the exact aggregate that will not especially invite and at the same time will not turn aside foreign commodities is all the protection any conscientiously disposed individual ought to countenance or crave, and all that any citizen of common sense and a respectable self-interest ought to concede or suffer. The Democratic organization never did nor never will believe in levying an assessment upon the whole bulk of citizenship for the purpose of bestowing a bounty upon a few bloated monopolies. There is not a patriotic American citizen who possesses an affection for his country's colors and exalts in her touching triumphs but what is willing to pay revenue to support this Government, but there should not be one who is willing to pet and pamper a privileged class who are abler to protect him than he is to protect them. If we have a law protecting the monopolist for the benefit of the workingman, as many argue, we ought at the same time give legislative sanction to a statute compelling him to directly divide the emolument derived with the man who toils the whole day long and for whose sake they feign to desire so much done. If the munificent magnanimity of any class of my fellow-countrymen conferred a bounty upon the business in which I was employed for my own particular profit, I would want it presented to myself, and not to another for me. Some people never grow weary insisting

that there are certain Democrats who vindicate protection. The position of any true Democrat who petitions for protection ought to be, and I presume nearly always is, founded upon the postulate that while others are protected he ought to be also, and the attitude of Democrats with reference to internal improvements and Federal aid to the cause of education by the General Government is based upon the same chain of reasoning.

If this country could realize the accurate construction of the conception of a tariff for revenue with incidental protection the national obligations could be canceled in one-fourth the time without pauperizing one interest while pampering another. When from the wisdom and philosophy of unfathomable events, and when from the honest, ennobling impulses of our leaders and the mistaken motives of our adversaries the tariff question became paramount in importance to all others, the gray-haired fathers who had observed and were conversant with the history of past contests upon important issues that had shaped the political revolutions that had gone before comprehended that this would be our deliverer—that it was the cord that insured an unquestionable, though in all probability remote success. The stars have already began singing upon our streamers for the next national combat, and the glory of tariff reform and the free coinage of silver is blazoning on the sky. From their distant ramparts you will hear the tread of our countless thousands and tremble, for defeat, dejection, and great darkness will encompass your standard and you will flout the air with a white banner. "Unconditional surrender," "tariff reform," and "free coinage" of gold and silver are our demands, and to these they will come when we make the grand, conclusive charge. Let every volunteer polish his helmet, armor, sword, and shield, symbols, we might say, of zeal, assiduity, heroism, and honor, that when the din of party strife has come and gone next November a gallant array of grateful, proud, and happy hearts can cluster around the new-won prize and with calm transport have our chosen President, who believes in these great principles of tariff reform and free coinage, as did Thomas Jefferson and Andrew Jackson in the brave days of old, with new-felt inspiration to America, the waters, and the world, "a revenue tariff" "and the equality of both metals" forever.

The currency question is confessedly the foremost political issue of to-day. As a member of the Banking and Currency Committee of the Fifty-second Congress when the Cate bill was pending I took a firm stand against the repeal of the Sherman Act. We were told that its repeal would be followed by an era of great prosperity. After a long struggle it was repealed, but the promised prosperity did not come. I concurred in the opinion of a majority of Democratic Senators then that the absence of a substitute was a great mistake—I will not say an additional wrong. When it was finally accomplished, not in the Fifty-second Congress but subsequently, I feared that it was a financial abortion, performed by the Administration's doctor, that might cost the Democratic party its life. As a matter of course I do not expect the successor of that Congress, many of the members of which voted for the repeal, to concur with me in this opinion. In the report from the Banking and Currency Committee of the Fifty-second Congress will be found the following:

CIRCULATION OF NATIONAL BANKS—VIEWS OF MR. KENDALL.

Mr. KENDALL, from the Committee on Banking and Currency, submitted the following views:

The fact has been conclusively demonstrated from official figures that the price of wheat and cotton, which constitute our most important exports, have followed the fluctuating price of silver as a logical result, except under abnormal conditions brought about by speculation or short crops, ever since silver was demonetized in 1873.

Without stopping to present additional facts or to discuss other far-reaching propositions of doubtful wisdom and expediency involved in the passage of this bill, the undersigned enters his respectful protest against the repeal of what is commonly known as the purchasing clause of the Sherman Act of July 14, 1890, which authorizes the purchase by the Secretary of the Treasury of 54,000,000 ounces of silver bullion per annum, unaccompanied by an adequate substitute enactment by which silver is, at the same time, rehabilitated to the position of absolute, constitutional parity with gold, at the present ratio, given to it by the fathers and holden for the eighty-one years prior to its clandestine degradation nearly twenty years ago.

JOSEPH M. KENDALL.

Sir, nothing has happened since to change my opinion expressed at that time. It was a blow at one-half of the metallic currency of this country from which it will not soon recover. In that same Congress I submitted some remarks upon this subject, in which I said:

It matters not what political party has the President and Congress, so long as a high protective tariff and a contraction of the currency obtain (both saddled upon the American people by the Republican party) just so long will the poor people of this country continue to complain and suffer.

Subsequent to this speech the following editorial appeared in the Morgan County Messenger, published at West Liberty, Ky., the Gibraltar of Democracy in eastern Kentucky. I will ask the Clerk to read.

The Clerk read as follows:

KENDALL OF KENTUCKY.

Under the above headline the New York Tribune, in about a column, makes an assault on our Congressman's recent speech on the silver question, a portion of which appeared in the Messenger last week. Judging by the extended comment by as notable a journal as the Tribune, the young man has "struck the bull's-eye and rung the bell." The Tribune starts out by trying to consider it "very funny" that Robert Burns or anybody else should feel humiliated by seeing his home taken from him by some foreign landlord. This is not strange when we consider the fact that the men who read and patronize the Tribune have already, as indicated by Mr. KENDALL, taken possession of Kansas, and are to-day covering with the shadow of their mortgages the homes of Kentucky. It will be very funny, indeed, when they own Kentucky as they already possess Kansas, which Mr. KENDALL claims is only a matter of time under our present financial system. This great paper seems to think it also "very funny" that Mr. KENDALL should imagine that the stars in their courses are fighting the battles of the poor, plain people.

The Tribune seems to be unable to appreciate the fact that that class of citizens called "the poor, plain people" by Mr. KENDALL are entitled to any consideration, and the natural inference is that they should be thankful it is no worse with them; and finally it strikes this great editor of the Tribune, the Hon. Whitelaw Reid, the nominee of the Republican party for the Vice-Presidency of the United States, as being very funny that a considerable number of Kentuckians ride on horseback, and compares such persons to the vagrants who sit around on the park benches in New York. This great paper, as a matter of course, refers to Kentucky's course in the civil war of some thirty-odd years ago, and ventures the hope that the people who are being robbed will not call the same kind of a halt as they did then. Continuing further, the Tribune quotes, but does not dispute, Mr. KENDALL's assertion that the Sherman Act of 1873 "was the direst calamity ever inflicted upon the American people by Congress." Mr. KENDALL is right. There is going to be some tall "camping in the saddle" all over this great country, and Kentucky will be in the future, as she has been in the past, the vanguard of the Democratic column. As KENDALL says, the protected robber, the gold bug, the landed aristocrats, and the Tribune will all have to go together—the horns with the hide.

Mr. KENDALL. Sir, in the Presidential election that followed the prophecy of this rural journalist was literally fulfilled. But the legitimate fruits of that great victory won by the people has been lost.

Sir, one of the best solutions of this currency problem to which my attention has been called seems to me to be that offered by Senator JONES of Arkansas, on which I am advised a report will be submitted by him at an early day. I have not the bill before me, but I understand that the bill authorizes and directs the Secretary of the Treasury to receive at any United States mint from any citizen silver bullion of standard fineness, and coin the same into silver dollars of 412½ grains each; the seigniorage on the bullion to belong to the Government and to be the difference between the coinage value and the market price of the bullion on the day the deposit is made, all expenditures for coinage to be paid out of the seigniorage, and the depositors of the bullion to receive standard silver dollars equal in amount to the price of the bullion from the Secretary of the Treasury, certificates to be issued on these coins in the manner now provided by law whenever the coins shall be received into the Treasury.

This is the bill in substance, and while I hesitate to commit myself to its provisions irrevocably, it seems to me to offer a just solution on which all shades of difference can meet and unite. It disposes of the "fifty-cent-dollar" argument, which is about all there is in the gold-standard stock in trade. Under its provisions we would pay the mine owner what his silver was actually worth, and no more. No one could object to this. The United States Government would receive the exact amount of the enhanced value its stamp gave the coin. This seems to me to be reasonable and fair. The other provisions are not material. To my mind there is only one way to maintain the parity between gold and silver, and that is to make them equal under the law. I am as strongly in favor of gold as I am of silver, but gold needs no advocate on this floor. She is able to employ her own advocates. The whole case in a nutshell appears to be this: The East wants gold, the West and South want gold and silver, and candidates for the Presidency whichever will gain the coveted prize. In my judgment, no man who is in favor of the gold standard—who justifies the demonetization act of 1873—will again be elected President.

It would be a calamity indeed. I never worry about this battle of the standards. I know the citizens of this country will in the end even up legislation. I do not believe in any financial scheme which confers upon private individuals the power to issue money. I do not believe it is either wise or just for the Government to become surety for the promissory notes of a bank or any other corporation. It is impossible to make gold, silver, and paper of equal intrinsic value by law, but the stamp of the Government has never failed to make them of equal exchangeable value. It is the volume of money, and not what it is made of, that establishes the price of a commodity. It goes without saying that in many sections of this country there is not enough money in circulation to give the people a decent burial. In all such places the restoration of silver is a vital political issue and at the same time a fundamental Democratic truth. Kentucky's position on this question will be found in the fourth resolution of the platform of the convention which nominated John Young Brown for governor of Kentucky, and he was elected by more than 25,000 majority:

Fourth. Recognizing the fact that the United States is the greatest silver-producing country in the world, and that both gold and silver were equally the money of the Constitution from the beginning of the Republic until the hostile and fraudulent legislation of the Republican party against silver, which unduly contracted the circulating medium of the country, and feeling that the great interests of the people demand more money for use in the channels of trade and commerce, we tender our gratitude to the Democrats in the

last Congress for their nearly unanimous votes in both Houses in favor of the free coinage of silver, and demand its restoration to the position of equality before the law given to it by our fathers.

Such is the voice of Kentucky, spoken in the biggest convention perhaps that ever came together within her borders. Our State has written more platforms for the party of the country than any other. Her voice is the voice of the old simon-pure, unadulterated Democracy, and the voice of true Democracy is the voice of God always and everywhere. In this good year of grace her voice will be potent, and I believe she will stand with Illinois and Georgia rather than with Massachusetts and the national banking associations. Although I deprecate any sectional view of this question, and am more than willing to meet on middle ground these advocates of a gold standard, I am in favor of settling all our factional controversies inside the party lines. The balance of the country must regulate the bondholders and the mine owners, and for one I am willing to unite in a conservative but determined effort to do it. The undertaking to keep this coin redemption fund at $100,000,000 reminds me of those persons in heathen mythology who, we are told, from one cause or another, were sentenced to the continued toil of filling with nectar vessels which had no bottom. We simply demand as a remedy for this hopeless task the gold and silver money invented by Jefferson, when he said:

The mint should stand on both metals—

and of Daniel Webster, who said:

I am certainly of opinion that gold and silver, at rates fixed by Congress, constitute the legal standard of value in this country, and that neither Congress nor any State has authority to establish any other standard or to displace this standard.

This day could be consumed in citing authorities like the above, than whom there are no higher. It fatigues me to hear so much talk about the position of certain prominent members of my party on this question. We believe in majority rule. In his letter of acceptance of the Presidential nomination Mr. Cleveland said that—

The wants of our people arising from the deficiency or imperfect distribution of money circulation ought to be fully and honestly recognized and efficiently remedied.

What has he done in an official capacity to bring about this remedy? In this I heartily concur, and whoever holds different, in my judgment, in the next Presidential election and pledges himself to carry it out may as well hang his harp on the willow.

The country is already crowded with able statesmen whose people have revoked their commissions, and I am afraid that the demand for Federal appointments for these gentlemen will surpass the supply. There is no denying the fact of history that since a very early period of its existence until quite recently the Democratic party has consistently and unbrokenly upheld the principle of free bimetallic coinage, or, in other words, the equality under the law of gold and silver. Before the bimetallic colors, which are the true colors of Democracy, are lost, a disinherited knight will ride from the ranks of the common people and rescue it. In their despair they are looking now as they never looked before for a savior who will cast the money changers out of the public temple and restore the principles which Jefferson taught and Jackson practiced. By sad experience, by the death of many prosperous industries, and the impoverishment of the great bulk of citizenship this country has learned that the Republican party is not the proper doctor to cure our financial troubles. Every thinking, well-read man engaged in business outside the cities west of this capital, knows that the volume of our money ought to be and must be expanded to double the present actual circulation per capita. Reports to the contrary notwithstanding, I believe the masses of the East are in unison with the West and South on this subject of bimetallism.

When you leave the avaricious and polluting shadow of the money centers and their agents, those people are not, I am credibly informed, in favor of a gold standard singly. That sentiment is confined to the bankers, bondholders, and mortgagees of the money centers who are frightened, as well they may be, at the oncoming spokesmen of the middle class clamoring for honest money and more of it. I believe New York State can be carried on a bimetallic platform. Look at Indiana. In that fair State under the leadership of Senator VOORHEES on this issue and this issue almost alone, and always with an increasing majority in her legislatures, have the sovereign people of that State registered their decree in favor of silver equality. Personally, I am neither a repudiator nor an inflationist, but I have always been in favor of making gold and silver dollars so long as we have an ounce of the metal and the molds do not get too hot. It has always been the lack of silver that afflicted my people, and a similar condition elsewhere seems to have almost become an epidemic. It has finally in a few instances reached members of Congress. Recently I have not given that study and reflection to this subject which I would have liked. I have certain theories, as much, perhaps, the result of enthusiasm and observation of conditions as of thought, but they have never reached the dignity of established conviction except that I am firmly persuaded that silver is the money of the people, rich and poor alike; that it is the money of the Constitution and ought to have a free and even fight with gold at the mints, and I am as strongly in favor of the one metal as I am of the other.

Trimmers after Presidential nominations seem to me to be the only gentlemen who are afraid to take the bovine of Wall street by the horns. But these gentlemen might as well understand or remember that the moneyed class does not furnish the President. He hails from another quarter. He must wear the spur and belt of an entirely different order. Upon this question the majority of the American voters have made up their minds and, in my judgment, it is useless to trifle with them any longer. Hereafter the candidate who opposes an extension of the currency by championing less money will secure less votes. No true, patriotic statesman can oppose or evade the issue. I am not one of those gentlemen who hold that "16 to 1" is a God-given ratio. I am not a stickler on this subject of ratios. I have said time and again that I would as soon have it 15½ to 1 as 16 to 1.

There are other questions I would gladly discuss, but time will not permit, and these two questions are the most important. I trust, however, I may be permitted to say that the income tax, although it miscarried in the Supreme Court, will always stand as a monument of Democratic fidelity to the people, and to express the opinion that, in my judgment, there would be fewer millionaires in the United States Senate if they were elected by a direct vote of the people.

Tariff reform and free coinage are the two living Democratic issues—twin stars in the political galaxy of principles—upon which we understand we are agreed to stand or fall together, and our urgings along these two lines will not cease until the wrongs which now exist shall have been adjusted. These are the words which will be inscribed upon every banner that leads the people in the coming contest for the Presidency and the control of the next Congress. I would rather see my party fall upon these two issues by advocating them bravely and openly than to try to win by straddling them. Our constituents are not to be misled by any side issues. These are the two questions you will settle, and, though it may not be done, let us hope that they will be settled decisively and for some time to come.

That your tax system and money system are wrong can not be successfully denied. The man who utters a different opinion is either misled or insincere or both, and will not be followed. The campaign orators may undertake to uphold or defend them, or try to create a stampede in another direction, but they know as well as you do that these two questions must be adjusted in a spirit of fairness in the coming contest, or the days of the political party that shuns it are numbered.

Sir, although the son of a prophet is not necessarily a prophet, and the indications at this time are not propitious, I venture the prediction that the next President of this country will be a Democrat who believes in tariff reform and the equal coinage of gold and silver. I am one of those who hold that everybody is wiser than anybody, and I confidently appeal to that excellent middle class who are at once the safety, the bulwark, and the glory of the old Republic.

State Governments in the South under Republicans.

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 11, 1896.

Mr. WHEELER said:

Mr. SPEAKER: To forcibly illustrate the great evils which would befall any State of the South in the event of its falling into the hands of persons who control a party which is opposed to the Democratic party, I give below the debts of ten Southern States before the war, and in a parallel column the debts of those same States after they had been subjected to the domination of opponents to the Democratic party during a period of between four and five years. It is as follows:

State.	Before the war.	In July, 1872.
Alabama	$7,945,000	$52,761,917
Arkansas	2,184,179	19,398,000
Florida	370,617	15,797,587
Georgia	2,670,750	42,500,500
Louisiana	11,000,000	40,021,734
Mississippi	None.	1,697,431
North Carolina	12,689,245	34,887,464
South Carolina	4,407,958	22,480,916
Texas	2,000,000	14,930,900
Virginia	33,248,141	47,090,866
Total	76,415,890	291,626,015
Total increase		215,210,125

I desire to call attention to the fact that at that time, 1872—

The total debt of the 10 Southern States was	$291,626,015
And the total debt of the 27 other States was	203,872,522
Making the greater indebtedness of the South than all the rest of the Union	87,753,463

Two years ago some misguided Democrats of the gallant old State of North Carolina were induced to join the Republicans in opposition to the party which had been their defense and bulwark for twenty years.

They were abundantly warned of the probable effect of their action. The Democratic party placed before them the fearful crimes and frauds committed by the Republicans when they had control of that State. The following table which I have prepared shows at a glance, first, that the Republicans taxed the people three times as heavily as the Democrats; second, that the Republicans spent on the legislature eight times as much as the Democrats; third, that Republicans did nothing for the public schools, while the Democrats provided means for the education of all the children of the State:

THE RATE OF TAXATION.

In 1869, Republican, 80 cents on $100.
In 1874, Democratic, 31¼ cents on $100.
In 1875, Democratic, 29½ cents on $100.
In 1881, Democratic, 28 cents on $100.
In 1883, Democratic, 25 cents on $100.
In 1884, Democratic, nothing.

COST OF LEGISLATURE.

Of 1868, Republican	$430,958
Of 1870, Democratic	212,893
Of 1872, Democratic	169,396
Of 1874, Democratic	109,234
Of 1876, Democratic	81,823
Of 1881, Democratic	56,259
Of 1883, Democratic	57,478

EXPENDED FOR COMMON SCHOOLS.

Year ending in 1869, Republican	Nothing.
Year ending in 1870, Republican	$42,862
Year ending in 1877, Democratic	289,213
Year ending in 1878, Democratic	324,287
Year ending in 1880, Democratic	352,882
Year ending in 1881, Democratic	409,656
Year ending in 1882, Democratic	509,736
Year ending in 1883, Democratic	725,000

In 1894 these misguided Democrats by aiding the Republicans placed the opponents of the Democrats in power in North Carolina, and they immediately commenced the criminal profligacy which characterized them when they were in power a quarter of a century ago. In corroboration of this assertion I give an extract from a letter from the Hon. Elias Carr, governor of North Carolina, dated June, 1896, in which he states some of the atrocious actions of these enemies of the people.

Governor Carr states that this fusion party—

1. Increased taxation from 41½ to 43 cents on the $100 worth of property; increased expenses for 1895 over $140,000.
2. It passed an election law that only allows five days for registration.
3. It turned out a one-legged Confederate soldier as doorkeeper and put in a burly, black negro, Abe Middleton by name, in his place.
4. It created over 3,600 new offices in order to fill them with partisans and get control of the county machinery. I think the true number was about 5,000.
5. The statement in regard to the appointment of 100 negro magistrates is practically correct.
6. Its crowning infamy was in refusing to adjourn in honor of Gen. Robert E. Lee, which was a public holiday under the laws of this State, and they did adjourn in honor of the miscegenationist, Fred Douglass.

They grabbed at every little office and did everything in their power to change the laws, and were so ignorant in their management that their own supreme court has in every case except one decided in favor of the incumbent. They sought to turn men out of office who had been elected for four years and only served two. They tried to place the railroad property of the State in the hands of known rascals, and would thereby have confiscated the best interest the State possesses. They put a judge on the bench who was not legally elected. Created a western and eastern court circuit, which was not needed, and under Democratic rule the judges of the superior courts had done work satisfactorily and with dispatch.

The new election law, while professing to be in favor of a free ballot and fair count, places in the hands of the C. S. C. a chance for unlimited fraud.

Yours, very truly,

ELIAS CARR, *Governor.*

When the Republicans controlled Alabama prior to 1874 they attempted to force negroes into the public schools, hotels, and churches, and did everything they could to humiliate and degrade white people. That they would be even more extreme if again intrusted with power, there can be but little doubt. Mr. GOODWYN, their candidate for governor, has already given abundant proof that he would be a willing tool in the hands of the people whom he asked to elect him to office. Mr. GOODWYN was sworn in as a member of Congress on April 22. He almost immediately left Washington, but when he returned he voted with the Republicans and against the Democrats on every occasion on which I find his name in the RECORD.

On May 29, pages 5914 and 5915, he voted with the extreme Republicans and against the Populists and Democrats to put Stokes, a Tillman silver Democrat, out of Congress, and put in an extreme gold-bug Republican.

He voted the same way on the same case on June 1, page 5952.

On June 4, pages 6110 and 6111, GOODWYN voted to unseat Colonel Elliott, son of Bishop Elliott, and a most accomplished and distinguished member of Congress, and put in his place a negro who is an extreme Republican, an earnest gold-standard man, bitterly opposed to silver coinage and to every principle espoused by the Populists or People's Party.

On June 5, pages 6166 and 6167, he voted to unseat a silver Democrat, Lockhart, and put in his place Martin, a goldbug Republican.

On June 9, pages 6329, 6353, and 6354, he voted to unseat a silver Democrat and superb cultured gentleman, Underwood, and put in his place a goldbug Republican, Aldrich.

In most of these cases the Democrat whom he voted to unseat was a silver man, and he voted to put in his place a gold-standard Republican. I feel confident that each of the Democrats he voted to put out was fairly and honestly elected, and the action of the Republican party in unseating these Democrats was partisan and dishonest in the extreme.

This was especially the case with regard to Mr. Underwood, of the Ninth district of Alabama.

Can there be any question as to what would be the course of Mr. GOODWYN if he were elected governor? His bitter feeling against Democrats is shown by his voting with the Republicans and against Democrats at, I think, every opportunity during his short career in Congress. His voting to put a white man out of Congress who was elected by a large majority—a majority of almost 3 to 2—and put in his place a negro who was not elected and who is a supporter of the gold-standard policy and every other atrocious policy which is advocated by the Republican party, should be enough to prevent any honest white man voting for Mr. GOODWYN for governor. I do not think the Populists who nominated Mr. GOODWYN, supposing him to be an advocate of free silver, will support him when they find that almost his entire course in Congress was against silver and in favor of the gold standard, as was indicated by his votes to put out silver men and put gold-standard men in their places.

INDEX

TO THE

APPENDIX TO THE CONGRESSIONAL RECORD.

Allen, *William V.* (*a Senator from Nebraska*)
The financial policy 310.

Andrews, *William E.* (*a Representative from Nebraska*)
Coin redemption fund 248.
Pensions 410.

Apsley, *Lewis Dewart* (*a Representative from Massachusetts*)
Apsley on protection 374.

Arnold, *William C.* (*a Representative from Pennsylvania*)
War in Cuba 258.

Babcock, *Joseph W.* (*a Representative from Wisconsin*)
History of money and financial legislation 335.
Silver and money 411.
